- VUID-vkGetPipelineIndirectMemoryRequirementsNV-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetPipelineIndirectMemoryRequirementsNV-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkComputePipelineCreateInfo](#) structure
- VUID-vkGetPipelineIndirectMemoryRequirementsNV-pMemoryRequirements-parameter **pMemoryRequirements** **must** be a valid pointer to a [VkMemoryRequirements2](#) structure

37.2.1. Indirect Execution Sets

Indirect Execution Sets contain sets of pipelines or shader objects which can be bound individually.

```
// Provided by VK_EXT_device_generated_commands
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkIndirectExecutionSetEXT)
```

Indirect Execution Sets allow the device to bind different shaders and pipeline states using [Device-Generated Commands](#).

Indirect Execution Sets are created by calling:

```
// Provided by VK_EXT_device_generated_commands
VkResult vkCreateIndirectExecutionSetEXT(
    VkDevice device,
    const VkIndirectExecutionSetCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkIndirectExecutionSetEXT* pIndirectExecutionSet);
```

- **device** is the logical device that creates the indirect execution set.
- **pCreateInfo** is a pointer to a [VkIndirectExecutionSetCreateInfoEXT](#) structure containing parameters affecting creation of the indirect execution set.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pIndirectExecutionSet** is a pointer to a [VkIndirectExecutionSetEXT](#) handle in which the resulting indirect execution set is returned.

Valid Usage

- VUID-vkCreateIndirectExecutionSetEXT-deviceGeneratedCommands-11013
The **VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreateIndirectExecutionSetEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCreateIndirectExecutionSetEXT-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkIndirectExecutionSetCreateInfoEXT](#) structure
- VUID-vkCreateIndirectExecutionSetEXT-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateIndirectExecutionSetEXT-pIndirectExecutionSet-parameter
pIndirectExecutionSet **must** be a valid pointer to a [VkIndirectExecutionSetEXT](#) handle
- VUID-vkCreateIndirectExecutionSetEXT-device-queuecount
The device **must** have been created with at least **1** queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkIndirectExecutionSetCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetCreateInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkIndirectExecutionSetInfoTypeEXT type;
    VkIndirectExecutionSetInfoEXT info;
} VkIndirectExecutionSetCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [type](#) is a [VkIndirectExecutionSetInfoTypeEXT](#) describing the type of set being created and determining which field of the [info](#) union will be used.
- [info](#) is a [VkIndirectExecutionSetInfoEXT](#) union containing layout information for the set.

Valid Usage

- VUID-VkIndirectExecutionSetCreateInfoEXT-maxIndirectShaderObjectCount-11014
If [VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectShaderObjectCount](#) is zero or the [shaderObject](#) feature is not enabled [type](#) **must** not be [VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT](#)

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetCreateInfoEXT-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_CREATE_INFO_EXT](#)
- VUID-VkIndirectExecutionSetCreateInfoEXT-type-parameter
[type](#) **must** be a valid [VkIndirectExecutionSetInfoTypeEXT](#) value
- VUID-VkIndirectExecutionSetCreateInfoEXT-pPipelineInfo-parameter
If [type](#) is [VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT](#), the [pPipelineInfo](#)

member of **info** **must** be a valid pointer to a valid [VkIndirectExecutionSetPipelineInfoEXT](#) structure

- VUID-VkIndirectExecutionSetCreateInfoEXT-pShaderInfo-parameter

If **type** is [VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT](#), the **pShaderInfo** member of **info** **must** be a valid pointer to a valid [VkIndirectExecutionSetShaderInfoEXT](#) structure

Values which **can** be set in [VkIndirectExecutionSetCreateInfoEXT::type](#), specifying contents of an indirect execution set, are:

```
// Provided by VK_EXT_device_generated_commands
typedef enum VkIndirectExecutionSetInfoTypeEXT {
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT = 0,
    VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT = 1,
} VkIndirectExecutionSetInfoTypeEXT;
```

- [VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT](#) specifies that the indirect execution set contains [VkPipeline](#) objects.
- [VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT](#) specifies that the indirect execution set contains [VkShaderEXT](#) objects.

The [VkIndirectExecutionSetInfoEXT](#) union is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef union VkIndirectExecutionSetInfoEXT {
    const VkIndirectExecutionSetPipelineInfoEXT* pPipelineInfo;
    const VkIndirectExecutionSetShaderInfoEXT* pShaderInfo;
} VkIndirectExecutionSetInfoEXT;
```

- **pPipelineInfo** is a pointer to a [VkIndirectExecutionSetPipelineInfoEXT](#) structure containing pipeline layout information for the set.
- **pShaderInfo** is a pointer to a [VkIndirectExecutionSetShaderInfoEXT](#) structure containing shader object layout information for the set.

The [VkIndirectExecutionSetPipelineInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetPipelineInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkPipeline initialPipeline;
    uint32_t maxPipelineCount;
} VkIndirectExecutionSetPipelineInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `initialPipeline` is the initial pipeline for the set. This pipeline will be automatically added to the set at index `0`.
- `maxPipelineCount` is the maximum number of pipelines stored in the set.

The characteristics of `initialPipeline` will be used to validate all pipelines added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with pipelines is used, `initialPipeline` constitutes the initial shader state.

Valid Usage

- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11015
If `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding` does not contain `VK_SHADER_STAGE_COMPUTE_BIT`, the `VkPipelineBindPoint` of `initialPipeline` **must** not be `VK_PIPELINE_BIND_POINT_COMPUTE`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11016
If `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding` does not contain `VK_SHADER_STAGE_FRAGMENT_BIT`, the `VkPipelineBindPoint` of `initialPipeline` **must** not be `VK_PIPELINE_BIND_POINT_GRAPHICS`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-supportedIndirectCommandsShaderStagesPipelineBinding-11017
If `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding` does not contain ray tracing stages, the `VkPipelineBindPoint` of `initialPipeline` **must** not be `VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-maxPipelineCount-11018
`maxPipelineCount` **must** be between `1` and `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectPipelineCount`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11019
`initialPipeline` **must** not use descriptors of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-11153
`initialPipeline` **must** have been created with `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetPipelineInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_PIPELINE_INFO_EXT`
- VUID-VkIndirectExecutionSetPipelineInfoEXT-initialPipeline-parameter
`initialPipeline` **must** be a valid `VkPipeline` handle

The `VkIndirectExecutionSetShaderInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderInfoEXT {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  shaderCount;
    const VkShaderEXT*        pInitialShaders;
    const VkIndirectExecutionSetShaderLayoutInfoEXT* pSetLayoutInfos;
    uint32_t                  maxShaderCount;
    uint32_t                  pushConstantRangeCount;
    const VkPushConstantRange* pPushConstantRanges;
} VkIndirectExecutionSetShaderInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderCount` is the number of members in the `pInitialShaders` and `pSetLayoutInfos` arrays.
- `pInitialShaders` is a pointer to an array containing a `VkShaderEXT` object for each shader stage that will be used in the set. These shaders will be automatically added to the set beginning at index 0.
- `pSetLayoutInfos` is `NULL` or a pointer to an array containing a `VkIndirectExecutionSetShaderLayoutInfoEXT` used by each corresponding `pInitialShaders` shader stage in the set.
- `maxShaderCount` is the maximum number of shader objects stored in the set.
- `pushConstantRangeCount` is the number of members in the `pPushConstantRanges` array.
- `pPushConstantRanges` is a pointer to the array of `VkPushConstantRange` ranges used by all shaders in the set.

The characteristics of `pInitialShaders` will be used to validate all shaders added to the set even if they are removed from the set or destroyed.

When an Indirect Execution Set created with shader objects is used, `pInitialShaders` constitutes the initial shader state.

If `pSetLayoutInfos` is `NULL`, the descriptor layout parameters are inherited from the shader object.

Valid Usage

- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11020
All members of `pInitialShaders` **must** have a `stage` supported by `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesShaderBinding`
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11021
`maxShaderCount` **must** not be zero
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11022
`maxShaderCount` **must** be less than or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectShaderObjectCount`
- VUID-VkIndirectExecutionSetShaderInfoEXT-maxShaderCount-11036
`maxShaderCount` **must** be greater than or equal to `shaderCount`
- VUID-VkIndirectExecutionSetShaderInfoEXT-stage-11023
The `stage` of each element in the `pInitialShaders` array **must** be unique
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11154
Each member of `pInitialShaders` **must** have been created with `VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT`
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-10929
If `pSetLayoutInfos` is not `NULL`, the descriptor layout values specified **must** be compatible with the descriptor set layouts defined at the creation of the shader object
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11321
If any element of `pInitialShaders` was created with `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`, all elements of `pInitialShaders` **must** have been created with `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11322
If any element of `pInitialShaders` was created without `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`, all elements of `pInitialShaders` **must** have been created without `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-11323
If elements of `pInitialShaders` were created with `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`, `pSetLayoutInfos` **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_INFO_EXT`
- VUID-VkIndirectExecutionSetShaderInfoEXT-pInitialShaders-parameter
`pInitialShaders` **must** be a valid pointer to an array of `shaderCount` valid `VkShaderEXT` handles
- VUID-VkIndirectExecutionSetShaderInfoEXT-pSetLayoutInfos-parameter
If `pSetLayoutInfos` is not `NULL`, `pSetLayoutInfos` **must** be a valid pointer to an array of

`shaderCount` valid `VkIndirectExecutionSetShaderLayoutInfoEXT` structures

- VUID-VkIndirectExecutionSetShaderInfoEXT-pPushConstantRanges-parameter
If `pushConstantRangeCount` is not 0, `pPushConstantRanges` **must** be a valid pointer to an array of `pushConstantRangeCount` valid `VkPushConstantRange` structures
- VUID-VkIndirectExecutionSetShaderInfoEXT-shaderCount-arraylength
`shaderCount` **must** be greater than 0

The `VkIndirectExecutionSetShaderLayoutInfoEXT` structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkIndirectExecutionSetShaderLayoutInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 setLayoutCount;
    const VkDescriptorSetLayout* pSetLayouts;
} VkIndirectExecutionSetShaderLayoutInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `setLayoutCount` is the number of members in the `pSetLayouts` array
- `pSetLayouts` is a pointer to an array containing `VkDescriptorSetLayout` objects used by the shader stage. The implementation **must** not access these objects outside of the duration of the command this structure is passed to.

Valid Usage

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-11024
All members of `pSetLayouts` **must** not contain descriptors of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`

Valid Usage (Implicit)

- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_INDIRECT_EXECUTION_SET_SHADER_LAYOUT_INFO_EXT`
- VUID-VkIndirectExecutionSetShaderLayoutInfoEXT-pSetLayouts-parameter
If `setLayoutCount` is not 0, `pSetLayouts` **must** be a valid pointer to an array of `setLayoutCount` valid or `VK_NULL_HANDLE` `VkDescriptorSetLayout` handles

Destroy an Indirect Execution Set by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkDestroyIndirectExecutionSetEXT(
    VkDevice device,
    VkIndirectExecutionSetEXT indirectExecutionSet,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that owns the indirect execution set.
- **indirectExecutionSet** is the indirect execution set to destroy.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-11025
All submitted commands that refer to **indirectExecutionSet** **must** have completed execution

Valid Usage (Implicit)

- VUID-vkDestroyIndirectExecutionSetEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parameter
If **indirectExecutionSet** is not [VK_NULL_HANDLE](#), **indirectExecutionSet** **must** be a valid [VkIndirectExecutionSetEXT](#) handle
- VUID-vkDestroyIndirectExecutionSetEXT-pAllocator-parameter
If **pAllocator** is not [NULL](#), **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkDestroyIndirectExecutionSetEXT-indirectExecutionSet-parent
If **indirectExecutionSet** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **indirectExecutionSet** **must** be externally synchronized

The [VkWriteIndirectExecutionSetPipelineEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkWriteIndirectExecutionSetPipelineEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkPipeline          pipeline;
} VkWriteIndirectExecutionSetPipelineEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **index** is the element of the set to update
- **pipeline** is the pipeline to store in the indirect execution set

Valid Usage

- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11026
index must be less than the value of [VkIndirectExecutionSetPipelineInfoEXT::maxPipelineCount](#) used to create the set
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11027
pipeline must have been created with [VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT](#)
- VUID-VkWriteIndirectExecutionSetPipelineEXT-index-11029
index must not be referenced by submitted command buffers
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-11030
The shader stages contained in **pipeline must** be supported by [VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStagesPipelineBinding](#)

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetPipelineEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_PIPELINE_EXT](#)
- VUID-VkWriteIndirectExecutionSetPipelineEXT-pipeline-parameter
pipeline must be a valid [VkPipeline](#) handle

The [VkWriteIndirectExecutionSetShaderEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands with VK_EXT_shader_object
typedef struct VkWriteIndirectExecutionSetShaderEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           index;
    VkShaderEXT         shader;
} VkWriteIndirectExecutionSetShaderEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **index** is the element of the set to update
- **shader** is the shader to store in the indirect execution set

Shaders need not be stored in the Indirect Execution Set according to their stage. The only restriction for shader indices within a set is that the value of the index **must** be less than the maximum number of shaders in the set.

Valid Usage

- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11031
index must be less than [VkIndirectExecutionSetShaderInfoEXT::maxShaderCount](#)
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-11032
shader must have been created with [VK_SHADER_CREATE_INDIRECT_BINDABLE_BIT_EXT](#)
- VUID-VkWriteIndirectExecutionSetShaderEXT-pInitialShaders-11033
A shader created with the same [VkShaderStageFlagBits](#) **must** have been passed in the [VkIndirectExecutionSetShaderInfoEXT::pInitialShaders](#) array
- VUID-VkWriteIndirectExecutionSetShaderEXT-index-11034
index must not be in use by submitted command buffers

Valid Usage (Implicit)

- VUID-VkWriteIndirectExecutionSetShaderEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_WRITE_INDIRECT_EXECUTION_SET_SHADER_EXT](#)
- VUID-VkWriteIndirectExecutionSetShaderEXT-shader-parameter
shader must be a valid [VkShaderEXT](#) handle

Pipeline elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetPipelineEXT(
    VkDevice                                device,
    VkIndirectExecutionSetEXT               indirectExecutionSet,
    uint32_t                               executionSetWriteCount,
    const VkWriteIndirectExecutionSetPipelineEXT* pExecutionSetWrites);
```

- **device** is the logical device that owns the indirect execution set.
- **indirectExecutionSet** is the indirect execution set being updated.
- **executionSetWriteCount** is the number of elements in the **pExecutionSetWrites** array.
- **pExecutionSetWrites** is a pointer to an array of **VkWriteIndirectExecutionSetPipelineEXT** structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-11035
indirectExecutionSet **must** have been created with type **VK_INDIRECT_EXECUTION_SET_INFO_TYPE_PIPELINES_EXT**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-11037
executionSetWriteCount **must** be less than or equal to **VkIndirectExecutionSetPipelineInfoEXT::maxPipelineCount**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-11042
Each element in the **pExecutionSetWrites** array must have a unique **VkWriteIndirectExecutionSetPipelineEXT::index**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11038
Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11324
If **initialPipeline** was created without **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, each pipeline in **pExecutionSetWrites** **must** also have been created without **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11325
If **initialPipeline** was created with **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, each pipeline in **pExecutionSetWrites** **must** also have been created with **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11039
If **initialPipeline** was created without **VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT**, the layout of each pipeline in **pExecutionSetWrites** **must** be **compatible** with the **initialPipeline** used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-None-11040

Each pipeline in the Indirect Execution Set **must** have identically defined static and dynamic state values to the **initialPipeline** used to create the Indirect Execution Set

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11147
Each pipeline in the Indirect Execution Set **must** have identically defined **fragment outputs interface** to the **initialPipeline** used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11152
Each pipeline in the Indirect Execution Set **must** match the **initialPipeline** used to create the Indirect Execution Set in its included shader stages
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11098
Each pipeline in the Indirect Execution Set **must** match the **initialPipeline** used to create the Indirect Execution Set in its use of **FragDepth**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11086
Each pipeline in the Indirect Execution Set **must** match the **initialPipeline** used to create the Indirect Execution Set in its use of **SampleMask**
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-initialPipeline-11085
Each pipeline in the Indirect Execution Set **must** match the **initialPipeline** used to create the Indirect Execution Set in its use of **StencilExportEXT**

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetPipelineEXT-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parameter **indirectExecutionSet** **must** be a valid **VkIndirectExecutionSetEXT** handle
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-pExecutionSetWrites-parameter **pExecutionSetWrites** **must** be a valid pointer to an array of **executionSetWriteCount** valid **VkWriteIndirectExecutionSetPipelineEXT** structures
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-executionSetWriteCount-arraylength **executionSetWriteCount** **must** be greater than 0
- VUID-vkUpdateIndirectExecutionSetPipelineEXT-indirectExecutionSet-parent **indirectExecutionSet** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **indirectExecutionSet** **must** be externally synchronized

Shader object elements in an Indirect Execution Set can be updated by calling:

```
// Provided by VK_EXT_device_generated_commands
void vkUpdateIndirectExecutionSetShaderEXT(
    VkDevice device,
    VkIndirectExecutionSetEXT indirectExecutionSet,
    uint32_t executionSetWriteCount,
    const VkWriteIndirectExecutionSetShaderEXT* pExecutionSetWrites);
```

- **device** is the logical device that owns the indirect execution set.
- **indirectExecutionSet** is the indirect execution set being updated.
- **executionSetWriteCount** is the number of elements in the **pExecutionSetWrites** array.
- **pExecutionSetWrites** is a pointer to an array of **VkWriteIndirectExecutionSetShaderEXT** structures describing the elements to update.

Valid Usage

- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-11041
indirectExecutionSet **must** have been created with type **VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT**
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11043
Each element in the **pExecutionSetWrites** array must have a unique **VkWriteIndirectExecutionSetShaderEXT::index**
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11044
Each member of the Indirect Execution Set referenced by the update command **must** not be in use by the device
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11326
If the shaders in **pInitialShaders** were created without **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**, each shader in **pExecutionSetWrites** **must** also have been created without **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pInitialShaders-11327
If the shaders in **pInitialShaders** were created with **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**, each pipeline in **pExecutionSetWrites** **must** also have been created with **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-11140
If the shaders in **pInitialShaders** were created without **VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT**, the descriptor layout of each shader in **pExecutionSetWrites** **must** be **compatible** with the initial layout info used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-None-11148
Each fragment shader element in the Indirect Execution Set **must** have **identically defined fragment outputs interface** to the initial shader state used to create the Indirect Execution Set
- VUID-vkUpdateIndirectExecutionSetShaderEXT-FragDepth-11054
Each fragment shader element in the Indirect Execution Set **must** match the initial shader

state used to create the Indirect Execution Set in its use of **FragDepth**

- VUID-vkUpdateIndirectExecutionSetShaderEXT-SampleMask-11050

Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of **SampleMask**

- VUID-vkUpdateIndirectExecutionSetShaderEXT-StencilExportEXT-11003

Each fragment shader element in the Indirect Execution Set **must** match the initial shader state used to create the Indirect Execution Set in its use of **StencilExportEXT**

Valid Usage (Implicit)

- VUID-vkUpdateIndirectExecutionSetShaderEXT-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parameter **indirectExecutionSet** **must** be a valid **VkIndirectExecutionSetEXT** handle
- VUID-vkUpdateIndirectExecutionSetShaderEXT-pExecutionSetWrites-parameter **pExecutionSetWrites** **must** be a valid pointer to an array of **executionSetWriteCount** valid **VkWriteIndirectExecutionSetShaderEXT** structures
- VUID-vkUpdateIndirectExecutionSetShaderEXT-executionSetWriteCount-arraylength **executionSetWriteCount** **must** be greater than 0
- VUID-vkUpdateIndirectExecutionSetShaderEXT-indirectExecutionSet-parent **indirectExecutionSet** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **indirectExecutionSet** **must** be externally synchronized

It is legal to update an Indirect Execution Set that is in flight as long as the element indices in **pExecutionSetWrites** are not in use. Any change to an indirect execution set requires recalculating memory requirements by calling **vkGetGeneratedCommandsMemoryRequirementsEXT** for commands that use that modified state. Commands that are in flight or those not using updated elements require no changes.

The lifetimes of pipelines and shader objects contained in a set **must** match or exceed the lifetime of the set.

With **VK_NV_device_generated_commands**, the actual generation of commands as well as their execution on the device is handled as single action with:

```
// Provided by VK_NV_device_generated_commands
void vkCmdExecuteGeneratedCommandsNV(
    VkCommandBuffer                      commandBuffer,
    VkBool32                             isPreprocessed,
    const VkGeneratedCommandsInfoNV*     pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `isPreprocessed` represents whether the input data has already been preprocessed on the device. If it is `VK_FALSE` this command will implicitly trigger the preprocessing step, otherwise not.
- `pGeneratedCommandsInfo` is a pointer to a `VkGeneratedCommandsInfoNV` structure containing parameters affecting the generation of commands.

If the `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_NV` flag was used to create the `VkGeneratedCommandsInfoNV::indirectCommandsLayout` then the order of execution of individual draws through this command **may** execute in any order, and **may** not necessarily be in the same order as specified in `VkGeneratedCommandsInfoNV::pStreams`.

The order of execution of individual dispatches through this command **may** execute in any order and **may** not necessarily be in the same order as specified in `VkGeneratedCommandsInfoNV::pStreams`.

Valid Usage

- VUID-vkCmdExecuteGeneratedCommandsNV-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdExecuteGeneratedCommandsNV-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdExecuteGeneratedCommandsNV-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdExecuteGeneratedCommandsNV-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of

this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**

- VUID-vkCmdExecuteGeneratedCommandsNV-unnormalizedCoordinates-09635
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **levelCount** and **layerCount** **must** be 1
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08609
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** **must** be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08610
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions with **ImplicitLod**, **Dref** or **Proj** in their name
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08611
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions that includes a LOD bias or any offset values
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06479
If a **VkImageView** is sampled with **depth comparison**, the image view's **format features** **must** contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02691
If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07888
If a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's **format features** **must** contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02692
If a **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02693
If the **VK_EXT_filter_cubic** extension is not enabled and any **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, it **must** not have a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_3D**, **VK_IMAGE_VIEW_TYPE_CUBE**, or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**
- VUID-vkCmdExecuteGeneratedCommandsNV-filterCubic-02694
Any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command **must** have a **VkImageViewType** and format that supports cubic filtering, as specified by **VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic** returned

by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-filterCubicMinmax-02695

Any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) with a reduction mode of either [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#) as a result of this command **must** have a [VkImageViewType](#) and format that supports cubic filtering together with minmax filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-cubicRangeClamp-09212

If the [cubicRangeClamp](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** not have a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-reductionMode-09213

Any [VkImageView](#) being sampled with a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#) as a result of this command **must** sample with [VK_FILTER_CUBIC_EXT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-selectableCubicWeights-09214

If the [selectableCubicWeights](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** have [VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights](#) equal to [VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-02696

Any [VkImage](#) created with a [VkImageCreateInfo::flags](#) containing [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) sampled as a result of this command **must** only be sampled using a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07027

For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07028

For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07029

For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07030

Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08600
If a [a bound shader](#) was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08601
If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10068
For each array of resources that is used by a [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-imageLayout-00344
If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be

resident

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdExecuteGeneratedCommandsNV-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsNV-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdExecuteGeneratedCommandsNV-viewType-07752

If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-format-07753

If a `VkImageView` or `VkBufferView` is accessed as a result of this command, then the `numeric type` of the view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-08795

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-08796

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have four components

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageWrite-04469

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04470

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04471

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04472

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64

- VUID-vkCmdExecuteGeneratedCommandsNV-SampledType-04473

If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32

- VUID-vkCmdExecuteGeneratedCommandsNV-sparseImageInt64Atomics-04474

If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdExecuteGeneratedCommandsNV-sparseImageInt64Atomics-04475

If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this

command

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to

read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdExecuteGeneratedCommandsNV-OpImageBlockMatchWindow-09217
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10679
If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout
- VUID-vkCmdExecuteGeneratedCommandsNV-pDescription-09900
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set
- VUID-vkCmdExecuteGeneratedCommandsNV-dimensionCount-09905
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object
- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeTensorARM-09906
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access
- VUID-vkCmdExecuteGeneratedCommandsNV-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or

`VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress` backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid `VkDeviceAddress` backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid `VkDeviceAddress`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11308

For each `descriptor heap` that is statically used by a `bound shader`, either directly or via a `descriptor mapping`, a valid descriptor heap **must** be bound

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11309

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by `vkCmdBind*HeapEXT` commands

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11372

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess`

feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsNV-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and

that sampler descriptor uses a custom border color with an index defined by `VkSamplerCustomBorderColorIndexCreateInfoEXT`, the value of `VkSamplerCustomBorderColorIndexCreateInfoEXT::index` **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdExecuteGeneratedCommandsNV-protectedNoFault-11455

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdExecuteGeneratedCommandsNV-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdExecuteGeneratedCommandsNV-renderPass-02684

The current render pass **must** be `compatible` with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdExecuteGeneratedCommandsNV-subpass-02685

The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`

- VUID-vkCmdExecuteGeneratedCommandsNV-OpTypeImage-07468

If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07469

Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments` [`InputAttachmentIndex`] in the bound `VkFramebuffer` as specified by [Fragment Input Attachment Compatibility](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a `InputAttachmentIndex` referenced by `VkRenderingInputAttachmentIndexInfo`, or no `InputAttachmentIndex` if `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` or `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be

created with a [VkImageView](#) that is compatible with the corresponding color, depth, or stencil attachment in [VkRenderingInfo](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthInputAttachmentIndex-09596
Input attachment views accessed in a dynamic render pass via a shader object **must** have an [InputAttachmentIndex](#) if both [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) and [VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex](#) are non-NULL
- VUID-vkCmdExecuteGeneratedCommandsNV-InputAttachmentIndex-09597
If an input attachment view accessed in a dynamic render pass via a shader object has an [InputAttachmentIndex](#), the [InputAttachmentIndex](#) **must** match an index in [VkRenderingInputAttachmentIndexInfo](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06537
Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10795
If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10796
If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-10797
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12338
If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_COLOR_BIT](#) on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12339
If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_DEPTH_BIT](#) on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-12340
If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and [feedback loop](#) is not enabled for [VK_IMAGE_ASPECT_STENCIL_BIT](#) on that attachment, the stencil attachment **must** not be written to by this command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09003
If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06886
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, **depth writes must** be disabled
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06887
If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back **writeMask** are not zero, and stencil test is enabled, **all stencil ops must** be **VK_STENCIL_OP_KEEP**
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07831
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT** dynamic state enabled then **vkCmdSetViewport must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07832
If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_SCISSOR** dynamic state enabled then **vkCmdSetScissor must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08617
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_LINE_WIDTH** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **effective rasterization input topology** is in line topology class, then **vkCmdSetLineWidth must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07834
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BIAS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthBiasEnable** is **VK_TRUE**, then **vkCmdSetDepthBias** or **vkCmdSetDepthBias2EXT must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07835
If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_BLEND_CONSTANTS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and an active color attachment **current value** of **blendEnable** is **VK_TRUE** with a blend equations where any **VkBlendFactor** member is **VK_BLEND_FACTOR_CONSTANT_COLOR**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR**, **VK_BLEND_FACTOR_CONSTANT_ALPHA**, or **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA**, then **vkCmdSetBlendConstants must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07836
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DEPTH_BOUNDS](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [depthBoundsTestEnable](#) is [VK_TRUE](#), then [vkCmdSetDepthBounds](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07837
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilCompareMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07838
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_WRITE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilWriteMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07839
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_REFERENCE](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilReference](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-maxMultiviewInstanceIndex-02688
If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to [VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-02689
If the bound graphics pipeline was created with [VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable](#) set to [VK_TRUE](#), then the active depth attachment **must** have been created with the [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) bit set
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07634
If the [VK_EXT_sample_locations](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT](#) dynamic state enabled, and the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetSampleLocationsEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetStencilTestEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, the `current value` of `stencilTestEnable` is `VK_TRUE`, then `vkCmdSetStencilOp` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetViewportWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, and the state is not inherited, then `vkCmdSetScissorWithCount` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled, and the state is not inherited, then the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** match the `scissorCount` parameter of `vkCmdSetScissorWithCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04137

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportWScalingStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04138

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the `current value` of `viewportWScalingEnable` is `VK_TRUE`, then `vkCmdSetViewportWScalingNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08636
If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-04139
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdExecuteGeneratedCommandsNV-shadingRateImage-09233
If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-shadingRateImage-09234
If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08637
If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`
- VUID-vkCmdExecuteGeneratedCommandsNV-VkPipelineVieportCreateInfo-04141
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or

equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-VkPipelineViewportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the

`VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsNV-

`primitiveFragmentShadingRateWithMultipleViewports-08642`

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsNV-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's **format features** do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding **current value** of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the **current value** of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06175

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06176

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06177

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-viewMask-06178

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`

- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-06179

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08910

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08912

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the

corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08911

If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-09362

If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09366
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the [VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID](#) resolve mode, then [vkCmdSetColorBlendEnableEXT](#) **must** have set blend enable to [VK_FALSE](#) prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-09367
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the [VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID](#) resolve mode, then [vkCmdSetRasterizationSamplesEXT](#) **must** have set [rasterizationSamples](#) to [VK_SAMPLE_COUNT_1_BIT](#) prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09368
If the current render pass instance was begun with [vkCmdBeginRendering](#), there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero [VkExternalFormatANDROID::externalFormat](#) value and with the [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) dynamic state enabled, then [vkCmdSetFragmentShadingRateKHR](#) **must** have set [pFragmentSize->width](#) to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-09369
If the current render pass instance was begun with [vkCmdBeginRendering](#), there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero [VkExternalFormatANDROID::externalFormat](#) value and with the [VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR](#) dynamic state enabled, then [vkCmdSetFragmentShadingRateKHR](#) **must** have set [pFragmentSize->height](#) to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-pFragmentSize-09370
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the [VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID](#) resolve mode, then [vkCmdSetFragmentShadingRateKHR](#) **must** have set [pFragmentSize->width](#) to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-pFragmentSize-09371
If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the [VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID](#) resolve mode, then [vkCmdSetFragmentShadingRateKHR](#) **must** have set [pFragmentSize->height](#) to 1 prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07749
If the [colorWriteEnable](#) feature is enabled, a shader object is bound to the [VK_SHADER_STAGE_FRAGMENT_BIT](#) stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT](#) dynamic state enabled, and the current value of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetColorWriteEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the `pNext` chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08916

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08917

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-08918

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06183
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingLocalRead-11797
If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`
- VUID-vkCmdExecuteGeneratedCommandsNV-imageView-06184
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`
- VUID-vkCmdExecuteGeneratedCommandsNV-layers-10831
If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`
- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-06185
If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-06186
If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-06187

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07285

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07286

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-multisampledRenderToSingleSampled-07287

If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-pNext-07935

If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsNV-renderPass-06198

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`

- VUID-vkCmdExecuteGeneratedCommandsNV-pColorAttachments-08963
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsNV-pColorAttachments-11539
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-08964
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-11540
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-08965
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-11860
If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-10582
If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set
- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithRasterizerDiscard-06708
If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled
- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithNonZeroStreams-06709
If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07620
If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07621
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07622
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07623
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsNV-alphaToCoverageEnable-08919
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to

`vkCmdSetAlphaToCoverageEnableEXT`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdExecuteGeneratedCommandsNV-alphaToCoverageEnable-08920

If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the `Fragment Output Interface` **must** contain a variable for the alpha `Component` word in `Location 0` at `Index 0`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07624

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07625

If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07626

If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07627

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorBlendEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07629

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorWriteMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07630

If the `geometryStreams` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_GEOMETRY_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_GEOMETRY_BIT` stage and the

`VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` dynamic state enabled, then `vkCmdSetRasterizationStreamEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07631

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetConservativeRasterizationModeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07632

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `conservativeRasterizationMode` is `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-conservativePointAndLineRasterization-07499

If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line or point topology class, then the current value of `conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the

current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the effective rasterization input topology is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the current value of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

`VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of

`coverageModulationTableEnable` is `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07647

If the `shadingRateImage` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-pipelineFragmentShadingRate-09238

If the `pipelineFragmentShadingRate` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07648

If the `representativeFragmentTest` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRepresentativeFragmentTestEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07649

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07471

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** follow the rules for a `zero-attachment subpass`

- VUID-vkCmdExecuteGeneratedCommandsNV-samples-07472

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09211

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** be the same as the `rasterizationSamples` member of that structure

- VUID-vkCmdExecuteGeneratedCommandsNV-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdExecuteGeneratedCommandsNV-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdExecuteGeneratedCommandsNV-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-10863

If a graphics pipeline is bound was created with

VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT, but not the VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetColorBlendAdvancedEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10864

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage or a graphics pipeline is bound was created with VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then either vkCmdSetColorBlendAdvancedEXT or vkCmdSetColorBlendEquationEXT **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command for all active color attachments with the blendEnable current value of VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsNV-primitivesGeneratedQueryWithNonZeroStreams-07481

If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, and the bound graphics pipeline was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to vkCmdSetRasterizationStreamEXT **must** have set the rasterizationStream to zero

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsPerPixel-07482

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples member of the VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been created with

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsPerPixel-07483

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current value of sampleLocationsEnable is VK_TRUE, then the sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to vkCmdSetSampleLocationsEXT **must** equal the rasterizationSamples parameter of the last call to vkCmdSetRasterizationSamplesEXT

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07484

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound graphics pipeline was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to vkCmdSetSampleLocationsEnableEXT then the current active depth attachment **must** have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide

`VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the current `rasterizationSamples` divided by the number of color samples in the current active color attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07489

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current `rasterizationSamples` **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsNV-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizerDiscardEnable-09420

If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdExecuteGeneratedCommandsNV-coverageReductionMode-07491

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` or

VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the current values of coverageReductionMode, rasterizationSamples, the sample counts for the color and depth/stencil attachments (if the subpass has them) **must** be a valid combination returned by vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-07492

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount greater or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-07493

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsNV-viewportCount-09421

If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any graphics stage, then the viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsNV-rasterizationSamples-07494

If the VK_NV_framebuffer_mixed_samples extension is enabled, and the coverageReductionMode feature is not enabled, or the current value of coverageReductionMode is not VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV, and the current value of rasterizationSamples is greater than sample count of the color attachment, then sample shading **must** be disabled

- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07495

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the stippledRectangularLines feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07496

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07497

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsNV-stippledLineEnable-07498

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsNV-stage-07073

If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then `Mesh Shader Queries` **must** not be active

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08877

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07850

If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-nextStage-10745

For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08684

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08685

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08686

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled,

`vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08687
If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08688
If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08689
If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08690
If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08693
If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08696
If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08698
If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08699
If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08878
All bound graphics shader objects **must** have been created with identical or `identically defined` push constant ranges
- VUID-vkCmdExecuteGeneratedCommandsNV-None-08879
All bound graphics shader objects **must** have either been created with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag set, or with identical or `identically`

defined arrays of descriptor set layouts

- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-09372

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes

- VUID-vkCmdExecuteGeneratedCommandsNV-pDynamicStates-08715

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-pDynamicStates-08716

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be 0

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09116

If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them

- VUID-vkCmdExecuteGeneratedCommandsNV-maxFragmentDualSrcAttachments-09239

If `blending` is enabled for any attachment where either the source or destination blend factors for that attachment [use the secondary color input](#), the maximum value of `Location` for any output attachment [statically used](#) in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09548

If the current render pass was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfo::pColorAttachmentLocations` in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09549

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices` in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10927

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader

object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10928

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09642

If the current render pass was begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09643

If the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`, the current render pass **must** have begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10677

If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10772

If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass

- VUID-vkCmdExecuteGeneratedCommandsNV-multiviewPerViewViewports-12262

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-multiviewPerViewViewports-12263

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-11521

If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11522

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11523

If the current render pass instance was begun with `vkCmdBeginRendering` and does not contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not

enabled, the graphics pipeline bound **must** not have been created with a [VkCustomResolveCreateInfoEXT](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11524

If the current render pass instance was begun with [vkCmdBeginRendering](#) and [vkCmdBeginCustomResolveEXT](#) has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with [VkCustomResolveCreateInfoEXT::customResolve](#) as [VK_TRUE](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11525

If the current render pass instance was begun with [vkCmdBeginRendering](#) and contains a custom resolve, and [vkCmdBeginCustomResolveEXT](#) has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with [VkCustomResolveCreateInfoEXT::customResolve](#) as [VK_FALSE](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11861

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled and the current render pass instance was begun with [vkCmdBeginRendering](#) and contains a custom resolve, the bound graphics pipeline **must** have been created with a [VkCustomResolveCreateInfoEXT::colorAttachmentCount](#) equal to [VkRenderingInfo::colorAttachmentCount](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11862

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled, and the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) not equal to [VK_NULL_HANDLE](#) **must** have been created with a [VkFormat](#) equal to the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11863

If the [dynamicRenderingUnusedAttachments](#) feature is not enabled, and the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) equal to [VK_NULL_HANDLE](#) **must** have the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound pipeline equal to [VK_FORMAT_UNDEFINED](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11864

If the [dynamicRenderingUnusedAttachments](#) feature is enabled, the current render pass instance was begun with [vkCmdBeginRendering](#), it contains a custom resolve, and [VkRenderingInfo::colorAttachmentCount](#) greater than 0, then each element of the [VkRenderingInfo::pColorAttachments](#) array with an [resolveImageView](#) not equal to [VK_NULL_HANDLE](#) **must** have been created with a [VkFormat](#) equal to the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#) used to create the bound graphics pipeline, or the corresponding element of [VkCustomResolveCreateInfoEXT::pColorAttachmentFormats](#), if it exists, **must** be [VK_FORMAT_UNDEFINED](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11865

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11866

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11867

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11868

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-11869

If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicRenderingUnusedAttachments-11870

If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsNV-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a

`VkRenderingInfo::colorAttachmentCount` parameter greater than 0 and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsNV-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsNV-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then there **must** be no binding with

`VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13364
If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR` set
- VUID-vkCmdExecuteGeneratedCommandsNV-flags-13365
If there are any shader objects bound that were created with `flags` that includes both the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` and `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` bits, there **must** be no shader object bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04007
All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** have either valid or `VK_NULL_HANDLE` buffers bound
- VUID-vkCmdExecuteGeneratedCommandsNV-None-04008
If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-02721
If the `robustBufferAccess` feature is not enabled, and that pipeline was created without enabling `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` for `vertexInputs`, then for a given vertex buffer binding, any attribute data fetched **must** be entirely contained within the corresponding vertex buffer binding, as described in [Vertex Input Description](#)
- VUID-vkCmdExecuteGeneratedCommandsNV-format-10389
For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is a `packed format`, and the `legacyVertexAttributes` feature is not enabled, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `size of the format`
- VUID-vkCmdExecuteGeneratedCommandsNV-format-10390
For each vertex attribute accessed by this command, if its `VkVertexInputAttributeDescription::format` or `VkVertexInputAttributeDescription2EXT::format` is not a `packed format`, and either the `legacyVertexAttributes` feature is not enabled or `format` has 64-bit components, the value of `attribAddress`, calculated as described in [Vertex Input Calculation](#), **must** be a multiple of the `component size of the format`
- VUID-vkCmdExecuteGeneratedCommandsNV-None-07842
If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then

`vkCmdSetPrimitiveTopology` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-dynamicPrimitiveTopologyUnrestricted-07500

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` **must** be of the same `topology class` as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10286

If a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage is bound, then the `current value` of `primitiveTopology` **must** be `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10747

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` prior to this drawing command, then a `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage **must** be bound

- VUID-vkCmdExecuteGeneratedCommandsNV-primitiveTopology-10748

If `vkCmdSetPrimitiveTopology` set `primitiveTopology` to `VK_PRIMITIVE_TOPOLOGY_POINT_LIST` prior to this drawing command, the `maintenance5` feature is not enabled, both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` and `VK_SHADER_STAGE_GEOMETRY_BIT` stage are not bound, then the `Vertex Execution Model` **must** have a `PointSize` decorated variable that is statically written to

- VUID-vkCmdExecuteGeneratedCommandsNV-pStrides-04913

If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2` with a non-NULL `pStrides` parameter or `vkCmdBindVertexBuffers3KHR` with `setStride` set to `VK_TRUE` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-13118

If the bound graphics pipeline was created without the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` dynamic state enabled, without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, and `vkCmdBindVertexBuffers3KHR` was called and not subsequently `invalidated` in the current command buffer prior to this draw command, the value of `setStride` in each of its `pBindInfos` elements must have been `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04914

If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this draw command

- VUID-vkCmdExecuteGeneratedCommandsNV-Input-07939

If the `vertexAttributeRobustness` feature is not enabled, and the `maintenance9` feature is not

enabled, and there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled then all variables with the **Input** storage class decorated with **Location** in the **Vertex Execution Model OpEntryPoint** **must** contain a location in [VkVertexInputAttributeDescription2EXT::location](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-Input-08734

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and either the **legacyVertexAttributes** feature is not enabled or the SPIR-V Type associated with a given **Input** variable of the corresponding **Location** in the **Vertex Execution Model OpEntryPoint** is 64-bit, then the numeric type associated with all **Input** variables of the corresponding **Location** in the **Vertex Execution Model OpEntryPoint** **must** be the same as [VkVertexInputAttributeDescription2EXT::format](#)

- VUID-vkCmdExecuteGeneratedCommandsNV-format-08936

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and [VkVertexInputAttributeDescription2EXT::format](#) has a 64-bit component, then the scalar width associated with all **Input** variables of the corresponding **Location** in the **Vertex Execution Model OpEntryPoint** **must** be 64-bit

- VUID-vkCmdExecuteGeneratedCommandsNV-format-08937

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and the scalar width associated with a **Location** decorated **Input** variable in the **Vertex Execution Model OpEntryPoint** is 64-bit, then the corresponding [VkVertexInputAttributeDescription2EXT::format](#) **must** have a 64-bit component

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09203

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VERTEX_INPUT_EXT](#) dynamic state enabled and [VkVertexInputAttributeDescription2EXT::format](#) has a 64-bit component, then all **Input** variables at the corresponding **Location** in the **Vertex Execution Model OpEntryPoint** **must** not use components that are not present in the format

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04875

If there is a shader object bound to the [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage or the bound graphics pipeline state was created with both a [VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT](#) stage and the [VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT](#) dynamic state enabled, and the current value of **primitiveTopology** is [VK_PRIMITIVE_TOPOLOGY_PATCH_LIST](#), then [vkCmdSetPatchControlPointsEXT](#) **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-04879

If there is a shader object bound to the [VK_SHADER_STAGE_VERTEX_BIT](#) stage or the

bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-None-09637

If the `primitiveTopologyListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, or `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled, then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-10909

If the `primitiveTopologyPatchListRestart` feature is not enabled, the `input assembly` is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, there is a shader object bound to the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` **must** be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsNV-stage-06481

The bound graphics pipeline **must** not have been created with the `VkPipelineShaderStageCreateInfo::stage` member of any element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-08885

There **must** be no shader object bound to either of the `VK_SHADER_STAGE_TASK_BIT_EXT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages

- VUID-vkCmdExecuteGeneratedCommandsNV-None-07619

If a shader object is bound to the `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage and the `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` dynamic state enabled, then `vkCmdSetTessellationDomainOriginEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12239

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the type of subdivision, they **must** be the same

- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12240

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the orientation of triangles, they **must** be the same

- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12241

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and

`VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the segment spacing, they **must** be the same

- VUID-vkCmdExecuteGeneratedCommandsNV-OpExecutionMode-12242

If a shader is bound to both the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT` and `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stages, and if both stages contain an `OpExecutionMode` instruction specifying the output patch size, they **must** be the same

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-02970

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdExecuteGeneratedCommandsNV-isPreprocessed-02908

If `isPreprocessed` is `VK_TRUE` then `vkCmdPreprocessGeneratedCommandsNV` **must** have already been executed on the device, using the same `pGeneratedCommandsInfo` content as well as the content of the input buffers it references (all except `VkGeneratedCommandsInfoNV::preprocessBuffer`). Furthermore, `pGeneratedCommandsInfo`'s `indirectCommandsLayout` **must** have been created with the `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV` bit set

- VUID-vkCmdExecuteGeneratedCommandsNV-pipeline-02909

`VkGeneratedCommandsInfoNV::pipeline` **must** match the current bound pipeline at `VkGeneratedCommandsInfoNV::pipelineBindPoint`

- VUID-vkCmdExecuteGeneratedCommandsNV-None-02910

Transform feedback **must** not be active

- VUID-vkCmdExecuteGeneratedCommandsNV-deviceGeneratedCommands-02911

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdExecuteGeneratedCommandsNV-pGeneratedCommandsInfo-parameter

`pGeneratedCommandsInfo` **must** be a valid pointer to a valid `VkGeneratedCommandsInfoNV` structure

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-recording

`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdExecuteGeneratedCommandsNV-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdExecuteGeneratedCommandsNV-renderpass

This command **must** only be called inside of a render pass instance

- VUID-vkCmdExecuteGeneratedCommandsNV-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdExecuteGeneratedCommandsNV-videocoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Inside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HCS_BIT	Action Indirection

Conditional Rendering

`vkCmdExecuteGeneratedCommandsNV` is affected by [conditional rendering](#)

The `VkGeneratedCommandsInfoNV` is defined as:

```
// Provided by VK_NV_device_generated_commands
typedef struct VkGeneratedCommandsInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkPipelineBindPoint      pipelineBindPoint;
    VkPipeline               pipeline;
    VkIndirectCommandsLayoutNV indirectCommandsLayout;
    uint32_t                 streamCount;
    const VkIndirectCommandsStreamNV* pStreams;
    uint32_t                 sequencesCount;
    VkBuffer                 preprocessBuffer;
    VkDeviceSize              preprocessOffset;
    VkDeviceSize              preprocessSize;
    VkBuffer                 sequencesCountBuffer;
    VkDeviceSize              sequencesCountOffset;
    VkBuffer                 sequencesIndexBuffer;
    VkDeviceSize              sequencesIndexOffset;
} VkGeneratedCommandsInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBindPoint` is the `VkPipelineBindPoint` used for the `pipeline`.

- **pipeline** is the **VkPipeline** used in the generation and execution process.
- **indirectCommandsLayout** is the **VkIndirectCommandsLayoutNV** that provides the command sequence to generate.
- **streamCount** defines the number of input streams
- **pStreams** is a pointer to an array of **streamCount** **VkIndirectCommandsStreamNV** structures providing the input data for the tokens used in **indirectCommandsLayout**.
- **sequencesCount** is the maximum number of sequences to reserve. If **sequencesCountBuffer** is **VK_NULL_HANDLE**, this is also the actual number of sequences generated.
- **preprocessBuffer** is the **VkBuffer** that is used for preprocessing the input data for execution. If this structure is used with **vkCmdExecuteGeneratedCommandsNV** with its **isPreprocessed** set to **VK_TRUE**, then the preprocessing step is skipped and data in this buffer will not be modified. The contents and the layout of this buffer are opaque to applications and **must** not be modified outside functions related to device-generated commands or copied to another buffer for reuse.
- **preprocessOffset** is the byte offset into **preprocessBuffer** where the preprocessed data is stored.
- **preprocessSize** is the maximum byte size within the **preprocessBuffer** after the **preprocessOffset** that is available for preprocessing.
- **sequencesCountBuffer** is a **VkBuffer** in which the actual number of sequences is provided as single **uint32_t** value.
- **sequencesCountOffset** is the byte offset into **sequencesCountBuffer** where the count value is stored.
- **sequencesIndexBuffer** is a **VkBuffer** that encodes the used sequence indices as **uint32_t** array.
- **sequencesIndexOffset** is the byte offset into **sequencesIndexBuffer** where the index values start.

Valid Usage

- VUID-VkGeneratedCommandsInfoNV-pipeline-02912
The provided **pipeline** **must** match the pipeline bound at execution time
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02913
If the **indirectCommandsLayout** uses a token of **VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV**, then the **pipeline** **must** have been created with multiple shader groups
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02914
If the **indirectCommandsLayout** uses a token of **VK_INDIRECT_COMMANDS_TOKEN_TYPE_SHADER_GROUP_NV**, then the **pipeline** **must** have been created with **VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV** set in **VkGraphicsPipelineCreateInfo::flags**
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-02915
If the **indirectCommandsLayout** uses a token of **VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV**, then the **pipeline's** **VkPipelineLayout** **must** match the **VkIndirectCommandsLayoutTokenNV::pushconstantPipelineLayout**
- VUID-VkGeneratedCommandsInfoNV-streamCount-02916

`streamCount` **must** match the `indirectCommandsLayout`'s `streamCount`

- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09084

If `pipelineBindPoint` is of type `VK_PIPELINE_BIND_POINT_COMPUTE`, then the `pipeline` **must** have been created with the flag `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV`

- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09085

If `pipelineBindPoint` is of type `VK_PIPELINE_BIND_POINT_COMPUTE`, then the `pipeline` **must** have been created with a `VkComputePipelineIndirectBufferInfoNV` structure specifying a valid address where its metadata will be saved

- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09086

If `pipelineBindPoint` is of type `VK_PIPELINE_BIND_POINT_COMPUTE`, then `vkCmdUpdatePipelineIndirectBufferNV` **must** have been called on that pipeline to save its metadata to a device address

- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-09087

If `pipelineBindPoint` is of type `VK_PIPELINE_BIND_POINT_COMPUTE`, and if `VK_INDIRECT_COMMANDS_TOKEN_TYPE_PIPELINE_NV` is used, then `pipeline` **must** be `VK_NULL_HANDLE`

- VUID-VkGeneratedCommandsInfoNV-sequencesCount-02917

`sequencesCount` **must** be less or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::maxIndirectSequenceCount` and `VkGeneratedCommandsMemoryRequirementsInfoNV::maxSequencesCount` that was used to determine the `preprocessSize`

- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-02918

`preprocessBuffer` **must** have the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set in its usage flag

- VUID-VkGeneratedCommandsInfoNV-preprocessOffset-02919

`preprocessOffset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minIndirectCommandsBufferOffsetAlignment`

- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-02971

If `preprocessBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-VkGeneratedCommandsInfoNV-preprocessSize-02920

`preprocessSize` **must** be at least equal to the memory requirement's size returned by `vkGetGeneratedCommandsMemoryRequirementsNV` using the matching inputs (`indirectCommandsLayout`, ...) as within this structure

- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02921

`sequencesCountBuffer` **can** be set if the actual used count of sequences is sourced from the provided buffer. In that case the `sequencesCount` serves as upper bound

- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02922

If `sequencesCountBuffer` is not `VK_NULL_HANDLE`, its usage flag **must** have the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set

- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02923

If `sequencesCountBuffer` is not `VK_NULL_HANDLE`, `sequencesCountOffset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minSequencesCountBufferOffsetAlignment`

- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-02972
If `sequencesCountBuffer` is not `VK_NULL_HANDLE` and is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02924
If `indirectCommandsLayout`'s `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_INDEXED_SEQUENCES_BIT_NV` is set, `sequencesIndexBuffer` **must** be set otherwise it **must** be `VK_NULL_HANDLE`
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02925
If `sequencesIndexBuffer` is not `VK_NULL_HANDLE`, its usage flag **must** have the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` bit set
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02926
If `sequencesIndexBuffer` is not `VK_NULL_HANDLE`, `sequencesIndexOffset` **must** be aligned to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV::minSequencesIndexBufferOffsetAlignment`
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-02973
If `sequencesIndexBuffer` is not `VK_NULL_HANDLE` and is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-07078
If the `indirectCommandsLayout` uses a token of `VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_TASKS_NV`, then the pipeline **must** contain a shader stage using the `MeshNV Execution Model`
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-07079
If the `indirectCommandsLayout` uses a token of `VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_NV`, then the pipeline **must** contain a shader stage using the `MeshEXT Execution Model`

Valid Usage (Implicit)

- VUID-VkGeneratedCommandsInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_GENERATED_COMMANDS_INFO_NV`
- VUID-VkGeneratedCommandsInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkGeneratedCommandsInfoNV-pipelineBindPoint-parameter
`pipelineBindPoint` **must** be a valid `VkPipelineBindPoint` value
- VUID-VkGeneratedCommandsInfoNV-pipeline-parameter
If `pipeline` is not `VK_NULL_HANDLE`, `pipeline` **must** be a valid `VkPipeline` handle
- VUID-VkGeneratedCommandsInfoNV-indirectCommandsLayout-parameter
`indirectCommandsLayout` **must** be a valid `VkIndirectCommandsLayoutNV` handle
- VUID-VkGeneratedCommandsInfoNV-pStreams-parameter

`pStreams` **must** be a valid pointer to an array of `streamCount` valid `VkIndirectCommandsStreamNV` structures

- VUID-VkGeneratedCommandsInfoNV-preprocessBuffer-parameter
`preprocessBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkGeneratedCommandsInfoNV-sequencesCountBuffer-parameter
If `sequencesCountBuffer` is not `VK_NULL_HANDLE`, `sequencesCountBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkGeneratedCommandsInfoNV-sequencesIndexBuffer-parameter
If `sequencesIndexBuffer` is not `VK_NULL_HANDLE`, `sequencesIndexBuffer` **must** be a valid `VkBuffer` handle
- VUID-VkGeneratedCommandsInfoNV-streamCount-arraylength
`streamCount` **must** be greater than 0
- VUID-VkGeneratedCommandsInfoNV-commonparent
Each of `indirectCommandsLayout`, `pipeline`, `preprocessBuffer`, `sequencesCountBuffer`, and `sequencesIndexBuffer` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Referencing the functions defined in [Indirect Commands Layout](#), `vkCmdExecuteGeneratedCommandsNV` behaves as:

```
uint32_t sequencesCount = sequencesCountBuffer ?
    min(maxSequencesCount, sequencesCountBuffer.load_uint32(sequencesCountOffset)) :
    maxSequencesCount;

cmdProcessAllSequences(commandBuffer, pipeline,
                      indirectCommandsLayout, pIndirectCommandsStreams,
                      sequencesCount,
                      sequencesIndexBuffer, sequencesIndexOffset);

// The stateful commands within indirectCommandsLayout will not
// affect the state of subsequent commands in the target
// command buffer (cmd)
```

NOTE

It is important to note that the values of all state related to the `pipelineBindPoint` used are undefined after this command.

Commands **can** be preprocessed prior execution using the following command:

```
// Provided by VK_NV_device_generated_commands
void vkCmdPreprocessGeneratedCommandsNV(
    VkCommandBuffer                commandBuffer,
    const VkGeneratedCommandsInfoNV* pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer which does the preprocessing.
- `pGeneratedCommandsInfo` is a pointer to a `VkGeneratedCommandsInfoNV` structure containing parameters affecting the preprocessing step.

Valid Usage

- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-02974
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdPreprocessGeneratedCommandsNV-pGeneratedCommandsInfo-02927
`pGeneratedCommandsInfo->indirectCommandsLayout` **must** have been created with the `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_NV` bit set
- VUID-vkCmdPreprocessGeneratedCommandsNV-deviceGeneratedCommands-02928
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV::deviceGeneratedCommands` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPreprocessGeneratedCommandsNV-pGeneratedCommandsInfo-parameter
`pGeneratedCommandsInfo` **must** be a valid pointer to a valid `VkGeneratedCommandsInfoNV` structure
- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPreprocessGeneratedCommandsNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPreprocessGeneratedCommandsNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdPreprocessGeneratedCommandsNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdPreprocessGeneratedCommandsNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdPreprocessGeneratedCommandsNV` is not affected by [conditional rendering](#)

The bound descriptor sets and push constants that will be used with indirect command generation for the compute pipelines **must** already be specified at the time of preprocessing commands with `vkCmdPreprocessGeneratedCommandsNV`. They **must** not change until the execution of indirect commands is submitted with `vkCmdExecuteGeneratedCommandsNV`.

If push constants for the compute pipeline are also specified in the `VkGeneratedCommandsInfoNV::indirectCommandsLayout` with `VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_NV` token, then those values override the push constants that were previously pushed for the compute pipeline.

With `VK_EXT_device_generated_commands`, the actual generation of commands as well as their execution on the device is handled as single action with:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdExecuteGeneratedCommandsEXT(
    VkCommandBuffer          commandBuffer,
    VkBool32                 isPreprocessed,
    const VkGeneratedCommandsInfoEXT* pGeneratedCommandsInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `isPreprocessed` represents whether the input data has already been preprocessed on the device. If it is `VK_FALSE` this command will implicitly trigger the preprocessing step, otherwise not.
- `pGeneratedCommandsInfo` is a pointer to a `VkGeneratedCommandsInfoEXT` structure containing parameters affecting the generation of commands.

If the `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_UNORDERED_SEQUENCES_BIT_EXT` flag was used to create the `VkGeneratedCommandsInfoEXT::indirectCommandsLayout` then the execution of sequences through this command **may** use implementation-defined ordering which is not guaranteed to be coherent using the same input data. It does not affect the order of token processing within a sequence. This is the implied ordering with `VK_INDIRECT_COMMANDS_TOKEN_TYPE_DISPATCH_EXT`.

After a call to `vkCmdExecuteGeneratedCommandsEXT`, command buffer state will become undefined according to the tokens executed. This table specifies the relationship between tokens used and state invalidation.

Table 52. Indirect Execution State Invalidation

Common Tokens	States Invalidated
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTE_EXT</code>	Bound shaders and pipelines
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT</code>	Push constant data
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT</code>	Push constant data
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_EXT</code>	Push data
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_DATA_SEQUENCE_INDEX_EXT</code>	Push data
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_INDEX_BUFFER_EXT</code>	Index buffer
<code>VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT</code>	Vertex buffer

Valid Usage

- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`

and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this

command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdExecuteGeneratedCommandsEXT-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdExecuteGeneratedCommandsEXT-cubicRangeClamp-09212

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`

- VUID-vkCmdExecuteGeneratedCommandsEXT-reductionMode-09213

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of

the `OpTypeImage` is `Unknown` then the view's `buffer` features **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08600

If a `bound shader` was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08601

If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10068

For each array of resources that is used by a `bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08114

Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageLayout-00344

If an image descriptor is accessed by a shader, the `VkImageLayout` **must** match the subresource accessible from the `VkImageView` as defined by the `image layout matching rules`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08115

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` **must** have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08116

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08604

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, **must** be valid if they are dynamically used by any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08117

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdSetDescriptorBufferOffsetsEXT`, the bound `VkPipeline` **must** have been created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsEXT-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewType-07752
If a [VkImageView](#) is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)
- VUID-vkCmdExecuteGeneratedCommandsEXT-format-07753
If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the **numeric type** of the view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have four components
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageWrite-04469
If a [VkBufferView](#) is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64
- VUID-vkCmdExecuteGeneratedCommandsEXT-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 32
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04474
If the **sparseImageInt64Atomics** feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an **OpTypeImage** with a **SampledType** with a **Width** of 64 by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-sparseImageInt64Atomics-04475
If the **sparseImageInt64Atomics** feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic

instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpImageBlockMatchWindow-09217

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07288

Any shader invocation executed by this command **must** `terminate`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09600

If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-10746

The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property that is bound to a resource accessed as a result of this command **must** be the active bound `bound tile memory object` in `commandBuffer`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10678

If this command is recorded inside a `tile shading render pass` instance, the stages corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10679

If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDescription-09900

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-dimensionCount-09905

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeTensorARM-09906

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#)

using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#)

`uniformBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11373

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2` for `storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdExecuteGeneratedCommandsEXT-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-protectedNoFault-11456

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-02684

The current render pass **must** be [compatible](#) with the [renderPass](#) member of the [VkGraphicsPipelineCreateInfo](#) structure specified when creating the [VkPipeline](#) bound to [VK_PIPELINE_BIND_POINT_GRAPHICS](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-subpass-02685

The subpass index of the current render pass **must** be equal to the [subpass](#) member of the [VkGraphicsPipelineCreateInfo](#) structure specified when creating the [VkPipeline](#) bound to [VK_PIPELINE_BIND_POINT_GRAPHICS](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-OpTypeImage-07468

If any shader executed by this pipeline accesses an [OpTypeImage](#) variable with a [Dim](#) operand of [SubpassData](#), it **must** be decorated with an [InputAttachmentIndex](#) that corresponds to a valid input attachment in the current subpass

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07469

Input attachment views accessed in a subpass **must** be created with the same [VkFormat](#) as the corresponding subpass definition, and be created with a [VkImageView](#) that is compatible with the attachment referenced by the subpass' [pInputAttachments](#) [[InputAttachmentIndex](#)] in the bound [VkFramebuffer](#) as specified by [Fragment Input Attachment Compatibility](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09595

Input attachment views accessed in a dynamic render pass with a [InputAttachmentIndex](#) referenced by [VkRenderingInputAttachmentIndexInfo](#), or no [InputAttachmentIndex](#) if [VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex](#) or

`VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are `NULL`, **must** be created with a `VkImageView` that is compatible with the corresponding color, depth, or stencil attachment in `VkRenderingInfo`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthInputAttachmentIndex-09596
Input attachment views accessed in a dynamic render pass via a shader object **must** have an `InputAttachmentIndex` if both `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` and `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` are non-`NULL`
- VUID-vkCmdExecuteGeneratedCommandsEXT-InputAttachmentIndex-09597
If an input attachment view accessed in a dynamic render pass via a shader object has an `InputAttachmentIndex`, the `InputAttachmentIndex` **must** match an index in `VkRenderingInputAttachmentIndexInfo`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06537
Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10795
If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10796
If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10797
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, it **must** not be accessed in any way other than as an attachment by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12338
If a color attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_COLOR_BIT` on that attachment, the color attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12339
If a depth attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_DEPTH_BIT` on that attachment, the depth attachment **must** not be written to by this command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-12340
If a stencil attachment is read in this command in any way other than as an attachment, or has been read by any prior command in this subpass as a non-attachment, and `feedback loop` is not enabled for `VK_IMAGE_ASPECT_STENCIL_BIT` on that attachment, the

stencil attachment **must** not be written to by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09003

If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it **must** not be accessed in any way other than as an attachment, storage image, or sampled image by this command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06886

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, **depth writes must** be disabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06887

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back **writeMask** are not zero, and stencil test is enabled, **all stencil ops must** be **VK_STENCIL_OP_KEEP**

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07831

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_VIEWPORT** dynamic state enabled then **vkCmdSetViewport must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07832

If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_SCISSOR** dynamic state enabled then **vkCmdSetScissor must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08617

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_LINE_WIDTH** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **effective rasterization input topology** is in line topology class, then **vkCmdSetLineWidth must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07834

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_DEPTH_BIAS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and the **current value** of **depthBiasEnable** is **VK_TRUE**, then **vkCmdSetDepthBias** or **vkCmdSetDepthBias2EXT must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07835

If a shader object is bound to the **VK_SHADER_STAGE_FRAGMENT_BIT** stage or a graphics pipeline is bound which was created with the **VK_DYNAMIC_STATE_BLEND_CONSTANTS** dynamic state enabled, the **current value** of **rasterizerDiscardEnable** is **VK_FALSE**, and an active color attachment **current value** of **blendEnable** is **VK_TRUE** with a blend equations where any **VkBlendFactor** member is **VK_BLEND_FACTOR_CONSTANT_COLOR**, **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR**, **VK_BLEND_FACTOR_CONSTANT_ALPHA**, or **VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA**, then **vkCmdSetBlendConstants must** have been called and not subsequently **invalidated** in the current command buffer

prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07836

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_DEPTH_BOUNDS](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [depthBoundsTestEnable](#) is [VK_TRUE](#), then [vkCmdSetDepthBounds](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07837

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilCompareMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07838

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_WRITE_MASK](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), and the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilWriteMask](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07839

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_REFERENCE](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilReference](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-maxMultiviewInstanceIndex-02688

If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index **must** be less than or equal to [VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-02689

If the bound graphics pipeline was created with [VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable](#) set to [VK_TRUE](#), then the active depth attachment **must** have been created with the [VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT](#) bit set

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07634

If the [VK_EXT_sample_locations](#) extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT](#) dynamic state enabled, and the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetSampleLocationsEnableEXT](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-06666

If the `VK_EXT_sample_locations` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `sampleLocationsEnable` is `VK_TRUE`, then `vkCmdSetSampleLocationsEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07840

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CULL_MODE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCullMode` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07841

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_FRONT_FACE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetFrontFace` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07843

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, `vkCmdSetDepthTestEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07844

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthWriteEnable` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07845

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `depthTestEnable` is `VK_TRUE`, then `vkCmdSetDepthCompareOp` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07846

If the `depthBounds` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBoundsTestEnable` **must** have been called and not subsequently

[invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07847

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE](#) dynamic state enabled, and the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), then [vkCmdSetStencilTestEnable](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07848

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_STENCIL_OP](#) dynamic state enabled, the [current value](#) of [rasterizerDiscardEnable](#) is [VK_FALSE](#), the [current value](#) of [stencilTestEnable](#) is [VK_TRUE](#), then [vkCmdSetStencilOp](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03417

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) dynamic state enabled, and the state is not inherited, then [vkCmdSetViewportWithCount](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-scissorCount-03418

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT](#) dynamic state enabled, and the state is not inherited, then [vkCmdSetScissorWithCount](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior to this drawing

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-03419

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with both the [VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT](#) and [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) dynamic states enabled, and the state is not inherited, then the [viewportCount](#) parameter of [vkCmdSetViewportWithCount](#) **must** match the [scissorCount](#) parameter of [vkCmdSetScissorWithCount](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04137

If the bound graphics pipeline state was created with the [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) dynamic state enabled, but not the [VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV](#) dynamic state enabled, then the bound graphics pipeline **must** have been created with [VkPipelineViewportWScalingStateCreateInfoNV::viewportCount](#) greater or equal to the [viewportCount](#) parameter in the last call to [vkCmdSetViewportWithCount](#)

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04138

If the [VK_NV_clip_space_w_scaling](#) extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the [VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT](#) and [VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV](#) dynamic state enabled, the [current value](#) of [viewportWScalingEnable](#) is [VK_TRUE](#), then [vkCmdSetViewportWScalingNV](#) **must** have been called and not subsequently [invalidated](#) in the current command buffer prior

to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08636

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV` dynamic state enabled, the **current value** of `viewportWScalingEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportWScalingNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-04139

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, then the bound graphics pipeline **must** have been created with `VkPipelineViewportShadingRateImageStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-shadingRateImage-09233

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_COARSE_SAMPLE_ORDER_NV` and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoarseSampleOrderNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-shadingRateImage-09234

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08637

If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and the **current value** of `shadingRateImageEnable` is `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` **must** be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-VkPipelineVieportCreateInfo-04141

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from

VkPipelineViewportStateCreateInfo, then the bound graphics pipeline **must** have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-VkPipelineVieportCreateInfo-04142

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline **must** have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07878

If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled, then `vkCmdSetExclusiveScissorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07879

If the `exclusiveScissor` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current command buffer set any element of `pExclusiveScissorEnables` to `VK_TRUE`, then `vkCmdSetExclusiveScissorNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04876

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE` dynamic state enabled, then `vkCmdSetRasterizerDiscardEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-04877

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE` dynamic state enabled, and the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthBiasEnable` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-logicOp-04878

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_EXT` dynamic state enabled, the `current value` of `rasterizerDiscardEnable` is `VK_FALSE`, and the `current value` of `logicOpEnable` is `VK_TRUE`, then `vkCmdSetLogicOpEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitiveFragmentShadingRateWithMultipleViewports-04552

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsEXT-

`primitiveFragmentShadingRateWithMultipleViewports-08642`

If the `primitiveFragmentShadingRateWithMultipleViewports` limit is not supported, and any shader object bound to a graphics stage writes to the `PrimitiveShadingRateKHR` built-in, then `vkCmdSetViewportWithCount` **must** have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` **must** be 1

- VUID-vkCmdExecuteGeneratedCommandsEXT-blendEnable-04727

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then for each color attachment, if the corresponding image view's **format features** do not contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`, then the corresponding **current value** of `blendEnable` **must** be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08644

If a shader object is bound to any graphics stage or a graphics pipeline is bound, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and none of the following is enabled:

- the `VK_AMD_mixed_attachment_samples` extension
- the `VK_NV_framebuffer_mixed_samples` extension
- the `multisampledRenderToSingleSampled` feature

then the **current value** of `rasterizationSamples` **must** be the same as the current color and/or depth/stencil attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08876

If a shader object is bound to any graphics stage, the current render pass instance **must** have been begun with `vkCmdBeginRendering`

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06172

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06173

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this

command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06174

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is

`VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this

command **must** not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06175

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is

`VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this

command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06176

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command

must not write any values to the depth attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06177

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this

command **must** not write any values to the stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewMask-06178

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::viewMask` equal to `VkRenderingInfo::viewMask`

- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-06179

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08910

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08912

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo`

::colorAttachmentCount greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08911

If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-09362

If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09363

If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09364

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` **must** have set the blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09365

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then

`vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09366

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetColorBlendEnableEXT` **must** have set blend enable to `VK_FALSE` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-09367

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetRasterizationSamplesEXT` **must** have set `rasterizationSamples` to `VK_SAMPLE_COUNT_1_BIT` prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09368

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09369

If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR` dynamic state enabled, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-pFragmentSize-09370

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->width` to 1 prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-pFragmentSize-09371

If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID` resolve mode, then `vkCmdSetFragmentShadingRateKHR` **must** have set `pFragmentSize->height` to 1 prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07749

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then

`vkCmdSetColorWriteEnableEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-attachmentCount-07750

If the `colorWriteEnable` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled, and the *current value* of `rasterizerDiscardEnable` is `VK_FALSE`, then the *attachmentCount* parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer **must** be greater than or equal to the number of active color attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07751

If the `VK_EXT_discard_rectangles` extension is enabled, a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the *pNext* chain of `VkGraphicsPipelineCreateInfo` included a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the *current value* of `rasterizerDiscardEnable` is `VK_FALSE`, and the *current value* of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-09236

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled and the *pNext* chain of `VkGraphicsPipelineCreateInfo` did not include a `VkPipelineDiscardRectangleStateCreateInfoEXT` structure, the *current value* of `rasterizerDiscardEnable` is `VK_FALSE`, and the *current value* of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command for each discard rectangle in `VkPhysicalDeviceDiscardRectanglePropertiesEXT::maxDiscardRectangles`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07880

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled, the *current value* of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07881

If the `VK_EXT_discard_rectangles` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT` dynamic state enabled, the *current value* of `rasterizerDiscardEnable` is `VK_FALSE`, and the *current value* of `discardRectangleEnable` is `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` **must** have been called and not subsequently *invalidated* in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08913

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08914

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08915

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08916

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08917

If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-08918

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`, the value of the format **must** be

VK_FORMAT_UNDEFINED

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06183

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingLocalRead-11797

If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingLocalRead` feature is enabled, the `VK_RENDERING_LOCAL_READ_CONCURRENT_ACCESS_CONTROL_BIT_KHR` flag is specified, and an attachment is being used as a feedback loop as specified by `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`, `VkRenderingAttachmentFlagsInfoKHR::flags` for that attachment **must** include `VK_RENDERING_ATTACHMENT_INPUT_ATTACHMENT_FEEDBACK_BIT_KHR`

- VUID-vkCmdExecuteGeneratedCommandsEXT-imageView-06184

If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-layers-10831

If the current render pass instance was created with `VK_RENDERING_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE` or `VK_RENDER_PASS_CREATE_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, and the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_PER_LAYER_FRAGMENT_DENSITY_BIT_VALVE`, then the current render pass instance **must** have a `layers` value less than or equal to `VkPipelineFragmentDensityMapLayeredCreateInfoVALVE::maxFragmentDensityMapLayers`

- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-06185

If the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-06186

If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-06187
 If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07285
 If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07286
 If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-multisampledRenderToSingleSampled-07287
 If the bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-pNext-07935
 If this command is called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`
- VUID-vkCmdExecuteGeneratedCommandsEXT-renderPass-06198
 If the current render pass instance was begun with `vkCmdBeginRendering`, the bound pipeline **must** have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal

to `VK_NULL_HANDLE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-08963

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pColorAttachments-11539

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->resolveImageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-08964

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11540

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, depth test is enabled, and the `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-08965

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has not yet been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11860

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, then the

`VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the pipeline **must** not be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-10582

If the current render pass instance was begun with a `vkCmdBeginRendering` call in `commandBuffer`, its `VkRenderingInfo::flags` parameter **must** not have `VK_RENDERING_CONTENTS_SECONDARY_COMMAND_BUFFERS_BIT` set unless `VK_RENDERING_CONTENTS_INLINE_BIT_KHR` is also set

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithRasterizerDiscard-06708

If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, `rasterization discard` **must** not be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-06709

If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline **must** not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07620

If the `depthClamp` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07621

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetPolygonModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07622

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetRasterizationSamplesEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07623

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetSampleMaskEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08919

If the bound graphics pipeline state was created with the

`VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and `alphaToCoverageEnable` was `VK_TRUE` in the last call to `vkCmdSetAlphaToCoverageEnableEXT`, then the **Fragment Output Interface** **must** contain a variable for the alpha **Component** word in **Location** 0 at **Index** 0

- VUID-vkCmdExecuteGeneratedCommandsEXT-alphaToCoverageEnable-08920
If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetAlphaToCoverageEnableEXT` in the current command buffer set `alphaToCoverageEnable` to `VK_TRUE`, then the **Fragment Output Interface** **must** contain a variable for the alpha **Component** word in **Location** 0 at **Index** 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07624
If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToCoverageEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07625
If the `alphaToOne` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07626
If the `logicOp` feature is enabled, a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled, and the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07627
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorBlendEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07629
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic state enabled, the **current value** of `rasterizerDiscardEnable` is `VK_FALSE`, and there are color attachments bound, then `vkCmdSetColorWriteMaskEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07630
If the `geometryStreams` feature is enabled, and a shader object is bound to the

`VK_SHADER_STAGE_GEOMETRY_BIT` stage or a graphics pipeline is bound which was created with both a `VK_SHADER_STAGE_GEOMETRY_BIT` stage and the `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` dynamic state enabled, then `vkCmdSetRasterizationStreamEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07631

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetConservativeRasterizationModeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07632

If the `VK_EXT_conservative_rasterization` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `conservativeRasterizationMode` is `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-conservativePointAndLineRasterization-07499

If the `VK_EXT_conservative_rasterization` extension is enabled, `conservativePointAndLineRasterization` is not supported, a shader object is bound to any graphics stage or a graphics pipeline is bound, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line or point topology class, then the current value of `conservativeRasterizationMode` **must** be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07633

If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state, then `vkCmdSetDepthClipEnableEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07636

If the `VK_EXT_provoking_vertex` extension is enabled, a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` **must** have been called and not subsequently **invalidated** in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08666

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics

pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineRasterizationModeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08669

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the effective rasterization input topology is in line topology class, then `vkCmdSetLineStippleEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07849

If any of the `stippledRectangularLines`, `stippledBresenhamLines` or `stippledSmoothLines` features are enabled and a shader object is bound to any graphics stage, or a bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `stippledLineEnable` is `VK_TRUE`, then `vkCmdSetLineStipple` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10608

If a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled, the effective rasterization input topology is in line topology class, and the current `lineRasterizationMode` is `VK_LINE_RASTERIZATION_MODE_BRESENHAM` or `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the current `alphaToCoverageEnable`, `alphaToOneEnable` and `sampleShadingEnable` states **must** all be `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07639

If the `depthClipControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT` dynamic state enabled, then `vkCmdSetDepthClipNegativeOneToOneEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09650

If the `depthClampControl` feature is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_RANGE_EXT` dynamic state enabled, and the current value of `depthClampEnable` is `VK_TRUE`, then `vkCmdSetDepthClampRangeEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07640

If the `VK_NV_clip_space_w_scaling` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV` dynamic state enabled, then `vkCmdSetViewportWScalingEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07641

If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then `vkCmdSetViewportSwizzleNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07642

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageToColorEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07643

If the `VK_NV_fragment_coverage_to_color` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageToColorEnable` is `VK_TRUE`, then `vkCmdSetCoverageToColorLocationNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07644

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetCoverageModulationModeNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07645

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` dynamic state enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and the current value of `coverageModulationMode` is any value other than `VK_COVERAGE_MODULATION_MODE_NONE_NV`, then `vkCmdSetCoverageModulationTableEnableNV` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07646

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV dynamic state enabled, the current value of rasterizerDiscardEnable is VK_FALSE, and the current value of coverageModulationTableEnable is VK_TRUE, then vkCmdSetCoverageModulationTableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07647

If the shadingRateImage feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetShadingRateImageEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-pipelineFragmentShadingRate-09238

If the pipelineFragmentShadingRate feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetFragmentShadingRateKHR **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07648

If the representativeFragmentTest feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetRepresentativeFragmentTestEnableNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07649

If the coverageReductionMode feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV dynamic state enabled, and the current value of rasterizerDiscardEnable is VK_FALSE, then vkCmdSetCoverageReductionModeNV **must** have been called and not subsequently invalidated in the current command buffer prior to this drawing command

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07471

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the rasterizationSamples in the last call to vkCmdSetRasterizationSamplesEXT **must** follow the rules for a zero-attachment subpass

- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07472

If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT state enabled and the VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the samples parameter in the last call to vkCmdSetSampleMaskEXT **must** be greater or equal to the VkPipelineMultisampleStateCreateInfo::rasterizationSamples parameter used to create

the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-samples-07473

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` **must** be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09211

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` **must** be the same as the `rasterizationSamples` member of that structure

- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07476

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorBlendEnableEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-firstAttachment-07478

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT` dynamic states enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then the last call to `vkCmdSetColorWriteMaskEXT` in the current command buffer prior to this drawing command **must** have set a value for all active color attachments

- VUID-vkCmdExecuteGeneratedCommandsEXT-advancedBlendMaxColorAttachments-07480

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic states enabled, the current value of `rasterizerDiscardEnable` is `VK_FALSE`, and an active color attachment current value of `blendEnable` is `VK_TRUE`, then the number of active color attachments **must** not exceed `advancedBlendMaxColorAttachments`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10862

If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-10863
If a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`, but not the `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetColorBlendAdvancedEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10864
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound was created with `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` and `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then either `vkCmdSetColorBlendAdvancedEXT` or `vkCmdSetColorBlendEquationEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command for all active color attachments with the `blendEnable` current value of `VK_TRUE`
- VUID-vkCmdExecuteGeneratedCommandsEXT-primitivesGeneratedQueryWithNonZeroStreams-07481
If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, and the bound graphics pipeline was created with `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` state enabled, the last call to `vkCmdSetRasterizationStreamEXT` **must** have set the `rasterizationStream` to zero
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07482
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` member of the `VkPipelineMultisampleStateCreateInfo` structure the bound graphics pipeline has been created with
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsPerPixel-07483
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current value of `sampleLocationsEnable` is `VK_TRUE`, then the `sampleLocationsPerPixel` member of `pSampleLocationsInfo` in the last call to `vkCmdSetSampleLocationsEXT` **must** equal the `rasterizationSamples` parameter of the last call to `vkCmdSetRasterizationSamplesEXT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07484
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT` then the current active depth attachment **must** have been created with the

VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07485

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07486

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.maxSampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07487

If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code **must** not statically use the extended instruction `InterpolateAtSample`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07936

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationGridSize.width` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07937

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then

`sampleLocationsInfo.sampleLocationGridSize.height` **must** evenly divide `VkMultisamplePropertiesEXT::maxSampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-sampleLocationsEnable-07938

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the `current` value of `sampleLocationsEnable` is `VK_TRUE`, then `sampleLocationsInfo.sampleLocationsPerPixel` **must** equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageModulationTableEnable-07488

If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` **must** equal the current `rasterizationSamples` divided by the number of color samples in the current active color attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07489

If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the bound pipeline, then the current `rasterizationSamples` **must** be the same as the sample count of the depth/stencil attachment

- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageToColorEnable-07490

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizerDiscardEnable-09420

If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then there **must** be an active color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` `coverageToColorLocation`, with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-coverageReductionMode-07491

If the `coverageReductionMode` feature is enabled, a shader object is bound to any graphics stage or a graphics pipeline is bound which was created with the

VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV or
VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT dynamic states enabled, then the
current values of coverageReductionMode, rasterizationSamples, the sample counts for the
color and depth/stencil attachments (if the subpass has them) **must** be a valid
combination returned by
vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-07492

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the
VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic state enabled, then the bound
graphics pipeline **must** have been created with
VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount greater or equal to the
viewportCount parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-07493

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and
VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV dynamic states enabled then the
viewportCount parameter in the last call to vkCmdSetViewportSwizzleNV **must** be greater
than or equal to the viewportCount parameter in the last call to
vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsEXT-viewportCount-09421

If the VK_NV_viewport_swizzle extension is enabled, and a shader object is bound to any
graphics stage, then the viewportCount parameter in the last call to
vkCmdSetViewportSwizzleNV **must** be greater than or equal to the viewportCount
parameter in the last call to vkCmdSetViewportWithCount

- VUID-vkCmdExecuteGeneratedCommandsEXT-rasterizationSamples-07494

If the VK_NV_framebuffer_mixed_samples extension is enabled, and the
coverageReductionMode feature is not enabled, or the current value of
coverageReductionMode is not VK_COVERAGE_REDUCTION_MODE_TRUNCATE_NV, and the
current value of rasterizationSamples is greater than sample count of the color
attachment, then sample shading **must** be disabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07495

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or
VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if
the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode
state is VK_LINE_RASTERIZATION_MODE_RECTANGULAR, then the
stippledRectangularLines feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07496

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT or
VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT dynamic states enabled, and if
the current stippledLineEnable state is VK_TRUE and the current lineRasterizationMode
state is VK_LINE_RASTERIZATION_MODE_BRESENHAM, then the stippledBresenhamLines
feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07497
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH`, then the `stippledSmoothLines` feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-stippledLineEnable-07498
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT`, then the `stippledRectangularLines` feature **must** be enabled and `VkPhysicalDeviceLimits::strictLines` **must** be `VK_TRUE`
- VUID-vkCmdExecuteGeneratedCommandsEXT-stage-07073
If the bound pipeline was created with the `VkPipelineShaderStageCreateInfo::stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then `Mesh Shader Queries` **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08877
If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage or a graphics pipeline is bound which was created with the `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` dynamic state enabled, and the current value of `rasterizerDiscardEnable` is `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` **must** have been called and not subsequently `invalidated` in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-07850
If dynamic state was inherited from `VkCommandBufferInheritanceViewportScissorInfoNV`, it **must** be set in the current command buffer prior to this drawing command
- VUID-vkCmdExecuteGeneratedCommandsEXT-nextStage-10745
For each shader object bound to a graphics stage, except for shader object bound to the last graphics stage in the logical pipeline, it **must** have been created with a `nextStage` including the corresponding bit to the shader object bound to the following graphics stage in the logical pipeline
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08684
If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08685
If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08686

If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08687

If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08688

If there is no bound graphics pipeline, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08689

If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08690

If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` **must** have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08693

If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages **must** have a valid `VkShaderEXT` bound, and the other **must** have no `VkShaderEXT` bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08696

If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there **must** be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08698

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call **must** also be bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08699

If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call **must** not have any `VkShaderEXT` bound

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08878

All bound graphics shader objects **must** have been created with identical or **identically defined** push constant ranges

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-08879

All bound graphics shader objects **must** have either been created with the

VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag set, or with identical or **identically defined** arrays of descriptor set layouts

- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-09372
If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_BIT_ANDROID`, and a fragment shader is bound, it **must** not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08715
If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` **must** be `VK_FALSE`
- VUID-vkCmdExecuteGeneratedCommandsEXT-pDynamicStates-08716
If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` **must** be 0
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09116
If a shader object is bound to any graphics stage or the bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` **must** either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them
- VUID-vkCmdExecuteGeneratedCommandsEXT-maxFragmentDualSrcAttachments-09239
If **blending** is enabled for any attachment where either the source or destination blend factors for that attachment **use the secondary color input**, the maximum value of `Location` for any output attachment **statically used** in the `Fragment Execution Model` executed by this command **must** be less than `maxFragmentDualSrcAttachments`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09548
If the current render pass was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfo::pColorAttachmentLocations` in the bound pipeline **must** match the value for the corresponding locations set currently in the current render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09549
If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingInputAttachmentIndexInfo::pColorAttachmentInputIndices` in the bound pipeline **must** match the value for the corresponding index set currently in the current render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10927

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pDepthInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10928

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of `VkRenderingInputAttachmentIndexInfo::pStencilInputAttachmentIndex` in the bound pipeline **must** match the value set currently in the current render pass instance

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09642

If the current render pass was begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag, the bound graphics pipeline **must** have been created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-09643

If the bound graphics pipeline was created with `VK_PIPELINE_CREATE_2_ENABLE_LEGACY_DITHERING_BIT_EXT`, the current render pass **must** have begun with `vkCmdBeginRendering` with the `VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT` flag

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10677

If the `per-tile execution model` is enabled, the `tileShadingPerTileDraw` feature **must** be enabled

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-10772

If a shader object is bound to any graphics stage, *multiview* functionality **must** not be enabled in the current render pass

- VUID-vkCmdExecuteGeneratedCommandsEXT-multiviewPerViewViewports-12262

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `viewportCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-multiviewPerViewViewports-12263

If the `multiviewPerViewViewports` feature is enabled, then the index of the most significant bit in current render pass instance `viewMask` **must** be less than the `current value` of `scissorCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-11521

If current render pass instance was begun with `vkCmdBeginRendering` with `VkRenderingInfo::flags` which includes `VK_RENDERING_FRAGMENT_REGION_BIT_EXT`, and if `sample shading` is enabled (explicitly or implicitly), then the minimum fraction for sample shading **must** equal 0.0

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11522

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11523

If the current render pass instance was begun with `vkCmdBeginRendering` and does not

contain a custom resolve, and the `dynamicRenderingUnusedAttachments` feature is not enabled, the graphics pipeline bound **must** not have been created with a `VkCustomResolveCreateInfoEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11524

If the current render pass instance was begun with `vkCmdBeginRendering` and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11525

If the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, and `vkCmdBeginCustomResolveEXT` has not been recorded in the render pass instance, the graphics pipeline bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11861

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, the bound graphics pipeline **must** have been created with a `VkCustomResolveCreateInfoEXT::colorAttachmentCount` equal to `VkRenderingInfo::colorAttachmentCount`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11862

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11863

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` equal to `VK_NULL_HANDLE` **must** have the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound pipeline equal to `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11864

If the `dynamicRenderingUnusedAttachments` feature is enabled, the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with an `resolveImageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats` used to create the bound graphics pipeline, or the corresponding element of `VkCustomResolveCreateInfoEXT::pColorAttachmentFormats`, if it exists, **must** be `VK_FORMAT_UNDEFINED`

- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11865
If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11866
If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11867
If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::depthAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11868
If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11869
If current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline **must** be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`
- VUID-vkCmdExecuteGeneratedCommandsEXT-dynamicRenderingUnusedAttachments-11870
If the current render pass instance was begun with `vkCmdBeginRendering`, it contains a custom resolve, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, and the value of `VkCustomResolveCreateInfoEXT::stencilAttachmentFormat` used to create the bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`, the value of the format **must** be `VK_FORMAT_UNDEFINED`
- VUID-vkCmdExecuteGeneratedCommandsEXT-colorAttachmentCount-11871

If the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0 and `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, then for each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE`, the `resolveImageView` **must** have been created with a sample count equal to the value of `rasterizationSamples` for the bound graphics pipeline

- VUID-vkCmdExecuteGeneratedCommandsEXT-pDepthAttachment-11872

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, and `VkRenderingInfo::pDepthAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsEXT-pStencilAttachment-11873

If the current render pass instance was begun with `vkCmdBeginRendering`, `vkCmdBeginCustomResolveEXT` has been recorded in the render pass instance, `VkRenderingInfo::pStencilAttachment->resolveImageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the bound graphics pipeline **must** be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->resolveImageView`

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11529

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering`, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_TRUE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-customResolve-11530

If a shader object is bound to the fragment stage, the current render pass instance was begun with `vkCmdBeginRendering` and contains a custom resolve, a fragment density map attachment is active, and `vkCmdBeginCustomResolveEXT` has not yet been called, then the fragment shader object bound **must** have been created with `VkCustomResolveCreateInfoEXT::customResolve` as `VK_FALSE`

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13361

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then all bound shader objects **must** have been created with the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13362

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, then the pipeline layout of the bound descriptor sets **must** have been created with `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` set

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13363

If there are any shader objects bound that were created with `flags` that includes the `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR` bit, and any of the descriptor set layouts used to create the pipeline layout of the bound descriptor sets were created with any binding's `VkDescriptorSetLayoutBinding::stageFlags` set with `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or

VK_SHADER_STAGE_GEOMETRY_BIT, then there **must** be no binding with VkDescriptorSetLayoutBinding::stageFlags set with VK_SHADER_STAGE_TASK_BIT_EXT or VK_SHADER_STAGE_MESH_BIT_EXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13364

If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, the pipeline layout of the bound descriptor sets **must** have been created with VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR set

- VUID-vkCmdExecuteGeneratedCommandsEXT-flags-13365

If there are any shader objects bound that were created with flags that includes both the VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR and VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT bits, there **must** be no shader object bound to the VK_SHADER_STAGE_TASK_BIT_EXT stage

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11045

commandBuffer **must** not be a protected command buffer

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11046

If isPreprocessed is VK_TRUE and vkGetGeneratedCommandsMemoryRequirementsEXT did not return a required size of zero then vkCmdPreprocessGeneratedCommandsEXT **must** have already been executed on the device before this command executes, and the preprocessing command **must** have used the same pGeneratedCommandsInfo content as well as the content of the input buffers it references (all except VkGeneratedCommandsInfoEXT::preprocessAddress)

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11047

If isPreprocessed is VK_TRUE then the indirectCommandsLayout member of pGeneratedCommandsInfo **must** have been created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set

- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11141

If the indirectCommandsLayout member of pGeneratedCommandsInfo was created with the VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT bit set, then isPreprocessed **must** be VK_TRUE

- VUID-vkCmdExecuteGeneratedCommandsEXT-preprocessAddress-11142

The contents of the preprocessAddress member of pGeneratedCommandsInfo **must** not have been previously used to record another vkCmdExecuteGeneratedCommandsEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11048

If isPreprocessed is VK_TRUE then the bound descriptor sets and push constants **must** match identically with those bound during recording of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-10198

If isPreprocessed is VK_TRUE then the conditional render state and its predicate value **must** match identically with the state and value set during execution of the corresponding call to vkCmdPreprocessGeneratedCommandsEXT

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11049

If `isPreprocessed` is `VK_TRUE` and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a draw token, then the graphics state bound on `commandBuffer` **must** match identically with the graphics state bound on the `stateCommandBuffer` passed to `vkCmdPreprocessGeneratedCommandsEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11149

If `isPreprocessed` is `VK_TRUE`, then the queue family index of `commandBuffer` **must** be the same as the queue family index used to allocate the `stateCommandBuffer` passed to `vkCmdPreprocessGeneratedCommandsEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11051

If `isPreprocessed` is `VK_TRUE` and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a dispatch token, then the compute state bound on `commandBuffer` **must** match identically with the compute state bound on the `stateCommandBuffer` passed to `vkCmdPreprocessGeneratedCommandsEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11052

If `isPreprocessed` is `VK_TRUE` and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a ray tracing token, then the ray tracing state bound on `commandBuffer` **must** match identically with the ray tracing state bound on the `stateCommandBuffer` passed to `vkCmdPreprocessGeneratedCommandsEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11150

If `isPreprocessed` is `VK_TRUE` and the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a ray tracing token, the queue family index `commandBuffer` was allocated from **must** be the same queue family index used to allocate the `stateCommandBuffer` passed to `vkCmdPreprocessGeneratedCommandsEXT`

- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11053

If the token sequence of the passed `VkGeneratedCommandsInfoEXT::indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the initial shader state of `VkGeneratedCommandsInfoEXT::indirectExecutionSet` **must** be bound on `commandBuffer`

- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11004

If `indirectCommandsLayout` was created with a token sequence that contained the `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token and `indirectExecutionSet` was created using `VK_INDIRECT_EXECUTION_SET_INFO_TYPE_SHADER_OBJECTS_EXT`, every executed `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token **must** bind all the shader stages set in the `VkIndirectCommandsExecutionSetTokenEXT::shaderStages` used to create `indirectCommandsLayout`

- VUID-vkCmdExecuteGeneratedCommandsEXT-isPreprocessed-11055

If `isPreprocessed` is `VK_TRUE` and the token sequence of the passed `VkGeneratedCommandsInfoEXT::indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the members of `VkGeneratedCommandsInfoEXT::indirectExecutionSet` accessed by this command **must** not have been modified since the preprocess buffer was generated

- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-11056

If the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a draw token,

then the active render pass **must** not have a specified fragment density map

- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommandsTransformFeedback-11057
If `deviceGeneratedCommandsTransformFeedback` is not supported on device, transform feedback **must** not be active
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectExecutionSet-11058
If transform feedback is active, `VkGeneratedCommandsInfoEXT::indirectExecutionSet` **must** be `VK_NULL_HANDLE`
- VUID-vkCmdExecuteGeneratedCommandsEXT-deviceGeneratedCommands-11059
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-vkCmdExecuteGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11060
The bound shader stages **must** be supported by `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages`
- VUID-vkCmdExecuteGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11061
Only stages specified in `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages` **can** be set in `pGeneratedCommandsInfo->shaderStages`
- VUID-vkCmdExecuteGeneratedCommandsEXT-None-11062
If a rendering pass is currently active, the view mask **must** be `0`
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-11143
`commandBuffer` **must** not have been recorded with `VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT`
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-10769
If the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` contains a draw token, this command **must** not be called outside a render pass instance
- VUID-vkCmdExecuteGeneratedCommandsEXT-indirectCommandsLayout-12202
If the `indirectCommandsLayout` member of `pGeneratedCommandsInfo` does not contain a draw token, this command **must** not be called inside a render pass instance

Valid Usage (Implicit)

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdExecuteGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
`pGeneratedCommandsInfo` **must** be a valid pointer to a valid `VkGeneratedCommandsInfoEXT` structure
- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`

- VUID-vkCmdExecuteGeneratedCommandsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdExecuteGeneratedCommandsEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdExecuteGeneratedCommandsEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdExecuteGeneratedCommandsEXT-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Both	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action Indirection

Conditional Rendering

`vkCmdExecuteGeneratedCommandsEXT` is affected by [conditional rendering](#)

The `VkGeneratedCommandsInfoEXT` is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkGeneratedCommandsInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkShaderStageFlags   shaderStages;
    VkIndirectExecutionSetEXT indirectExecutionSet;
    VkIndirectCommandsLayoutEXT indirectCommandsLayout;
    VkDeviceAddress       indirectAddress;
    VkDeviceSize          indirectAddressSize;
    VkDeviceAddress       preprocessAddress;
    VkDeviceSize          preprocessSize;
    uint32_t              maxSequenceCount;
    VkDeviceAddress       sequenceCountAddress;
    uint32_t              maxDrawCount;
} VkGeneratedCommandsInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderStages` is the mask of shader stages used by the commands.
- `indirectExecutionSet` is the indirect execution set to be used for binding shaders.
- `indirectCommandsLayout` is the `VkIndirectCommandsLayoutEXT` that specifies the command sequence data.
- `indirectAddress` is an address that holds the indirect buffer data.
- `indirectAddressSize` is the size in bytes of indirect buffer data starting at `indirectAddress`.
- `preprocessAddress` specifies a physical address of the `VkBuffer` used for preprocessing the input data for execution. If this structure is used with `vkCmdExecuteGeneratedCommandsEXT` with its `isPreprocessed` set to `VK_TRUE`, then the preprocessing step is skipped but data in this address **may** still be modified. The contents and the layout of this address are opaque to applications and **must** not be modified outside functions related to device-generated commands or copied to another buffer for reuse.
- `preprocessSize` is the maximum byte size within `preprocessAddress` that is available for preprocessing.
- `maxSequenceCount` is used to determine the number of sequences to execute.
- `sequenceCountAddress` specifies an optional physical address of a single `uint32_t` value containing the requested number of sequences to execute.
- `maxDrawCount` is the maximum number of indirect draws that can be executed by any COUNT-type multi-draw indirect tokens. The draw count in the indirect buffer is clamped to this value for these token types.

If `sequenceCountAddress` is not `NULL`, then `maxSequenceCount` is the maximum number of sequences that can be executed. The actual number is `min(maxSequenceCount, *sequenceCountAddress)`. If `sequenceCountAddress` is `NULL`, then `maxSequenceCount` is the exact number of sequences to execute.

If the action command token for the layout is not a COUNT-type multi-draw indirect token,

`maxDrawCount` is ignored.

Valid Usage

- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11063
If `vkGetGeneratedCommandsMemoryRequirementsEXT` returns a non-zero size, `preprocessAddress` **must** not be 0
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11064
`VkDeviceMemory` objects bound to the underlying buffer for `preprocessAddress` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned by `vkGetGeneratedCommandsMemoryRequirementsEXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11065
If the `indirectCommandsLayout` uses a token of `VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT`, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in `VkIndirectCommandsPushConstantTokenEXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11066
If the `indirectCommandsLayout` uses a token of `VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT`, then the `indirectExecutionSet`'s push constant layout **must** contain the `updateRange` specified in `VkIndirectCommandsPushConstantTokenEXT`
- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-11067
`maxSequenceCount` **must** be less or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectSequenceCount` and `VkGeneratedCommandsMemoryRequirementsInfoEXT::maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11068
If `sequenceCountAddress` is not `NULL`, the value contained in the address **must** be less or equal to `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::maxIndirectSequenceCount` and `VkGeneratedCommandsMemoryRequirementsInfoEXT::maxSequenceCount` that was used to determine the `preprocessSize`
- VUID-VkGeneratedCommandsInfoEXT-maxSequenceCount-10246
`maxSequenceCount` **must** not be zero
- VUID-VkGeneratedCommandsInfoEXT-preprocessAddress-11069
`preprocessAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_2_PREPROCESS_BUFFER_BIT_EXT` usage flag set
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11144
If the `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, and there is a descriptor and push constant layout info provided either by `pipelineLayout` or through a `VkPipelineLayoutCreateInfo` in `pNext` of the `VkIndirectCommandsLayoutCreateInfoEXT` used to create `indirectCommandsLayout`, the pipeline layout **must** be `compatible` with the descriptor and push constant layout info used by `indirectExecutionSet`

- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11328
If the `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a `VkPipelineLayoutCreateInfo` in `pNext` of the `VkIndirectCommandsLayoutCreateInfoEXT` used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created with `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11329
If the `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, and there was a descriptor and push constant layout info provided either by `pipelineLayout` or through a `VkPipelineLayoutCreateInfo` in `pNext` of the `VkIndirectCommandsLayoutCreateInfoEXT` used to create `indirectCommandsLayout`, pipelines in `indirectExecutionSet` **must** have been created without `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11330
If the `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, and there was no descriptor and push constant layout info provided either by `pipelineLayout` or through a `VkPipelineLayoutCreateInfo` in `pNext` of the `VkIndirectCommandsLayoutCreateInfoEXT` used to create `indirectCommandsLayout`, shaders in `indirectExecutionSet` **must** have been created with `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11331
If the `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, and there was a descriptor and push constant layout info provided either by `pipelineLayout` or through a `VkPipelineLayoutCreateInfo` in `pNext` of the `VkIndirectCommandsLayoutCreateInfoEXT` used to create `indirectCommandsLayout`, shaders in `indirectExecutionSet` **must** have been created without `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT`
- VUID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11002
If `indirectCommandsLayout` was created with a token sequence that contained the `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the shader stages used to create the initial shader state of `indirectExecutionSet` **must** equal the `VkIndirectCommandsExecutionSetTokenEXT::shaderStages` used to create `indirectCommandsLayout`
- VUID-VkGeneratedCommandsInfoEXT-preprocessSize-11071
`preprocessSize` **must** be greater than or equal to the memory requirement's size returned by `vkGetGeneratedCommandsMemoryRequirementsEXT` using the matching inputs (`indirectCommandsLayout`, ...) as within this structure
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11072
The underlying buffer for `sequenceCountAddress` **must** have the `VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR` bit set in its usage flag
- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-11073
If `sequenceCountAddress` is not `NULL`, `sequenceCountAddress` **must** be aligned to 4
- VUID-VkGeneratedCommandsInfoEXT-indirectAddress-12407
The underlying buffer for `indirectAddress` **must** have the

`VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR` bit set in its usage flag

- `VOID-VkGeneratedCommandsInfoEXT-indirectAddress-11074`
`indirectAddress` **must** be aligned to 4
- `VOID-VkGeneratedCommandsInfoEXT-indirectAddressSize-11077`
`indirectAddressSize` **must** be greater than zero
- `VOID-VkGeneratedCommandsInfoEXT-maxDrawCount-11078`
When not ignored, `maxDrawCount` × `maxSequenceCount` **must** be less than 2^{24}
- `VOID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11079`
If `indirectCommandsLayout` was created using a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_VERTEX_BUFFER_EXT` token and shader objects are not bound then the bound graphics pipeline **must** have been created with `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE` in `pDynamicStates`
- `VOID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-11083`
If the token sequence of the passed `indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the `indirectExecutionSet` **must** not be `VK_NULL_HANDLE`
- `VOID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-10241`
If the token sequence of the passed `indirectCommandsLayout` does not contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the `indirectExecutionSet` **must** be `VK_NULL_HANDLE`
- `VOID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-11080`
If `indirectExecutionSet` is `VK_NULL_HANDLE`, a `VkGeneratedCommandsPipelineInfoEXT` or `VkGeneratedCommandsShaderInfoEXT` **must** be included in the `pNext` chain

Valid Usage (Implicit)

- `VOID-VkGeneratedCommandsInfoEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_GENERATED_COMMANDS_INFO_EXT`
- `VOID-VkGeneratedCommandsInfoEXT-shaderStages-parameter`
`shaderStages` **must** be a valid combination of `VkShaderStageFlagBits` values
- `VOID-VkGeneratedCommandsInfoEXT-shaderStages-requiredbitmask`
`shaderStages` **must** not be 0
- `VOID-VkGeneratedCommandsInfoEXT-indirectExecutionSet-parameter`
If `indirectExecutionSet` is not `VK_NULL_HANDLE`, `indirectExecutionSet` **must** be a valid `VkIndirectExecutionSetEXT` handle
- `VOID-VkGeneratedCommandsInfoEXT-indirectCommandsLayout-parameter`
`indirectCommandsLayout` **must** be a valid `VkIndirectCommandsLayoutEXT` handle
- `VOID-VkGeneratedCommandsInfoEXT-indirectAddress-parameter`
`indirectAddress` **must** be a valid `VkDeviceAddress` value
- `VOID-VkGeneratedCommandsInfoEXT-preprocessAddress-parameter`
If `preprocessAddress` is not 0, `preprocessAddress` **must** be a valid `VkDeviceAddress` value

- VUID-VkGeneratedCommandsInfoEXT-sequenceCountAddress-parameter
If `sequenceCountAddress` is not `0`, `sequenceCountAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkGeneratedCommandsInfoEXT-commonparent
Both of `indirectCommandsLayout`, and `indirectExecutionSet` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Referencing the functions defined in [Indirect Commands Layout](#), `vkCmdExecuteGeneratedCommandsEXT` behaves as:

```
uint32_t sequencesCount = sequenceCountAddress ?
    min(maxSequenceCount, sequenceCountAddress.load_uint32()) :
    maxSequenceCount;

cmdProcessAllSequences(commandBuffer, indirectExecutionSet,
                      indirectCommandsLayout, indirectAddress,
                      sequencesCount);

// The stateful commands within indirectCommandsLayout will not
// affect the state of subsequent commands in the target
// command buffer (cmd)
```

NOTE

It is important to note that the affected values of all state related to the `shaderStages` used are undefined after this command. This means that e.g., if this command indirectly alters push constants, the push constant state becomes undefined.

Commands **can** be preprocessed prior execution using the following command:

```
// Provided by VK_EXT_device_generated_commands
void vkCmdPreprocessGeneratedCommandsEXT(
    VkCommandBuffer                commandBuffer,
    const VkGeneratedCommandsInfoEXT* pGeneratedCommandsInfo,
    VkCommandBuffer                stateCommandBuffer);
```

- `commandBuffer` is the command buffer which does the preprocessing.
- `pGeneratedCommandsInfo` is a pointer to a `VkGeneratedCommandsInfoEXT` structure containing parameters affecting the preprocessing step.
- `stateCommandBuffer` is a command buffer from which to snapshot current states affecting the preprocessing step. When a graphics command action token is used, graphics state is snapshotted. When a compute action command token is used, compute state is snapshotted. When a ray tracing action command token is used, ray tracing state is snapshotted. It can be deleted at any time after this command has been recorded.

NOTE

`stateCommandBuffer` access is not synchronized by the driver, meaning that this command buffer **must** not be modified between threads in an unsafe manner.

Valid Usage

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-11081
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-11082
`pGeneratedCommandsInfo`'s `indirectCommandsLayout` **must** have been created with the `VK_INDIRECT_COMMANDS_LAYOUT_USAGE_EXPLICIT_PREPROCESS_BIT_EXT` bit set
- VUID-vkCmdPreprocessGeneratedCommandsEXT-indirectCommandsLayout-11084
If the token sequence of the passed `VkGeneratedCommandsInfoEXT::indirectCommandsLayout` contains a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_EXECUTION_SET_EXT` token, the initial shader state of `VkGeneratedCommandsInfoEXT::indirectExecutionSet` **must** be bound on `stateCommandBuffer`
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-11138
`stateCommandBuffer` **must** be in the recording state
- VUID-vkCmdPreprocessGeneratedCommandsEXT-deviceGeneratedCommands-11087
The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT::deviceGeneratedCommands` feature **must** be enabled
- VUID-vkCmdPreprocessGeneratedCommandsEXT-supportedIndirectCommandsShaderStages-11088
Only stages specified in `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT::supportedIndirectCommandsShaderStages` **can** be set in `pGeneratedCommandsInfo->shaderStages`

Valid Usage (Implicit)

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-pGeneratedCommandsInfo-parameter
`pGeneratedCommandsInfo` **must** be a valid pointer to a valid `VkGeneratedCommandsInfoEXT` structure
- VUID-vkCmdPreprocessGeneratedCommandsEXT-stateCommandBuffer-parameter
`stateCommandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdPreprocessGeneratedCommandsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdPreprocessGeneratedCommandsEXT-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdPreprocessGeneratedCommandsEXT-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdPreprocessGeneratedCommandsEXT-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdPreprocessGeneratedCommandsEXT-bufferlevel

`commandBuffer` **must** be a primary `VkCommandBuffer`

- VUID-vkCmdPreprocessGeneratedCommandsEXT-commonparent

Both of `commandBuffer`, and `stateCommandBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to `stateCommandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdPreprocessGeneratedCommandsEXT` is not affected by [conditional rendering](#)

The bound descriptor sets and push constants that will be used with indirect command generation **must** already be specified on `stateCommandBuffer` at the time of preprocessing commands with `vkCmdPreprocessGeneratedCommandsEXT`. They **must** match the bound descriptor sets and push constants used in the execution of indirect commands with `vkCmdExecuteGeneratedCommandsEXT`.

If push constants for shader stages are also specified in the `VkGeneratedCommandsInfoEXT::indirectCommandsLayout` with a `VK_INDIRECT_COMMANDS_TOKEN_TYPE_PUSH_CONSTANT_EXT` or `VK_INDIRECT_COMMANDS_TOKEN_TYPE_SEQUENCE_INDEX_EXT` token, then those values override the push constants that were previously pushed.

All [State-setting commands](#) that are bound on [stateCommandBuffer](#) will be used. Any parameters set by those commands **must** be set identically in a command buffer that [vkCmdExecuteGeneratedCommandsEXT](#) is recorded into, at the point [vkCmdExecuteGeneratedCommandsEXT](#) is recorded. If conditional rendering is used, the predicate value at preprocessing time **must** match the one at execution time. The queue family index [stateCommandBuffer](#) was allocated from **must** be the same as the queue family index of the command buffer used in [vkCmdExecuteGeneratedCommandsEXT](#).

On some implementations, preprocessing **may** have no effect on performance.

[vkCmdExecuteGeneratedCommandsEXT](#) **may** write to the preprocess buffer, no matter the `isPreprocess` parameter. In this case, the implementation **must** insert appropriate synchronization automatically, which corresponds to the following pseudocode:

- Barrier
 - `srcStageMask = DRAW_INDIRECT`
 - `srcAccessMask = 0`
 - `dstStageMask = COMMAND_PREPROCESS_BIT`
 - `dstAccessMask = COMMAND_PREPROCESS_WRITE_BIT | COMMAND_PREPROCESS_READ_BIT`
- Do internal writes
- Barrier
 - `srcStageMask = COMMAND_PREPROCESS_BIT`
 - `srcAccessMask = COMMAND_PREPROCESS_WRITE_BIT`
 - `dstStageMask = DRAW_INDIRECT`
 - `dstAccessMask = INDIRECT_COMMAND_READ_BIT`
- Execute

Chapter 38. Sparse Resources

As documented in [Resource Memory Association](#), [VkBuffer](#) and [VkImage](#) resources in Vulkan **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object. This binding **must** be done before the resource is used, and the binding is immutable for the lifetime of the resource.

Sparse resources relax these restrictions and provide these additional features:

- Sparse resources **can** be bound non-contiguously to one or more [VkDeviceMemory](#) allocations.
- Sparse resources **can** be re-bound to different memory allocations over the lifetime of the resource.
- Sparse resources **can** have descriptors generated and used orthogonally with memory binding commands.

38.1. Sparse Resource Features

Sparse resources have several features that **must** be enabled explicitly at resource creation time. The features are enabled by including bits in the [flags](#) parameter of [VkImageCreateInfo](#) or [VkBufferCreateInfo](#). Each feature also has one or more corresponding feature enables specified in [VkPhysicalDeviceFeatures](#).

- The [sparseBinding](#) feature is the base, and provides the following capabilities:
 - Resources **can** be bound at some defined (sparse block) granularity.
 - The entire resource **must** be bound to memory before use regardless of regions actually accessed.
 - No specific mapping of image region to memory offset is defined, i.e. the location that each texel corresponds to in memory is implementation-dependent.
 - Sparse buffers have a well-defined mapping of buffer range to memory range, where an offset into a range of the buffer that is bound to a single contiguous range of memory corresponds to an identical offset within that range of memory.
 - Requested via the [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) and [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) bits.
 - A sparse image created using [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) (but not [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#)) supports all formats that non-sparse usage supports, and supports both [VK_IMAGE_TILING_OPTIMAL](#) and [VK_IMAGE_TILING_LINEAR](#) tiling.
- *Sparse Residency* builds on (and requires) the [sparseBinding](#) feature. It includes the following capabilities:
 - Resources do not have to be completely bound to memory before use on the device.
 - Images have a prescribed sparse image block layout, allowing specific rectangular regions of the image to be bound to specific offsets in memory allocations.
 - Consistency of access to unbound regions of the resource is defined by the absence or presence of [VkPhysicalDeviceSparseProperties::residencyNonResidentStrict](#). If this property is

present, accesses to unbound regions of the resource are well defined and behave as if the data bound is populated with all zeros; writes are discarded. When this property is absent, accesses are considered safe, but reads will return undefined values.

- Requested via the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` and `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` bits.
- Sparse residency support is advertised on a finer grain via the following features:
 - The `sparseResidencyBuffer` feature provides support for creating `VkBuffer` objects with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidencyImage2D` feature provides support for creating 2D single-sampled `VkImage` objects with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidencyImage3D` feature provides support for creating 3D `VkImage` objects with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidency2Samples` feature provides support for creating 2D `VkImage` objects with 2 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidency4Samples` feature provides support for creating 2D `VkImage` objects with 4 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidency8Samples` feature provides support for creating 2D `VkImage` objects with 8 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
 - The `sparseResidency16Samples` feature provides support for creating 2D `VkImage` objects with 16 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.

Implementations supporting `sparseResidencyImage2D` are only **required** to support sparse 2D, single-sampled images. Support for sparse 3D and MSAA images is **optional** and **can** be enabled via `sparseResidencyImage3D`, `sparseResidency2Samples`, `sparseResidency4Samples`, `sparseResidency8Samples`, and `sparseResidency16Samples`.

- A sparse image created using `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` supports all non-compressed color formats with power-of-two element size that non-sparse usage supports. Additional formats **may** also be supported and **can** be queried via `vkGetPhysicalDeviceSparseImageFormatProperties`. `VK_IMAGE_TILING_LINEAR` tiling is not supported.
- The `sparseResidencyAliased` feature provides the following capability that **can** be enabled per resource:

Allows physical memory ranges to be shared between multiple locations in the same sparse resource or between multiple sparse resources, with each binding of a memory location observing a consistent interpretation of the memory contents.

See [Sparse Memory Aliasing](#) for more information.

38.2. Sparse Buffers and Fully-Resident Images

Both `VkBuffer` and `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` or `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` bits **can** be thought of as a linear region of address

space. In the `VkImage` case if `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` is not used, this linear region is entirely opaque, meaning that there is no application-visible mapping between texel location and memory offset.

Unless `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` or `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` are also used, the entire resource **must** be bound to one or more `VkDeviceMemory` objects before use.

38.2.1. Sparse Buffer and Fully-Resident Image Block Size

The sparse block size in bytes for sparse buffers and fully-resident images is reported as `VkMemoryRequirements::alignment`. `alignment` represents both the memory alignment requirement and the binding granularity (in bytes) for sparse resources.

38.3. Sparse Partially-Resident Buffers

`VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` bit allow the buffer to be made only partially resident. Partially resident `VkBuffer` objects are allocated and bound identically to `VkBuffer` objects using only the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` feature. The only difference is the ability for some regions of the buffer to be unbound during device use. After creating a `VkBuffer` with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, the entire buffer region is considered unbound.

38.4. Sparse Partially-Resident Images

`VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` bit allow specific rectangular regions of the image called sparse image blocks to be bound to specific ranges of memory. This allows the application to manage residency at either image subresource or sparse image block granularity. Each image subresource (outside of the `mip tail`) starts on a sparse block boundary and has dimensions that are integer multiples of the corresponding dimensions of the sparse image block. After creating a `VkImage` with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, all image subresources are considered unbound.

NOTE

Applications **can** use these types of images to control LOD based on total memory consumption. If memory pressure becomes an issue the application **can** unbind and disable specific mipmap levels of images without having to recreate resources or modify texel data of unaffected levels.

The application **can** also use this functionality to access subregions of the image in a “megatexture” fashion. The application **can** create a large image and only populate the region of the image that is currently being used in the scene.

38.4.1. Accessing Unbound Regions

The following member of `VkPhysicalDeviceSparseProperties` affects how data in unbound regions of sparse resources are handled by the implementation:

- `residencyNonResidentStrict`

If this property is not present, reads of unbound regions of the image will return undefined values. Both reads and writes are still considered *safe* and will not affect other resources or populated regions of the image.

If this property is present, all reads of unbound regions of the image will behave as if the region was bound to memory populated with all zeros; writes will be discarded.

[Image operations](#) performed on unbound memory **may** still alter some component values in the natural way for those accesses, e.g. substituting a value of one for alpha in formats that do not have an alpha component.

Example: Reading the alpha component of an unbacked [VK_FORMAT_R8_UNORM](#) image will return a value of 1.0f.

If a value was previously written to the same unbound sparse memory location in the same shader invocation, that value **may** be returned instead; using the [VolatileTexel](#) image operand, the [Volatile](#) memory semantic, or the [Volatile](#) decoration to load the value will prevent prior stored values from being returned.

NOTE

Getting the value of the previous store is possible as implementations are free to optimize multiple accesses in the general case. There are other ways this **can** be prevented, but using volatile loads is by far the simplest.

See [Physical Device Enumeration](#) for instructions for retrieving physical device properties.

Implementor's Note

For implementations that **cannot** natively handle access to unbound regions of a resource, the implementation **may** allocate and bind memory to the unbound regions. Reads and writes to unbound regions will access the implementation-managed memory instead.

Given that the values resulting from reads of unbound regions are undefined in this scenario, implementations **may** use the same physical memory for all unbound regions of multiple resources within the same process.

38.4.2. Mip Tail Regions

Sparse images created using [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) (without also using [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#)) have no specific mapping of image region or image subresource to memory offset defined, so the entire image **can** be thought of as a linear opaque address region. However, images created with [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) do have a prescribed sparse image block layout, and hence each image subresource **must** start on a sparse block boundary. Within each array layer, the set of mip levels that have a smaller size than the sparse block size in bytes are grouped together into a *mip tail region*.

If the [VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT](#) flag is present in the [flags](#) member of

`VkSparseImageFormatProperties`, for the image's `format`, then any mip level which has dimensions that are not integer multiples of the corresponding dimensions of the sparse image block, and all subsequent mip levels, are also included in the mip tail region.

The following member of `VkPhysicalDeviceSparseProperties` **may** affect how the implementation places mip levels in the mip tail region:

- `residencyAlignedMipSize`

Each mip tail region is bound to memory as an opaque region (i.e. **must** be bound using a `VkSparseImageOpaqueMemoryBindInfo` structure) and **may** be of a size greater than or equal to the sparse block size in bytes. This size is guaranteed to be an integer multiple of the sparse block size in bytes.

An implementation **may** choose to allow each array-layer's mip tail region to be bound to memory independently or require that all array-layer's mip tail regions be treated as one. This is dictated by `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT` in `VkSparseImageMemoryRequirements::flags`.

The following diagrams depict how `VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT` and `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT` alter memory usage and requirements.

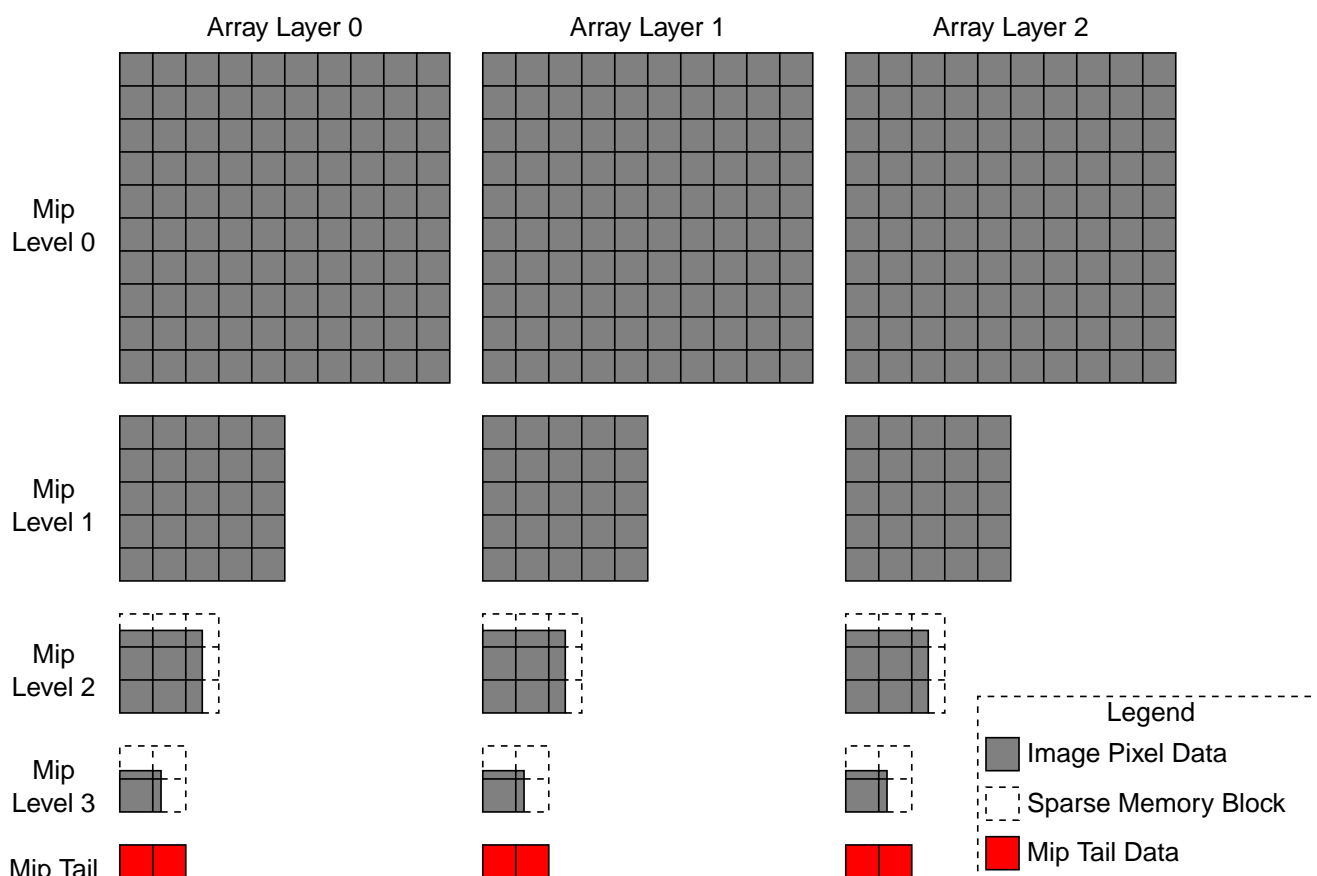

Figure 22. Sparse Image

In the absence of `VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT` and `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT`, each array layer contains a mip tail region containing texel data for all mip levels smaller than the sparse image block in any dimension.

Mip levels that are as large or larger than a sparse image block in all dimensions **can** be bound

individually. Right-edges and bottom-edges of each level are allowed to have partially used sparse blocks. Any bound partially-used-sparse-blocks **must** still have their full sparse block size in bytes allocated in memory.

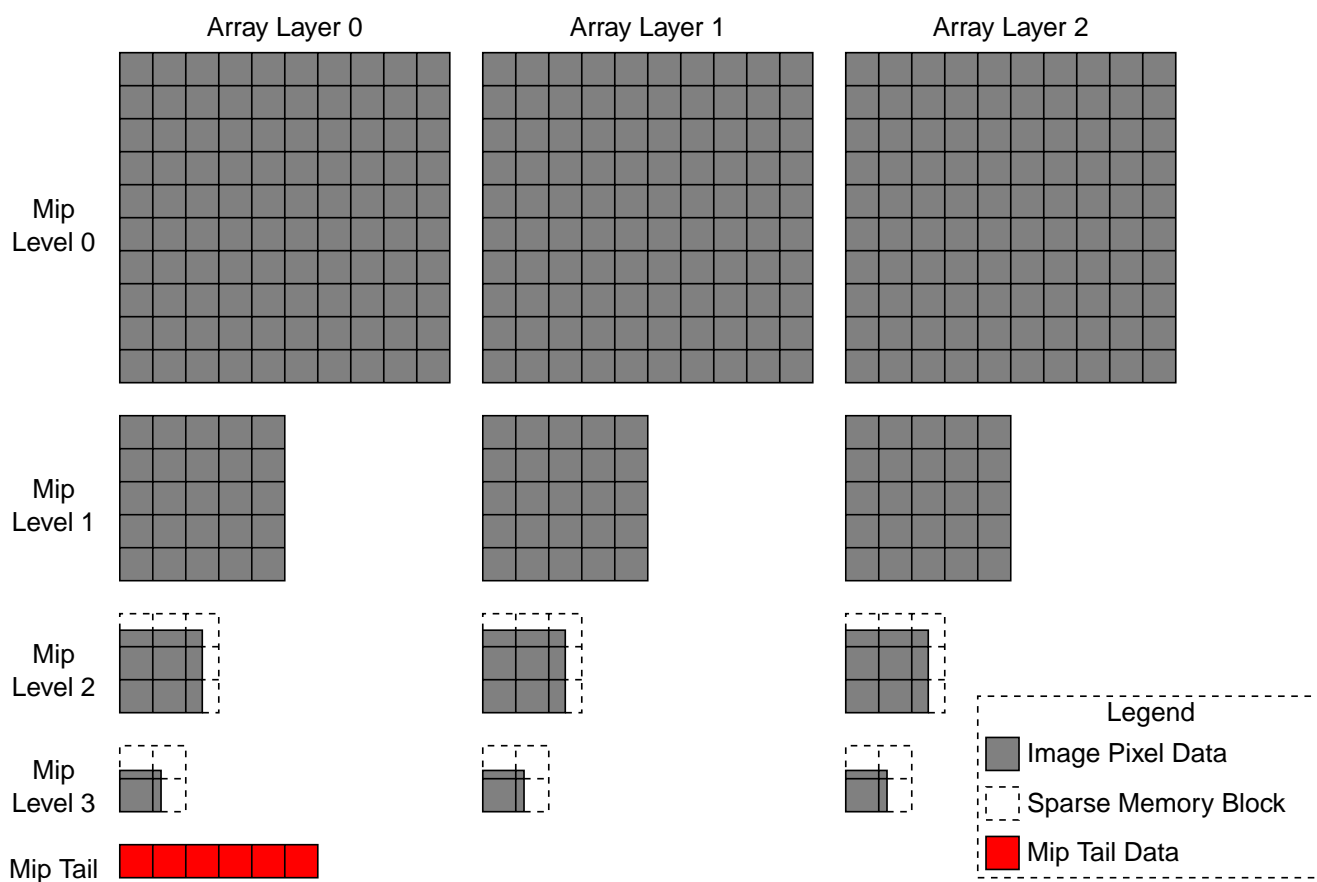

Figure 23. Sparse Image with Single Mip Tail

When [VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT](#) is present all array layers will share a single mip tail region.

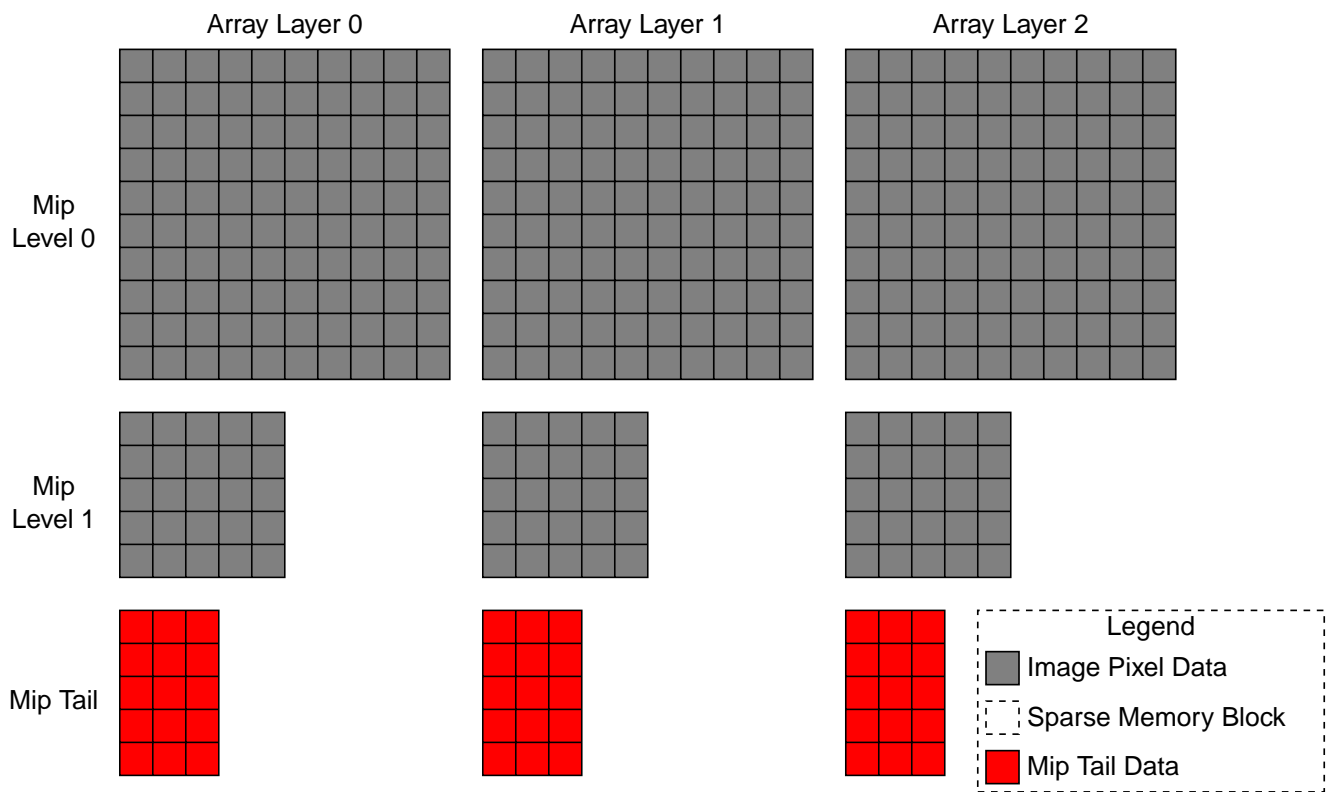

Figure 24. Sparse Image with Aligned Mip Size

NOTE

The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When [VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT](#) is present the first mip level that would contain partially used sparse blocks begins the mip tail region. This level and all subsequent levels are placed in the mip tail. Only the first N mip levels whose dimensions are an exact multiple of the sparse image block dimensions **can** be bound and unbound on a sparse block basis.

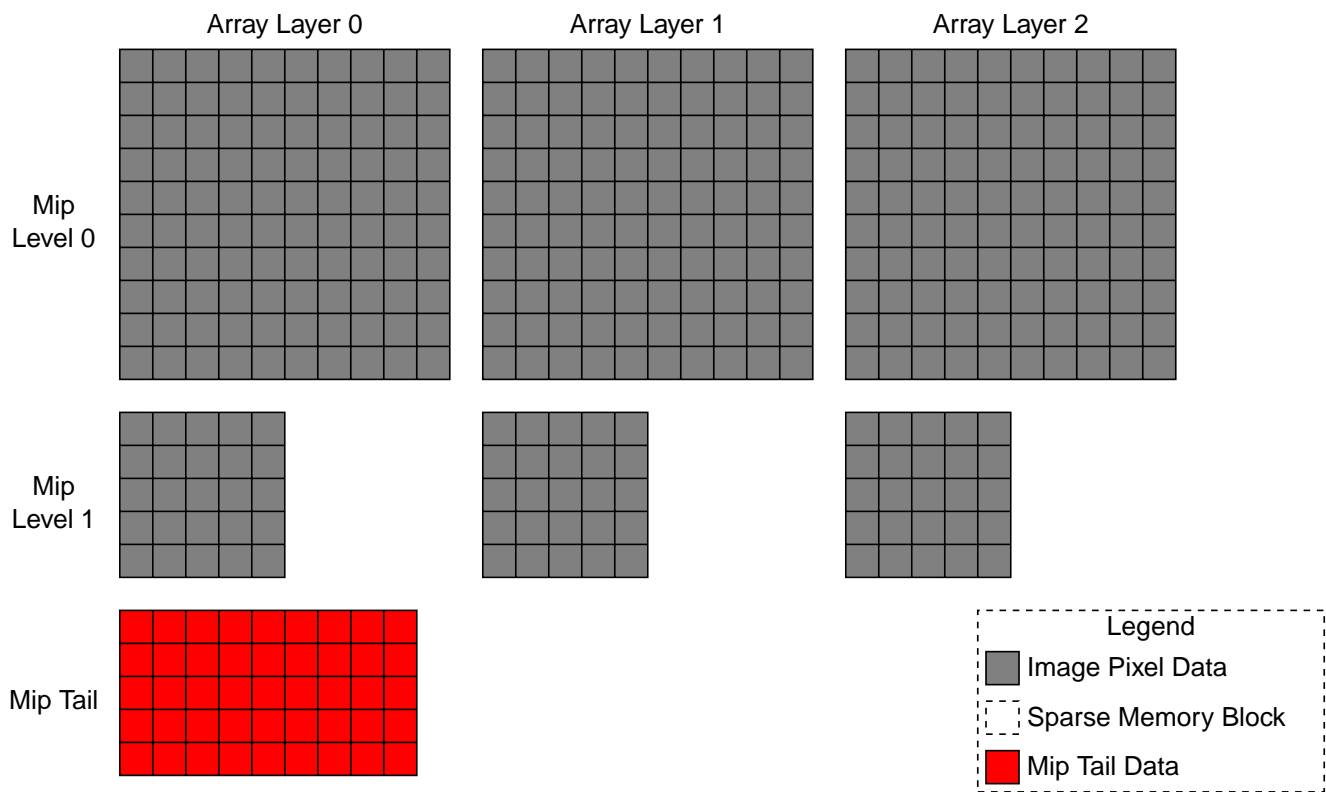

Figure 25. Sparse Image with Aligned Mip Size and Single Mip Tail

NOTE

The mip tail region is presented here in a 2D array simply for figure size reasons. It is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

When both [VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT](#) and [VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT](#) are present the constraints from each of these flags are in effect.

38.4.3. Standard Sparse Image Block Shapes

Standard sparse image block shapes define a standard set of dimensions for sparse image blocks that depend on the format of the image. Layout of texels or compressed texel blocks within a sparse image block is implementation-dependent. All currently defined standard sparse image block shapes are 64 KB in size.

For block-compressed formats (e.g. [VK_FORMAT_BC5_UNORM_BLOCK](#)), the texel size is the size of the compressed texel block (e.g. 128-bit for [BC5](#)) thus the dimensions of the standard sparse image block shapes apply in terms of compressed texel blocks.

NOTE

For block-compressed formats, the dimensions of a sparse image block in terms of texels **can** be calculated by multiplying the sparse image block dimensions by the compressed texel block dimensions.

Table 53. Standard Sparse Image Block Shapes (Single Sample)

TEXEL SIZE (bits)	Block Shape (2D)	Block Shape (3D)
8-Bit	$256 \times 256 \times 1$	$64 \times 32 \times 32$
16-Bit	$256 \times 128 \times 1$	$32 \times 32 \times 32$
32-Bit	$128 \times 128 \times 1$	$32 \times 32 \times 16$
64-Bit	$128 \times 64 \times 1$	$32 \times 16 \times 16$
128-Bit	$64 \times 64 \times 1$	$16 \times 16 \times 16$

Table 54. Standard Sparse Image Block Shapes (MSAA)

TEXEL SIZE (bits)	Block Shape (2X)	Block Shape (4X)	Block Shape (8X)	Block Shape (16X)
8-Bit	$128 \times 256 \times 1$	$128 \times 128 \times 1$	$64 \times 128 \times 1$	$64 \times 64 \times 1$
16-Bit	$128 \times 128 \times 1$	$128 \times 64 \times 1$	$64 \times 64 \times 1$	$64 \times 32 \times 1$
32-Bit	$64 \times 128 \times 1$	$64 \times 64 \times 1$	$32 \times 64 \times 1$	$32 \times 32 \times 1$
64-Bit	$64 \times 64 \times 1$	$64 \times 32 \times 1$	$32 \times 32 \times 1$	$32 \times 16 \times 1$
128-Bit	$32 \times 64 \times 1$	$32 \times 32 \times 1$	$16 \times 32 \times 1$	$16 \times 16 \times 1$

Implementations that support the standard sparse image block shape for all formats listed in the [Standard Sparse Image Block Shapes \(Single Sample\)](#) and [Standard Sparse Image Block Shapes \(MSAA\)](#) tables **may** advertise the following `VkPhysicalDeviceSparseProperties`:

- `residencyStandard2DBlockShape`
- `residencyStandard2DMultisampleBlockShape`
- `residencyStandard3DBlockShape`

Reporting each of these features does *not* imply that all possible image types are supported as sparse. Instead, this indicates that no supported sparse image of the corresponding type will use custom sparse image block dimensions for any formats that have a corresponding standard sparse image block shape.

38.4.4. Custom Sparse Image Block Shapes

An implementation that does not support a standard image block shape for a particular sparse partially-resident image **may** choose to support a custom sparse image block shape for it instead. The dimensions of such a custom sparse image block shape are reported in `VkSparseImageFormatProperties::imageGranularity`. As with standard sparse image block shapes, the size in bytes of the custom sparse image block shape will be reported in `VkMemoryRequirements::alignment`.

Custom sparse image block dimensions are reported through `vkGetPhysicalDeviceSparseImageFormatProperties` and `vkGetImageSparseMemoryRequirements`.

An implementation **must** not support both the standard sparse image block shape and a custom

sparse image block shape for the same image. The standard sparse image block shape **must** be used if it is supported.

38.4.5. Multiple Aspects

Partially resident images are allowed to report separate sparse properties for different aspects of the image. One example is for depth/stencil images where the implementation separates the depth and stencil data into separate planes. Another reason for multiple aspects is to allow the application to manage memory allocation for implementation-private *metadata* associated with the image. See the figure below:

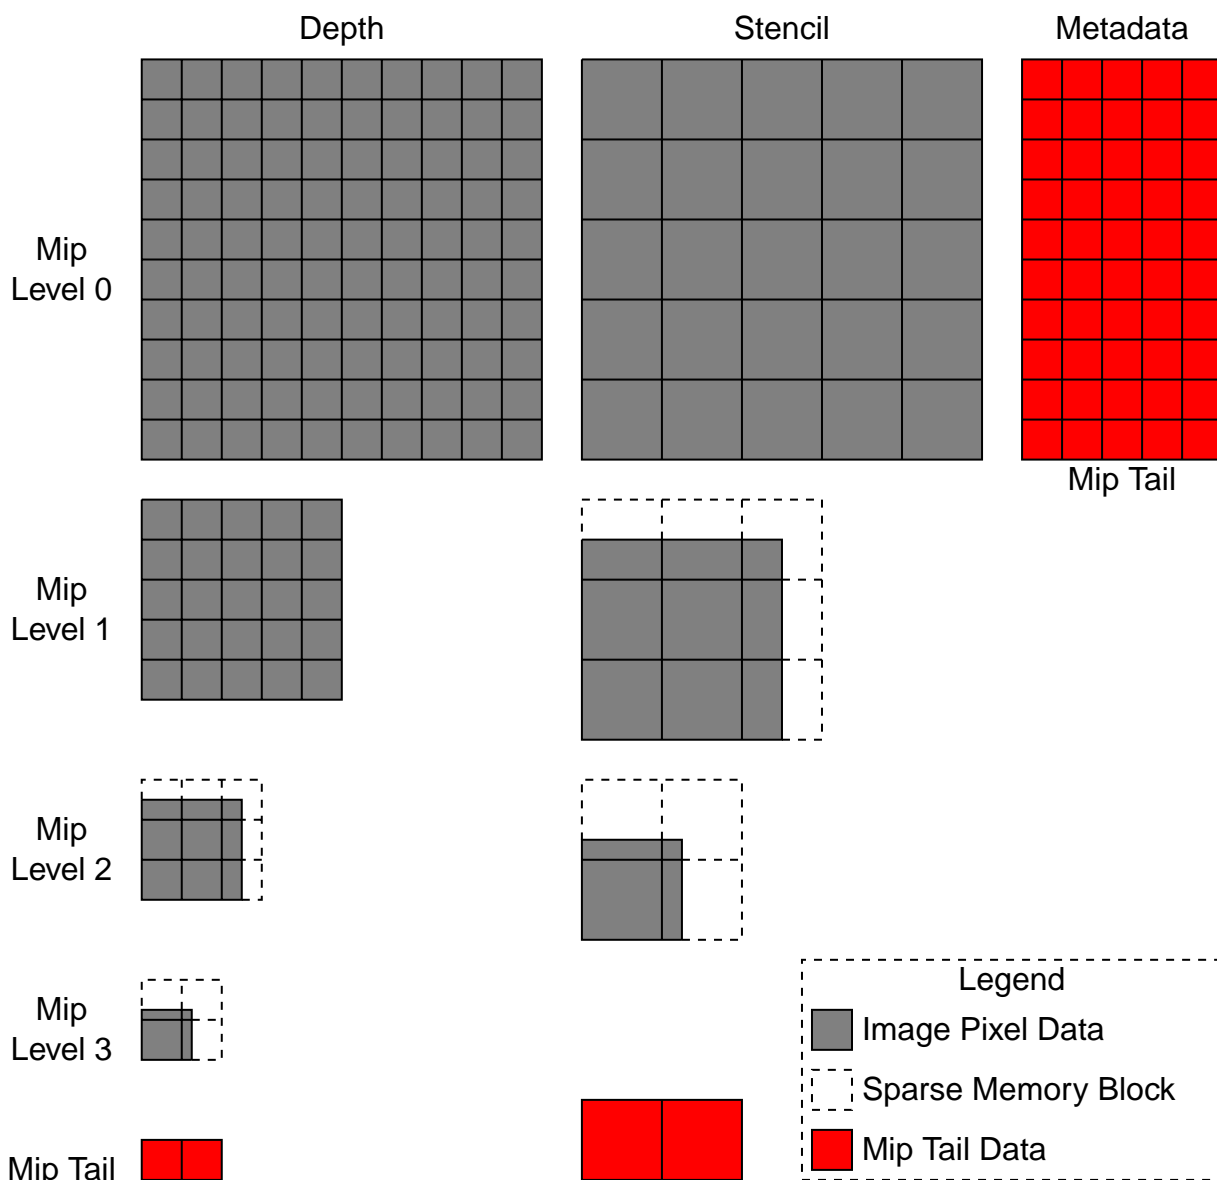

Figure 26. Multiple Aspect Sparse Image

NOTE

The mip tail regions are presented here in 2D arrays simply for figure size reasons. Each mip tail is logically a single array of sparse blocks with an implementation-dependent mapping of texels or compressed texel blocks to sparse blocks.

In the figure above the depth, stencil, and metadata aspects all have unique sparse properties. The per-texel stencil data is $\frac{1}{4}$ the size of the depth data, hence the stencil sparse blocks include $4 \times$ the number of texels. The sparse block size in bytes for all of the aspects is identical and defined by

`VkMemoryRequirements::alignment`.

Metadata

The metadata aspect of an image has the following constraints:

- All metadata is reported in the mip tail region of the metadata aspect.
- All metadata **must** be bound prior to device use of the sparse image.

38.5. Sparse Memory Aliasing

By default sparse resources have the same aliasing rules as non-sparse resources. See [Memory Aliasing](#) for more information.

`VkDevice` objects that have the `sparseResidencyAliased` feature enabled are able to use the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` flags for resource creation. These flags allow resources to access physical memory bound into multiple locations within one or more sparse resources in a *data consistent* fashion. This means that reading physical memory from multiple aliased locations will return the same value.

Care **must** be taken when performing a write operation to aliased physical memory. Memory dependencies **must** be used to separate writes to one alias from reads or writes to another alias. Writes to aliased memory that are not properly guarded against accesses to different aliases will have undefined results for all accesses to the aliased memory.

Applications that wish to make use of data consistent sparse memory aliasing **must** abide by the following guidelines:

- All sparse resources that are bound to aliased physical memory **must** be created with the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` / `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` flag.
- All resources that access aliased physical memory **must** interpret the memory in the same way. This implies the following:
 - Buffers and images **cannot** alias the same physical memory in a data consistent fashion. The physical memory ranges **must** be used exclusively by buffers or used exclusively by images for data consistency to be guaranteed.
 - Memory in sparse image mip tail regions **cannot** access aliased memory in a data consistent fashion.
 - Sparse images that alias the same physical memory **must** have compatible formats and be using the same sparse image block shape in order to access aliased memory in a data consistent fashion.

Failure to follow any of the above guidelines will require the application to abide by the normal, non-sparse resource [aliasing rules](#). In this case memory **cannot** be accessed in a data consistent fashion.

NOTE

Enabling sparse resource memory aliasing **can** be a way to lower physical memory use, but it **may** reduce performance on some implementations. An application

developer **can** test on their target HW and balance the memory / performance trade-offs measured.

38.6. Sparse Resource Implementation Guidelines (Informative)

This section is Informative. It is included to aid in implementors' understanding of sparse resources.

Device Virtual Address

The basic **sparseBinding** feature allows the resource to reserve its own device virtual address range at resource creation time rather than relying on a bind operation to set this. Without any other creation flags, no other constraints are relaxed compared to normal resources. All pages **must** be bound to physical memory before the device accesses the resource.

The **sparseResidency** features allow sparse resources to be used even when not all pages are bound to memory. Implementations that support access to unbound pages without causing a fault **may** support **residencyNonResidentStrict**.

Not faulting on access to unbound pages is not enough to support **residencyNonResidentStrict**. An implementation **must** also guarantee that reads after writes to unbound regions of the resource always return data for the read as if the memory contains zeros. Depending on any caching hierarchy of the implementation this **may** not always be possible.

Any implementation that does not fault, but does not guarantee correct read values **must** not support **residencyNonResidentStrict**.

Any implementation that **cannot** access unbound pages without causing a fault will require the implementation to bind the entire device virtual address range to physical memory. Any pages that the application does not bind to memory **may** be bound to one (or more) "placeholder" physical page(s) allocated by the implementation. Given the following properties:

- A process **must** not access memory from another process
- Reads return undefined values

It is sufficient for each host process to allocate these placeholder pages and use them for all resources in that process. Implementations **may** allocate more often (per instance, per device, or per resource).

Binding Memory

The byte size reported in **VkMemoryRequirements::size** **must** be greater than or equal to the amount of physical memory **required** to fully populate the resource. Some implementations require "holes" in the device virtual address range that are never accessed. These holes **may** be included in the **size** reported for the resource.

Including or not including the device virtual address holes in the resource size will alter how

the implementation provides support for `VkSparseImageOpaqueMemoryBindInfo`. This operation **must** be supported for all sparse images, even ones created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.

- If the holes are included in the size, this bind function becomes very easy. In most cases the `resourceOffset` is simply a device virtual address offset and the implementation can easily determine what device virtual address to bind. The cost is that the application **may** allocate more physical memory for the resource than it needs.
- If the holes are not included in the size, the application **can** allocate less physical memory than otherwise for the resource. However, in this case the implementation **must** account for the holes when mapping `resourceOffset` to the actual device virtual address intended to be mapped.

If the application always uses `VkSparseImageMemoryBindInfo` to bind memory for the non-tail mip levels, any holes that are present in the resource size **may** never be bound.

NOTE

Since `VkSparseImageMemoryBindInfo` uses texel locations to determine which device virtual addresses to bind, it is impossible to bind device virtual address holes with this operation.

Binding Metadata Memory

All metadata for sparse images have their own sparse properties and are embedded in the mip tail region for said properties. See the [Multiaspect](#) section for details.

Given that metadata is in a mip tail region, and the mip tail region **must** be reported as contiguous (either globally or per-array-layer), some implementations will have to resort to complicated offset → device virtual address mapping for handling `VkSparseImageOpaqueMemoryBindInfo`.

To make this easier on the implementation, the `VK_SPARSE_MEMORY_BIND_METADATA_BIT` explicitly specifies when metadata is bound with `VkSparseImageOpaqueMemoryBindInfo`. When this flag is not present, the `resourceOffset` **may** be treated as a strict device virtual address offset.

When `VK_SPARSE_MEMORY_BIND_METADATA_BIT` is present, the `resourceOffset` **must** have been derived explicitly from the `imageMipTailOffset` in the sparse resource properties returned for the metadata aspect. By manipulating the value returned for `imageMipTailOffset`, the `resourceOffset` does not have to correlate directly to a device virtual address offset, and **may** instead be whatever value makes it easiest for the implementation to derive the correct device virtual address.

38.7. Sparse Resource API

The APIs related to sparse resources are grouped into the following categories:

- [Physical Device Features](#)

- [Physical Device Sparse Properties](#)
- [Sparse Image Format Properties](#)
- [Sparse Resource Creation](#)
- [Sparse Resource Memory Requirements](#)
- [Binding Resource Memory](#)

38.7.1. Physical Device Features

Some sparse-resource related features are reported and enabled in `VkPhysicalDeviceFeatures`. These features **must** be supported and enabled on the `VkDevice` object before applications **can** use them. See [Physical Device Features](#) for information on how to get and set enabled device features, and for more detailed explanations of these features.

Sparse Physical Device Features

- `sparseBinding`: Support for creating `VkBuffer` and `VkImage` objects with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` and `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` flags, respectively.
- `sparseResidencyBuffer`: Support for creating `VkBuffer` objects with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag.
- `sparseResidencyImage2D`: Support for creating 2D single-sampled `VkImage` objects with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidencyImage3D`: Support for creating 3D `VkImage` objects with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidency2Samples`: Support for creating 2D `VkImage` objects with 2 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidency4Samples`: Support for creating 2D `VkImage` objects with 4 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidency8Samples`: Support for creating 2D `VkImage` objects with 8 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidency16Samples`: Support for creating 2D `VkImage` objects with 16 samples and `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`.
- `sparseResidencyAliased`: Support for creating `VkBuffer` and `VkImage` objects with the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` flags, respectively.

38.7.2. Physical Device Sparse Properties

Some features of the implementation are not possible to disable, and are reported to allow applications to alter their sparse resource usage accordingly. These read-only capabilities are reported in the `VkPhysicalDeviceProperties::sparseProperties` member, which is a `VkPhysicalDeviceSparseProperties` structure.

The `VkPhysicalDeviceSparseProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceSparseProperties {
    VkBool32    residencyStandard2DBlockShape;
    VkBool32    residencyStandard2DMultisampleBlockShape;
    VkBool32    residencyStandard3DBlockShape;
    VkBool32    residencyAlignedMipSize;
    VkBool32    residencyNonResidentStrict;
} VkPhysicalDeviceSparseProperties;
```

- **residencyStandard2DBlockShape** is **VK_TRUE** if the physical device will access all single-sample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the [Standard Sparse Image Block Shapes \(Single Sample\)](#) table. If this property is not supported the value returned in the **imageGranularity** member of the **VkSparseImageFormatProperties** structure for single-sample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- **residencyStandard2DMultisampleBlockShape** is **VK_TRUE** if the physical device will access all multisample 2D sparse resources using the standard sparse image block shapes (based on image format), as described in the [Standard Sparse Image Block Shapes \(MSAA\)](#) table. If this property is not supported, the value returned in the **imageGranularity** member of the **VkSparseImageFormatProperties** structure for multisample 2D images is not **required** to match the standard sparse image block dimensions listed in the table.
- **residencyStandard3DBlockShape** is **VK_TRUE** if the physical device will access all 3D sparse resources using the standard sparse image block shapes (based on image format), as described in the [Standard Sparse Image Block Shapes \(Single Sample\)](#) table. If this property is not supported, the value returned in the **imageGranularity** member of the **VkSparseImageFormatProperties** structure for 3D images is not **required** to match the standard sparse image block dimensions listed in the table.
- **residencyAlignedMipSize** is **VK_TRUE** if images with mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block **may** be placed in the mip tail. If this property is not reported, only mip levels with dimensions smaller than the **imageGranularity** member of the **VkSparseImageFormatProperties** structure will be placed in the mip tail. If this property is reported the implementation is allowed to return **VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT** in the **flags** member of **VkSparseImageFormatProperties**, indicating that mip level dimensions that are not integer multiples of the corresponding dimensions of the sparse image block will be placed in the mip tail.
- **residencyNonResidentStrict** specifies whether the physical device **can** consistently access non-resident regions of a resource. If this property is **VK_TRUE**, access to non-resident regions of resources will be guaranteed to return values as if the resource was populated with 0; writes to non-resident regions will be discarded.

38.7.3. Sparse Image Format Properties

Given that certain aspects of sparse image support, including the sparse image block dimensions, **may** be implementation-dependent, **vkGetPhysicalDeviceSparseImageFormatProperties** **can** be used to query for sparse image format properties prior to resource creation. This command is used

to check whether a given set of sparse image parameters is supported and what the sparse image block shape will be.

Sparse Image Format Properties API

The `VkSparseImageFormatProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageFormatProperties {
    VkImageAspectFlags    aspectMask;
    VkExtent3D            imageGranularity;
    VkSparseImageFormatFlags flags;
} VkSparseImageFormatProperties;
```

- `aspectMask` is a bitmask `VkImageAspectFlagBits` specifying which aspects of the image the properties apply to.
- `imageGranularity` is the width, height, and depth of the sparse image block in texels.
- `flags` is a bitmask of `VkSparseImageFormatFlagBits` specifying additional information about the sparse resource.

Bits which **may** be set in `VkSparseImageFormatProperties::flags`, specifying additional information about the sparse resource, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseImageFormatFlagBits {
    VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT = 0x00000001,
    VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT = 0x00000002,
    VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT = 0x00000004,
} VkSparseImageFormatFlagBits;
```

- `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT` specifies that the image uses a single mip tail region for all array layers.
- `VK_SPARSE_IMAGE_FORMAT_ALIGNED_MIP_SIZE_BIT` specifies that the first mip level whose dimensions are not integer multiples of the corresponding dimensions of the sparse image block begins the mip tail region.
- `VK_SPARSE_IMAGE_FORMAT_NONSTANDARD_BLOCK_SIZE_BIT` specifies that the image uses non-standard sparse image block dimensions, and the `imageGranularity` values do not match the standard sparse image block dimensions for the given format.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseImageFormatFlags;
```

`VkSparseImageFormatFlags` is a bitmask type for setting a mask of zero or more `VkSparseImageFormatFlagBits`.

`vkGetPhysicalDeviceSparseImageFormatProperties` returns an array of `VkSparseImageFormatProperties`. Each element describes properties for one set of image aspects that are bound simultaneously for a `VkImage` created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

WARNING This functionality is superseded by `vkGetPhysicalDeviceSparseImageFormatProperties2`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceSparseImageFormatProperties(
    VkPhysicalDevice    physicalDevice,
    VkFormat            format,
    VkImageType         type,
    VkSampleCountFlagBits samples,
    VkImageUsageFlags   usage,
    VkImageTiling        tiling,
    uint32_t*           pPropertyCount,
    VkSparseImageFormatProperties* pProperties);
```

- `physicalDevice` is the physical device from which to query the sparse image format properties.
- `format` is the image format.
- `type` is the dimensionality of the image.
- `samples` is a `VkSampleCountFlagBits` value specifying the number of samples per texel.
- `usage` is a bitmask describing the intended usage of the image.
- `tiling` is the tiling arrangement of the texel blocks in memory.
- `pPropertyCount` is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkSparseImageFormatProperties` structures.

If `pProperties` is `NULL`, then the number of sparse format properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of sparse format properties available, at most `pPropertyCount` structures will be written.

If `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` is not supported for the given arguments, `pPropertyCount` will be zero upon return, and no data will be written to `pProperties`.

Multiple aspects are returned for depth/stencil images that are implemented as separate planes by the implementation. The depth and stencil data planes each have unique `VkSparseImageFormatProperties` data.

Depth/stencil images with depth and stencil data interleaved into a single plane will return a single `VkSparseImageFormatProperties` structure with the `aspectMask` set to `VK_IMAGE_ASPECT_DEPTH_BIT` | `VK_IMAGE_ASPECT_STENCIL_BIT`.

Valid Usage

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-01094
`samples` **must** be a valid `VkSampleCountFlagBits` value that is set in `VkImageFormatProperties::sampleCounts` returned by `vkGetPhysicalDeviceImageFormatProperties` with `format`, `type`, `tiling`, and `usage` equal to those in this command

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-format-parameter
`format` **must** be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-type-parameter
`type` **must** be a valid `VkImageType` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-samples-parameter
`samples` **must** be a valid `VkSampleCountFlagBits` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-usage-parameter
`usage` **must** be a valid combination of `VkImageUsageFlagBits` values
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-usage-requiredbitmask
`usage` **must** not be 0
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-tiling-parameter
`tiling` **must** be a valid `VkImageTiling` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pPropertyCount-parameter
`pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not NULL, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkSparseImageFormatProperties` structures

`vkGetPhysicalDeviceSparseImageFormatProperties2` returns an array of `VkSparseImageFormatProperties2`. Each element describes properties for one set of image aspects that are bound simultaneously for a `VkImage` created with the provided image creation parameters. This is usually one element for each aspect in the image, but for interleaved depth/stencil images there is only one element describing the combined aspects.

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceSparseImageFormatProperties2(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                        pPropertyCount,
    VkSparseImageFormatProperties2*  pProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceSparseImageFormatProperties2
void vkGetPhysicalDeviceSparseImageFormatProperties2KHR(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceSparseImageFormatInfo2* pFormatInfo,
    uint32_t*                        pPropertyCount,
    VkSparseImageFormatProperties2*  pProperties);
```

- **physicalDevice** is the physical device from which to query the sparse image format properties.
- **pFormatInfo** is a pointer to a [VkPhysicalDeviceSparseImageFormatInfo2](#) structure containing input parameters to the command.
- **pPropertyCount** is a pointer to an integer related to the number of sparse format properties available or queried, as described below.
- **pProperties** is either **NULL** or a pointer to an array of [VkSparseImageFormatProperties2](#) structures.

[vkGetPhysicalDeviceSparseImageFormatProperties2](#) behaves identically to [vkGetPhysicalDeviceSparseImageFormatProperties](#), with the ability to return extended information by adding extending structures to the **pNext** chain of its **pProperties** parameter.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pFormatInfo-parameter **pFormatInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceSparseImageFormatInfo2](#) structure
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pPropertyCount-parameter **pPropertyCount** **must** be a valid pointer to a **uint32_t** value
- VUID-vkGetPhysicalDeviceSparseImageFormatProperties2-pProperties-parameter
If the value referenced by **pPropertyCount** is not 0, and **pProperties** is not **NULL**, **pProperties** **must** be a valid pointer to an array of **pPropertyCount** [VkSparseImageFormatProperties2](#) structures

The [VkPhysicalDeviceSparseImageFormatInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSparseImageFormatInfo2 {
    VkStructureType      sType;
    const void*          pNext;
    VkFormat              format;
    VkImageType           type;
    VkSampleCountFlagBits samples;
    VkImageUsageFlags     usage;
    VkImageTiling          tiling;
} VkPhysicalDeviceSparseImageFormatInfo2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceSparseImageFormatInfo2
typedef VkPhysicalDeviceSparseImageFormatInfo2
VkPhysicalDeviceSparseImageFormatInfo2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is the image format.
- **type** is the dimensionality of the image.
- **samples** is a **VkSampleCountFlagBits** value specifying the number of samples per texel.
- **usage** is a bitmask describing the intended usage of the image.
- **tiling** is the tiling arrangement of the texel blocks in memory.

Valid Usage

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-01095
samples must be a valid **VkSampleCountFlagBits** value that is set in **VkImageFormatProperties::sampleCounts** returned by **vkGetPhysicalDeviceImageFormatProperties** with **format**, **type**, **tiling**, and **usage** equal to those in this command

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-sType-sType
sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SPARSE_IMAGE_FORMAT_INFO_2**
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-pNext-pNext
pNext must be **NULL**
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-format-parameter
format must be a valid **VkFormat** value

- VUID-VkPhysicalDeviceSparseImageFormatInfo2-type-parameter **type** must be a valid [VkImageType](#) value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-samples-parameter **samples** must be a valid [VkSampleCountFlagBits](#) value
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-usage-parameter **usage** must be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-usage-requiredbitmask **usage** must not be 0
- VUID-VkPhysicalDeviceSparseImageFormatInfo2-tiling-parameter **tiling** must be a valid [VkImageTiling](#) value

The [VkSparseImageFormatProperties2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageFormatProperties2 {
    VkStructureType      sType;
    void*                 pNext;
    VkSparseImageFormatProperties properties;
} VkSparseImageFormatProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkSparseImageFormatProperties2
typedef VkSparseImageFormatProperties2 VkSparseImageFormatProperties2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **properties** is a [VkSparseImageFormatProperties](#) structure which is populated with the same values as in [vkGetPhysicalDeviceSparseImageFormatProperties](#).

Valid Usage (Implicit)

- VUID-VkSparseImageFormatProperties2-sType-sType **sType** must be [VK_STRUCTURE_TYPE_SPARSE_IMAGE_FORMAT_PROPERTIES_2](#)
- VUID-VkSparseImageFormatProperties2-pNext-pNext **pNext** must be `NULL`

38.7.4. Sparse Resource Creation

Sparse resources require that one or more sparse feature flags be specified (as part of the [VkPhysicalDeviceFeatures](#) structure described previously in the [Physical Device Features](#) section) when calling [vkCreateDevice](#). When the appropriate device features are enabled, the [VK_BUFFER_CREATE_SPARSE_*](#) and [VK_IMAGE_CREATE_SPARSE_*](#) flags **can** be used. See [vkCreateBuffer](#) and

[vkCreateImage](#) for details of the resource creation APIs.

NOTE

Specifying [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) or [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) requires specifying [VK_BUFFER_CREATE_SPARSE_BINDING_BIT](#) or [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#), respectively, as well. This means that resources **must** be created with the appropriate [*_SPARSE_BINDING_BIT](#) to be used with the sparse binding command ([vkQueueBindSparse](#)).

38.7.5. Sparse Resource Memory Requirements

Sparse resources have specific memory requirements related to binding sparse memory. These memory requirements are reported differently for [VkBuffer](#) objects and [VkImage](#) objects.

Buffer and Fully-Resident Images

Buffers (both fully and partially resident) and fully-resident images **can** be bound to memory using only the data from [VkMemoryRequirements](#). For all sparse resources the [VkMemoryRequirements::alignment](#) member specifies both the binding granularity in bytes and the **required** alignment of [VkDeviceMemory](#).

Partially Resident Images

Partially resident images have a different method for binding memory. As with buffers and fully resident images, the [VkMemoryRequirements::alignment](#) field specifies the binding granularity in bytes for the image.

Requesting sparse memory requirements for [VkImage](#) objects using [vkGetImageSparseMemoryRequirements](#) will return an array of one or more [VkSparseImageMemoryRequirements](#) structures. Each structure describes the sparse memory requirements for a group of aspects of the image.

The sparse image **must** have been created using the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag to retrieve valid sparse image memory requirements.

Sparse Image Memory Requirements

The [VkSparseImageMemoryRequirements](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryRequirements {
    VkSparseImageFormatProperties    formatProperties;
    uint32_t                        imageMipTailFirstLod;
    VkDeviceSize                    imageMipTailSize;
    VkDeviceSize                    imageMipTailOffset;
    VkDeviceSize                    imageMipTailStride;
} VkSparseImageMemoryRequirements;
```

- [formatProperties](#) is a [VkSparseImageFormatProperties](#) structure specifying properties of the

image format.

- `imageMipTailFirstLod` is the first mip level at which image subresources are included in the mip tail region.
- `imageMipTailSize` is the memory size (in bytes) of the mip tail region. If `formatProperties.flags` contains `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT`, this is the size of the whole mip tail, otherwise this is the size of the mip tail of a single array layer. This value is guaranteed to be a multiple of the sparse block size in bytes.
- `imageMipTailOffset` is the opaque memory offset used with `VkSparseImageOpaqueMemoryBindInfo` to bind the mip tail region(s).
- `imageMipTailStride` is the offset stride between each array-layer's mip tail, if `formatProperties.flags` does not contain `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT` (otherwise the value is undefined).

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_0
void vkGetImageSparseMemoryRequirements(
    VkDevice          device,
    VkImage           image,
    uint32_t*         pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements* pSparseMemoryRequirements);
```

- `device` is the logical device that owns the image.
- `image` is the `VkImage` object to get the memory requirements for.
- `pSparseMemoryRequirementCount` is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- `pSparseMemoryRequirements` is either `NULL` or a pointer to an array of `VkSparseImageMemoryRequirements` structures.

If `pSparseMemoryRequirements` is `NULL`, then the number of sparse memory requirements available is returned in `pSparseMemoryRequirementCount`. Otherwise, `pSparseMemoryRequirementCount` **must** point to a variable set by the application to the number of elements in the `pSparseMemoryRequirements` array, and on return the variable is overwritten with the number of structures actually written to `pSparseMemoryRequirements`. If `pSparseMemoryRequirementCount` is less than the number of sparse memory requirements available, at most `pSparseMemoryRequirementCount` structures will be written.

If the image was not created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` then `pSparseMemoryRequirementCount` will be zero and `pSparseMemoryRequirements` will not be written to.

NOTE

It is legal for an implementation to report a larger value in `VkMemoryRequirements::size` than would be obtained by adding together memory sizes for all `VkSparseImageMemoryRequirements` returned by `vkGetImageSparseMemoryRequirements`. This **may** occur when the implementation requires unused padding in the address range describing the resource.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageSparseMemoryRequirements-image-parameter **image** **must** be a valid [VkImage](#) handle
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter **pSparseMemoryRequirementCount** **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter If the value referenced by **pSparseMemoryRequirementCount** is not `0`, and **pSparseMemoryRequirements** is not `NULL`, **pSparseMemoryRequirements** **must** be a valid pointer to an array of **pSparseMemoryRequirementCount** [VkSparseImageMemoryRequirements](#) structures
- VUID-vkGetImageSparseMemoryRequirements-image-parent **image** **must** have been created, allocated, or retrieved from **device**

To query sparse memory requirements for an image, call:

```
// Provided by VK_VERSION_1_1
void vkGetImageSparseMemoryRequirements2(
    VkDevice          device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*         pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*         pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to vkGetImageSparseMemoryRequirements2
void vkGetImageSparseMemoryRequirements2KHR(
    VkDevice          device,
    const VkImageSparseMemoryRequirementsInfo2* pInfo,
    uint32_t*         pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2*         pSparseMemoryRequirements);
```

- **device** is the logical device that owns the image.
- **pInfo** is a pointer to a [VkImageSparseMemoryRequirementsInfo2](#) structure containing parameters required for the memory requirements query.
- **pSparseMemoryRequirementCount** is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- **pSparseMemoryRequirements** is either `NULL` or a pointer to an array of [VkSparseImageMemoryRequirements2](#) structures.

Valid Usage (Implicit)

- VUID-vkGetImageSparseMemoryRequirements2-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetImageSparseMemoryRequirements2-pInfo-parameter **pInfo** **must** be a valid pointer to a valid [VkImageSparseMemoryRequirementsInfo2](#) structure
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirementCount-parameter **pSparseMemoryRequirementCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetImageSparseMemoryRequirements2-pSparseMemoryRequirements-parameter
If the value referenced by **pSparseMemoryRequirementCount** is not **0**, and **pSparseMemoryRequirements** is not **NULL**, **pSparseMemoryRequirements** **must** be a valid pointer to an array of **pSparseMemoryRequirementCount** [VkSparseImageMemoryRequirements2](#) structures

To determine the sparse memory requirements for an image resource without creating an object, call:

```
// Provided by VK_VERSION_1_3
void vkGetDeviceImageSparseMemoryRequirements(
    VkDevice                device,
    const VkDeviceImageMemoryRequirements* pInfo,
    uint32_t*               pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2* pSparseMemoryRequirements);
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to vkGetDeviceImageSparseMemoryRequirements
void vkGetDeviceImageSparseMemoryRequirementsKHR(
    VkDevice                device,
    const VkDeviceImageMemoryRequirements* pInfo,
    uint32_t*               pSparseMemoryRequirementCount,
    VkSparseImageMemoryRequirements2* pSparseMemoryRequirements);
```

- **device** is the logical device intended to own the image.
- **pInfo** is a pointer to a [VkDeviceImageMemoryRequirements](#) structure containing parameters required for the memory requirements query.
- **pSparseMemoryRequirementCount** is a pointer to an integer related to the number of sparse memory requirements available or queried, as described below.
- **pSparseMemoryRequirements** is either **NULL** or a pointer to an array of [VkSparseImageMemoryRequirements2](#) structures.

Valid Usage (Implicit)

- VUID-vkGetDeviceImageSparseMemoryRequirements-device-parameter **device** must be a valid [VkDevice](#) handle
- VUID-vkGetDeviceImageSparseMemoryRequirements-pInfo-parameter **pInfo** must be a valid pointer to a valid [VkDeviceImageMemoryRequirements](#) structure
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirementCount-parameter **pSparseMemoryRequirementCount** must be a valid pointer to a `uint32_t` value
- VUID-vkGetDeviceImageSparseMemoryRequirements-pSparseMemoryRequirements-parameter
If the value referenced by **pSparseMemoryRequirementCount** is not `0`, and **pSparseMemoryRequirements** is not `NULL`, **pSparseMemoryRequirements** must be a valid pointer to an array of **pSparseMemoryRequirementCount** [VkSparseImageMemoryRequirements2](#) structures

The [VkImageSparseMemoryRequirementsInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageSparseMemoryRequirementsInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkImage             image;
} VkImageSparseMemoryRequirementsInfo2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkImageSparseMemoryRequirementsInfo2
typedef VkImageSparseMemoryRequirementsInfo2 VkImageSparseMemoryRequirementsInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **image** is the image to query.

Valid Usage (Implicit)

- VUID-VkImageSparseMemoryRequirementsInfo2-sType-sType **sType** must be [VK_STRUCTURE_TYPE_IMAGE_SPARSE_MEMORY_REQUIREMENTS_INFO_2](#)
- VUID-VkImageSparseMemoryRequirementsInfo2-pNext-pNext **pNext** must be `NULL`
- VUID-VkImageSparseMemoryRequirementsInfo2-image-parameter **image** must be a valid [VkImage](#) handle

The `VkSparseImageMemoryRequirements2` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSparseImageMemoryRequirements2 {
    VkStructureType    sType;
    void*              pNext;
    VkSparseImageMemoryRequirements    memoryRequirements;
} VkSparseImageMemoryRequirements2;
```

```
// Provided by VK_KHR_get_memory_requirements2
// Equivalent to VkSparseImageMemoryRequirements2
typedef VkSparseImageMemoryRequirements2 VkSparseImageMemoryRequirements2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryRequirements` is a `VkSparseImageMemoryRequirements` structure describing the memory requirements of the sparse image.

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryRequirements2-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SPARSE_IMAGE_MEMORY_REQUIREMENTS_2`
- VUID-VkSparseImageMemoryRequirements2-pNext-pNext
`pNext` **must** be `NULL`

38.7.6. Binding Resource Memory

Non-sparse resources are backed by a single physical allocation prior to device use (via `vkBindImageMemory` or `vkBindBufferMemory`), and their backing **must** not be changed. On the other hand, sparse resources **can** be bound to memory non-contiguously and these bindings **can** be altered during the lifetime of the resource.

NOTE

It is important to note that freeing a `VkDeviceMemory` object with `vkFreeMemory` will not cause resources (or resource regions) bound to the memory object to become unbound. Applications **must** not access resources bound to memory that has been freed.

Sparse memory bindings execute on a queue that includes the `VK_QUEUE_SPARSE_BINDING_BIT` bit. Applications **must** use `synchronization primitives` to guarantee that other queues do not access ranges of memory concurrently with a binding change. Applications **can** access other ranges of the same resource while a bind operation is executing.

NOTE

Implementations **must** provide a guarantee that simultaneously binding sparse blocks while another queue accesses those same sparse blocks via a sparse resource

must not access memory owned by another process or otherwise corrupt the system.

While some implementations **may** include `VK_QUEUE_SPARSE_BINDING_BIT` support in queue families that also include graphics and compute support, other implementations **may** only expose a `VK_QUEUE_SPARSE_BINDING_BIT`-only queue family. In either case, applications **must** use [synchronization primitives](#) to explicitly request any ordering dependencies between sparse memory binding operations and other graphics/compute/transfer operations, as sparse binding operations are not automatically ordered against command buffer execution, even within a single queue.

When binding memory explicitly for the `VK_IMAGE_ASPECT_METADATA_BIT` the application **must** use the `VK_SPARSE_MEMORY_BIND_METADATA_BIT` in the `VkSparseMemoryBind::flags` field when binding memory. Binding memory for metadata is done the same way as binding memory for the mip tail, with the addition of the `VK_SPARSE_MEMORY_BIND_METADATA_BIT` flag.

Binding the mip tail for any aspect **must** only be performed using `VkSparseImageOpaqueMemoryBindInfo`. If `formatProperties.flags` contains `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT`, then it **can** be bound with a single `VkSparseMemoryBind` structure, with `resourceOffset = imageMipTailOffset` and `size = imageMipTailSize`.

If `formatProperties.flags` does not contain `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT` then the offset for the mip tail in each array layer is given as:

```
arrayMipTailOffset = imageMipTailOffset + arrayLayer * imageMipTailStride;
```

and the mip tail **can** be bound with `layerCount` `VkSparseMemoryBind` structures, each using `size = imageMipTailSize` and `resourceOffset = arrayMipTailOffset` as defined above.

Sparse memory binding is handled by the following APIs and related data structures.

Sparse Memory Binding Functions

The `VkSparseMemoryBind` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseMemoryBind {
    VkDeviceSize      resourceOffset;
    VkDeviceSize      size;
    VkDeviceMemory     memory;
    VkDeviceSize      memoryOffset;
    VkSparseMemoryBindFlags flags;
} VkSparseMemoryBind;
```

- `resourceOffset` is the offset into the resource.
- `size` is the size of the memory region to be bound.

- `memory` is the `VkDeviceMemory` object that the range of the resource is bound to. If `memory` is `VK_NULL_HANDLE`, the range is unbound.
- `memoryOffset` is the offset into the `VkDeviceMemory` object to bind the resource range to. If `memory` is `VK_NULL_HANDLE`, this value is ignored.
- `flags` is a bitmask of `VkSparseMemoryBindFlagBits` specifying usage of the binding operation.

The *binding range* [`resourceOffset`, `resourceOffset + size`) has different constraints based on `flags`. If `flags` contains `VK_SPARSE_MEMORY_BIND_METADATA_BIT`, the binding range **must** be within the mip tail region of the metadata aspect. This metadata region is defined by:

$$\text{metadataRegion} = [\text{base}, \text{base} + \text{imageMipTailSize})$$

$$\text{base} = \text{imageMipTailOffset} + \text{imageMipTailStride} \times n$$

and `imageMipTailOffset`, `imageMipTailSize`, and `imageMipTailStride` values are from the `VkSparseImageMemoryRequirements` corresponding to the metadata aspect of the image, and `n` is a valid array layer index for the image,

`imageMipTailStride` is considered to be zero for aspects where `VkSparseImageMemoryRequirements::formatProperties.flags` contains `VK_SPARSE_IMAGE_FORMAT_SINGLE_MIPTAIL_BIT`.

If `flags` does not contain `VK_SPARSE_MEMORY_BIND_METADATA_BIT`, the binding range **must** be within the range `[0, VkMemoryRequirements::size)`.

Valid Usage

- VUID-VkSparseMemoryBind-memory-01096
If `memory` is not `VK_NULL_HANDLE`, `memory` and `memoryOffset` **must** match the memory requirements of the resource, as described in section [Resource Memory Association](#)
- VUID-VkSparseMemoryBind-resourceOffset-09491
If the resource being bound is a `VkBuffer`, `resourceOffset`, `memoryOffset` and `size` **must** be an integer multiple of the `alignment` of the `VkMemoryRequirements` structure returned from a call to `vkGetBufferMemoryRequirements` with the buffer resource
- VUID-VkSparseMemoryBind-resourceOffset-09492
If the resource being bound is a `VkImage`, `resourceOffset` and `memoryOffset` **must** be an integer multiple of the `alignment` of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with the image resource
- VUID-VkSparseMemoryBind-memory-01097
If `memory` is not `VK_NULL_HANDLE`, `memory` **must** not have been created with a memory type that reports `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set
- VUID-VkSparseMemoryBind-size-01098
`size` **must** be greater than 0
- VUID-VkSparseMemoryBind-resourceOffset-01099
`resourceOffset` **must** be less than the size of the resource

- VUID-VkSparseMemoryBind-size-01100
`size` **must** be less than or equal to the size of the resource minus `resourceOffset`
- VUID-VkSparseMemoryBind-memoryOffset-01101
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkSparseMemoryBind-size-01102
`size` **must** be less than or equal to the size of `memory` minus `memoryOffset`
- VUID-VkSparseMemoryBind-memory-02730
If `memory` was created with `VkExportMemoryAllocateInfo::handleTypes` not equal to `0`, at least one handle type it contained **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` or `VkExternalMemoryImageCreateInfo::handleTypes` when the resource was created
- VUID-VkSparseMemoryBind-memory-02731
If `memory` was created by a memory import operation, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` or `VkExternalMemoryImageCreateInfo::handleTypes` when the resource was created

Valid Usage (Implicit)

- VUID-VkSparseMemoryBind-memory-parameter
If `memory` is not `VK_NULL_HANDLE`, `memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkSparseMemoryBind-flags-parameter
`flags` **must** be a valid combination of `VkSparseMemoryBindFlagBits` values

Bits which **can** be set in `VkSparseMemoryBind::flags`, specifying usage of a sparse memory binding operation, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSparseMemoryBindFlagBits {
    VK_SPARSE_MEMORY_BIND_METADATA_BIT = 0x00000001,
} VkSparseMemoryBindFlagBits;
```

- `VK_SPARSE_MEMORY_BIND_METADATA_BIT` specifies that the memory being bound is only for the metadata aspect.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSparseMemoryBindFlags;
```

`VkSparseMemoryBindFlags` is a bitmask type for setting a mask of zero or more `VkSparseMemoryBindFlagBits`.

Memory is bound to `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseBufferMemoryBindInfo {
    VkBuffer          buffer;
    uint32_t          bindCount;
    const VkSparseMemoryBind* pBinds;
} VkSparseBufferMemoryBindInfo;
```

- **buffer** is the [VkBuffer](#) object to be bound.
- **bindCount** is the number of [VkSparseMemoryBind](#) structures in the **pBinds** array.
- **pBinds** is a pointer to an array of [VkSparseMemoryBind](#) structures.

Valid Usage (Implicit)

- VUID-VkSparseBufferMemoryBindInfo-buffer-parameter **buffer** **must** be a valid [VkBuffer](#) handle
- VUID-VkSparseBufferMemoryBindInfo-pBinds-parameter **pBinds** **must** be a valid pointer to an array of **bindCount** valid [VkSparseMemoryBind](#) structures
- VUID-VkSparseBufferMemoryBindInfo-bindCount-arraylength **bindCount** **must** be greater than 0

Memory is bound to opaque regions of [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_BINDING_BIT](#) flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageOpaqueMemoryBindInfo {
    VkImage          image;
    uint32_t          bindCount;
    const VkSparseMemoryBind* pBinds;
} VkSparseImageOpaqueMemoryBindInfo;
```

- **image** is the [VkImage](#) object to be bound.
- **bindCount** is the number of [VkSparseMemoryBind](#) structures in the **pBinds** array.
- **pBinds** is a pointer to an array of [VkSparseMemoryBind](#) structures.

This structure is normally used to bind memory to fully-resident sparse images or for mip tail regions of partially resident images. However, it **can** also be used to bind memory for the entire binding range of partially resident images.

NOTE

If the **pBinds[i].flags** of an element *i* of **pBinds** does not contain [VK_SPARSE_MEMORY_BIND_METADATA_BIT](#), the **resourceOffset** is in the range [0, [VkMemoryRequirements::size](#)), This range includes data from all aspects of the image, including metadata. For most implementations this will probably mean that

the `resourceOffset` is a simple device address offset within the resource. It is possible for an application to bind a range of memory that includes both resource data and metadata. However, the application would not know what part of the image the memory is used for, or if any range is being used for metadata.

If the `pBinds[i].flags` of an element `i` of `pBinds` contains `VK_SPARSE_MEMORY_BIND_METADATA_BIT`, the binding range specified **must** be within the mip tail region of the metadata aspect. In this case the `resourceOffset` is not **required** to be a simple device address offset within the resource. However, it is defined to be within `[imageMipTailOffset, imageMipTailOffset + imageMipTailSize)` for the metadata aspect. See `VkSparseMemoryBind` for the full constraints on binding region with this flag present.

Valid Usage

- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-01103

If the `flags` member of any element of `pBinds` contains `VK_SPARSE_MEMORY_BIND_METADATA_BIT`, the binding range defined **must** be within the mip tail region of the metadata aspect of `image`

Valid Usage (Implicit)

- VUID-VkSparseImageOpaqueMemoryBindInfo-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-VkSparseImageOpaqueMemoryBindInfo-pBinds-parameter
`pBinds` **must** be a valid pointer to an array of `bindCount` valid `VkSparseMemoryBind` structures
- VUID-VkSparseImageOpaqueMemoryBindInfo-bindCount-arraylength
`bindCount` **must** be greater than 0

Memory **can** be bound to sparse image blocks of `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag using the following structure:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBindInfo {
    VkImage          image;
    uint32_t         bindCount;
    const VkSparseImageMemoryBind* pBinds;
} VkSparseImageMemoryBindInfo;
```

- `image` is the `VkImage` object to be bound
- `bindCount` is the number of `VkSparseImageMemoryBind` structures in `pBinds` array
- `pBinds` is a pointer to an array of `VkSparseImageMemoryBind` structures

Valid Usage

- VUID-VkSparseImageMemoryBindInfo-subresource-01722
The `subresource.mipLevel` member of each element of `pBinds` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01723
The `subresource.arrayLayer` member of each element of `pBinds` **must** be less than the `arrayLayers` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkSparseImageMemoryBindInfo-subresource-01106
The `subresource.aspectMask` member of each element of `pBinds` **must** be valid for the `format` specified in `VkImageCreateInfo` when `image` was created
- VUID-VkSparseImageMemoryBindInfo-image-02901
`image` **must** have been created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBindInfo-image-parameter
`image` **must** be a valid `VkImage` handle
- VUID-VkSparseImageMemoryBindInfo-pBinds-parameter
`pBinds` **must** be a valid pointer to an array of `bindCount` valid `VkSparseImageMemoryBind` structures
- VUID-VkSparseImageMemoryBindInfo-bindCount-arraylength
`bindCount` **must** be greater than 0

The `VkSparseImageMemoryBind` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkSparseImageMemoryBind {
    VkImageSubresource    subresource;
    VkOffset3D            offset;
    VkExtent3D            extent;
    VkDeviceMemory        memory;
    VkDeviceSize          memoryOffset;
    VkSparseMemoryBindFlags flags;
} VkSparseImageMemoryBind;
```

- `subresource` is the image *aspect* and region of interest in the image.
- `offset` are the coordinates of the first texel within the image subresource to bind.
- `extent` is the size in texels of the region within the image subresource to bind. The extent **must** be a multiple of the sparse image block dimensions, except when binding sparse image blocks along the edge of an image subresource it **can** instead be such that any coordinate of `offset + extent` equals the corresponding dimensions of the image subresource.

- `memory` is the `VkDeviceMemory` object that the sparse image blocks of the image are bound to. If `memory` is `VK_NULL_HANDLE`, the sparse image blocks are unbound.
- `memoryOffset` is an offset into `VkDeviceMemory` object. If `memory` is `VK_NULL_HANDLE`, this value is ignored.
- `flags` are sparse memory binding flags.

Valid Usage

- VUID-VkSparseImageMemoryBind-memory-01104
If the `sparseResidencyAliased` feature is not enabled, and if any other resources are bound to ranges of `memory`, the range of `memory` being bound **must** not overlap with those bound ranges
- VUID-VkSparseImageMemoryBind-memory-01105
`memory` and `memoryOffset` **must** match the memory requirements of the calling command's `image`, as described in section [Resource Memory Association](#)
- VUID-VkSparseImageMemoryBind-offset-01107
`offset.x` **must** be a multiple of the sparse image block width (`VkSparseImageFormatProperties::imageGranularity.width`) of the image
- VUID-VkSparseImageMemoryBind-extent-09388
`extent.width` **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01108
`extent.width` **must** either be a multiple of the sparse image block width of the image, or else (`extent.width + offset.x`) **must** equal the width of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01109
`offset.y` **must** be a multiple of the sparse image block height (`VkSparseImageFormatProperties::imageGranularity.height`) of the image
- VUID-VkSparseImageMemoryBind-extent-09389
`extent.height` **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01110
`extent.height` **must** either be a multiple of the sparse image block height of the image, or else (`extent.height + offset.y`) **must** equal the height of the image subresource
- VUID-VkSparseImageMemoryBind-offset-01111
`offset.z` **must** be a multiple of the sparse image block depth (`VkSparseImageFormatProperties::imageGranularity.depth`) of the image
- VUID-VkSparseImageMemoryBind-extent-09390
`extent.depth` **must** be greater than 0
- VUID-VkSparseImageMemoryBind-extent-01112
`extent.depth` **must** either be a multiple of the sparse image block depth of the image, or else (`extent.depth + offset.z`) **must** equal the depth of the image subresource
- VUID-VkSparseImageMemoryBind-memory-02732
If `memory` was created with `VkExportMemoryAllocateInfo::handleTypes` not equal to 0, at least one handle type it contained **must** also have been set in

`VkExternalMemoryImageCreateInfo::handleTypes` when the image was created

- VUID-VkSparseImageMemoryBind-memory-02733

If `memory` was created by a memory import operation, the external handle type of the imported memory **must** also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created

Valid Usage (Implicit)

- VUID-VkSparseImageMemoryBind-subresource-parameter
`subresource` **must** be a valid `VkImageSubresource` structure
- VUID-VkSparseImageMemoryBind-memory-parameter
If `memory` is not `VK_NULL_HANDLE`, `memory` **must** be a valid `VkDeviceMemory` handle
- VUID-VkSparseImageMemoryBind-flags-parameter
`flags` **must** be a valid combination of `VkSparseMemoryBindFlagBits` values

To submit sparse binding operations to a queue, call:

```
// Provided by VK_VERSION_1_0
VkResult vkQueueBindSparse(
    VkQueue          queue,
    uint32_t         bindInfoCount,
    const VkBindSparseInfo* pBindInfo,
    VkFence          fence);
```

- `queue` is the queue that the sparse binding operations will be submitted to.
- `bindInfoCount` is the number of elements in the `pBindInfo` array.
- `pBindInfo` is a pointer to an array of `VkBindSparseInfo` structures, each specifying a sparse binding submission batch.
- `fence` is an **optional** handle to a fence to be signaled. If `fence` is not `VK_NULL_HANDLE`, it defines a `fence signal operation`.

`vkQueueBindSparse` is a `queue submission command`, with each batch defined by an element of `pBindInfo` as a `VkBindSparseInfo` structure. Batches begin execution in the order they appear in `pBindInfo`, but **may** complete out of order.

Within a batch, a given range of a resource **must** not be bound more than once. Across batches, if a range is to be bound to one allocation and offset and then to another allocation and offset, then the application **must** guarantee (usually using semaphores) that the binding operations are executed in the correct order, as well as to order binding operations against the execution of command buffer submissions.

As no operation to `vkQueueBindSparse` causes any pipeline stage to access memory, synchronization primitives used in this command effectively only define execution dependencies.

Additional information about fence and semaphore operation is described in [the synchronization chapter](#).

Valid Usage

- VUID-vkQueueBindSparse-fence-01113
If **fence** is not [VK_NULL_HANDLE](#), **fence** **must** be unsignaled
- VUID-vkQueueBindSparse-fence-01114
If **fence** is not [VK_NULL_HANDLE](#), **fence** **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkQueueBindSparse-pSignalSemaphores-01115
Each element of the **pSignalSemaphores** member of each element of **pBindInfo** **must** be unsignaled when the semaphore signal operation it defines is executed on the device
- VUID-vkQueueBindSparse-pWaitSemaphores-01116
When a semaphore wait operation referring to a binary semaphore defined by any element of the **pWaitSemaphores** member of any element of **pBindInfo** executes on **queue**, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueueBindSparse-pWaitSemaphores-03245
All elements of the **pWaitSemaphores** member of all elements of **pBindInfo** referring to a semaphore created with a **VkSemaphoreType** of [VK_SEMAPHORE_TYPE_BINARY](#) **must** reference a semaphore signal operation that has been submitted for execution and any [semaphore signal operations](#) on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueueBindSparse-queue-parameter
queue **must** be a valid [VkQueue](#) handle
- VUID-vkQueueBindSparse-pBindInfo-parameter
If **bindInfoCount** is not 0, **pBindInfo** **must** be a valid pointer to an array of **bindInfoCount** valid [VkBindSparseInfo](#) structures
- VUID-vkQueueBindSparse-fence-parameter
If **fence** is not [VK_NULL_HANDLE](#), **fence** **must** be a valid [VkFence](#) handle
- VUID-vkQueueBindSparse-queueType
The **queue** **must** support [VK_QUEUE_SPARSE_BINDING_BIT](#) operations
- VUID-vkQueueBindSparse-commonparent
Both of **fence**, and **queue** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to **queue** **must** be externally synchronized if it was not created with

VK_DEVICE_QUEUE_CREATE INTERNALLY SYNCHRONIZED_BIT_KHR

- Host access to **fence** **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	VK_QUEUE_SPARSE_BINDING_BIT	-

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_DEVICE_LOST
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The **VkBindSparseInfo** structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkBindSparseInfo {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  waitSemaphoreCount;
    const VkSemaphore*        pWaitSemaphores;
    uint32_t                  bufferBindCount;
    const VkSparseBufferMemoryBindInfo* pBufferBinds;
    uint32_t                  imageOpaqueBindCount;
    const VkSparseImageOpaqueMemoryBindInfo* pImageOpaqueBinds;
    uint32_t                  imageBindCount;
    const VkSparseImageMemoryBindInfo* pImageBinds;
    uint32_t                  signalSemaphoreCount;
    const VkSemaphore*        pSignalSemaphores;
} VkBindSparseInfo;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- `waitSemaphoreCount` is the number of semaphores upon which to wait before executing the sparse binding operations for the batch.
- `pWaitSemaphores` is a pointer to an array of semaphores upon which to wait on before the sparse binding operations for this batch begin execution. If semaphores to wait on are provided, they define a [semaphore wait operation](#).
- `bufferBindCount` is the number of sparse buffer bindings to perform in the batch.
- `pBufferBinds` is a pointer to an array of [VkSparseBufferMemoryBindInfo](#) structures.
- `imageOpaqueBindCount` is the number of opaque sparse image bindings to perform.
- `pImageOpaqueBinds` is a pointer to an array of [VkSparseImageOpaqueMemoryBindInfo](#) structures, indicating opaque sparse image bindings to perform.
- `imageBindCount` is the number of sparse image bindings to perform.
- `pImageBinds` is a pointer to an array of [VkSparseImageMemoryBindInfo](#) structures, indicating sparse image bindings to perform.
- `signalSemaphoreCount` is the number of semaphores to be signaled once the sparse binding operations specified by the structure have completed execution.
- `pSignalSemaphores` is a pointer to an array of semaphores which will be signaled when the sparse binding operations for this batch have completed execution. If semaphores to be signaled are provided, they define a [semaphore signal operation](#).

The first [synchronization scope](#) of each [semaphore signal operation](#) defined by this structure includes all sparse binding operations defined by this structure.

The second [synchronization scope](#) of each [semaphore wait operation](#) defined by this structure includes all sparse binding operations defined by this structure.

Valid Usage

- VUID-VkBindSparseInfo-pWaitSemaphores-03246
If any element of `pWaitSemaphores` or `pSignalSemaphores` was created with a [VkSemaphoreType](#) of `VK_SEMAPHORE_TYPE_TIMELINE` then the `pNext` chain **must** include a [VkTimelineSemaphoreSubmitInfo](#) structure
- VUID-VkBindSparseInfo-pNext-03247
If the `pNext` chain of this structure includes a [VkTimelineSemaphoreSubmitInfo](#) structure and any element of `pWaitSemaphores` was created with a [VkSemaphoreType](#) of `VK_SEMAPHORE_TYPE_TIMELINE` then its `waitSemaphoreValueCount` member **must** equal `waitSemaphoreCount`
- VUID-VkBindSparseInfo-pNext-03248
If the `pNext` chain of this structure includes a [VkTimelineSemaphoreSubmitInfo](#) structure and any element of `pSignalSemaphores` was created with a [VkSemaphoreType](#) of `VK_SEMAPHORE_TYPE_TIMELINE` then its `signalSemaphoreValueCount` member **must** equal `signalSemaphoreCount`
- VUID-VkBindSparseInfo-pSignalSemaphores-03249
For each element of `pSignalSemaphores` created with a [VkSemaphoreType](#) of

`VK_SEMAPHORE_TYPE_TIMELINE` the corresponding element of `VkTimelineSemaphoreSubmitInfo::pSignalSemaphoreValues` **must** have a value greater than the current value of the semaphore when the semaphore signal operation is executed

- VUID-VkBindSparseInfo-pWaitSemaphores-03250

For each element of `pWaitSemaphores` created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` the corresponding element of `VkTimelineSemaphoreSubmitInfo::pWaitSemaphoreValues` **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than `maxTimelineSemaphoreValueDifference`

- VUID-VkBindSparseInfo-pSignalSemaphores-03251

For each element of `pSignalSemaphores` created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` the corresponding element of `VkTimelineSemaphoreSubmitInfo::pSignalSemaphoreValues` **must** have a value which does not differ from the current value of the semaphore or from the value of any outstanding semaphore wait or signal operation on that semaphore by more than `maxTimelineSemaphoreValueDifference`

- VUID-VkBindSparseInfo-pNext-09753

If the `pNext` chain of this structure includes a `VkFrameBoundaryTensorsARM` structure then it **must** also include a `VkFrameBoundaryEXT` structure

Valid Usage (Implicit)

- VUID-VkBindSparseInfo-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_BIND_SPARSE_INFO`

- VUID-VkBindSparseInfo-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDeviceGroupBindSparseInfo`, `VkFrameBoundaryEXT`, `VkFrameBoundaryTensorsARM`, or `VkTimelineSemaphoreSubmitInfo`

- VUID-VkBindSparseInfo-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkBindSparseInfo-pWaitSemaphores-parameter

If `waitSemaphoreCount` is not 0, `pWaitSemaphores` **must** be a valid pointer to an array of `waitSemaphoreCount` valid `VkSemaphore` handles

- VUID-VkBindSparseInfo-pBufferBinds-parameter

If `bufferBindCount` is not 0, `pBufferBinds` **must** be a valid pointer to an array of `bufferBindCount` valid `VkSparseBufferMemoryBindInfo` structures

- VUID-VkBindSparseInfo-pImageOpaqueBinds-parameter

If `imageOpaqueBindCount` is not 0, `pImageOpaqueBinds` **must** be a valid pointer to an array of `imageOpaqueBindCount` valid `VkSparseImageOpaqueMemoryBindInfo` structures

- VUID-VkBindSparseInfo-pImageBinds-parameter

If `imageBindCount` is not 0, `pImageBinds` **must** be a valid pointer to an array of `imageBindCount` valid `VkSparseImageMemoryBindInfo` structures

- VUID-VkBindSparseInfo-pSignalSemaphores-parameter

If `signalSemaphoreCount` is not 0, `pSignalSemaphores` **must** be a valid pointer to an array of `signalSemaphoreCount` valid `VkSemaphore` handles

- VUID-VkBindSparseInfo-commonparent

Both of the elements of `pSignalSemaphores`, and the elements of `pWaitSemaphores` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

To specify the values to use when waiting for and signaling semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE`, add a `VkTimelineSemaphoreSubmitInfo` structure to the `pNext` chain of the `VkBindSparseInfo` structure.

If the `pNext` chain of `VkBindSparseInfo` includes a `VkDeviceGroupBindSparseInfo` structure, then that structure includes device indices specifying which instance of the resources and memory are bound.

The `VkDeviceGroupBindSparseInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDeviceGroupBindSparseInfo {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           resourceDeviceIndex;
    uint32_t           memoryDeviceIndex;
} VkDeviceGroupBindSparseInfo;
```

```
// Provided by VK_KHR_device_group
// Equivalent to VkDeviceGroupBindSparseInfo
typedef VkDeviceGroupBindSparseInfo VkDeviceGroupBindSparseInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `resourceDeviceIndex` is a device index indicating which instance of the resource is bound.
- `memoryDeviceIndex` is a device index indicating which instance of the memory the resource instance is bound to.

These device indices apply to all buffer and image memory binds included in the batch pointing to this structure. The semaphore waits and signals for the batch are executed only by the physical device specified by the `resourceDeviceIndex`.

If this structure is not present, `resourceDeviceIndex` and `memoryDeviceIndex` are assumed to be zero.

Valid Usage

- VUID-VkDeviceGroupBindSparseInfo-resourceDeviceIndex-01118
`resourceDeviceIndex` and `memoryDeviceIndex` **must** both be valid device indices
- VUID-VkDeviceGroupBindSparseInfo-memoryDeviceIndex-01119
Each memory allocation bound in this batch **must** have allocated an instance for `memoryDeviceIndex`

Valid Usage (Implicit)

- VUID-VkDeviceGroupBindSparseInfo-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_BIND_SPARSE_INFO`

Structure Chaining

Extends the structure

- `VkBindSparseInfo`

Chapter 39. Window System Integration (WSI)

This chapter discusses the window system integration (WSI) between the Vulkan API and the various forms of displaying the results of rendering to a user. Since the Vulkan API **can** be used without displaying results, WSI is provided through the use of optional Vulkan extensions. This chapter provides an overview of WSI. See the appendix for additional details of each WSI extension, including which extensions **must** be enabled in order to use each of the functions described in this chapter.

39.1. WSI Platform

A platform is an abstraction for a window system, OS, etc. Some examples include MS Windows, Android, and Wayland. The Vulkan API **may** be integrated in a unique manner for each platform.

The Vulkan API does not define any type of platform object. Platform-specific WSI extensions are defined, each containing platform-specific functions for using WSI. Use of these extensions is guarded by preprocessor symbols as defined in the [Window System-Specific Header Control](#) appendix.

In order for an application to be compiled to use WSI with a given platform, it **must** either:

- `#define` the appropriate preprocessor symbol prior to including the `vulkan.h` header file, or
- include `vulkan_core.h` and any native platform headers, followed by the appropriate platform-specific header.

The preprocessor symbols and platform-specific headers are defined in the [Window System Extensions and Headers](#) table.

Each platform-specific extension is an instance extension. The application **must** enable instance extensions with `vkCreateInstance` before using them.

39.2. WSI Surface

Native platform surface or window objects are abstracted by surface objects, which are represented by `VkSurfaceKHR` handles:

```
// Provided by VK_KHR_surface
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSurfaceKHR)
```

The `VK_KHR_surface` extension declares the `VkSurfaceKHR` object, and provides a function for destroying `VkSurfaceKHR` objects. Separate platform-specific extensions each provide a function for creating a `VkSurfaceKHR` object for the respective platform. From the application's perspective this is an opaque handle, just like the handles of other Vulkan objects.

NOTE

On certain platforms, the Vulkan loader and ICDs **may** have conventions that treat

the handle as a pointer to a structure containing the platform-specific information about the surface. This will be described in the documentation for the loader-ICD interface, and in the `vk_icd.h` header file of the LoaderAndTools source-code repository. This does not affect the loader-layer interface; layers **may** wrap `VkSurfaceKHR` objects.

39.2.1. Android Platform

To create a `VkSurfaceKHR` object for an Android native window, call:

```
// Provided by VK_KHR_android_surface
VkResult vkCreateAndroidSurfaceKHR(
    VkInstance                                instance,
    const VkAndroidSurfaceCreateInfoKHR*      pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkAndroidSurfaceCreateInfoKHR` structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

During the lifetime of a surface created using a particular `ANativeWindow` handle any attempts to create another surface for the same `ANativeWindow` and any attempts to connect to the same `ANativeWindow` through other platform mechanisms will fail.

NOTE In particular, only one `VkSurfaceKHR` **can** exist at a time for a given window. Similarly, a native window **cannot** be used by both a `VkSurfaceKHR` and `EGLSurface` simultaneously.

If successful, `vkCreateAndroidSurfaceKHR` increments the `ANativeWindow`'s reference count, and `vkDestroySurfaceKHR` will decrement it.

On Android, when a swapchain's `imageExtent` does not match the surface's `currentExtent`, the presentable images will be scaled to the surface's dimensions during presentation. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum image size supported by the consumer. For the system compositor, `currentExtent` is the window size (i.e. the consumer's preferred size).

Valid Usage (Implicit)

- VUID-vkCreateAndroidSurfaceKHR-instance-parameter
`instance` **must** be a valid `VkInstance` handle
- VUID-vkCreateAndroidSurfaceKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkAndroidSurfaceCreateInfoKHR` structure

- VUID-vkCreateAndroidSurfaceKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateAndroidSurfaceKHR-pSurface-parameter
`pSurface` **must** be a valid pointer to a `VkSurfaceKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkAndroidSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_android_surface
typedef struct VkAndroidSurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkAndroidSurfaceCreateFlagsKHR flags;
    struct ANativeWindow* window;
} VkAndroidSurfaceCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `window` is a pointer to the `ANativeWindow` to associate the surface with.

Valid Usage

- VUID-VkAndroidSurfaceCreateInfoKHR-window-01248
`window` **must** point to a valid Android `ANativeWindow`

Valid Usage (Implicit)

- VUID-VkAndroidSurfaceCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR`

- `VOID-VkAndroidSurfaceCreateInfoKHR-pNext-pNext`
`pNext` **must** be `NULL`
- `VOID-VkAndroidSurfaceCreateInfoKHR-flags-zeroBitmask`
`flags` **must** be `0`

To remove an unnecessary compile time dependency, an incomplete type definition of `ANativeWindow` is provided in the Vulkan headers:

```
// Provided by VK_KHR_android_surface
struct ANativeWindow;
```

The actual `ANativeWindow` type is defined in Android NDK headers.

```
// Provided by VK_KHR_android_surface
typedef VkFlags VkAndroidSurfaceCreateFlagsKHR;
```

`VkAndroidSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.2. Wayland Platform

To create a `VkSurfaceKHR` object for a Wayland surface, call:

```
// Provided by VK_KHR_wayland_surface
VkResult vkCreateWaylandSurfaceKHR(
    VkInstance          instance,
    const VkWaylandSurfaceCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR* pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkWaylandSurfaceCreateInfoKHR` structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- `VOID-vkCreateWaylandSurfaceKHR-instance-parameter`
`instance` **must** be a valid `VkInstance` handle

- VUID-vkCreateWaylandSurfaceKHR-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkWaylandSurfaceCreateInfoKHR](#) structure
- VUID-vkCreateWaylandSurfaceKHR-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateWaylandSurfaceKHR-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkWaylandSurfaceCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_wayland_surface
typedef struct VkWaylandSurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkWaylandSurfaceCreateFlagsKHR flags;
    struct wl_display*  display;
    struct wl_surface*  surface;
} VkWaylandSurfaceCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **display** and **surface** are pointers to the Wayland [wl_display](#) and [wl_surface](#) to associate the surface with.

Valid Usage

- VUID-VkWaylandSurfaceCreateInfoKHR-display-01304
display **must** point to a valid Wayland [wl_display](#)
- VUID-VkWaylandSurfaceCreateInfoKHR-surface-01305
surface **must** point to a valid Wayland [wl_surface](#)

Valid Usage (Implicit)

- VUID-VkWaylandSurfaceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR`
- VUID-VkWaylandSurfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkWaylandSurfaceCreateInfoKHR-flags-zerobitmask
`flags` **must** be `0`

On Wayland, `currentExtent` is the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that the surface size will be determined by the extent of a swapchain targeting the surface. Whatever the application sets a swapchain's `imageExtent` to will be the size of the window, after the first image is presented. `minImageExtent` is (1,1), and `maxImageExtent` is the maximum supported surface size. Any calls to `vkGetPhysicalDeviceSurfacePresentModesKHR` on a surface created with `vkCreateWaylandSurfaceKHR` are **required** to return `VK_PRESENT_MODE_MAILBOX_KHR` as one of the valid present modes.

Some Vulkan functions **may** send protocol over the specified `wl_display` connection when using a swapchain or presentable images created from a `VkSurfaceKHR` referring to a `wl_surface`. Applications **must** therefore ensure that both the `wl_display` and the `wl_surface` remain valid for the lifetime of any `VkSwapchainKHR` objects created from a particular `wl_display` and `wl_surface`. Also, calling `vkQueuePresentKHR` will result in Vulkan sending `wl_surface.commit` requests to the underlying `wl_surface` of each. The `wl_surface.attach`, `wl_surface.damage`, and `wl_surface.commit` requests **must** be issued by the implementation during the call to `vkQueuePresentKHR` and **must** not be issued by the implementation outside of `vkQueuePresentKHR`. This ensures that any Wayland requests sent by the client after the call to `vkQueuePresentKHR` returns will be received by the compositor after the `wl_surface.commit`. Regardless of the mode of swapchain creation, a new `wl_event_queue` **must** be created for each successful `vkCreateWaylandSurfaceKHR` call, and every Wayland object created by the implementation **must** be assigned to this event queue. If the platform provides Wayland 1.11 or greater, this **must** be implemented by the use of Wayland proxy object wrappers, to avoid race conditions.

If the application wishes to synchronize any window changes with a particular frame, such requests **must** be sent to the Wayland display server prior to calling `vkQueuePresentKHR`.

The implementation **must** ensure that no `wp_color_management_surface_v1` object exists for a surface, which has no swapchains, or only swapchains with a `imageColorSpace` of `VK_COLOR_SPACE_PASS_THROUGH_EXT` associated with it.

```
// Provided by VK_KHR_wayland_surface
typedef VkFlags VkWaylandSurfaceCreateFlagsKHR;
```

`VkWaylandSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.3. Win32 Platform

To create a `VkSurfaceKHR` object for a Win32 window, call:

```
// Provided by VK_KHR_win32_surface
VkResult vkCreateWin32SurfaceKHR(
    VkInstance          instance,
    const VkWin32SurfaceCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR*       pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkWin32SurfaceCreateInfoKHR` structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateWin32SurfaceKHR-instance-parameter
`instance` **must** be a valid `VkInstance` handle
- VUID-vkCreateWin32SurfaceKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkWin32SurfaceCreateInfoKHR` structure
- VUID-vkCreateWin32SurfaceKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateWin32SurfaceKHR-pSurface-parameter
`pSurface` **must** be a valid pointer to a `VkSurfaceKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Some Vulkan functions **may** call the `SendMessage` system API when interacting with a `VkSurfaceKHR`

through a `VkSwapchainKHR`. In a multithreaded environment, calling `SendMessage` from a thread that is not the thread associated with `pCreateInfo->hwnd` will block until the application has processed the window message. Thus, applications **should** either call these Vulkan functions on the message pump thread, or make sure their message pump is actively running. Failing to do so **may** result in deadlocks.

The functions subject to this requirement are:

- `vkCreateSwapchainKHR`
- `vkDestroySwapchainKHR`
- `vkAcquireNextImageKHR` and `vkAcquireNextImage2KHR`
- `vkQueuePresentKHR`
- `vkReleaseSwapchainImagesKHR`
- `vkAcquireFullScreenExclusiveModeEXT`
- `vkReleaseFullScreenExclusiveModeEXT`
- `vkSetHdrMetadataEXT`

The `VkWin32SurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_win32_surface
typedef struct VkWin32SurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkWin32SurfaceCreateFlagsKHR flags;
    HINSTANCE           hInstance;
    HWND               hwnd;
} VkWin32SurfaceCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `hInstance` is the Win32 `HINSTANCE` for the window to associate the surface with.
- `hwnd` is the Win32 `HWND` for the window to associate the surface with.

Valid Usage

- VUID-VkWin32SurfaceCreateInfoKHR-hinstance-01307
`hInstance` **must** be a valid Win32 `HINSTANCE`
- VUID-VkWin32SurfaceCreateInfoKHR-hwnd-01308
`hwnd` **must** be a valid Win32 `HWND`

Valid Usage (Implicit)

- VUID-VkWin32SurfaceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR`
- VUID-VkWin32SurfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkWin32SurfaceCreateInfoKHR-flags-zeroBitmask
`flags` **must** be `0`

With Win32, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of a Win32 surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless `VkSwapchainPresentScalingCreateInfoKHR` is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in `VkSurfaceCapabilitiesKHR::currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

```
// Provided by VK_KHR_win32_surface
typedef VkFlags VkWin32SurfaceCreateFlagsKHR;
```

`VkWin32SurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.4. XCB Platform

To create a `VkSurfaceKHR` object for an X11 window, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkResult vkCreateXcbSurfaceKHR(
    VkInstance          instance,
    const VkXcbSurfaceCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR* pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkXcbSurfaceCreateInfoKHR` structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is

no more specific allocator available (see [Memory Allocation](#)).

- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXcbSurfaceKHR-instance-parameter
instance **must** be a valid [VkInstance](#) handle
- VUID-vkCreateXcbSurfaceKHR-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkXcbSurfaceCreateInfoKHR](#) structure
- VUID-vkCreateXcbSurfaceKHR-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateXcbSurfaceKHR-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkXcbSurfaceCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_xcb_surface
typedef struct VkXcbSurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkXcbSurfaceCreateFlagsKHR flags;
    xcb_connection_t*   connection;
    xcb_window_t        window;
} VkXcbSurfaceCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **connection** is a pointer to an [xcb_connection_t](#) to the X server.

- `window` is the `xcb_window_t` for the X11 window to associate the surface with.

Valid Usage

- VUID-VkXcbSurfaceCreateInfoKHR-connection-01310
`connection` **must** point to a valid X11 `xcb_connection_t`
- VUID-VkXcbSurfaceCreateInfoKHR-window-01311
`window` **must** be a valid X11 `xcb_window_t`

Valid Usage (Implicit)

- VUID-VkXcbSurfaceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR`
- VUID-VkXcbSurfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkXcbSurfaceCreateInfoKHR-flags-zero bitmask
`flags` **must** be 0

With Xcb, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of an Xcb surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless `VkSwapchainPresentScalingCreateInfoKHR` is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in `VkSurfaceCapabilitiesKHR::currentExtent`.

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified xcb connection when using a swapchain or presentable images created from a `VkSurfaceKHR` referring to an xcb window. Applications **must** therefore ensure the xcb connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with xcb-based swapchains **must**

- Avoid holding a server grab on an xcb connection while waiting for Vulkan operations to complete using a swapchain derived from a different xcb connection referring to the same X server instance. Failing to do so **may** result in deadlock.

```
// Provided by VK_KHR_xcb_surface
typedef VkFlags VkXcbSurfaceCreateFlagsKHR;
```

`VkXcbSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.5. Xlib Platform

To create a `VkSurfaceKHR` object for an X11 window, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkResult vkCreateXlibSurfaceKHR(
    VkInstance                                instance,
    const VkXlibSurfaceCreateInfoKHR*         pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkXlibSurfaceCreateInfoKHR` structure containing the parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateXlibSurfaceKHR-instance-parameter
`instance` **must** be a valid `VkInstance` handle
- VUID-vkCreateXlibSurfaceKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkXlibSurfaceCreateInfoKHR` structure
- VUID-vkCreateXlibSurfaceKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateXlibSurfaceKHR-pSurface-parameter
`pSurface` **must** be a valid pointer to a `VkSurfaceKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkXlibSurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_xlib_surface
typedef struct VkXlibSurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkXlibSurfaceCreateFlagsKHR flags;
    Display*           dpy;
    Window              window;
} VkXlibSurfaceCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `dpy` is a pointer to an Xlib [Display](#) connection to the X server.
- `window` is an Xlib [Window](#) to associate the surface with.

Valid Usage

- VUID-VkXlibSurfaceCreateInfoKHR-dpy-01313
`dpy` **must** point to a valid Xlib [Display](#)
- VUID-VkXlibSurfaceCreateInfoKHR-window-01314
`window` **must** be a valid Xlib [Window](#)

Valid Usage (Implicit)

- VUID-VkXlibSurfaceCreateInfoKHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_XLIB_SURFACE_CREATE_INFO_KHR](#)
- VUID-VkXlibSurfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkXlibSurfaceCreateInfoKHR-flags-zerobitmask
`flags` **must** be 0

With Xlib, `minImageExtent`, `maxImageExtent`, and `currentExtent` **must** always equal the window size.

The `currentExtent` of an Xlib surface **must** have both `width` and `height` greater than 0, or both of them 0.

NOTE

Due to above restrictions, unless [VkSwapchainPresentScalingCreateInfoKHR](#) is used to specify handling of disparities between surface and swapchain dimensions, it is only possible to create a new swapchain on this platform with `imageExtent` being equal to the current size of the window, as reported in [VkSurfaceCapabilitiesKHR::currentExtent](#).

The window size **may** become (0, 0) on this platform (e.g. when the window is minimized), and so a swapchain **cannot** be created until the size changes.

Some Vulkan functions **may** send protocol over the specified Xlib `Display` connection when using a swapchain or presentable images created from a [VkSurfaceKHR](#) referring to an Xlib window. Applications **must** therefore ensure the display connection is available to Vulkan for the duration of any functions that manipulate such swapchains or their presentable images, and any functions that build or queue command buffers that operate on such presentable images. Specifically, applications using Vulkan with Xlib-based swapchains **must**

- Avoid holding a server grab on a display connection while waiting for Vulkan operations to complete using a swapchain derived from a different display connection referring to the same X server instance. Failing to do so **may** result in deadlock.

Some implementations may require threads to implement some presentation modes so applications **must** call `XInitThreads()` before calling any other Xlib functions.

```
// Provided by VK_KHR_xlib_surface
typedef VkFlags VkXlibSurfaceCreateFlagsKHR;
```

`VkXlibSurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.6. DirectFB Platform

To create a `VkSurfaceKHR` object for a DirectFB surface, call:

```
// Provided by VK_EXT_directfb_surface
VkResult vkCreateDirectFBSurfaceEXT(
    VkInstance                instance,
    const VkDirectFBSurfaceCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR* pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a [VkDirectFBSurfaceCreateInfoEXT](#) structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDirectFBSurfaceEXT-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateDirectFBSurfaceEXT-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkDirectFBSurfaceCreateInfoEXT](#) structure
- VUID-vkCreateDirectFBSurfaceEXT-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateDirectFBSurfaceEXT-pSurface-parameter **pSurface** **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDirectFBSurfaceCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_directfb_surface
typedef struct VkDirectFBSurfaceCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkDirectFBSurfaceCreateFlagsEXT flags;
    IDirectFB*         dfb;
    IDirectFBSurface*  surface;
} VkDirectFBSurfaceCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **dfb** is a pointer to the [IDirectFB](#) main interface of DirectFB.
- **surface** is a pointer to a [IDirectFBSurface](#) surface interface.

Valid Usage

- VUID-VkDirectFBSurfaceCreateInfoEXT-dfb-04117
dfb **must** point to a valid DirectFB **IDirectFB**
- VUID-VkDirectFBSurfaceCreateInfoEXT-surface-04118
surface **must** point to a valid DirectFB **IDirectFBSurface**

Valid Usage (Implicit)

- VUID-VkDirectFBSurfaceCreateInfoEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_DIRECTFB_SURFACE_CREATE_INFO_EXT**
- VUID-VkDirectFBSurfaceCreateInfoEXT-pNext-pNext
pNext **must** be **NULL**
- VUID-VkDirectFBSurfaceCreateInfoEXT-flags-zero bitmask
flags **must** be **0**

With DirectFB, **minImageExtent**, **maxImageExtent**, and **currentExtent** **must** always equal the surface size.

```
// Provided by VK_EXT_directfb_surface
typedef VkFlags VkDirectFBSurfaceCreateFlagsEXT;
```

VkDirectFBSurfaceCreateFlagsEXT is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.7. Fuchsia Platform

To create a **VkSurfaceKHR** object for a Fuchsia ImagePipe, call:

```
// Provided by VK_FUCHSIA_imagepipe_surface
VkResult vkCreateImagePipeSurfaceFUCHSIA(
    VkInstance                instance,
    const VkImagePipeSurfaceCreateInfoFUCHSIA* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR*             pSurface);
```

- **instance** is the instance to associate with the surface.
- **pCreateInfo** is a pointer to a **VkImagePipeSurfaceCreateInfoFUCHSIA** structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a **VkSurfaceKHR** handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateImagePipeSurfaceFUCHSIA-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkImagePipeSurfaceCreateInfoFUCHSIA](#) structure
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateImagePipeSurfaceFUCHSIA-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkImagePipeSurfaceCreateInfoFUCHSIA](#) structure is defined as:

```
// Provided by VK_FUCHSIA_imagepipe_surface
typedef struct VkImagePipeSurfaceCreateInfoFUCHSIA {
    VkStructureType      sType;
    const void*          pNext;
    VkImagePipeSurfaceCreateFlagsFUCHSIA  flags;
    zx_handle_t          imagePipeHandle;
} VkImagePipeSurfaceCreateInfoFUCHSIA;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **imagePipeHandle** is a [zx_handle_t](#) referring to the ImagePipe to associate with the surface.

Valid Usage

- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-imagePipeHandle-04863
`imagePipeHandle` **must** be a valid `zx_handle_t`

Valid Usage (Implicit)

- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGEPIPE_SURFACE_CREATE_INFO_FUCHSIA`
- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkImagePipeSurfaceCreateInfoFUCHSIA-flags-zeroBitmask
`flags` **must** be `0`

On Fuchsia, the surface `currentExtent` is the special value (`0xFFFFFFFF`, `0xFFFFFFFF`), indicating that the surface size will be determined by the extent of a swapchain targeting the surface.

```
// Provided by VK_FUCHSIA_imagepipe_surface
typedef VkFlags VkImagePipeSurfaceCreateFlagsFUCHSIA;
```

`VkImagePipeSurfaceCreateFlagsFUCHSIA` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.8. Google Games Platform

To create a `VkSurfaceKHR` object for a Google Games Platform stream descriptor, call:

```
// Provided by VK_GGP_stream_descriptor_surface
VkResult vkCreateStreamDescriptorSurfaceGGP(
    VkInstance          instance,
    const VkStreamDescriptorSurfaceCreateInfoGGP* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR*       pSurface);
```

- `instance` is the instance to associate with the surface.
- `pCreateInfo` is a pointer to a `VkStreamDescriptorSurfaceCreateInfoGGP` structure containing parameters that affect the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateStreamDescriptorSurfaceGGP-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateStreamDescriptorSurfaceGGP-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkStreamDescriptorSurfaceCreateInfoGGP](#) structure
- VUID-vkCreateStreamDescriptorSurfaceGGP-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateStreamDescriptorSurfaceGGP-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_NATIVE_WINDOW_IN_USE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkStreamDescriptorSurfaceCreateInfoGGP](#) structure is defined as:

```
// Provided by VK_GGP_stream_descriptor_surface
typedef struct VkStreamDescriptorSurfaceCreateInfoGGP {
    VkStructureType    sType;
    const void*        pNext;
    VkStreamDescriptorSurfaceCreateFlagsGGP flags;
    GgpStreamDescriptor streamDescriptor;
} VkStreamDescriptorSurfaceCreateInfoGGP;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **streamDescriptor** is a [GgpStreamDescriptor](#) referring to the GGP stream descriptor to associate with the surface.

Valid Usage

- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-streamDescriptor-02681
`streamDescriptor` **must** be a valid `GgpStreamDescriptor`

Valid Usage (Implicit)

- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_STREAM_DESCRIPTOR_SURFACE_CREATE_INFO_GGP`
- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkStreamDescriptorSurfaceCreateInfoGGP-flags-zeroBitmask
`flags` **must** be `0`

On Google Games Platform, the surface extents are dynamic. The `minImageExtent` will never be greater than 1080p and the `maxImageExtent` will never be less than 1080p. The `currentExtent` will reflect the current optimal resolution.

Applications are expected to choose an appropriate size for the swapchain's `imageExtent`, within the bounds of the surface. Using the surface's `currentExtent` will offer the best performance and quality. When a swapchain's `imageExtent` does not match the surface's `currentExtent`, the presentable images are scaled to the surface's dimensions during presentation if possible and `VK_SUBOPTIMAL_KHR` is returned, otherwise presentation fails with `VK_ERROR_OUT_OF_DATE_KHR`.

```
// Provided by VK_GGP_stream_descriptor_surface
typedef VkFlags VkStreamDescriptorSurfaceCreateFlagsGGP;
```

`VkStreamDescriptorSurfaceCreateFlagsGGP` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.9. iOS Platform

To create a `VkSurfaceKHR` object for an iOS `UIView` or `CAMetalLayer`, call:

```
// Provided by VK_MVK_ios_surface
VkResult vkCreateIOSurfaceMVK(
    VkInstance                                instance,
    const VkIOSurfaceCreateInfoMVK*          pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- `instance` is the instance with which to associate the surface.

- **pCreateInfo** is a pointer to a [VkIOSSurfaceCreateInfoMVK](#) structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

NOTE

The **vkCreateIOSSurfaceMVK** function is considered legacy and has been superseded by **vkCreateMetalSurfaceEXT** from the [VK_EXT_metal_surface](#) extension.

Valid Usage (Implicit)

- VUID-vkCreateIOSSurfaceMVK-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateIOSSurfaceMVK-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkIOSSurfaceCreateInfoMVK](#) structure
- VUID-vkCreateIOSSurfaceMVK-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateIOSSurfaceMVK-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_NATIVE_WINDOW_IN_USE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkIOSSurfaceCreateInfoMVK](#) structure is defined as:

```
// Provided by VK_MVK_ios_surface
typedef struct VkIOSurfaceCreateInfoMVK {
    VkStructureType      sType;
    const void*          pNext;
    VkIOSurfaceCreateFlagsMVK flags;
    const void*          pView;
} VkIOSurfaceCreateInfoMVK;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **pView** is a reference to either a [CAMetalLayer](#) object or a [UIView](#) object.

Valid Usage

- VUID-VkIOSurfaceCreateInfoMVK-pView-04143
If **pView** is a [CAMetalLayer](#) object, it **must** be a valid [CAMetalLayer](#)
- VUID-VkIOSurfaceCreateInfoMVK-pView-01316
If **pView** is a [UIView](#) object, it **must** be a valid [UIView](#), **must** be backed by a [CALayer](#) object of type [CAMetalLayer](#), and [vkCreateIOSurfaceMVK](#) **must** be called on the main thread

Valid Usage (Implicit)

- VUID-VkIOSurfaceCreateInfoMVK-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_IOS_SURFACE_CREATE_INFO_MVK](#)
- VUID-VkIOSurfaceCreateInfoMVK-pNext-pNext
pNext **must** be **NULL**
- VUID-VkIOSurfaceCreateInfoMVK-flags-zero bitmask
flags **must** be 0

```
// Provided by VK_MVK_ios_surface
typedef VkFlags VkIOSurfaceCreateFlagsMVK;
```

[VkIOSurfaceCreateFlagsMVK](#) is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.10. macOS Platform

To create a [VkSurfaceKHR](#) object for a macOS [NSView](#) or [CAMetalLayer](#), call:

```
// Provided by VK_MVK_macos_surface
VkResult vkCreateMacOSSurfaceMVK(
    VkInstance                                instance,
    const VkMacOSSurfaceCreateInfoMVK*       pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- **instance** is the instance with which to associate the surface.
- **pCreateInfo** is a pointer to a [VkMacOSSurfaceCreateInfoMVK](#) structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

NOTE

The [vkCreateMacOSSurfaceMVK](#) function is considered legacy and has been superseded by [vkCreateMetalSurfaceEXT](#) from the [VK_EXT_metal_surface](#) extension.

Valid Usage (Implicit)

- VUID-vkCreateMacOSSurfaceMVK-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateMacOSSurfaceMVK-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkMacOSSurfaceCreateInfoMVK](#) structure
- VUID-vkCreateMacOSSurfaceMVK-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateMacOSSurfaceMVK-pSurface-parameter **pSurface** **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_NATIVE_WINDOW_IN_USE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkMacOSSurfaceCreateInfoMVK` structure is defined as:

```
// Provided by VK_MVK_macos_surface
typedef struct VkMacOSSurfaceCreateInfoMVK {
    VkStructureType      sType;
    const void*          pNext;
    VkMacOSSurfaceCreateFlagsMVK flags;
    const void*          pView;
} VkMacOSSurfaceCreateInfoMVK;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `pView` is a reference to either a `CAMetalLayer` object or an `NSView` object.

Valid Usage

- VUID-VkMacOSSurfaceCreateInfoMVK-pView-04144
If `pView` is a `CAMetalLayer` object, it **must** be a valid `CAMetalLayer`
- VUID-VkMacOSSurfaceCreateInfoMVK-pView-01317
If `pView` is an `NSView` object, it **must** be a valid `NSView`, **must** be backed by a `CALayer` object of type `CAMetalLayer`, and `vkCreateMacOSSurfaceMVK` **must** be called on the main thread

Valid Usage (Implicit)

- VUID-VkMacOSSurfaceCreateInfoMVK-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MACOS_SURFACE_CREATE_INFO_MVK`
- VUID-VkMacOSSurfaceCreateInfoMVK-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMacOSSurfaceCreateInfoMVK-flags-zero bitmask
`flags` **must** be 0

```
// Provided by VK_MVK_macos_surface
typedef VkFlags VkMacOSSurfaceCreateFlagsMVK;
```

`VkMacOSSurfaceCreateFlagsMVK` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.11. VI Platform

To create a `VkSurfaceKHR` object for an `nn::vi::Layer`, query the layer's native handle using `nn::vi::GetNativeWindow`, and then call:

```
// Provided by VK_NN_vi_surface
VkResult vkCreateViSurfaceNN(
    VkInstance                                instance,
    const VkViSurfaceCreateInfoNN*           pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- **instance** is the instance with which to associate the surface.
- **pCreateInfo** is a pointer to a **VkViSurfaceCreateInfoNN** structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see **Memory Allocation**).
- **pSurface** is a pointer to a **VkSurfaceKHR** handle in which the created surface object is returned.

During the lifetime of a surface created using a particular **nn::vi::NativeWindowHandle**, applications **must** not attempt to create another surface for the same **nn::vi::Layer** or attempt to connect to the same **nn::vi::Layer** through other platform mechanisms.

If the native window is created with a specified size, **currentExtent** will reflect that size. In this case, applications should use the same size for the swapchain's **imageExtent**. Otherwise, the **currentExtent** will have the special value (0xFFFFFFFF, 0xFFFFFFFF), indicating that applications are expected to choose an appropriate size for the swapchain's **imageExtent** (e.g., by matching the result of a call to **nn::vi::GetDisplayResolution**).

Valid Usage (Implicit)

- VUID-vkCreateViSurfaceNN-instance-parameter
instance **must** be a valid **VkInstance** handle
- VUID-vkCreateViSurfaceNN-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid **VkViSurfaceCreateInfoNN** structure
- VUID-vkCreateViSurfaceNN-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkCreateViSurfaceNN-pSurface-parameter
pSurface **must** be a valid pointer to a **VkSurfaceKHR** handle

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_NATIVE_WINDOW_IN_USE_KHR**

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkViSurfaceCreateInfoNN` structure is defined as:

```
// Provided by VK_NN_vi_surface
typedef struct VkViSurfaceCreateInfoNN {
    VkStructureType      sType;
    const void*          pNext;
    VkViSurfaceCreateFlagsNN flags;
    void*                window;
} VkViSurfaceCreateInfoNN;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `window` is the `nn::vi::NativeWindowHandle` for the `nn::vi::Layer` with which to associate the surface.

Valid Usage

- VUID-VkViSurfaceCreateInfoNN-window-01318
`window` **must** be a valid `nn::vi::NativeWindowHandle`

Valid Usage (Implicit)

- VUID-VkViSurfaceCreateInfoNN-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_VI_SURFACE_CREATE_INFO_NN](#)
- VUID-VkViSurfaceCreateInfoNN-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkViSurfaceCreateInfoNN-flags-zero bitmask
`flags` **must** be 0

```
// Provided by VK_NN_vi_surface
typedef VkFlags VkViSurfaceCreateFlagsNN;
```

`VkViSurfaceCreateFlagsNN` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.12. Metal Platform

To create a `VkSurfaceKHR` object for a `CAMetalLayer`, call:

```
// Provided by VK_EXT_metal_surface
VkResult vkCreateMetalSurfaceEXT(
    VkInstance                                instance,
    const VkMetalSurfaceCreateInfoEXT*        pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- `instance` is the instance with which to associate the surface.
- `pCreateInfo` is a pointer to a `VkMetalSurfaceCreateInfoEXT` structure specifying parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateMetalSurfaceEXT-instance-parameter
`instance` **must** be a valid `VkInstance` handle
- VUID-vkCreateMetalSurfaceEXT-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkMetalSurfaceCreateInfoEXT` structure
- VUID-vkCreateMetalSurfaceEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateMetalSurfaceEXT-pSurface-parameter
`pSurface` **must** be a valid pointer to a `VkSurfaceKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The [VkMetalSurfaceCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_metal_surface
typedef struct VkMetalSurfaceCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMetalSurfaceCreateFlagsEXT flags;
    const CAMetalLayer*  pLayer;
} VkMetalSurfaceCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **pLayer** is a reference to a [CAMetalLayer](#) object representing a renderable surface.

Valid Usage (Implicit)

- VUID-VkMetalSurfaceCreateInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_METAL_SURFACE_CREATE_INFO_EXT](#)
- VUID-VkMetalSurfaceCreateInfoEXT-pNext-pNext
pNext must be **NULL**
- VUID-VkMetalSurfaceCreateInfoEXT-flags-zero bitmask
flags must be **0**

To remove an unnecessary compile time dependency, an incomplete type definition of [CAMetalLayer](#) is provided in the Vulkan headers:

```
// Provided by VK_EXT_metal_surface
#ifdef __OBJC__
@class CAMetalLayer;
#else
typedef void CAMetalLayer;
#endif
```

The actual [CAMetalLayer](#) type is defined in the QuartzCore framework.

```
// Provided by VK_EXT_metal_surface
typedef VkFlags VkMetalSurfaceCreateFlagsEXT;
```

VkMetalSurfaceCreateFlagsEXT is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.13. QNX Screen Platform

To create a `VkSurfaceKHR` object for a QNX Screen surface, call:

```
// Provided by VK_QNX_screen_surface
VkResult vkCreateScreenSurfaceQNX(
    VkInstance                                instance,
    const VkScreenSurfaceCreateInfoQNX*      pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- `instance` is the instance to associate the surface with.
- `pCreateInfo` is a pointer to a `VkScreenSurfaceCreateInfoQNX` structure containing parameters affecting the creation of the surface object.
- `pAllocator` is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSurface` is a pointer to a `VkSurfaceKHR` handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateScreenSurfaceQNX-instance-parameter
`instance` **must** be a valid `VkInstance` handle
- VUID-vkCreateScreenSurfaceQNX-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkScreenSurfaceCreateInfoQNX` structure
- VUID-vkCreateScreenSurfaceQNX-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateScreenSurfaceQNX-pSurface-parameter
`pSurface` **must** be a valid pointer to a `VkSurfaceKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkScreenSurfaceCreateInfoQNX` structure is defined as:

```
// Provided by VK_QNX_screen_surface
typedef struct VkScreenSurfaceCreateInfoQNX {
    VkStructureType      sType;
    const void*          pNext;
    VkScreenSurfaceCreateFlagsQNX flags;
    struct _screen_context* context;
    struct _screen_window* window;
} VkScreenSurfaceCreateInfoQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `context` and `window` are QNX Screen `context` and `window` to associate the surface with.

Valid Usage

- VUID-VkScreenSurfaceCreateInfoQNX-context-04741
`context` **must** point to a valid QNX Screen `struct _screen_context`
- VUID-VkScreenSurfaceCreateInfoQNX-window-04742
`window` **must** point to a valid QNX Screen `struct _screen_window`

Valid Usage (Implicit)

- VUID-VkScreenSurfaceCreateInfoQNX-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SCREEN_SURFACE_CREATE_INFO_QNX`
- VUID-VkScreenSurfaceCreateInfoQNX-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkScreenSurfaceCreateInfoQNX-flags-zero bitmask
`flags` **must** be `0`

```
// Provided by VK_QNX_screen_surface
typedef VkFlags VkScreenSurfaceCreateFlagsQNX;
```

`VkScreenSurfaceCreateFlagsQNX` is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.14. Open Harmony OS Platform Surface Creation

To create a `VkSurfaceKHR` object on Open Harmony OS platform, call:

```
// Provided by VK_OHOS_surface
VkResult vkCreateSurfaceOHOS(
    VkInstance                                instance,
    const VkSurfaceCreateInfoOHOS*            pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- **instance** is the instance to associate the surface with.
- **pCreateInfo** is a pointer to a [VkSurfaceCreateInfoOHOS](#) structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateSurfaceOHOS-instance-parameter
instance **must** be a valid [VkInstance](#) handle
- VUID-vkCreateSurfaceOHOS-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkSurfaceCreateInfoOHOS](#) structure
- VUID-vkCreateSurfaceOHOS-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateSurfaceOHOS-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkSurfaceCreateInfoOHOS](#) structure is defined as:

```
// Provided by VK_OHOS_surface
typedef struct VkSurfaceCreateInfoOHOS {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceCreateFlagsOHOS flags;
    OHNativeWindow*    window;
} VkSurfaceCreateInfoOHOS;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **window**: is a pointer to a [OHNativeWindow](#) to associate the surface with.

Valid Usage (Implicit)

- VUID-VkSurfaceCreateInfoOHOS-sType-sType
sType must be [VK_STRUCTURE_TYPE_SURFACE_CREATE_INFO_OHOS](#)
- VUID-VkSurfaceCreateInfoOHOS-pNext-pNext
pNext must be **NULL**
- VUID-VkSurfaceCreateInfoOHOS-flags-zerobitmask
flags must be **0**

The [OHNativeWindow](#) structure is defined as:

```
// Provided by VK_OHOS_surface
typedef struct NativeWindow OHNativeWindow;
```

It is the native window structure on Open Harmony OS platform. It is exposed by the Open Harmony OS NDK.

```
// Provided by VK_OHOS_surface
typedef VkFlags VkSurfaceCreateFlagsOHOS;
```

VkSurfaceCreateFlagsOHOS is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.15. UBM Platform

To create a **VkSurfaceKHR** object for a UBM surface, call:

```
// Provided by VK_SEC_ubm_surface
VkResult vkCreateUbmSurfaceSEC(
    VkInstance                                instance,
    const VkUbmSurfaceCreateInfoSEC*          pCreateInfo,
    const VkAllocationCallbacks*              pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- **instance** is the instance to associate the surface with.
- **pCreateInfo** is a pointer to a [VkUbmSurfaceCreateInfoSEC](#) structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateUbmSurfaceSEC-instance-parameter
instance **must** be a valid [VkInstance](#) handle
- VUID-vkCreateUbmSurfaceSEC-pCreateInfo-parameter
pCreateInfo **must** be a valid pointer to a valid [VkUbmSurfaceCreateInfoSEC](#) structure
- VUID-vkCreateUbmSurfaceSEC-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateUbmSurfaceSEC-pSurface-parameter
pSurface **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkUbmSurfaceCreateInfoSEC](#) structure is defined as:

```
// Provided by VK_SEC_ubm_surface
typedef struct VkUbmSurfaceCreateInfoSEC {
    VkStructureType      sType;
    const void*          pNext;
    VkUbmSurfaceCreateFlagsSEC flags;
    struct ubm_device*    device;
    struct ubm_surface*    surface;
} VkUbmSurfaceCreateInfoSEC;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **device** is a pointer to a [ubm_device](#) to associate the surface with.
- **surface** is a pointer to a [ubm_surface](#) to associate the surface with.

Valid Usage

- VUID-VkUbmSurfaceCreateInfoSEC-device-12366
device must point to a valid UBM [ubm_device](#)
- VUID-VkUbmSurfaceCreateInfoSEC-surface-12367
surface must point to a valid UBM [ubm_surface](#)

Valid Usage (Implicit)

- VUID-VkUbmSurfaceCreateInfoSEC-sType-sType
sType must be [VK_STRUCTURE_TYPE_UBM_SURFACE_CREATE_INFO_SEC](#)
- VUID-VkUbmSurfaceCreateInfoSEC-pNext-pNext
pNext must be **NULL**
- VUID-VkUbmSurfaceCreateInfoSEC-flags-zero-bitmask
flags must be **0**

```
// Provided by VK_SEC_ubm_surface
typedef VkFlags VkUbmSurfaceCreateFlagsSEC;
```

[VkUbmSurfaceCreateFlagsSEC](#) is a bitmask type for setting a mask, but is currently reserved for future use.

39.2.16. Platform-Independent Information

Once created, [VkSurfaceKHR](#) objects **can** be used in this and other extensions, in particular the [VK_KHR_swapchain](#) extension.

Several WSI functions return [VK_ERROR_SURFACE_LOST_KHR](#) if the surface becomes no longer available. After such an error, the surface (and any child swapchain, if one exists) **should** be destroyed, as there is no way to restore them to a not-lost state. Applications **may** attempt to create a new [VkSurfaceKHR](#) using the same native platform window object, but whether such re-creation will succeed is platform-dependent and **may** depend on the reason the surface became unavailable. A lost surface does not otherwise cause devices to be [lost](#).

To destroy a [VkSurfaceKHR](#) object, call:

```
// Provided by VK_KHR_surface
void vkDestroySurfaceKHR(
    VkInstance          instance,
    VkSurfaceKHR        surface,
    const VkAllocationCallbacks* pAllocator);
```

- [instance](#) is the instance used to create the surface.
- [surface](#) is the surface to destroy.
- [pAllocator](#) is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).

Destroying a [VkSurfaceKHR](#) merely severs the connection between Vulkan and the native surface, and does not imply destroying the native surface, closing a window, or similar behavior.

Valid Usage

- VUID-vkDestroySurfaceKHR-surface-01266
All [VkSwapchainKHR](#) objects created for [surface](#) **must** have been destroyed prior to destroying [surface](#)
- VUID-vkDestroySurfaceKHR-surface-01267
If [VkAllocationCallbacks](#) were provided when [surface](#) was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySurfaceKHR-surface-01268
If no [VkAllocationCallbacks](#) were provided when [surface](#) was created, [pAllocator](#) **must** be [NULL](#)

Valid Usage (Implicit)

- VUID-vkDestroySurfaceKHR-instance-parameter
[instance](#) **must** be a valid [VkInstance](#) handle
- VUID-vkDestroySurfaceKHR-surface-parameter
If [surface](#) is not [VK_NULL_HANDLE](#), [surface](#) **must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkDestroySurfaceKHR-pAllocator-parameter
If [pAllocator](#) is not [NULL](#), [pAllocator](#) **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure

- `VUID-vkDestroySurfaceKHR-surface-parent`

If `surface` is a valid handle, it **must** have been created, allocated, or retrieved from `instance`

Host Synchronization

- Host access to `surface` **must** be externally synchronized

39.3. Presenting Directly to Display Devices

In some environments applications **can** also present Vulkan rendering directly to display devices without using an intermediate windowing system. This **can** be useful for embedded applications, or implementing the rendering/presentation backend of a windowing system using Vulkan. The `VK_KHR_display` extension provides the functionality necessary to enumerate display devices and create `VkSurfaceKHR` objects that target displays.

39.3.1. Display Enumeration

Displays are represented by `VkDisplayKHR` handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayKHR)
```

Various functions are provided for enumerating the available display devices present on a Vulkan physical device. To query information about the available displays, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPropertiesKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t*          pPropertyCount,
    VkDisplayPropertiesKHR* pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display devices available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display devices available for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display devices for `physicalDevice`, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pPropertyCount-parameter **pPropertyCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetPhysicalDeviceDisplayPropertiesKHR-pProperties-parameter
If the value referenced by **pPropertyCount** is not 0, and **pProperties** is not **NULL**, **pProperties** **must** be a valid pointer to an array of **pPropertyCount** [VkDisplayPropertiesKHR](#) structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDisplayPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPropertiesKHR {
    VkDisplayKHR          display;
    const char*           displayName;
    VkExtent2D            physicalDimensions;
    VkExtent2D            physicalResolution;
    VkSurfaceTransformFlagsKHR supportedTransforms;
    VkBool32              planeReorderPossible;
    VkBool32              persistentContent;
} VkDisplayPropertiesKHR;
```

- **display** is a handle that is used to refer to the display described here. This handle will be valid for the lifetime of the Vulkan instance.
- **displayName** is **NULL** or a pointer to a null-terminated UTF-8 string containing the name of the display. Generally, this will be the name provided by the display's EDID. If **NULL**, no suitable name is available. If not **NULL**, the string pointed to **must** remain accessible and unmodified as long as **display** is valid.
- **physicalDimensions** describes the physical width and height of the visible portion of the display,

in millimeters.

- **physicalResolution** describes the physical, native, or preferred resolution of the display.

NOTE

For devices which have no natural value to return here, implementations **should** return the maximum resolution supported.

- **supportedTransforms** is a bitmask of **VkSurfaceTransformFlagBitsKHR** describing which transforms are supported by this display.
- **planeReorderPossible** tells whether the planes on this display **can** have their z order changed. If this is **VK_TRUE**, the application **can** re-arrange the planes on this display in any order relative to each other.
- **persistentContent** tells whether the display supports self-refresh/internal buffering. If this is true, the application **can** submit persistent present operations on swapchains created against this display.

NOTE

Persistent presents **may** have higher latency, and **may** use less power when the screen content is updated infrequently, or when only a portion of the screen needs to be updated in most frames.

To query information about the available displays, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayProperties2KHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkDisplayProperties2KHR*   pProperties);
```

- **physicalDevice** is a physical device.
- **pPropertyCount** is a pointer to an integer related to the number of display devices available or queried, as described below.
- **pProperties** is either **NULL** or a pointer to an array of **VkDisplayProperties2KHR** structures.

vkGetPhysicalDeviceDisplayProperties2KHR behaves similarly to **vkGetPhysicalDeviceDisplayPropertiesKHR**, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-physicalDevice-parameter **physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pPropertyCount-parameter **pPropertyCount** **must** be a valid pointer to a **uint32_t** value
- VUID-vkGetPhysicalDeviceDisplayProperties2KHR-pProperties-parameter
If the value referenced by **pPropertyCount** is not 0, and **pProperties** is not **NULL**, **pProperties**

must be a valid pointer to an array of `pPropertyCount` `VkDisplayProperties2KHR` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDisplayProperties2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayProperties2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkDisplayPropertiesKHR displayProperties;
} VkDisplayProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayProperties` is a `VkDisplayPropertiesKHR` structure.

Valid Usage (Implicit)

- VUID-VkDisplayProperties2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_PROPERTIES_2_KHR`
- VUID-VkDisplayProperties2KHR-pNext-pNext
`pNext` **must** be `NULL`

Acquiring and Releasing Displays

On some platforms, access to displays is limited to a single process or native driver instance. On such platforms, some or all of the displays may not be available to Vulkan if they are already in use by a native windowing system or other application.

To acquire permission to directly access a display in Vulkan from an X11 server, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkAcquireXlibDisplayEXT(
    VkPhysicalDevice      physicalDevice,
    Display*              dpy,
    VkDisplayKHR           display);
```

- **physicalDevice** The physical device the display is on.
- **dpy** A connection to the X11 server that currently owns **display**.
- **display** The display the caller wishes to control in Vulkan.

All permissions necessary to control the display are granted to the Vulkan instance associated with **physicalDevice** until the display is released or the X11 connection specified by **dpy** is terminated. Permission to access the display **may** be temporarily revoked during periods when the X11 server from which control was acquired itself loses access to **display**. During such periods, operations which require access to the display **must** fail with an appropriate error code. If the X11 server associated with **dpy** does not own **display**, or if permission to access it has already been acquired by another entity, the call **must** return the error code [VK_ERROR_INITIALIZATION_FAILED](#).

NOTE

One example of when an X11 server loses access to a display is when it loses ownership of its virtual terminal.

Valid Usage (Implicit)

- VUID-vkAcquireXlibDisplayEXT-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkAcquireXlibDisplayEXT-dpy-parameter **dpy** **must** be a valid pointer to a [Display](#) value
- VUID-vkAcquireXlibDisplayEXT-display-parameter **display** **must** be a valid [VkDisplayKHR](#) handle
- VUID-vkAcquireXlibDisplayEXT-display-parent **display** **must** have been created, allocated, or retrieved from **physicalDevice**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

When acquiring displays from an X11 server, an application may also wish to enumerate and identify them using a native handle rather than a `VkDisplayKHR` handle. To determine the `VkDisplayKHR` handle corresponding to an X11 RandR Output, call:

```
// Provided by VK_EXT_acquire_xlib_display
VkResult vkGetRandROutputDisplayEXT(
    VkPhysicalDevice physicalDevice,
    Display* dpy,
    RROutput rrOutput,
    VkDisplayKHR* pDisplay);
```

- `physicalDevice` The physical device to query the display handle on.
- `dpy` A connection to the X11 server from which `rrOutput` was queried.
- `rrOutput` An X11 RandR output ID.
- `pDisplay` The corresponding `VkDisplayKHR` handle will be returned here.

If there is no `VkDisplayKHR` corresponding to `rrOutput` on `physicalDevice`, `VK_NULL_HANDLE` must be returned in `pDisplay`.

Valid Usage (Implicit)

- VUID-vkGetRandROutputDisplayEXT-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetRandROutputDisplayEXT-dpy-parameter `dpy` must be a valid pointer to a `Display` value
- VUID-vkGetRandROutputDisplayEXT-pDisplay-parameter `pDisplay` must be a valid pointer to a `VkDisplayKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To acquire permission to directly access a display in Vulkan on Windows 10, call:

```
// Provided by VK_NV_acquire_winrt_display
VkResult vkAcquireWinrtDisplayNV(
    VkPhysicalDevice          physicalDevice,
    VkDisplayKHR              display);
```

- **physicalDevice** The physical device the display is on.
- **display** The display the caller wishes to control in Vulkan.

All permissions necessary to control the display are granted to the Vulkan instance associated with **physicalDevice** until the display is released or the application is terminated. Permission to access the display **may** be revoked by events that cause Windows 10 itself to lose access to **display**. If this has happened, operations which require access to the display **must** fail with an appropriate error code. If permission to access **display** has already been acquired by another entity, the call **must** return the error code [VK_ERROR_INITIALIZATION_FAILED](#).

NOTE	The Vulkan instance acquires control of a “winrt::Windows::Devices::Display::Core::DisplayTarget” by performing an operation equivalent to “winrt::Windows::Devices::Display::Core::DisplayManager.TryAcquireTarget()” on the “DisplayTarget”.
NOTE	One example of when Windows 10 loses access to a display is when the display is hot-unplugged.
NOTE	One example of when a display has already been acquired by another entity is when the Windows desktop compositor (DWM) is in control of the display. Beginning with Windows 10 version 2004 it is possible to cause DWM to release a display by using the “Advanced display settings” sub-page of the “Display settings” control panel. vkAcquireWinrtDisplayNV does not itself cause DWM to release a display; this action must be performed outside of Vulkan.

Valid Usage (Implicit)

- VUID-vkAcquireWinrtDisplayNV-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkAcquireWinrtDisplayNV-display-parameter **display** **must** be a valid [VkDisplayKHR](#) handle
- VUID-vkAcquireWinrtDisplayNV-display-parent **display** **must** have been created, allocated, or retrieved from **physicalDevice**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

When acquiring displays on Windows 10, an application may also wish to enumerate and identify them using a native handle rather than a `VkDisplayKHR` handle.

To determine the `VkDisplayKHR` handle corresponding to a “`winrt::Windows::Devices::Display::Core::DisplayTarget`”, call:

```
// Provided by VK_NV_acquire_winrt_display
VkResult vkGetWinrtDisplayNV(
    VkPhysicalDevice      physicalDevice,
    uint32_t              deviceRelativeId,
    VkDisplayKHR*         pDisplay);
```

- `physicalDevice` The physical device on which to query the display handle.
- `deviceRelativeId` The value of the “`AdapterRelativeId`” property of a “`DisplayTarget`” that is enumerated by a “`DisplayAdapter`” with an “`Id`” property matching the `deviceLUID` property of a `VkPhysicalDeviceIDProperties` for `physicalDevice`.
- `pDisplay` The corresponding `VkDisplayKHR` handle will be returned here.

If there is no `VkDisplayKHR` corresponding to `deviceRelativeId` on `physicalDevice`, `VK_NULL_HANDLE` must be returned in `pDisplay`.

Valid Usage (Implicit)

- VUID-vkGetWinrtDisplayNV-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetWinrtDisplayNV-pDisplay-parameter `pDisplay` must be a valid pointer to a `VkDisplayKHR` handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To acquire permission to directly a display in Vulkan from the Direct Rendering Manager (DRM) interface, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkAcquireDrmDisplayEXT(
    VkPhysicalDevice          physicalDevice,
    int32_t                   drmFd,
    VkDisplayKHR               display);
```

- [physicalDevice](#) The physical device the display is on.
- [drmFd](#) DRM primary file descriptor.
- [display](#) The display the caller wishes Vulkan to control.

All permissions necessary to control the display are granted to the Vulkan instance associated with the provided [physicalDevice](#) until the display is either released or the connector is unplugged. The provided [drmFd](#) **must** correspond to the one owned by the [physicalDevice](#). If not, the error code [VK_ERROR_UNKNOWN](#) **must** be returned. The DRM FD must have DRM master permissions. If any error is encountered during the acquisition of the display, the call **must** return the error code [VK_ERROR_INITIALIZATION_FAILED](#).

The provided DRM fd should not be closed before the display is released, attempting to do it may result in undefined behavior.

Valid Usage (Implicit)

- VUID-vkAcquireDrmDisplayEXT-physicalDevice-parameter [physicalDevice](#) **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkAcquireDrmDisplayEXT-display-parameter [display](#) **must** be a valid [VkDisplayKHR](#) handle
- VUID-vkAcquireDrmDisplayEXT-display-parent [display](#) **must** have been created, allocated, or retrieved from [physicalDevice](#)

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Before acquiring a display from the DRM interface, the caller may want to select a specific `VkDisplayKHR` handle by identifying it using a `connectorId`. To do so, call:

```
// Provided by VK_EXT_acquire_drm_display
VkResult vkGetDrmDisplayEXT(
    VkPhysicalDevice      physicalDevice,
    int32_t               drmFd,
    uint32_t              connectorId,
    VkDisplayKHR*         display);
```

- `physicalDevice` The physical device to query the display from.
- `drmFd` DRM primary file descriptor.
- `connectorId` Identifier of the specified DRM connector.
- `display` The corresponding `VkDisplayKHR` handle will be returned here.

If there is no `VkDisplayKHR` corresponding to the `connectorId` on the `physicalDevice`, the returning `display` **must** be `VK_NULL_HANDLE`. The provided `drmFd` **must** correspond to the one owned by the `physicalDevice`. If not, the error code `VK_ERROR_UNKNOWN` **must** be returned. Master permissions are not required, because the file descriptor is just used for information gathering purposes. The given `connectorId` **must** be a resource owned by the provided `drmFd`. If not, the error code `VK_ERROR_UNKNOWN` **must** be returned. If any error is encountered during the identification of the display, the call **must** return the error code `VK_ERROR_INITIALIZATION_FAILED`.

Valid Usage (Implicit)

- VUID-vkGetDrmDisplayEXT-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetDrmDisplayEXT-display-parameter `display` **must** be a valid pointer to a `VkDisplayKHR` handle

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To release a previously acquired display, call:

```
// Provided by VK_EXT_direct_mode_display
VkResult vkReleaseDisplayEXT(
    VkPhysicalDevice      physicalDevice,
    VkDisplayKHR          display);
```

- `physicalDevice` The physical device the display is on.
- `display` The display to release control of.

Valid Usage (Implicit)

- VUID-vkReleaseDisplayEXT-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkReleaseDisplayEXT-display-parameter `display` **must** be a valid `VkDisplayKHR` handle
- VUID-vkReleaseDisplayEXT-display-parent `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Display Planes

Images are presented to individual planes on a display. Devices **must** support at least one plane on

each display. Planes **can** be stacked and blended to composite multiple images on one display. Devices **may** support only a fixed stacking order and fixed mapping between planes and displays, or they **may** allow arbitrary application-specified stacking orders and mappings between planes and displays. To query the properties of device display planes, call:

```
// Provided by VK_KHR_display
VkResult vkGetPhysicalDeviceDisplayPlanePropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pPropertyCount,
    VkDisplayPlanePropertiesKHR* pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display planes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPlanePropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display planes available for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display planes for `physicalDevice`, at most `pPropertyCount` structures will be written.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayPlanePropertiesKHR-pProperties-parameter
If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkDisplayPlanePropertiesKHR` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`

- [VK_ERROR_VALIDATION_FAILED](#)

The `VkDisplayPlanePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlanePropertiesKHR {
    VkDisplayKHR    currentDisplay;
    uint32_t        currentStackIndex;
} VkDisplayPlanePropertiesKHR;
```

- `currentDisplay` is the handle of the display the plane is currently associated with. If the plane is not currently attached to any displays, this will be [VK_NULL_HANDLE](#).
- `currentStackIndex` is the current z-order of the plane. This will be between 0 and the value returned by `vkGetPhysicalDeviceDisplayPlanePropertiesKHR` in `pPropertyCount`.

To query the properties of a device's display planes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetPhysicalDeviceDisplayPlaneProperties2KHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t*           pPropertyCount,
    VkDisplayPlaneProperties2KHR* pProperties);
```

- `physicalDevice` is a physical device.
- `pPropertyCount` is a pointer to an integer related to the number of display planes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayPlaneProperties2KHR` structures.

`vkGetPhysicalDeviceDisplayPlaneProperties2KHR` behaves similarly to [vkGetPhysicalDeviceDisplayPlanePropertiesKHR](#), with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-physicalDevice-parameter `physicalDevice` **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceDisplayPlaneProperties2KHR-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` [VkDisplayPlaneProperties2KHR](#) structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDisplayPlaneProperties2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneProperties2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkDisplayPlanePropertiesKHR displayPlaneProperties;
} VkDisplayPlaneProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayPlaneProperties` is a `VkDisplayPlanePropertiesKHR` structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneProperties2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_PLANE_PROPERTIES_2_KHR`
- VUID-VkDisplayPlaneProperties2KHR-pNext-pNext
`pNext` **must** be `NULL`

To determine which displays a plane is usable with, call

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneSupportedDisplaysKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            planeIndex,
    uint32_t*           pDisplayCount,
    VkDisplayKHR*       pDisplays);
```

- `physicalDevice` is a physical device.

- `planeIndex` is the plane which the application wishes to use, and **must** be in the range [0, physical device plane count - 1].
- `pDisplayCount` is a pointer to an integer related to the number of displays available or queried, as described below.
- `pDisplays` is either `NULL` or a pointer to an array of `VkDisplayKHR` handles.

If `pDisplays` is `NULL`, then the number of displays usable with the specified `planeIndex` for `physicalDevice` is returned in `pDisplayCount`. Otherwise, `pDisplayCount` **must** point to a variable set by the application to the number of elements in the `pDisplays` array, and on return the variable is overwritten with the number of handles actually written to `pDisplays`. If the value of `pDisplayCount` is less than the number of usable display-plane pairs for `physicalDevice`, at most `pDisplayCount` handles will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available pairs were returned.

Valid Usage

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-planeIndex-01249
`planeIndex` **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplayCount-parameter
`pDisplayCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayPlaneSupportedDisplaysKHR-pDisplays-parameter
If the value referenced by `pDisplayCount` is not 0, and `pDisplays` is not `NULL`, `pDisplays` **must** be a valid pointer to an array of `pDisplayCount` `VkDisplayKHR` handles

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Additional properties of displays are queried using specialized query functions.

Display Modes

Display modes are represented by `VkDisplayModeKHR` handles:

```
// Provided by VK_KHR_display
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDisplayModeKHR)
```

Each display has one or more supported modes associated with it by default. These built-in modes are queried by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayModePropertiesKHR(
    VkPhysicalDevice      physicalDevice,
    VkDisplayKHR          display,
    uint32_t*             pPropertyCount,
    VkDisplayModePropertiesKHR* pProperties);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to query.
- `pPropertyCount` is a pointer to an integer related to the number of display modes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayModePropertiesKHR` structures.

If `pProperties` is `NULL`, then the number of display modes available on the specified `display` for `physicalDevice` is returned in `pPropertyCount`. Otherwise, `pPropertyCount` **must** point to a variable set by the application to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If the value of `pPropertyCount` is less than the number of display modes for `physicalDevice`, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available display modes were returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayModePropertiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetDisplayModePropertiesKHR-display-parameter `display` **must** be a valid `VkDisplayKHR` handle
- VUID-vkGetDisplayModePropertiesKHR-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayModePropertiesKHR-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkDisplayModePropertiesKHR`

structures

- VUID-vkGetDisplayModePropertiesKHR-display-parent
display must have been created, allocated, or retrieved from **physicalDevice**

Return Codes

Success

- VK_INCOMPLETE
- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_UNKNOWN
- VK_ERROR_VALIDATION_FAILED

The **VkDisplayModePropertiesKHR** structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModePropertiesKHR {
    VkDisplayModeKHR          displayMode;
    VkDisplayModeParametersKHR parameters;
} VkDisplayModePropertiesKHR;
```

- **displayMode** is a handle to the display mode described in this structure. This handle will be valid for the lifetime of the Vulkan instance.
- **parameters** is a **VkDisplayModeParametersKHR** structure describing the display parameters associated with **displayMode**.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayModeCreateFlagsKHR;
```

VkDisplayModeCreateFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

To query the properties of a device's built-in display modes, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayModeProperties2KHR(
    VkPhysicalDevice      physicalDevice,
    VkDisplayKHR          display,
    uint32_t*             pPropertyCount,
    VkDisplayModeProperties2KHR* pProperties);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to query.
- `pPropertyCount` is a pointer to an integer related to the number of display modes available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkDisplayModeProperties2KHR` structures.

`vkGetDisplayModeProperties2KHR` behaves similarly to `vkGetDisplayModePropertiesKHR`, with the ability to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayModeProperties2KHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetDisplayModeProperties2KHR-display-parameter `display` **must** be a valid `VkDisplayKHR` handle
- VUID-vkGetDisplayModeProperties2KHR-pPropertyCount-parameter `pPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetDisplayModeProperties2KHR-pProperties-parameter
If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkDisplayModeProperties2KHR` structures
- VUID-vkGetDisplayModeProperties2KHR-display-parent `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDisplayModeProperties2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayModeProperties2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkDisplayModePropertiesKHR displayModeProperties;
} VkDisplayModeProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displayModeProperties` is a `VkDisplayModePropertiesKHR` structure.

Valid Usage (Implicit)

- VUID-VkDisplayModeProperties2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_MODE_PROPERTIES_2_KHR`
- VUID-VkDisplayModeProperties2KHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDisplayModeStereoPropertiesNV`
- VUID-VkDisplayModeProperties2KHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

The `VkDisplayModeParametersKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeParametersKHR {
    VkExtent2D    visibleRegion;
    uint32_t      refreshRate;
} VkDisplayModeParametersKHR;
```

- `visibleRegion` is the 2D extents of the visible region.
- `refreshRate` is a `uint32_t` that is the number of times the display is refreshed each second multiplied by 1000.

NOTE For example, a 60Hz display mode would report a `refreshRate` of 60,000.

Valid Usage

- VUID-VkDisplayModeParametersKHR-width-01990
The `width` member of `visibleRegion` **must** be greater than 0
- VUID-VkDisplayModeParametersKHR-height-01991
The `height` member of `visibleRegion` **must** be greater than 0

- VUID-VkDisplayModeParametersKHR-refreshRate-01992
`refreshRate` **must** be greater than 0

The `VkDisplayModeStereoPropertiesNV` structure is defined as:

```
// Provided by VK_NV_display_stereo
typedef struct VkDisplayModeStereoPropertiesNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hdmi3DSupported;
} VkDisplayModeStereoPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hdmi3DSupported` indicates whether this display mode can be used for a display surface configured for `VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV`.

Valid Usage (Implicit)

- VUID-VkDisplayModeStereoPropertiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_MODE_STEREO_PROPERTIES_NV`

Structure Chaining

Extends the structure

- `VkDisplayModeProperties2KHR`

Additional modes **may** also be created by calling:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayModeKHR(
    VkPhysicalDevice          physicalDevice,
    VkDisplayKHR              display,
    const VkDisplayModeCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks*    pAllocator,
    VkDisplayModeKHR*          pMode);
```

- `physicalDevice` is the physical device associated with `display`.
- `display` is the display to create an additional mode for.
- `pCreateInfo` is a pointer to a `VkDisplayModeCreateInfoKHR` structure describing the new mode to create.
- `pAllocator` is the allocator used for host memory allocated for the display mode object when

there is no more specific allocator available (see [Memory Allocation](#)).

- `pMode` is a pointer to a `VkDisplayModeKHR` handle in which the mode created is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayModeKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkCreateDisplayModeKHR-display-parameter `display` **must** be a valid `VkDisplayKHR` handle
- VUID-vkCreateDisplayModeKHR-pCreateInfo-parameter `pCreateInfo` **must** be a valid pointer to a valid `VkDisplayModeCreateInfoKHR` structure
- VUID-vkCreateDisplayModeKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDisplayModeKHR-pMode-parameter `pMode` **must** be a valid pointer to a `VkDisplayModeKHR` handle
- VUID-vkCreateDisplayModeKHR-display-parent `display` **must** have been created, allocated, or retrieved from `physicalDevice`

Host Synchronization

- Host access to `display` **must** be externally synchronized

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDisplayModeCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayModeCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDisplayModeCreateFlagsKHR flags;
    VkDisplayModeParametersKHR parameters;
} VkDisplayModeCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use, and **must** be zero.
- **parameters** is a [VkDisplayModeParametersKHR](#) structure describing the display parameters to use in creating the new mode. If the parameters are not compatible with the specified display, the implementation **must** return [VK_ERROR_INITIALIZATION_FAILED](#).

Valid Usage (Implicit)

- VUID-VkDisplayModeCreateInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_DISPLAY_MODE_CREATE_INFO_KHR](#)
- VUID-VkDisplayModeCreateInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkDisplayModeCreateInfoKHR-flags-zero bitmask
flags must be 0
- VUID-VkDisplayModeCreateInfoKHR-parameters-parameter
parameters must be a valid [VkDisplayModeParametersKHR](#) structure

Applications that wish to present directly to a display **must** select which layer, or “plane” of the display they wish to target, and a mode to use with the display. Each display supports at least one plane. The capabilities of a given mode and plane combination are determined by calling:

```
// Provided by VK_KHR_display
VkResult vkGetDisplayPlaneCapabilitiesKHR(
    VkPhysicalDevice      physicalDevice,
    VkDisplayModeKHR      mode,
    uint32_t              planeIndex,
    VkDisplayPlaneCapabilitiesKHR* pCapabilities);
```

- **physicalDevice** is the physical device associated with the display specified by **mode**
- **mode** is the display mode the application intends to program when using the specified plane. Note this parameter also implicitly specifies a display.
- **planeIndex** is the plane which the application intends to use with the display, and is less than the number of display planes supported by the device.

- **pCapabilities** is a pointer to a **VkDisplayPlaneCapabilitiesKHR** structure in which the capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilitiesKHR-physicalDevice-parameter **physicalDevice** **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parameter **mode** **must** be a valid **VkDisplayModeKHR** handle
- VUID-vkGetDisplayPlaneCapabilitiesKHR-pCapabilities-parameter **pCapabilities** **must** be a valid pointer to a **VkDisplayPlaneCapabilitiesKHR** structure
- VUID-vkGetDisplayPlaneCapabilitiesKHR-mode-parent **mode** **must** have been created, allocated, or retrieved from **physicalDevice**

Host Synchronization

- Host access to **mode** **must** be externally synchronized

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkDisplayPlaneCapabilitiesKHR** structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplayPlaneCapabilitiesKHR {
    VkDisplayPlaneAlphaFlagsKHR    supportedAlpha;
    VkOffset2D                     minSrcPosition;
    VkOffset2D                     maxSrcPosition;
    VkExtent2D                     minSrcExtent;
    VkExtent2D                     maxSrcExtent;
    VkOffset2D                     minDstPosition;
    VkOffset2D                     maxDstPosition;
    VkExtent2D                     minDstExtent;
    VkExtent2D                     maxDstExtent;
} VkDisplayPlaneCapabilitiesKHR;
```

- **supportedAlpha** is a bitmask of **VkDisplayPlaneAlphaFlagBitsKHR** describing the supported alpha blending modes.
- **minSrcPosition** is the minimum source rectangle offset supported by this plane using the specified mode.
- **maxSrcPosition** is the maximum source rectangle offset supported by this plane using the specified mode. The **x** and **y** components of **maxSrcPosition** **must** each be greater than or equal to the **x** and **y** components of **minSrcPosition**, respectively.
- **minSrcExtent** is the minimum source rectangle size supported by this plane using the specified mode.
- **maxSrcExtent** is the maximum source rectangle size supported by this plane using the specified mode.
- **minDstPosition**, **maxDstPosition**, **minDstExtent**, **maxDstExtent** all have similar semantics to their corresponding ***Src*** equivalents, but apply to the output region within the mode rather than the input region within the source image. Unlike the ***Src*** offsets, **minDstPosition** and **maxDstPosition** **may** contain negative values.

The minimum and maximum position and extent fields describe the implementation limits, if any, as they apply to the specified display mode and plane. Vendors **may** support displaying a subset of a swapchain's presentable images on the specified display plane. This is expressed by returning **minSrcPosition**, **maxSrcPosition**, **minSrcExtent**, and **maxSrcExtent** values that indicate a range of possible positions and sizes which **may** be used to specify the region within the presentable images that source pixels will be read from when creating a swapchain on the specified display mode and plane.

Vendors **may** also support mapping the presentable images' content to a subset or superset of the visible region in the specified display mode. This is expressed by returning **minDstPosition**, **maxDstPosition**, **minDstExtent** and **maxDstExtent** values that indicate a range of possible positions and sizes which **may** be used to describe the region within the display mode that the source pixels will be mapped to.

Other vendors **may** support only a 1-1 mapping between pixels in the presentable images and the display mode. This **may** be indicated by returning (0,0) for **minSrcPosition**, **maxSrcPosition**, **minDstPosition**, and **maxDstPosition**, and (display mode width, display mode height) for

`minSrcExtent`, `maxSrcExtent`, `minDstExtent`, and `maxDstExtent`.

The value `supportedAlpha` **must** contain at least one valid `VkDisplayPlaneAlphaFlagBitsKHR` bit.

These values indicate the limits of the implementation's individual fields. Not all combinations of values within the offset and extent ranges returned in `VkDisplayPlaneCapabilitiesKHR` are guaranteed to be supported. Presentation requests specifying unsupported combinations **may** fail.

To query the capabilities of a given mode and plane combination, call:

```
// Provided by VK_KHR_get_display_properties2
VkResult vkGetDisplayPlaneCapabilities2KHR(
    VkPhysicalDevice          physicalDevice,
    const VkDisplayPlaneInfo2KHR* pDisplayPlaneInfo,
    VkDisplayPlaneCapabilities2KHR* pCapabilities);
```

- `physicalDevice` is the physical device associated with `pDisplayPlaneInfo`.
- `pDisplayPlaneInfo` is a pointer to a `VkDisplayPlaneInfo2KHR` structure describing the plane and mode.
- `pCapabilities` is a pointer to a `VkDisplayPlaneCapabilities2KHR` structure in which the capabilities are returned.

`vkGetDisplayPlaneCapabilities2KHR` behaves similarly to `vkGetDisplayPlaneCapabilitiesKHR`, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage (Implicit)

- VUID-vkGetDisplayPlaneCapabilities2KHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetDisplayPlaneCapabilities2KHR-pDisplayPlaneInfo-parameter `pDisplayPlaneInfo` **must** be a valid pointer to a valid `VkDisplayPlaneInfo2KHR` structure
- VUID-vkGetDisplayPlaneCapabilities2KHR-pCapabilities-parameter `pCapabilities` **must** be a valid pointer to a `VkDisplayPlaneCapabilities2KHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`

- [VK_ERROR_VALIDATION_FAILED](#)

The `VkDisplayPlaneInfo2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneInfo2KHR {
    VkStructureType    sType;
    const void*        pNext;
    VkDisplayModeKHR    mode;
    uint32_t            planeIndex;
} VkDisplayPlaneInfo2KHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mode` is the display mode the application intends to program when using the specified plane.

NOTE | This parameter also implicitly specifies a display.

- `planeIndex` is the plane which the application intends to use with the display.

The members of `VkDisplayPlaneInfo2KHR` correspond to the arguments to [vkGetDisplayPlaneCapabilitiesKHR](#), with `sType` and `pNext` added for extensibility.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneInfo2KHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_DISPLAY_PLANE_INFO_2_KHR](#)
- VUID-VkDisplayPlaneInfo2KHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDisplayPlaneInfo2KHR-mode-parameter
`mode` **must** be a valid [VkDisplayModeKHR](#) handle

Host Synchronization

- Host access to `mode` **must** be externally synchronized

The `VkDisplayPlaneCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_display_properties2
typedef struct VkDisplayPlaneCapabilities2KHR {
    VkStructureType      sType;
    void*                pNext;
    VkDisplayPlaneCapabilitiesKHR capabilities;
} VkDisplayPlaneCapabilities2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `capabilities` is a `VkDisplayPlaneCapabilitiesKHR` structure.

Valid Usage (Implicit)

- VUID-VkDisplayPlaneCapabilities2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_PLANE_CAPABILITIES_2_KHR`
- VUID-VkDisplayPlaneCapabilities2KHR-pNext-pNext
`pNext` **must** be `NULL`

39.3.2. Display Control

To set the power state of a display, call:

```
// Provided by VK_EXT_display_control
VkResult vkDisplayPowerControlEXT(
    VkDevice          device,
    VkDisplayKHR      display,
    const VkDisplayPowerInfoEXT* pDisplayPowerInfo);
```

- `device` is a logical device associated with `display`.
- `display` is the display whose power state is modified.
- `pDisplayPowerInfo` is a pointer to a `VkDisplayPowerInfoEXT` structure specifying the new power state of `display`.

Valid Usage (Implicit)

- VUID-vkDisplayPowerControlEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDisplayPowerControlEXT-display-parameter
`display` **must** be a valid `VkDisplayKHR` handle
- VUID-vkDisplayPowerControlEXT-pDisplayPowerInfo-parameter
`pDisplayPowerInfo` **must** be a valid pointer to a valid `VkDisplayPowerInfoEXT` structure
- VUID-vkDisplayPowerControlEXT-commonparent

Both of **device**, and **display** **must** have been created, allocated, or retrieved from the same [VkPhysicalDevice](#)

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkDisplayPowerInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkDisplayPowerInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDisplayPowerStateEXT powerState;
} VkDisplayPowerInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **powerState** is a [VkDisplayPowerStateEXT](#) value specifying the new power state of the display.

Valid Usage (Implicit)

- VUID-VkDisplayPowerInfoEXT-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_DISPLAY_POWER_INFO_EXT](#)
- VUID-VkDisplayPowerInfoEXT-pNext-pNext
pNext **must** be [NULL](#)
- VUID-VkDisplayPowerInfoEXT-powerState-parameter
powerState **must** be a valid [VkDisplayPowerStateEXT](#) value

Possible values of [VkDisplayPowerInfoEXT::powerState](#), specifying the new power state of a display, are:

```
// Provided by VK_EXT_display_control
typedef enum VkDisplayPowerStateEXT {
    VK_DISPLAY_POWER_STATE_OFF_EXT = 0,
    VK_DISPLAY_POWER_STATE_SUSPEND_EXT = 1,
    VK_DISPLAY_POWER_STATE_ON_EXT = 2,
} VkDisplayPowerStateEXT;
```

- [VK_DISPLAY_POWER_STATE_OFF_EXT](#) specifies that the display is powered down.
- [VK_DISPLAY_POWER_STATE_SUSPEND_EXT](#) specifies that the display is put into a low power mode, from which it **may** be able to transition back to [VK_DISPLAY_POWER_STATE_ON_EXT](#) more quickly than if it were in [VK_DISPLAY_POWER_STATE_OFF_EXT](#). This state **may** be the same as [VK_DISPLAY_POWER_STATE_OFF_EXT](#).
- [VK_DISPLAY_POWER_STATE_ON_EXT](#) specifies that the display is powered on.

39.3.3. Display Surfaces

A complete display configuration includes a mode, one or more display planes and any parameters describing their behavior, and parameters describing some aspects of the images associated with those planes. Display surfaces describe the configuration of a single plane within a complete display configuration. To create a [VkSurfaceKHR](#) object for a display plane, call:

```
// Provided by VK_KHR_display
VkResult vkCreateDisplayPlaneSurfaceKHR(
    VkInstance                                instance,
    const VkDisplaySurfaceCreateInfoKHR*      pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkSurfaceKHR*                             pSurface);
```

- [instance](#) is the instance corresponding to the physical device the targeted display is on.
- [pCreateInfo](#) is a pointer to a [VkDisplaySurfaceCreateInfoKHR](#) structure specifying which mode, plane, and other parameters to use, as described below.
- [pAllocator](#) is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- [pSurface](#) is a pointer to a [VkSurfaceKHR](#) handle in which the created surface is returned.

Valid Usage (Implicit)

- VUID-vkCreateDisplayPlaneSurfaceKHR-instance-parameter
[instance](#) **must** be a valid [VkInstance](#) handle
- VUID-vkCreateDisplayPlaneSurfaceKHR-pCreateInfo-parameter
[pCreateInfo](#) **must** be a valid pointer to a valid [VkDisplaySurfaceCreateInfoKHR](#) structure
- VUID-vkCreateDisplayPlaneSurfaceKHR-pAllocator-parameter
If [pAllocator](#) is not `NULL`, [pAllocator](#) **must** be a valid pointer to a valid

[VkAllocationCallbacks](#) structure

- `VUID-vkCreateDisplayPlaneSurfaceKHR-pSurface-parameter pSurface` **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkDisplaySurfaceCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_display
typedef struct VkDisplaySurfaceCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkDisplaySurfaceCreateFlagsKHR flags;
    VkDisplayModeKHR    displayMode;
    uint32_t            planeIndex;
    uint32_t            planeStackIndex;
    VkSurfaceTransformFlagBitsKHR transform;
    float               globalAlpha;
    VkDisplayPlaneAlphaFlagBitsKHR alphaMode;
    VkExtent2D          imageExtent;
} VkDisplaySurfaceCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use, and **must** be zero.
- `displayMode` is a [VkDisplayModeKHR](#) handle specifying the mode to use when displaying this surface.
- `planeIndex` is the plane on which this surface appears.
- `planeStackIndex` is the z-order of the plane.
- `transform` is a [VkSurfaceTransformFlagBitsKHR](#) value specifying the transformation to apply to images as part of the scanout operation.
- `globalAlpha` is the global alpha value. This value is ignored if `alphaMode` is not [VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR](#).

- **alphaMode** is a `VkDisplayPlaneAlphaFlagBitsKHR` value specifying the type of alpha blending to use.
- **imageExtent** is the size of the presentable images to use with the surface.

NOTE

Creating a display surface **must** not modify the state of the displays, planes, or other resources it names. For example, it **must** not apply the specified mode to be set on the associated display. Application of display configuration occurs as a side effect of presenting to a display surface.

Valid Usage

- VUID-VkDisplaySurfaceCreateInfoKHR-planeIndex-01252
planeIndex **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`
- VUID-VkDisplaySurfaceCreateInfoKHR-planeReorderPossible-01253
If the **planeReorderPossible** member of the `VkDisplayPropertiesKHR` structure returned by `vkGetPhysicalDeviceDisplayPropertiesKHR` for the display corresponding to **displayMode** is `VK_TRUE` then **planeStackIndex** **must** be less than the number of display planes supported by the device as determined by calling `vkGetPhysicalDeviceDisplayPlanePropertiesKHR`; otherwise **planeStackIndex** **must** equal the **currentStackIndex** member of `VkDisplayPlanePropertiesKHR` returned by `vkGetPhysicalDeviceDisplayPlanePropertiesKHR` for the display plane corresponding to **displayMode**
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01254
If **alphaMode** is `VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR` then **globalAlpha** **must** be between 0 and 1, inclusive
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-01255
alphaMode **must** be one of the bits present in the **supportedAlpha** member of `VkDisplayPlaneCapabilitiesKHR` for the display plane corresponding to **displayMode**
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-06740
transform **must** be one of the bits present in the **supportedTransforms** member of `VkDisplayPropertiesKHR` for the display corresponding to **displayMode**
- VUID-VkDisplaySurfaceCreateInfoKHR-width-01256
The **width** and **height** members of **imageExtent** **must** be less than or equal to `VkPhysicalDeviceLimits::maxImageDimension2D`
- VUID-VkDisplaySurfaceCreateInfoKHR-pNext-10284
If the **pNext** chain includes a `VkDisplaySurfaceStereoCreateInfoNV` structure whose **stereoType** member is `VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV`, then the **hdm3DSupported** member of the `VkDisplayModeStereoPropertiesNV` structure in the **pNext** chain of the `VkDisplayModeProperties2KHR` structure returned by `vkGetDisplayModeProperties2KHR` for the display mode corresponding to **displayMode** **must** be `VK_TRUE`

Valid Usage (Implicit)

- VUID-VkDisplaySurfaceCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_SURFACE_CREATE_INFO_KHR`
- VUID-VkDisplaySurfaceCreateInfoKHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDisplaySurfaceStereoCreateInfoNV`
- VUID-VkDisplaySurfaceCreateInfoKHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDisplaySurfaceCreateInfoKHR-flags-zeroBitmask
`flags` **must** be `0`
- VUID-VkDisplaySurfaceCreateInfoKHR-displayMode-parameter
`displayMode` **must** be a valid `VkDisplayModeKHR` handle
- VUID-VkDisplaySurfaceCreateInfoKHR-transform-parameter
`transform` **must** be a valid `VkSurfaceTransformFlagBitsKHR` value
- VUID-VkDisplaySurfaceCreateInfoKHR-alphaMode-parameter
`alphaMode` **must** be a valid `VkDisplayPlaneAlphaFlagBitsKHR` value

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplaySurfaceCreateFlagsKHR;
```

`VkDisplaySurfaceCreateFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which **can** be set in `VkDisplaySurfaceCreateInfoKHR::alphaMode`, specifying the type of alpha blending to use on a display, are:

```
// Provided by VK_KHR_display
typedef enum VkDisplayPlaneAlphaFlagBitsKHR {
    VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR = 0x00000002,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR = 0x00000004,
    VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR = 0x00000008,
} VkDisplayPlaneAlphaFlagBitsKHR;
```

- `VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR` specifies that the source image will be treated as opaque.
- `VK_DISPLAY_PLANE_ALPHA_GLOBAL_BIT_KHR` specifies that a global alpha value **must** be specified that will be applied to all pixels in the source image.
- `VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR` specifies that the alpha value will be determined by the alpha component of the source image's pixels. If the source format contains no alpha values, no blending will be applied. The source alpha values are not premultiplied into

the source image's other color components.

- [VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_PREMULTIPLIED_BIT_KHR](#) is equivalent to [VK_DISPLAY_PLANE_ALPHA_PER_PIXEL_BIT_KHR](#), except the source alpha values are assumed to be premultiplied into the source image's other color components.

```
// Provided by VK_KHR_display
typedef VkFlags VkDisplayPlaneAlphaFlagsKHR;
```

[VkDisplayPlaneAlphaFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkDisplayPlaneAlphaFlagBitsKHR](#).

The [VkDisplaySurfaceStereoCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_display_stereo
typedef struct VkDisplaySurfaceStereoCreateInfoNV {
    VkStructureType          sType;
    const void*              pNext;
    VkDisplaySurfaceStereoTypeNV stereoType;
} VkDisplaySurfaceStereoCreateInfoNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [stereoType](#) is a [VkDisplaySurfaceStereoTypeNV](#) value specifying the type of 3D stereo presentation the display will be configured for.

Valid Usage (Implicit)

- VUID-VkDisplaySurfaceStereoCreateInfoNV-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_DISPLAY_SURFACE_STEREO_CREATE_INFO_NV](#)
- VUID-VkDisplaySurfaceStereoCreateInfoNV-stereoType-parameter
[stereoType](#) **must** be a valid [VkDisplaySurfaceStereoTypeNV](#) value

Structure Chaining

Extends the structure

- [VkDisplaySurfaceCreateInfoKHR](#)

Possible values of [VkDisplaySurfaceStereoCreateInfoNV::stereoType](#), specifying the type of 3D stereo presentation the display will be configured for, are:

```
// Provided by VK_NV_display_stereo
typedef enum VkDisplaySurfaceStereoTypeNV {
    VK_DISPLAY_SURFACE_STEREO_TYPE_NONE_NV = 0,
    VK_DISPLAY_SURFACE_STEREO_TYPE_ONBOARD_DIN_NV = 1,
    VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV = 2,
    VK_DISPLAY_SURFACE_STEREO_TYPE_INBAND_DISPLAYPORT_NV = 3,
} VkDisplaySurfaceStereoTypeNV;
```

- [VK_DISPLAY_SURFACE_STEREO_TYPE_NONE_NV](#) specifies no configuration for stereo presentation. This is the default behavior if [VkDisplaySurfaceStereoCreateInfoNV](#) is not provided.
- [VK_DISPLAY_SURFACE_STEREO_TYPE_ONBOARD_DIN_NV](#) specifies configuration for glasses that connect via a DIN connector on the back of the graphics card.
- [VK_DISPLAY_SURFACE_STEREO_TYPE_HDMI_3D_NV](#) specifies configuration for HDMI 3D compatible display devices with their own stereo emitters. This is also known as HDMI Frame Packed Stereo, where the left and right eye images are stacked into a single frame with a doubled pixel clock and refresh rate.
- [VK_DISPLAY_SURFACE_STEREO_TYPE_INBAND_DISPLAYPORT_NV](#) specifies configuration for DisplayPort display devices with in-band stereo signaling and emitters.

39.3.4. Presenting to Headless Surfaces

Vulkan rendering can be presented to a headless surface, where the presentation operation is a no-op producing no externally-visible result.

NOTE

Because there is no real presentation target, the headless presentation engine may be extended to impose an arbitrary or customizable set of restrictions and features. This makes it a useful portable test target for applications targeting a wide range of presentation engines where the actual target presentation engines might be scarce, unavailable or otherwise undesirable or inconvenient to use for general Vulkan application development.

The usual surface query mechanisms must be used to determine the actual restrictions and features of the implementation.

To create a headless [VkSurfaceKHR](#) object, call:

```
// Provided by VK_EXT_headless_surface
VkResult vkCreateHeadlessSurfaceEXT(
    VkInstance instance,
    const VkHeadlessSurfaceCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSurfaceKHR* pSurface);
```

- [instance](#) is the instance to associate the surface with.

- **pCreateInfo** is a pointer to a [VkHeadlessSurfaceCreateInfoEXT](#) structure containing parameters affecting the creation of the surface object.
- **pAllocator** is the allocator used for host memory allocated for the surface object when there is no more specific allocator available (see [Memory Allocation](#)).
- **pSurface** is a pointer to a [VkSurfaceKHR](#) handle in which the created surface object is returned.

Valid Usage (Implicit)

- VUID-vkCreateHeadlessSurfaceEXT-instance-parameter **instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateHeadlessSurfaceEXT-pCreateInfo-parameter **pCreateInfo** **must** be a valid pointer to a valid [VkHeadlessSurfaceCreateInfoEXT](#) structure
- VUID-vkCreateHeadlessSurfaceEXT-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateHeadlessSurfaceEXT-pSurface-parameter **pSurface** **must** be a valid pointer to a [VkSurfaceKHR](#) handle

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkHeadlessSurfaceCreateInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_headless_surface
typedef struct VkHeadlessSurfaceCreateInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkHeadlessSurfaceCreateFlagsEXT flags;
} VkHeadlessSurfaceCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.

Valid Usage (Implicit)

- VUID-VkHeadlessSurfaceCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_HEADLESS_SURFACE_CREATE_INFO_EXT`
- VUID-VkHeadlessSurfaceCreateInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkHeadlessSurfaceCreateInfoEXT-flags-zeroBitmask
`flags` **must** be `0`

For headless surfaces, `currentExtent` is the reserved value (`0xFFFFFFFF`, `0xFFFFFFFF`). Whatever the application sets a swapchain's `imageExtent` to will be the size of the surface, after the first image is presented.

```
// Provided by VK_EXT_headless_surface
typedef VkFlags VkHeadlessSurfaceCreateFlagsEXT;
```

`VkHeadlessSurfaceCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

39.4. Querying for WSI Support

Not all physical devices will include WSI support. Within a physical device, not all queue families will support presentation. WSI support and compatibility **can** be determined in a platform-neutral manner (which determines support for presentation to a particular surface object) and additionally **may** be determined in platform-specific manners (which determine support for presentation on the specified physical device but do not guarantee support for presentation to a particular surface object).

To determine whether a queue family of a physical device supports presentation to a given surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    VkSurfaceKHR        surface,
    VkBool32*           pSupported);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family.
- `surface` is the surface.
- `pSupported` is a pointer to a `VkBool32`. `VK_TRUE` indicates support, and `VK_FALSE` indicates no support.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-queueFamilyIndex-01269
`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-surface-parameter
`surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-pSupported-parameter
`pSupported` **must** be a valid pointer to a `VkBool32` value
- VUID-vkGetPhysicalDeviceSurfaceSupportKHR-commonparent
Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same `VkInstance`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

39.4.1. Android Platform

On Android, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Android-specific query for these capabilities.

39.4.2. Wayland Platform

To determine whether a queue family of a physical device supports presentation to a Wayland compositor, call:

```
// Provided by VK_KHR_wayland_surface
VkBool32 vkGetPhysicalDeviceWaylandPresentationSupportKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    struct wl_display*         display);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `display` is a pointer to the `wl_display` associated with a Wayland compositor.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-queueFamilyIndex-01306 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceWaylandPresentationSupportKHR-display-parameter `display` **must** be a valid pointer to a `wl_display` value

39.4.3. Win32 Platform

To determine whether a queue family of a physical device supports presentation to the Microsoft Windows desktop, call:

```
// Provided by VK_KHR_win32_surface
VkBool32 vkGetPhysicalDeviceWin32PresentationSupportKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-queueFamilyIndex-01309

`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceWin32PresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid [VkPhysicalDevice](#) handle

39.4.4. XCB Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the XCB client-side library, call:

```
// Provided by VK_KHR_xcb_surface
VkBool32 vkGetPhysicalDeviceXcbPresentationSupportKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    xcb_connection_t*         connection,
    xcb_visualid_t            visual_id);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `connection` is a pointer to an `xcb_connection_t` to the X server.
- `visual_id` is an X11 visual (`xcb_visualid_t`).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-queueFamilyIndex-01312 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceXcbPresentationSupportKHR-connection-parameter `connection` **must** be a valid pointer to an `xcb_connection_t` value

39.4.5. Xlib Platform

To determine whether a queue family of a physical device supports presentation to an X11 server, using the Xlib client-side library, call:

```
// Provided by VK_KHR_xlib_surface
VkBool32 vkGetPhysicalDeviceXlibPresentationSupportKHR(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    Display*            dpy,
    VisualID             visualID);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dpy` is a pointer to an Xlib `Display` connection to the server.
- `visualID` is an X11 visual (`VisualID`).

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-queueFamilyIndex-01315 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceXlibPresentationSupportKHR-dpy-parameter `dpy` **must** be a valid pointer to a `Display` value

39.4.6. DirectFB Platform

To determine whether a queue family of a physical device supports presentation with DirectFB library, call:

```
// Provided by VK_EXT_directfb_surface
VkBool32 vkGetPhysicalDeviceDirectFBPresentationSupportEXT(
    VkPhysicalDevice    physicalDevice,
    uint32_t            queueFamilyIndex,
    IDirectFB*           dfb);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `dfb` is a pointer to the `IDirectFB` main interface of DirectFB.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-queueFamilyIndex-04119 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceDirectFBPresentationSupportEXT-dfb-parameter `dfb` **must** be a valid pointer to an `IDirectFB` value

39.4.7. Metal Platform

On Apple platforms with Metal support, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no Apple-specific query for these capabilities.

39.4.8. Fuchsia Platform

On Fuchsia, all physical devices and queue families **must** be capable of presentation with any ImagePipe. As a result there is no Fuchsia-specific query for these capabilities.

39.4.9. Google Games Platform

On Google Games Platform, all physical devices and queue families with the `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` capabilities **must** be capable of presentation with any Google Games Platform stream descriptor. As a result, there is no query specific to Google Games Platform for these capabilities.

39.4.10. iOS Platform

On iOS, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no iOS-specific query for these capabilities.

39.4.11. macOS Platform

On macOS, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no macOS-specific query for these capabilities.

39.4.12. VI Platform

On VI, all physical devices and queue families **must** be capable of presentation with any layer. As a result there is no VI-specific query for these capabilities.

39.4.13. QNX Screen Platform

To determine whether a queue family of a physical device supports presentation to a QNX Screen compositor, call:

```
// Provided by VK_QNX_screen_surface
VkBool32 vkGetPhysicalDeviceScreenPresentationSupportQNX(
    VkPhysicalDevice      physicalDevice,
    uint32_t              queueFamilyIndex,
    struct _screen_window* window);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `window` is the QNX Screen `window` object.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-queueFamilyIndex-04743 `queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceScreenPresentationSupportQNX-window-parameter `window` **must** be a valid pointer to a `_screen_window` value

39.4.14. Open Harmony OS Platform

On Open Harmony OS, all physical devices and queue families **must** be capable of presentation with any native window. As a result there is no Open Harmony OS platform-specific query for these capabilities.

39.4.15. UBM Platform

To determine whether a queue family of a physical device supports presentation to a UBM

compositor, call:

```
// Provided by VK_SEC_ubm_surface
VkBool32 vkGetPhysicalDeviceUbmPresentationSupportSEC(
    VkPhysicalDevice          physicalDevice,
    uint32_t                  queueFamilyIndex,
    struct ubm_device*        device);
```

- `physicalDevice` is the physical device.
- `queueFamilyIndex` is the queue family index.
- `device` is a pointer to the `ubm_device` associated with a UBM compositor.

This platform-specific function **can** be called prior to creating a surface.

Valid Usage

- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-device-12368
`device` **must** point to a valid UBM `ubm_device`
- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-queueFamilyIndex-12369
`queueFamilyIndex` **must** be less than `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties` for the given `physicalDevice`

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceUbmPresentationSupportSEC-device-parameter
`device` **must** be a valid pointer to a `ubm_device` value

39.5. Surface Queries

The capabilities of a swapchain targeting a surface are the intersection of the capabilities of the WSI platform, the native window or display, and the physical device. The resulting capabilities **can** be obtained with the queries listed below in this section.

NOTE

In addition to the surface capabilities as obtained by surface queries below, swapchain images are also subject to ordinary image creation limits as reported by `vkGetPhysicalDeviceImageFormatProperties`. As an application is instructed by the appropriate Valid Usage sections, both the surface capabilities and the image creation limits have to be satisfied whenever swapchain images are created.

39.5.1. Surface Capabilities

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceCapabilitiesKHR(
    VkPhysicalDevice    physicalDevice,
    VkSurfaceKHR        surface,
    VkSurfaceCapabilitiesKHR* pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **surface** is the surface that will be associated with the swapchain.
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilitiesKHR](#) structure in which the capabilities are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-06211
surface must be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-physicalDevice-parameter
physicalDevice must be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-surface-parameter
surface must be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-pSurfaceCapabilities-parameter
pSurfaceCapabilities must be a valid pointer to a [VkSurfaceCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilitiesKHR-commonparent
Both of **physicalDevice**, and **surface must** have been created, allocated, or retrieved from the same [VkInstance](#)

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)

- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkSurfaceCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceCapabilitiesKHR {
    uint32_t          minImageCount;
    uint32_t          maxImageCount;
    VkExtent2D        currentExtent;
    VkExtent2D        minImageExtent;
    VkExtent2D        maxImageExtent;
    uint32_t          maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR supportedTransforms;
    VkSurfaceTransformFlagBitsKHR currentTransform;
    VkCompositeAlphaFlagsKHR supportedCompositeAlpha;
    VkImageUsageFlags supportedUsageFlags;
} VkSurfaceCapabilitiesKHR;
```

- `minImageCount` is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- `maxImageCount` is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to `minImageCount`. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.
- `currentExtent` is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- `minImageExtent` contains the smallest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be less than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageExtent` contains the largest valid swapchain extent for the surface on the specified device. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `minImageExtent`. The `width` and `height` of the extent will each be greater than or equal to the corresponding `width` and `height` of `currentExtent`, unless `currentExtent` has the special value described above.
- `maxImageArrayLayers` is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- `supportedTransforms` is a bitmask of [VkSurfaceTransformFlagBitsKHR](#) indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- `currentTransform` is [VkSurfaceTransformFlagBitsKHR](#) value indicating the surface's current transform relative to the presentation engine's natural orientation.

- **supportedCompositeAlpha** is a bitmask of [VkCompositeAlphaFlagBitsKHR](#), representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- **supportedUsageFlags** is a bitmask of [VkImageUsageFlagBits](#) representing the ways the application **can** use the presentable images of a swapchain created with [VkPresentModeKHR](#) set to [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#), [VK_PRESENT_MODE_IMMEDIATE_KHR](#), [VK_PRESENT_MODE_MAILBOX_KHR](#), [VK_PRESENT_MODE_FIFO_KHR](#) or [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#) for the surface on the specified device. [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#) **must** be included in the set. Implementations **may** support additional usages.

NOTE Supported usage flags of a presentable image when using [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#) or [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#) presentation mode are provided by [VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags](#).

NOTE Formulas such as $\min(N, \text{maxImageCount})$ are not correct, since **maxImageCount** **may** be zero.

To query the basic capabilities of a surface defined by the core or extensions, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceCapabilities2KHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    VkSurfaceCapabilities2KHR* pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **pSurfaceInfo** is a pointer to a [VkPhysicalDeviceSurfaceInfo2KHR](#) structure describing the surface and other fixed parameters that would be consumed by [vkCreateSwapchainKHR](#).
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilities2KHR](#) structure in which the capabilities are returned.

[vkGetPhysicalDeviceSurfaceCapabilities2KHR](#) behaves similarly to [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06521
If the [VK_G00GLE_surfaceless_query](#) extension is not enabled, **pSurfaceInfo->surface** **must**

be a valid [VkSurfaceKHR](#) handle

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-06522

If [pSurfaceInfo->surface](#) is not [VK_NULL_HANDLE](#), [pSurfaceInfo->surface](#) **must** be supported by [physicalDevice](#), as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-02671

If a [VkSurfaceCapabilitiesFullScreenExclusiveEXT](#) structure is included in the [pNext](#) chain of [pSurfaceCapabilities](#), a [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure **must** be included in the [pNext](#) chain of [pSurfaceInfo](#)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07776

If a [VkSurfacePresentModeCompatibilityKHR](#) structure is included in the [pNext](#) chain of [pSurfaceCapabilities](#), a [VkSurfacePresentModeKHR](#) structure **must** be included in the [pNext](#) chain of [pSurfaceInfo](#)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07777

If a [VkSurfacePresentScalingCapabilitiesKHR](#) structure is included in the [pNext](#) chain of [pSurfaceCapabilities](#), a [VkSurfacePresentModeKHR](#) structure **must** be included in the [pNext](#) chain of [pSurfaceInfo](#)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07778

If a [VkSurfacePresentModeCompatibilityKHR](#) structure is included in the [pNext](#) chain of [pSurfaceCapabilities](#), [pSurfaceInfo->surface](#) **must** be a valid [VkSurfaceKHR](#) handle

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pNext-07779

If a [VkSurfacePresentScalingCapabilitiesKHR](#) structure is included in the [pNext](#) chain of [pSurfaceCapabilities](#), [pSurfaceInfo->surface](#) **must** be a valid [VkSurfaceKHR](#) handle

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-physicalDevice-parameter [physicalDevice](#) **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceInfo-parameter [pSurfaceInfo](#) **must** be a valid pointer to a valid [VkPhysicalDeviceSurfaceInfo2KHR](#) structure
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2KHR-pSurfaceCapabilities-parameter [pSurfaceCapabilities](#) **must** be a valid pointer to a [VkSurfaceCapabilities2KHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)

- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPhysicalDeviceSurfaceInfo2KHR](#) structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkPhysicalDeviceSurfaceInfo2KHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSurfaceKHR       surface;
} VkPhysicalDeviceSurfaceInfo2KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [surface](#) is the surface that will be associated with the swapchain.

The members of [VkPhysicalDeviceSurfaceInfo2KHR](#) correspond to the arguments to [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), with [sType](#) and [pNext](#) added for extensibility.

Additional capabilities of a surface **may** be available to swapchains created with different full-screen exclusive settings - particularly if exclusive full-screen access is application controlled. These additional capabilities **can** be queried by adding a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure to the [pNext](#) chain of this structure when used to query surface properties. Additionally, for Win32 surfaces with application controlled exclusive full-screen access, chaining a [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure **may** also report additional surface capabilities. These additional capabilities only apply to swapchains created with the same parameters included in the [pNext](#) chain of [VkSwapchainCreateInfoKHR](#).

Valid Usage

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-02672
If the [pNext](#) chain includes a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure with its [fullScreenExclusive](#) member set to [VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT](#), and [surface](#) was created using [vkCreateWin32SurfaceKHR](#), a [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure **must** be included in the [pNext](#) chain
- VUID-VkPhysicalDeviceSurfaceInfo2KHR-surface-07919
If [surface](#) is not `VK_NULL_HANDLE`, and the [VK_G00GLE_surfaceless_query](#) extension is not enabled, [surface](#) **must** be a valid [VkSurfaceKHR](#) handle

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-sType

sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SURFACE_INFO_2_KHR`

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-pNext-pNext

Each **pNext** member of any structure (including this one) in the **pNext** chain must be either `NULL` or a pointer to a valid instance of `VkSurfaceFullScreenExclusiveInfoEXT`, `VkSurfaceFullScreenExclusiveWin32InfoEXT`, or `VkSurfacePresentModeKHR`

- VUID-VkPhysicalDeviceSurfaceInfo2KHR-sType-unique

The **sType** value of each structure in the **pNext** chain must be unique

If the **pNext** chain of `VkSwapchainCreateInfoKHR` includes a `VkSurfaceFullScreenExclusiveInfoEXT` structure, then that structure specifies the application's preferred full-screen transition behavior.

The `VkSurfaceFullScreenExclusiveInfoEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkFullScreenExclusiveEXT fullScreenExclusive;
} VkSurfaceFullScreenExclusiveInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **fullScreenExclusive** is a `VkFullScreenExclusiveEXT` value specifying the preferred full-screen transition behavior.

If this structure is not present, **fullScreenExclusive** is considered to be `VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT`.

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveInfoEXT-sType-sType
sType must be `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_INFO_EXT`
- VUID-VkSurfaceFullScreenExclusiveInfoEXT-fullScreenExclusive-parameter
fullScreenExclusive must be a valid `VkFullScreenExclusiveEXT` value

Structure Chaining

Extends the structures

- `VkPhysicalDeviceSurfaceInfo2KHR`
- `VkSwapchainCreateInfoKHR`

Possible values of `VkSurfaceFullScreenExclusiveInfoEXT::fullScreenExclusive` are:

```
// Provided by VK_EXT_full_screen_exclusive
typedef enum VkFullScreenExclusiveEXT {
    VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT = 0,
    VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT = 1,
    VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT = 2,
    VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT = 3,
} VkFullScreenExclusiveEXT;
```

- [VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT](#) specifies that the implementation **should** determine the appropriate full-screen method by whatever means it deems appropriate.
- [VK_FULL_SCREEN_EXCLUSIVE_ALLOWED_EXT](#) specifies that the implementation **may** use full-screen exclusive mechanisms when available. Such mechanisms **may** result in better performance and/or the availability of different presentation capabilities, but **may** require a more disruptive transition during swapchain initialization, first presentation and/or destruction.
- [VK_FULL_SCREEN_EXCLUSIVE_DISALLOWED_EXT](#) specifies that the implementation **should** avoid using full-screen mechanisms which rely on disruptive transitions.
- [VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT](#) specifies that the application will manage full-screen exclusive mode by using the [vkAcquireFullScreenExclusiveModeEXT](#) and [vkReleaseFullScreenExclusiveModeEXT](#) commands.

The [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure is defined as:

```
// Provided by VK_KHR_win32_surface with VK_EXT_full_screen_exclusive
typedef struct VkSurfaceFullScreenExclusiveWin32InfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    HMONITOR            hmonitor;
} VkSurfaceFullScreenExclusiveWin32InfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [hmonitor](#) is the Win32 [HMONITOR](#) handle identifying the display to create the surface with.

NOTE

If [hmonitor](#) is invalidated (e.g. the monitor is unplugged) during the lifetime of a swapchain created with this structure, operations on that swapchain will return [VK_ERROR_OUT_OF_DATE_KHR](#).

NOTE

It is the responsibility of the application to change the display settings of the targeted Win32 display using the appropriate platform APIs. Such changes **may** alter the surface capabilities reported for the created surface.

Valid Usage

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-hmonitor-02673
`hmonitor` must be a valid `HMONITOR`

Valid Usage (Implicit)

- VUID-VkSurfaceFullScreenExclusiveWin32InfoEXT-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_WIN32_INFO_EXT`

Structure Chaining

Extends the structures

- `VkPhysicalDeviceSurfaceInfo2KHR`
- `VkSwapchainCreateInfoKHR`

The `VkSurfaceCapabilities2KHR` structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceCapabilities2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkSurfaceCapabilitiesKHR surfaceCapabilities;
} VkSurfaceCapabilities2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCapabilities` is a `VkSurfaceCapabilitiesKHR` structure describing the capabilities of the specified surface.

If the `VK_GOOGLE_surfaceless_query` extension is enabled and `VkPhysicalDeviceSurfaceInfo2KHR::surface` in the `vkGetPhysicalDeviceSurfaceCapabilities2KHR` call is `VK_NULL_HANDLE`, the values returned in `minImageCount`, `maxImageCount`, `currentExtent`, and `currentTransform` will not reflect that of any surface and will instead be as such:

- `minImageCount` and `maxImageCount` will be `0xFFFFFFFF`
- `currentExtent` will be `(0xFFFFFFFF, 0xFFFFFFFF)`
- `currentTransform` will be `VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR`

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_KHR`
- VUID-VkSurfaceCapabilities2KHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDisplayNativeHdrSurfaceCapabilitiesAMD`, `VkLatencySurfaceCapabilitiesNV`, `VkPresentTimingSurfaceCapabilitiesEXT`, `VkSharedPresentSurfaceCapabilitiesKHR`, `VkSurfaceCapabilitiesFullScreenExclusiveEXT`, `VkSurfaceCapabilitiesPresentBarrierNV`, `VkSurfaceCapabilitiesPresentId2KHR`, `VkSurfaceCapabilitiesPresentWait2KHR`, `VkSurfacePresentModeCompatibilityKHR`, `VkSurfacePresentScalingCapabilitiesKHR`, or `VkSurfaceProtectedCapabilitiesKHR`
- VUID-VkSurfaceCapabilities2KHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

An application queries if a protected `VkSurfaceKHR` is displayable on a specific windowing system using `VkSurfaceProtectedCapabilitiesKHR`, which **can** be passed in `pNext` parameter of `VkSurfaceCapabilities2KHR`.

The `VkSurfaceProtectedCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_surface_protected_capabilities
typedef struct VkSurfaceProtectedCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           supportsProtected;
} VkSurfaceProtectedCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportsProtected` specifies whether a protected swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` for a particular windowing system **can** be displayed on screen or not. If `supportsProtected` is `VK_TRUE`, then creation of swapchains with the `VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR` flag set **must** be supported for `surface`.

If the `VK_GOOGLE_surfaceless_query` extension is enabled, the value returned in `supportsProtected` will be identical for every valid surface created on this physical device, and so in the `vkGetPhysicalDeviceSurfaceCapabilities2KHR` call, `VkPhysicalDeviceSurfaceInfo2KHR::surface` **can** be `VK_NULL_HANDLE`. In that case, the contents of `VkSurfaceCapabilities2KHR::surfaceCapabilities` as well as any other structure chained to it will be undefined.

Valid Usage (Implicit)

- VUID-VkSurfaceProtectedCapabilitiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_PROTECTED_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSurfacePresentScalingCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentScalingCapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkPresentScalingFlagsKHR supportedPresentScaling;
    VkPresentGravityFlagsKHR supportedPresentGravityX;
    VkPresentGravityFlagsKHR supportedPresentGravityY;
    VkExtent2D           minScaledImageExtent;
    VkExtent2D           maxScaledImageExtent;
} VkSurfacePresentScalingCapabilitiesKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentScalingCapabilitiesKHR
typedef VkSurfacePresentScalingCapabilitiesKHR VkSurfacePresentScalingCapabilitiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **supportedPresentScaling** is a bitmask of [VkPresentScalingFlagBitsKHR](#) representing the scaling methods supported by the surface, or **0** if application-defined scaling is not supported.
- **supportedPresentGravityX** is a bitmask of [VkPresentGravityFlagBitsKHR](#) representing the X-axis pixel gravity supported by the surface, or **0** if Vulkan-defined pixel gravity is not supported for the X axis.
- **supportedPresentGravityY** is a bitmask of [VkPresentGravityFlagBitsKHR](#) representing the Y-axis pixel gravity supported by the surface, or **0** if Vulkan-defined pixel gravity is not supported for the Y axis.
- **minScaledImageExtent** contains the smallest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in **supportedPresentScaling** is used, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface. The **width** and **height** of the extent will each be smaller than or equal to the corresponding **width** and **height** of [VkSurfaceCapabilitiesKHR::minImageExtent](#).
- **maxScaledImageExtent** contains the largest valid swapchain extent for the surface on the specified device when one of the scaling methods specified in **supportedPresentScaling** is used, or the special value described above for **minScaledImageExtent**. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of [VkSurfaceCapabilitiesKHR::maxImageExtent](#).

To query the set of supported scaling modes for a given present mode, add a [VkSurfacePresentModeKHR](#) structure in the `pNext` chain of [VkPhysicalDeviceSurfaceInfo2KHR](#) when calling [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#). The implementation **must** return the same values in [VkSurfacePresentScalingCapabilitiesKHR](#) for any of the compatible present modes as obtained through [VkSurfacePresentModeCompatibilityKHR](#).

The application **can** specify the scaling mode when creating a swapchain through the use of [VkSwapchainPresentScalingCreateInfoKHR](#).

Valid Usage (Implicit)

- VUID-VkSurfacePresentScalingCapabilitiesKHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_SURFACE_PRESENT_SCALING_CAPABILITIES_KHR](#)
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentScaling-parameter
`supportedPresentScaling` **must** be a valid combination of [VkPresentScalingFlagBitsKHR](#) values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityX-parameter
`supportedPresentGravityX` **must** be a valid combination of [VkPresentGravityFlagBitsKHR](#) values
- VUID-VkSurfacePresentScalingCapabilitiesKHR-supportedPresentGravityY-parameter
`supportedPresentGravityY` **must** be a valid combination of [VkPresentGravityFlagBitsKHR](#) values

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

Bits which **may** be set in [VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling](#), specifying scaling modes supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentScalingFlagBitsKHR {
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR = 0x00000001,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR = 0x00000002,
    VK_PRESENT_SCALING_STRETCH_BIT_KHR = 0x00000004,
    VK_PRESENT_SCALING_ONE_TO_ONE_BIT_EXT = VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR,
    VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_EXT =
VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR,
    VK_PRESENT_SCALING_STRETCH_BIT_EXT = VK_PRESENT_SCALING_STRETCH_BIT_KHR,
} VkPresentScalingFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagBitsKHR
typedef VkPresentScalingFlagBitsKHR VkPresentScalingFlagBitsEXT;
```

- [VK_PRESENT_SCALING_ONE_TO_ONE_BIT_KHR](#) specifies that no scaling occurs, and pixels in the swapchain image are mapped to one and only one pixel in the surface. The mapping between pixels is defined by the chosen presentation gravity.
- [VK_PRESENT_SCALING_ASPECT_RATIO_STRETCH_BIT_KHR](#) specifies that the swapchain image will be minified or magnified such that at least one of the resulting width or height is equal to the corresponding surface dimension, and the other resulting dimension is less than or equal to the corresponding surface dimension, with the aspect ratio of the resulting image being identical to that of the original swapchain image.
- [VK_PRESENT_SCALING_STRETCH_BIT_KHR](#) specifies that the swapchain image will be minified or magnified such that the resulting image dimensions are equal to those of the surface.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentScalingFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentScalingFlagsKHR
typedef VkPresentScalingFlagsKHR VkPresentScalingFlagsEXT;
```

[VkPresentScalingFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkPresentScalingFlagBitsKHR](#).

Bits which **may** be set in the [VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX](#) or [supportedPresentGravityY](#) fields, specifying the gravity of presented pixels supported by the surface, are:

```
// Provided by VK_KHR_surface_maintenance1
typedef enum VkPresentGravityFlagBitsKHR {
    VK_PRESENT_GRAVITY_MIN_BIT_KHR = 0x00000001,
    VK_PRESENT_GRAVITY_MAX_BIT_KHR = 0x00000002,
    VK_PRESENT_GRAVITY_CENTERED_BIT_KHR = 0x00000004,
    VK_PRESENT_GRAVITY_MIN_BIT_EXT = VK_PRESENT_GRAVITY_MIN_BIT_KHR,
    VK_PRESENT_GRAVITY_MAX_BIT_EXT = VK_PRESENT_GRAVITY_MAX_BIT_KHR,
    VK_PRESENT_GRAVITY_CENTERED_BIT_EXT = VK_PRESENT_GRAVITY_CENTERED_BIT_KHR,
} VkPresentGravityFlagBitsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagBitsKHR
typedef VkPresentGravityFlagBitsKHR VkPresentGravityFlagBitsEXT;
```

- `VK_PRESENT_GRAVITY_MIN_BIT_KHR` means that the pixels will gravitate towards the top or left side of the surface.
- `VK_PRESENT_GRAVITY_MAX_BIT_KHR` means that the pixels will gravitate towards the bottom or right side of the surface.
- `VK_PRESENT_GRAVITY_CENTERED_BIT_KHR` means that the pixels will be centered in the surface.

If the value in `VkSurfaceCapabilitiesKHR::currentTransform` is not `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, it is implementation-defined whether the gravity configuration applies to the presented image before or after transformation.

```
// Provided by VK_KHR_surface_maintenance1
typedef VkFlags VkPresentGravityFlagsKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkPresentGravityFlagsKHR
typedef VkPresentGravityFlagsKHR VkPresentGravityFlagsEXT;
```

`VkPresentGravityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkPresentGravityFlagBitsKHR`.

The `VkSurfacePresentModeKHR` structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPresentModeKHR    presentMode;
} VkSurfacePresentModeKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeKHR
typedef VkSurfacePresentModeKHR VkSurfacePresentModeEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentMode` is the presentation mode the swapchain will use.

If the `VkSurfacePresentModeKHR` structure is included in the `pNext` chain of `VkPhysicalDeviceSurfaceInfo2KHR`, the values returned in `VkSurfaceCapabilitiesKHR::minImageCount`, `VkSurfaceCapabilitiesKHR::maxImageCount`, `VkSurfacePresentScalingCapabilitiesKHR::minScaledImageExtent`, and `VkSurfacePresentScalingCapabilitiesKHR::maxScaledImageExtent` are valid only for the specified `presentMode`. If `presentMode` is `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or

[VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#), the per-present mode image counts **must** both be one. The per-present mode image counts **may** be less-than or greater-than the image counts returned when [VkSurfacePresentModeKHR](#) is not provided.

NOTE

If [VkSwapchainPresentModesCreateInfoKHR](#) is provided to swapchain creation, the requirements for forward progress may be less strict. For example, a FIFO swapchain might only require 2 images to guarantee forward progress, but a MAILBOX one might require 4. Without the per-present image counts, such an implementation would have to return 4 in [VkSurfaceCapabilitiesKHR::minImageCount](#), which pessimizes FIFO. Conversely, an implementation may return a low number for minImageCount, but internally bump the image count when application queries [vkGetSwapchainImagesKHR](#), which can surprise applications, and is not discoverable until swapchain creation. Using [VkSurfacePresentModeKHR](#) and [VkSwapchainPresentModesCreateInfoKHR](#) together effectively removes this problem.

[VkSwapchainPresentModesCreateInfoKHR](#) is required for the specification to be backwards compatible with applications that do not know about, or make use of this feature.

Valid Usage

- VUID-VkSurfacePresentModeKHR-presentMode-07780
[presentMode](#) **must** be a value reported by [vkGetPhysicalDeviceSurfacePresentModesKHR](#) for the specified surface

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_KHR](#)
- VUID-VkSurfacePresentModeKHR-presentMode-parameter
[presentMode](#) **must** be a valid [VkPresentModeKHR](#) value

Structure Chaining

Extends the structure

- [VkPhysicalDeviceSurfaceInfo2KHR](#)

The [VkSurfacePresentModeCompatibilityKHR](#) structure is defined as:

```
// Provided by VK_KHR_surface_maintenance1
typedef struct VkSurfacePresentModeCompatibilityKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           presentModeCount;
    VkPresentModeKHR*   pPresentModes;
} VkSurfacePresentModeCompatibilityKHR;
```

```
// Provided by VK_EXT_surface_maintenance1
// Equivalent to VkSurfacePresentModeCompatibilityKHR
typedef VkSurfacePresentModeCompatibilityKHR VkSurfacePresentModeCompatibilityEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentModeCount** is an integer related to the number of present modes available or queried, as described below.
- **pPresentModes** is a pointer to an array of [VkPresentModeKHR](#) in which present modes compatible with a given present mode are returned.

If **pPresentModes** is **NULL**, then the number of present modes that are compatible with the one specified in [VkSurfacePresentModeKHR](#) is returned in **presentModeCount**. Otherwise, **presentModeCount** **must** be set by the application to the number of elements in the **pPresentModes** array, and on return is overwritten with the number of values actually written to **pPresentModes**. If the value of **presentModeCount** is less than the number of compatible present modes that are supported, at most **presentModeCount** values will be written to **pPresentModes**. The implementation **must** include the present mode passed to [VkSurfacePresentModeKHR](#) in **pPresentModes**, unless **presentModeCount** is zero.

To query the set of present modes compatible with a given initial present mode, add a [VkSurfacePresentModeKHR](#) structure in the **pNext** chain of [VkPhysicalDeviceSurfaceInfo2KHR](#) when calling [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#).

The application **can** create a swapchain whose present mode **can** be modified through the use of [VkSwapchainPresentModesCreateInfoKHR](#).

Valid Usage (Implicit)

- VUID-VkSurfacePresentModeCompatibilityKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_COMPATIBILITY_KHR](#)
- VUID-VkSurfacePresentModeCompatibilityKHR-pPresentModes-parameter
If **presentModeCount** is not 0, and **pPresentModes** is not **NULL**, **pPresentModes** **must** be a valid pointer to an array of **presentModeCount** [VkPresentModeKHR](#) values

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSharedPresentSurfaceCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shared_presentable_image
typedef struct VkSharedPresentSurfaceCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkImageUsageFlags  sharedPresentSupportedUsageFlags;
} VkSharedPresentSurfaceCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [sharedPresentSupportedUsageFlags](#) is a bitmask of [VkImageUsageFlagBits](#) representing the ways the application **can** use the shared presentable image from a swapchain created with [VkPresentModeKHR](#) set to [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#) or [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#) for the surface on the specified device. [VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT](#) **must** be included in the set but implementations **may** support additional usages.

Valid Usage (Implicit)

- VUID-VkSharedPresentSurfaceCapabilitiesKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkDisplayNativeHdrSurfaceCapabilitiesAMD](#) structure is defined as:

```
// Provided by VK_AMD_display_native_hdr
typedef struct VkDisplayNativeHdrSurfaceCapabilitiesAMD {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           localDimmingSupport;
} VkDisplayNativeHdrSurfaceCapabilitiesAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `localDimmingSupport` specifies whether the surface supports local dimming. If this is `VK_TRUE`, `VkSwapchainDisplayNativeHdrCreateInfoAMD` **can** be used to explicitly enable or disable local dimming for the surface. Local dimming may also be overridden by `vkSetLocalDimmingAMD` during the lifetime of the swapchain.

Valid Usage (Implicit)

- VUID-VkDisplayNativeHdrSurfaceCapabilitiesAMD-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_NATIVE_HDR_SURFACE_CAPABILITIES_AMD`

Structure Chaining

Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkSurfaceCapabilitiesFullScreenExclusiveEXT` structure is defined as:

```
// Provided by VK_EXT_full_screen_exclusive
typedef struct VkSurfaceCapabilitiesFullScreenExclusiveEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           fullScreenExclusiveSupported;
} VkSurfaceCapabilitiesFullScreenExclusiveEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fullScreenExclusiveSupported` is a boolean describing whether the surface is able to make use of exclusive full-screen access.

This structure **can** be included in the `pNext` chain of `VkSurfaceCapabilities2KHR` to determine support for exclusive full-screen access. If `fullScreenExclusiveSupported` is `VK_FALSE`, it indicates that exclusive full-screen access is not obtainable for this surface.

Applications **must** not attempt to create swapchains with `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT` set if `fullScreenExclusiveSupported` is `VK_FALSE`.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesFullScreenExclusiveEXT-sType-sType `sType` **must** be

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSurfaceCapabilitiesPresentBarrierNV](#) structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkSurfaceCapabilitiesPresentBarrierNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrierSupported;
} VkSurfaceCapabilitiesPresentBarrierNV;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentBarrierSupported` is a boolean describing whether the surface is able to make use of the present barrier feature.

This structure **can** be included in the `pNext` chain of [VkSurfaceCapabilities2KHR](#) to determine support for present barrier access. If `presentBarrierSupported` is [VK_FALSE](#), it indicates that the present barrier feature is not obtainable for this surface.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentBarrierNV-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_BARRIER_NV](#)

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

The [VkSurfaceCapabilitiesPresentId2KHR](#) structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkSurfaceCapabilitiesPresentId2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2Supported;
} VkSurfaceCapabilitiesPresentId2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2Supported` is a boolean describing whether the surface is able to support the present-ID extension

This structure **can** be included in the `pNext` chain of `VkSurfaceCapabilities2KHR` to determine support for present-wait. If `presentId2Supported` is `VK_FALSE`, it indicates that attaching an ID to presentation requests is not possible for this surface.

Applications **must** not attempt to include `VkPresentId2KHR` in the `pNext` chain of a `VkPresentInfoKHR` if `presentId2Supported` is `VK_FALSE`.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentId2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_ID_2_KHR`

Structure Chaining

Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkSurfaceCapabilitiesPresentWait2KHR` structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkSurfaceCapabilitiesPresentWait2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2Supported;
} VkSurfaceCapabilitiesPresentWait2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentWait2Supported` is a boolean describing whether the surface is able to support the present-wait extension

This structure **can** be included in the `pNext` chain of `VkSurfaceCapabilities2KHR` to determine support for present-wait. If `presentWait2Supported` is `VK_FALSE`, it indicates that waiting for presentation is not possible for this surface.

Applications **must** not attempt to call `vkWaitForPresent2KHR` on a swapchain if `presentWait2Supported` is `VK_FALSE`.

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilitiesPresentWait2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_WAIT_2_KHR`

Structure Chaining

Extends the structure

- `VkSurfaceCapabilities2KHR`

The `VkPresentTimingSurfaceCapabilitiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingSurfaceCapabilitiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentTimingSupported;
    VkBool32           presentAtAbsoluteTimeSupported;
    VkBool32           presentAtRelativeTimeSupported;
    VkPresentStageFlagsEXT presentStageQueries;
} VkPresentTimingSurfaceCapabilitiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentTimingSupported` indicates whether querying presentation timestamps is supported for a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface`.
- `presentAtAbsoluteTimeSupported` indicates whether a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` supports presenting images with absolute times.
- `presentAtRelativeTimeSupported` indicates whether a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` supports presenting images with relative times.
- `presentStageQueries` is a bitmask of `VkPresentStageFlagBitsEXT` indicating which present stages a swapchain created from `VkPhysicalDeviceSurfaceInfo2KHR::surface` is able to provide timing information for.

If `presentTimingSupported` is `VK_TRUE`, the implementation **must** also advertise support for at least the `VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT` present stage in `presentStageQueries`.

Valid Usage (Implicit)

- VUID-VkPresentTimingSurfaceCapabilitiesEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_PRESENT_TIMING_SURFACE_CAPABILITIES_EXT](#)

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

To query the basic capabilities of a surface, needed in order to create a swapchain, call:

```
// Provided by VK_EXT_display_surface_counter
VkResult vkGetPhysicalDeviceSurfaceCapabilities2EXT(
    VkPhysicalDevice    physicalDevice,
    VkSurfaceKHR        surface,
    VkSurfaceCapabilities2EXT* pSurfaceCapabilities);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **surface** is the surface that will be associated with the swapchain.
- **pSurfaceCapabilities** is a pointer to a [VkSurfaceCapabilities2EXT](#) structure in which the capabilities are returned.

[vkGetPhysicalDeviceSurfaceCapabilities2EXT](#) behaves similarly to [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), with the ability to return extended information by adding extending structures to the **pNext** chain of its **pSurfaceCapabilities** parameter.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-06211
surface must be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-physicalDevice-parameter
physicalDevice must be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-surface-parameter
surface must be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-pSurfaceCapabilities-parameter
pSurfaceCapabilities must be a valid pointer to a [VkSurfaceCapabilities2EXT](#) structure

- VUID-vkGetPhysicalDeviceSurfaceCapabilities2EXT-commonparent
Both of **physicalDevice**, and **surface** **must** have been created, allocated, or retrieved from the same **VkInstance**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_SURFACE_LOST_KHR**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkSurfaceCapabilities2EXT** structure is defined as:

```
// Provided by VK_EXT_display_surface_counter
typedef struct VkSurfaceCapabilities2EXT {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             minImageCount;
    uint32_t             maxImageCount;
    VkExtent2D           currentExtent;
    VkExtent2D           minImageExtent;
    VkExtent2D           maxImageExtent;
    uint32_t             maxImageArrayLayers;
    VkSurfaceTransformFlagsKHR supportedTransforms;
    VkSurfaceTransformFlagBitsKHR currentTransform;
    VkCompositeAlphaFlagsKHR supportedCompositeAlpha;
    VkImageUsageFlags    supportedUsageFlags;
    VkSurfaceCounterFlagsEXT supportedSurfaceCounters;
} VkSurfaceCapabilities2EXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **minImageCount** is the minimum number of images the specified device supports for a swapchain created for the surface, and will be at least one.
- **maxImageCount** is the maximum number of images the specified device supports for a swapchain created for the surface, and will be either 0, or greater than or equal to **minImageCount**. A value of 0 means that there is no limit on the number of images, though there **may** be limits related to the total amount of memory used by presentable images.

- **currentExtent** is the current width and height of the surface, or the special value (0xFFFFFFFF, 0xFFFFFFFF) indicating that the surface size will be determined by the extent of a swapchain targeting the surface.
- **minImageExtent** contains the smallest valid swapchain extent for the surface on the specified device. The **width** and **height** of the extent will each be less than or equal to the corresponding **width** and **height** of **currentExtent**, unless **currentExtent** has the special value described above.
- **maxImageExtent** contains the largest valid swapchain extent for the surface on the specified device. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of **minImageExtent**. The **width** and **height** of the extent will each be greater than or equal to the corresponding **width** and **height** of **currentExtent**, unless **currentExtent** has the special value described above.
- **maxImageArrayLayers** is the maximum number of layers presentable images **can** have for a swapchain created for this device and surface, and will be at least one.
- **supportedTransforms** is a bitmask of **VkSurfaceTransformFlagBitsKHR** indicating the presentation transforms supported for the surface on the specified device. At least one bit will be set.
- **currentTransform** is **VkSurfaceTransformFlagBitsKHR** value indicating the surface's current transform relative to the presentation engine's natural orientation.
- **supportedCompositeAlpha** is a bitmask of **VkCompositeAlphaFlagBitsKHR**, representing the alpha compositing modes supported by the presentation engine for the surface on the specified device, and at least one bit will be set. Opaque composition **can** be achieved in any alpha compositing mode by either using an image format that has no alpha component, or by ensuring that all pixels in the presentable images have an alpha value of 1.0.
- **supportedUsageFlags** is a bitmask of **VkImageUsageFlagBits** representing the ways the application **can** use the presentable images of a swapchain created with **VkPresentModeKHR** set to **VK_PRESENT_MODE_FIFO_LATEST_READY_KHR**, **VK_PRESENT_MODE_IMMEDIATE_KHR**, **VK_PRESENT_MODE_MAILBOX_KHR**, **VK_PRESENT_MODE_FIFO_KHR** or **VK_PRESENT_MODE_FIFO_RELAXED_KHR** for the surface on the specified device. **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT** **must** be included in the set. Implementations **may** support additional usages.
- **supportedSurfaceCounters** is a bitmask of **VkSurfaceCounterFlagBitsEXT** indicating the supported surface counter types. It **must** not include **VK_SURFACE_COUNTER_VBLANK_BIT_EXT** unless the surface queried is a **display surface**

Valid Usage (Implicit)

- VUID-VkSurfaceCapabilities2EXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_EXT**
- VUID-VkSurfaceCapabilities2EXT-pNext-pNext
pNext **must** be **NULL**

Bits which **can** be set in **VkSurfaceCapabilities2EXT::supportedSurfaceCounters**, indicating supported surface counter types, are:

```
// Provided by VK_EXT_display_surface_counter
typedef enum VkSurfaceCounterFlagBitsEXT {
    VK_SURFACE_COUNTER_VBLANK_BIT_EXT = 0x00000001,
    // VK_SURFACE_COUNTER_VBLANK_EXT is a legacy alias
    VK_SURFACE_COUNTER_VBLANK_EXT = VK_SURFACE_COUNTER_VBLANK_BIT_EXT,
} VkSurfaceCounterFlagBitsEXT;
```

- [VK_SURFACE_COUNTER_VBLANK_BIT_EXT](#) specifies a counter incrementing once every time a vertical blanking period occurs on the display associated with the surface.

```
// Provided by VK_EXT_display_surface_counter
typedef VkFlags VkSurfaceCounterFlagsEXT;
```

[VkSurfaceCounterFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkSurfaceCounterFlagBitsEXT](#).

Bits which **may** be set in [VkSurfaceCapabilitiesKHR::supportedTransforms](#) indicating the presentation transforms supported for the surface on the specified device, and possible values of [VkSurfaceCapabilitiesKHR::currentTransform](#) indicating the surface's current transform relative to the presentation engine's natural orientation, are:

```
// Provided by VK_KHR_surface
typedef enum VkSurfaceTransformFlagBitsKHR {
    VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR = 0x00000001,
    VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR = 0x00000002,
    VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR = 0x00000004,
    VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR = 0x00000008,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR = 0x00000010,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR = 0x00000020,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR = 0x00000040,
    VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR = 0x00000080,
    VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR = 0x00000100,
} VkSurfaceTransformFlagBitsKHR;
```

- [VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR](#) specifies that image content is presented without being transformed.
- [VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR](#) specifies that image content is rotated 90 degrees clockwise.
- [VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR](#) specifies that image content is rotated 180 degrees clockwise.
- [VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR](#) specifies that image content is rotated 270 degrees clockwise.
- [VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_BIT_KHR](#) specifies that image content is mirrored horizontally.

- [VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_90_BIT_KHR](#) specifies that image content is mirrored horizontally, then rotated 90 degrees clockwise.
- [VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_180_BIT_KHR](#) specifies that image content is mirrored horizontally, then rotated 180 degrees clockwise.
- [VK_SURFACE_TRANSFORM_HORIZONTAL_MIRROR_ROTATE_270_BIT_KHR](#) specifies that image content is mirrored horizontally, then rotated 270 degrees clockwise.
- [VK_SURFACE_TRANSFORM_INHERIT_BIT_KHR](#) specifies that the presentation transform is not specified, and is instead determined by platform-specific considerations and mechanisms outside Vulkan.

```
// Provided by VK_KHR_display, VK_KHR_surface
typedef VkFlags VkSurfaceTransformFlagsKHR;
```

[VkSurfaceTransformFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkSurfaceTransformFlagBitsKHR](#).

The [supportedCompositeAlpha](#) member is of type [VkCompositeAlphaFlagBitsKHR](#), containing the following values:

```
// Provided by VK_KHR_surface
typedef enum VkCompositeAlphaFlagBitsKHR {
    VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR = 0x00000001,
    VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR = 0x00000002,
    VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR = 0x00000004,
    VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR = 0x00000008,
} VkCompositeAlphaFlagBitsKHR;
```

These values are described as follows:

- [VK_COMPOSITE_ALPHA_OPAQUE_BIT_KHR](#): The alpha component, if it exists, of the images is ignored in the compositing process. Instead, the image is treated as if it has a constant alpha of 1.0.
- [VK_COMPOSITE_ALPHA_PRE_MULTIPLIED_BIT_KHR](#): The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are expected to already be multiplied by the alpha component by the application.
- [VK_COMPOSITE_ALPHA_POST_MULTIPLIED_BIT_KHR](#): The alpha component, if it exists, of the images is respected in the compositing process. The non-alpha components of the image are not expected to already be multiplied by the alpha component by the application; instead, the compositor will multiply the non-alpha components of the image by the alpha component during compositing.
- [VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR](#): The way in which the presentation engine treats the alpha component in the images is unknown to the Vulkan API. Instead, the application is responsible for setting the composite alpha blending mode using native window system commands. If the application does not set the blending mode using native window system commands, then a platform-specific default will be used.

```
// Provided by VK_KHR_surface
typedef VkFlags VkCompositeAlphaFlagsKHR;
```

`VkCompositeAlphaFlagsKHR` is a bitmask type for setting a mask of zero or more `VkCompositeAlphaFlagBitsKHR`.

39.5.2. Surface Format Support

To query the supported swapchain format-color space pairs for a surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfaceFormatsKHR(
    VkPhysicalDevice          physicalDevice,
    VkSurfaceKHR              surface,
    uint32_t*                 pSurfaceFormatCount,
    VkSurfaceFormatKHR*       pSurfaceFormats);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for `vkCreateSwapchainKHR`.
- `surface` is the surface that will be associated with the swapchain.
- `pSurfaceFormatCount` is a pointer to an integer related to the number of format pairs available or queried, as described below.
- `pSurfaceFormats` is either `NULL` or a pointer to an array of `VkSurfaceFormatKHR` structures.

If `pSurfaceFormats` is `NULL`, then the number of format pairs supported for the given `surface` is returned in `pSurfaceFormatCount`. Otherwise, `pSurfaceFormatCount` **must** point to a variable set by the application to the number of elements in the `pSurfaceFormats` array, and on return the variable is overwritten with the number of structures actually written to `pSurfaceFormats`. If the value of `pSurfaceFormatCount` is less than the number of format pairs supported, at most `pSurfaceFormatCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available format pairs were returned.

The number of format pairs supported **must** be greater than or equal to 1. `pSurfaceFormats` **must** not contain an entry whose value for `format` is `VK_FORMAT_UNDEFINED`.

If `pSurfaceFormats` includes an entry whose value for `colorSpace` is `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR` and whose value for `format` is a UNORM (or SRGB) format and the corresponding SRGB (or UNORM) format is a color renderable format for `VK_IMAGE_TILING_OPTIMAL`, then `pSurfaceFormats` **must** also contain an entry with the same value for `colorSpace` and `format` equal to the corresponding SRGB (or UNORM) format.

If the `VK_GOOGLE_surfaceless_query` extension is enabled, the values returned in `pSurfaceFormats` will be identical for every valid surface created on this physical device, and so `surface` **can** be `VK_NULL_HANDLE`.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06524
If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-06525
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-surface-parameter
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormatCount-parameter
`pSurfaceFormatCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-pSurfaceFormats-parameter
If the value referenced by `pSurfaceFormatCount` is not 0, and `pSurfaceFormats` is not `NULL`, `pSurfaceFormats` **must** be a valid pointer to an array of `pSurfaceFormatCount` `VkSurfaceFormatKHR` structures
- VUID-vkGetPhysicalDeviceSurfaceFormatsKHR-commonparent
Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkInstance`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSurfaceFormatKHR` structure is defined as:

```
// Provided by VK_KHR_surface
typedef struct VkSurfaceFormatKHR {
    VkFormat          format;
    VkColorSpaceKHR   colorSpace;
} VkSurfaceFormatKHR;
```

- **format** is a [VkFormat](#) that is compatible with the specified surface.
- **colorSpace** is a presentation [VkColorSpaceKHR](#) that is compatible with the surface.

To query the supported swapchain format tuples for a surface, call:

```
// Provided by VK_KHR_get_surface_capabilities2
VkResult vkGetPhysicalDeviceSurfaceFormats2KHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    uint32_t*                 pSurfaceFormatCount,
    VkSurfaceFormat2KHR*      pSurfaceFormats);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **pSurfaceInfo** is a pointer to a [VkPhysicalDeviceSurfaceInfo2KHR](#) structure describing the surface and other fixed parameters that would be consumed by [vkCreateSwapchainKHR](#).
- **pSurfaceFormatCount** is a pointer to an integer related to the number of format tuples available or queried, as described below.
- **pSurfaceFormats** is either **NULL** or a pointer to an array of [VkSurfaceFormat2KHR](#) structures.

[vkGetPhysicalDeviceSurfaceFormats2KHR](#) behaves similarly to [vkGetPhysicalDeviceSurfaceFormatsKHR](#), with the ability to be extended via **pNext** chains.

If **pSurfaceFormats** is **NULL**, then the number of format tuples supported for the given **surface** is returned in **pSurfaceFormatCount**. Otherwise, **pSurfaceFormatCount** **must** point to a variable set by the application to the number of elements in the **pSurfaceFormats** array, and on return the variable is overwritten with the number of structures actually written to **pSurfaceFormats**. If the value of **pSurfaceFormatCount** is less than the number of format tuples supported, at most **pSurfaceFormatCount** structures will be written, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that not all the available values were returned.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06521
If the [VK_GOOGLE_surfaceless_query](#) extension is not enabled, **pSurfaceInfo->surface** **must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-06522
If **pSurfaceInfo->surface** is not [VK_NULL_HANDLE](#), **pSurfaceInfo->surface** **must** be supported by **physicalDevice**, as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or

an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceInfo-parameter **pSurfaceInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceSurfaceInfo2KHR](#) structure
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormatCount-parameter **pSurfaceFormatCount** **must** be a valid pointer to a [uint32_t](#) value
- VUID-vkGetPhysicalDeviceSurfaceFormats2KHR-pSurfaceFormats-parameter
If the value referenced by **pSurfaceFormatCount** is not 0, and **pSurfaceFormats** is not **NULL**, **pSurfaceFormats** **must** be a valid pointer to an array of **pSurfaceFormatCount** [VkSurfaceFormat2KHR](#) structures

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkSurfaceFormat2KHR](#) structure is defined as:

```
// Provided by VK_KHR_get_surface_capabilities2
typedef struct VkSurfaceFormat2KHR {
    VkStructureType    sType;
    void*              pNext;
    VkSurfaceFormatKHR surfaceFormat;
} VkSurfaceFormat2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **surfaceFormat** is a [VkSurfaceFormatKHR](#) structure describing a format-color space pair that is

compatible with the specified surface.

If the `imageCompressionControlSwapchain` feature is supported and a `VkImageCompressionPropertiesEXT` structure is included in the `pNext` chain of this structure, then it will be filled with the compression properties that are supported for the `surfaceFormat`.

Valid Usage

- VUID-VkSurfaceFormat2KHR-pNext-06750

If the `VK_EXT_image_compression_control_swapchain` extension is not supported, the `pNext` chain **must** not include an `VkImageCompressionPropertiesEXT` structure

Valid Usage (Implicit)

- VUID-VkSurfaceFormat2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SURFACE_FORMAT_2_KHR`
- VUID-VkSurfaceFormat2KHR-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkImageCompressionPropertiesEXT`
- VUID-VkSurfaceFormat2KHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

While the `format` of a presentable image refers to the encoding of each pixel, the `colorSpace` determines how the presentation engine interprets the pixel values. A color space in this document refers to a specific color space (defined by the chromaticities of its primaries and a white point in CIE Lab), and transfer functions indicating the mapping between the image data and the colorimetry with respect to the given color space.

Possible values of `VkSurfaceFormatKHR::colorSpace`, specifying the color spaces that a presentation engine can accept, are:

```

// Provided by VK_KHR_surface
typedef enum VkColorSpaceKHR {
    VK_COLOR_SPACE_SRGB_NONLINEAR_KHR = 0,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT = 1000104001,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT = 1000104002,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT = 1000104003,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT = 1000104004,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_LINEAR_EXT = 1000104005,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT709_NONLINEAR_EXT = 1000104006,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_BT2020_LINEAR_EXT = 1000104007,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_ST2084_EXT = 1000104008,
    // Provided by VK_EXT_swapchain_colorspace
    // VK_COLOR_SPACE_DOLBYVISION_EXT is legacy, but no reason was given in the API XML
    VK_COLOR_SPACE_DOLBYVISION_EXT = 1000104009,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_HDR10_HLG_EXT = 1000104010,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT = 1000104011,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT = 1000104012,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_PASS_THROUGH_EXT = 1000104013,
    // Provided by VK_EXT_swapchain_colorspace
    VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT = 1000104014,
    // Provided by VK_AMD_display_native_hdr
    VK_COLOR_SPACE_DISPLAY_NATIVE_AMD = 1000213000,
    // VK_COLORSPACE_SRGB_NONLINEAR_KHR is a legacy alias
    VK_COLORSPACE_SRGB_NONLINEAR_KHR = VK_COLOR_SPACE_SRGB_NONLINEAR_KHR,
    // Provided by VK_EXT_swapchain_colorspace
    // VK_COLOR_SPACE_DCI_P3_LINEAR_EXT is a legacy alias
    VK_COLOR_SPACE_DCI_P3_LINEAR_EXT = VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT,
} VkColorSpaceKHR;

```

- [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#) specifies support for the images in sRGB color space, encoded according to the sRGB specification.
- [VK_COLOR_SPACE_DISPLAY_P3_NONLINEAR_EXT](#) specifies support for the images in Display-P3 color space, encoded using a Display-P3 transfer function.
- [VK_COLOR_SPACE_EXTENDED_SRGB_LINEAR_EXT](#) specifies support for the images in extended sRGB color space, encoded using a linear transfer function.
- [VK_COLOR_SPACE_EXTENDED_SRGB_NONLINEAR_EXT](#) specifies support for the images in

extended sRGB color space, encoded according to the scRGB specification.

- [VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT](#) specifies support for the images in Display-P3 color space, encoded using a linear transfer function.
- [VK_COLOR_SPACE_DCI_P3_NONLINEAR_EXT](#) specifies support for the images in DCI-P3 color space, encoded according to the DCI-P3 specification. Note that values in such an image are interpreted as XYZ encoded color data by the presentation engine.
- [VK_COLOR_SPACE_BT709_LINEAR_EXT](#) specifies support for the images in BT709 color space, encoded using a linear transfer function.
- [VK_COLOR_SPACE_BT709_NONLINEAR_EXT](#) specifies support for the images in BT709 color space, encoded according to the BT709 specification.
- [VK_COLOR_SPACE_BT2020_LINEAR_EXT](#) specifies support for the images in BT2020 color space, encoded using a linear transfer function.
- [VK_COLOR_SPACE_HDR10_ST2084_EXT](#) specifies support for the images in HDR10 (BT2020) color space, encoded according to SMPTE ST2084 Perceptual Quantizer (PQ) specification.
- [VK_COLOR_SPACE_HDR10_HLG_EXT](#) specifies support for the images in HDR10 (BT2020) color space, encoded according to the Hybrid Log Gamma (HLG) specification.
- [VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT](#) specifies support for images in Adobe RGB color space, encoded using a linear transfer function.
- [VK_COLOR_SPACE_ADOBERGB_NONLINEAR_EXT](#) specifies support for the images in Adobe RGB color space, encoded according to the Adobe RGB specification (approximately Gamma 2.2).
- [VK_COLOR_SPACE_PASS_THROUGH_EXT](#) specifies that color components are used “as is”. This is intended to allow applications to supply data for color spaces not described here.
- [VK_COLOR_SPACE_DISPLAY_NATIVE_AMD](#) specifies support for the display’s native color space. This matches the color space expectations of AMD’s FreeSync2 standard, for displays supporting it.

NOTE

In the initial release of the [VK_KHR_surface](#) and [VK_KHR_swapchain](#) extensions, the token [VK_COLORSPACE_SRGB_NONLINEAR_KHR](#) was used. Starting in the 2016-05-13 updates to the extension branches, matching release 1.0.13 of the core API specification, [VK_COLOR_SPACE_SRGB_NONLINEAR_KHR](#) is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

NOTE

In older versions of this extension [VK_COLOR_SPACE_DISPLAY_P3_LINEAR_EXT](#) was misnamed [VK_COLOR_SPACE_DCI_P3_LINEAR_EXT](#). This has been updated to indicate that it uses RGB color encoding, not XYZ. The old name is legacy but is maintained for backwards compatibility.

NOTE

In older versions of the [VK_EXT_swapchain_colorspace](#) extension, [VK_COLOR_SPACE_DOLBYVISION_EXT](#) was exposed. The intent was to indicate the presentation engine shall decode an image using the SMPTE ST 2084 Perceptual Quantizer (PQ) EOTF, and then apply a proprietary OOTF to process the image. However, Dolby Vision profile 8.4 describes an encoding using the Hybrid Log

Gamma (HLG) OETF, and there is no swapchain extension for signaling Dolby Vision metadata to be used by a proprietary OOTF. This enum is legacy but is maintained for backwards compatibility.

NOTE

For a traditional “Linear” or non-gamma transfer function color space use [VK_COLOR_SPACE_PASS_THROUGH_EXT](#).

NOTE

On Wayland, [VK_COLOR_SPACE_PASS_THROUGH_EXT](#) can be used to disable color management by the WSI on a surface, which makes it possible for the application to create a `wp_color_management_surface_v1` object without triggering a `surface_exists` protocol error.

See [vkCreateWaylandSurfaceKHR](#)

The presentation engine interprets the pixel values of the R, G, and B components as having been encoded using an appropriate transfer function. Applications **should** ensure that the appropriate transfer function has been applied. [Texel encode](#) requires that all implementations implicitly apply the sRGB EOTF¹ on R, G, and B components when shaders write to an sRGB pixel format image, which is useful for sRGB color spaces. For sRGB color spaces with other pixel formats, or other non-linear color spaces, applications **can** apply the transfer function explicitly in a shader. The A channel is always interpreted as linearly encoded.

This extension defines enums for [VkColorSpaceKHR](#) that correspond to the following color spaces:

Table 55. Color Spaces and Attributes

Name	Red Primary	Green Primary	Blue Primary	White-point	Transfer function
DCI-P3	1.000, 0.000	0.000, 1.000	0.000, 0.000	0.3333, 0.3333	DCI P3
Display-P3	0.680, 0.320	0.265, 0.690	0.150, 0.060	0.3127, 0.3290 (D65)	Display-P3
BT709	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	BT709
sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	sRGB
extended sRGB	0.640, 0.330	0.300, 0.600	0.150, 0.060	0.3127, 0.3290 (D65)	scRGB
HDR10_ST2084	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	ST2084 PQ
HDR10_HLG	0.708, 0.292	0.170, 0.797	0.131, 0.046	0.3127, 0.3290 (D65)	HLG
Adobe RGB	0.640, 0.330	0.210, 0.710	0.150, 0.060	0.3127, 0.3290 (D65)	Adobe RGB

The transfer functions are described in the “Transfer Functions” chapter of the [Khronos Data](#)

Format Specification.

Except Display-P3 OETF, which is:

$$E = \begin{cases} 1.055 \times L^{\frac{1}{2.4}} - 0.055 & \text{for } 0.0030186 \leq L \leq 1 \\ 12.92 \times L & \text{for } 0 \leq L < 0.0030186 \end{cases}$$

where L is the linear value of a color component and E is the encoded value (as stored in the image in memory).

NOTE For most uses, the sRGB OETF is equivalent.

39.5.3. Surface Presentation Mode Support

To query the supported presentation modes for a surface, call:

```
// Provided by VK_KHR_surface
VkResult vkGetPhysicalDeviceSurfacePresentModesKHR(
    VkPhysicalDevice          physicalDevice,
    VkSurfaceKHR              surface,
    uint32_t*                 pPresentModeCount,
    VkPresentModeKHR*         pPresentModes);
```

- **physicalDevice** is the physical device that will be associated with the swapchain to be created, as described for [vkCreateSwapchainKHR](#).
- **surface** is the surface that will be associated with the swapchain.
- **pPresentModeCount** is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- **pPresentModes** is either **NULL** or a pointer to an array of [VkPresentModeKHR](#) values, indicating the supported presentation modes.

If **pPresentModes** is **NULL**, then the number of presentation modes supported for the given **surface** is returned in **pPresentModeCount**. Otherwise, **pPresentModeCount** **must** point to a variable set by the application to the number of elements in the **pPresentModes** array, and on return the variable is overwritten with the number of values actually written to **pPresentModes**. If the value of **pPresentModeCount** is less than the number of presentation modes supported, at most **pPresentModeCount** values will be written, and [VK_INCOMPLETE](#) will be returned instead of [VK_SUCCESS](#), to indicate that not all the available modes were returned.

If the [VK_GOOGLE_surfaceless_query](#) extension is enabled and **surface** is [VK_NULL_HANDLE](#), the values returned in **pPresentModes** will only indicate support for [VK_PRESENT_MODE_FIFO_KHR](#), [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#), and [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#). To query support for any other present mode, a valid handle **must** be provided in **surface**.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06524
If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-06525
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-surface-parameter
If `surface` is not `VK_NULL_HANDLE`, `surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModeCount-parameter
`pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-pPresentModes-parameter
If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` `VkPresentModeKHR` values
- VUID-vkGetPhysicalDeviceSurfacePresentModesKHR-commonparent
Both of `physicalDevice`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkInstance`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To query the supported presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkGetPhysicalDeviceSurfacePresentModes2EXT(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    uint32_t*                       pPresentModeCount,
    VkPresentModeKHR*               pPresentModes);
```

- `physicalDevice` is the physical device that will be associated with the swapchain to be created, as described for `vkCreateSwapchainKHR`.
- `pSurfaceInfo` is a pointer to a `VkPhysicalDeviceSurfaceInfo2KHR` structure describing the surface and other fixed parameters that would be consumed by `vkCreateSwapchainKHR`.
- `pPresentModeCount` is a pointer to an integer related to the number of presentation modes available or queried, as described below.
- `pPresentModes` is either `NULL` or a pointer to an array of `VkPresentModeKHR` values, indicating the supported presentation modes.

`vkGetPhysicalDeviceSurfacePresentModes2EXT` behaves similarly to `vkGetPhysicalDeviceSurfacePresentModesKHR`, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06521
If the `VK_GOOGLE_surfaceless_query` extension is not enabled, `pSurfaceInfo->surface` **must** be a valid `VkSurfaceKHR` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-06522
If `pSurfaceInfo->surface` is not `VK_NULL_HANDLE`, `pSurfaceInfo->surface` **must** be supported by `physicalDevice`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-physicalDevice-parameter
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pSurfaceInfo-parameter
`pSurfaceInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceSurfaceInfo2KHR` structure
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModeCount-parameter
`pPresentModeCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceSurfacePresentModes2EXT-pPresentModes-parameter
If the value referenced by `pPresentModeCount` is not `0`, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `pPresentModeCount` `VkPresentModeKHR` values

Return Codes

Success

- [VK_INCOMPLETE](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

Possible values of elements of the [vkGetPhysicalDeviceSurfacePresentModesKHR::pPresentModes](#) array, indicating the supported presentation modes for a surface, are:

```
// Provided by VK_KHR_surface
typedef enum VkPresentModeKHR {
    VK_PRESENT_MODE_IMMEDIATE_KHR = 0,
    VK_PRESENT_MODE_MAILBOX_KHR = 1,
    VK_PRESENT_MODE_FIFO_KHR = 2,
    VK_PRESENT_MODE_FIFO_RELAXED_KHR = 3,
    // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR = 1000111000,
    // Provided by VK_KHR_shared_presentable_image
    VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR = 1000111001,
    // Provided by VK_KHR_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_KHR = 1000361000,
    // Provided by VK_EXT_present_mode_fifo_latest_ready
    VK_PRESENT_MODE_FIFO_LATEST_READY_EXT = VK_PRESENT_MODE_FIFO_LATEST_READY_KHR,
} VkPresentModeKHR;
```

- [VK_PRESENT_MODE_IMMEDIATE_KHR](#) specifies that the presentation engine does not wait for a vertical blanking period to update the current image, meaning this mode **may** result in visible tearing. No internal queuing of presentation requests is needed, as the requests are applied immediately.
- [VK_PRESENT_MODE_MAILBOX_KHR](#) specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application. One request is removed from the queue and processed during each vertical blanking period in which the queue is non-empty.
- [VK_PRESENT_MODE_FIFO_KHR](#) specifies that the presentation engine waits for the next vertical

blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty. This is the only value of `presentMode` that is **required** to be supported.

- `VK_PRESENT_MODE_FIFO_RELAXED_KHR` specifies that the presentation engine generally waits for the next vertical blanking period to update the current image. If a vertical blanking period has already passed since the last update of the current image then the presentation engine does not wait for another vertical blanking period for the update, meaning this mode **may** result in visible tearing in this case. This mode is useful for reducing visual stutter with an application that will mostly present a new image before the next vertical blanking period, but may occasionally be late, and present a new image just after the next vertical blanking period. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during or after each vertical blanking period in which the queue is non-empty.
- `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR` specifies that the presentation engine waits for the next vertical blanking period to update the current image. Tearing **cannot** be observed. An internal queue is used to hold pending presentation requests. New requests are appended to the end of the queue. At each vertical blanking period, the presentation engine dequeues all successive requests that are ready to be presented from the beginning of the queue. If using the `VK_GOOGLE_display_timing` extension or the `presentAtAbsoluteTime` feature to provide a target present time, the presentation engine checks the specified time for each image. If the target present time is less-than or equal-to the current time, the presentation engine dequeues the image and checks the next one. The image of the last dequeued request is presented. The other dequeued requests are dropped.
- `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine is only required to update the current image after a new presentation request is received. Therefore the application **must** make a presentation request whenever an update is required. However, the presentation engine **may** update the current image at any point, meaning this mode **may** result in visible tearing.
- `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` specifies that the presentation engine and application have concurrent access to a single image, which is referred to as a *shared presentable image*. The presentation engine periodically updates the current image on its regular refresh cycle. The application is only required to make one initial presentation request, after which the presentation engine **must** update the current image without any need for further presentation requests. The application **can** indicate the image contents have been updated by making a presentation request, but this does not guarantee the timing of when it will be updated. This mode **may** result in visible tearing if rendering to the image is not timed correctly.

The supported `VkImageUsageFlagBits` of the presentable images of a swapchain created for a surface **may** differ depending on the presentation mode, and can be determined as per the table below:

Table 56. Presentable Image Usage Queries

Presentation mode	Image usage flags
VK_PRESENT_MODE_IMMEDIATE_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_MAILBOX_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_RELAXED_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_FIFO_LATEST_READY_KHR	VkSurfaceCapabilitiesKHR::supportedUsageFlags
VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags
VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR	VkSharedPresentSurfaceCapabilitiesKHR::sharedPresentSupportedUsageFlags

NOTE

For reference, the mode indicated by `VK_PRESENT_MODE_FIFO_KHR` is equivalent to the behavior of `{wgl|glX|egl}SwapBuffers` with a swap interval of 1, while the mode indicated by `VK_PRESENT_MODE_FIFO_RELAXED_KHR` is equivalent to the behavior of `{wgl|glX}SwapBuffers` with a swap interval of -1 (from the `{WGL|GLX}_EXT_swap_control_tear` extensions).

39.6. Full Screen Exclusive Control

Swapchains created with `fullScreenExclusive` set to `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT` **must** acquire and release exclusive full-screen access explicitly, using the following commands.

To acquire exclusive full-screen access for a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkAcquireFullScreenExclusiveModeEXT(
    VkDevice device,
    VkSwapchainKHR swapchain);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to acquire exclusive full-screen access for.

Valid Usage

- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02674 `swapchain` **must** not be in the retired state
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02675 `swapchain` **must** be a swapchain created with a `VkSurfaceFullScreenExclusiveInfoEXT` structure, with `fullScreenExclusive` set to `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT`
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-02676

swapchain **must** not currently have exclusive full-screen access

A return value of `VK_SUCCESS` indicates that the **swapchain** successfully acquired exclusive full-screen access. The swapchain will retain this exclusivity until either the application releases exclusive full-screen access with `vkReleaseFullScreenExclusiveModeEXT`, destroys the swapchain, or if any of the swapchain commands return `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` indicating that the mode was lost because of platform-specific changes.

If the swapchain was unable to acquire exclusive full-screen access to the display then `VK_ERROR_INITIALIZATION_FAILED` is returned. An application **can** attempt to acquire exclusive full-screen access again for the same swapchain even if this command fails, or if `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` has been returned by a swapchain command.

Valid Usage (Implicit)

- VUID-vkAcquireFullScreenExclusiveModeEXT-device-parameter **device** **must** be a valid `VkDevice` handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parameter **swapchain** **must** be a valid `VkSwapchainKHR` handle
- VUID-vkAcquireFullScreenExclusiveModeEXT-swapchain-parent **swapchain** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To release exclusive full-screen access from a swapchain, call:

```
// Provided by VK_EXT_full_screen_exclusive
VkResult vkReleaseFullScreenExclusiveModeEXT(
    VkDevice device,
    VkSwapchainKHR swapchain);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to release exclusive full-screen access from.

NOTE

Applications will not be able to present to **swapchain** after this call until exclusive full-screen access is reacquired. This is usually useful to handle when an application is minimized or otherwise intends to stop presenting for a time.

Valid Usage

- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02677
swapchain **must** not be in the retired state
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-02678
swapchain **must** be a swapchain created with a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure, with [fullScreenExclusive](#) set to [VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT](#)

Valid Usage (Implicit)

- VUID-vkReleaseFullScreenExclusiveModeEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parameter
swapchain **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkReleaseFullScreenExclusiveModeEXT-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

39.7. Device Group Queries

A logical device that represents multiple physical devices **may** support presenting from images on more than one physical device, or combining images from multiple physical devices.

To query these capabilities, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupPresentCapabilitiesKHR(
    VkDevice device,
    VkDeviceGroupPresentCapabilitiesKHR* pDeviceGroupPresentCapabilities);
```

- **device** is the logical device.
- **pDeviceGroupPresentCapabilities** is a pointer to a **VkDeviceGroupPresentCapabilitiesKHR** structure in which the device's capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-device-parameter **device** **must** be a valid **VkDevice** handle
- VUID-vkGetDeviceGroupPresentCapabilitiesKHR-pDeviceGroupPresentCapabilities-parameter **pDeviceGroupPresentCapabilities** **must** be a valid pointer to a **VkDeviceGroupPresentCapabilitiesKHR** structure

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkDeviceGroupPresentCapabilitiesKHR** structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef struct VkDeviceGroupPresentCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            presentMask[VK_MAX_DEVICE_GROUP_SIZE];
    VkDeviceGroupPresentModeFlagsKHR    modes;
} VkDeviceGroupPresentCapabilitiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentMask** is an array of [VK_MAX_DEVICE_GROUP_SIZE](#) **uint32_t** masks, where the mask at element *i* is non-zero if physical device *i* has a presentation engine, and where bit *j* is set in element *i* if physical device *i* **can** present swapchain images from physical device *j*. If element *i* is non-zero, then bit *i* **must** be set.
- **modes** is a bitmask of [VkDeviceGroupPresentModeFlagBitsKHR](#) indicating which device group presentation modes are supported.

modes always has [VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR](#) set.

The present mode flags are also used when presenting an image, in [VkDeviceGroupPresentInfoKHR::mode](#).

If a device group only includes a single physical device, then **modes** **must** equal [VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR](#).

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentCapabilitiesKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR](#)
- VUID-VkDeviceGroupPresentCapabilitiesKHR-pNext-pNext
pNext **must** be **NULL**

Bits which **may** be set in [VkDeviceGroupPresentCapabilitiesKHR::modes](#), indicating which device group presentation modes are supported, are:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef enum VkDeviceGroupPresentModeFlagBitsKHR {
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR = 0x00000001,
    VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR = 0x00000002,
    VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR = 0x00000004,
    VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR = 0x00000008,
} VkDeviceGroupPresentModeFlagBitsKHR;
```

- [VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR](#) specifies that any physical device with a presentation engine **can** present its own swapchain images.
- [VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR](#) specifies that any physical device with a presentation engine **can** present swapchain images from any physical device in its [presentMask](#).
- [VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR](#) specifies that any physical device with a presentation engine **can** present the sum of swapchain images from any physical devices in its [presentMask](#).
- [VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR](#) specifies that multiple physical devices with a presentation engine **can** each present their own swapchain images.

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
typedef VkFlags VkDeviceGroupPresentModeFlagsKHR;
```

[VkDeviceGroupPresentModeFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkDeviceGroupPresentModeFlagBitsKHR](#).

Some surfaces **may** not be capable of using all the device group present modes.

To query the supported device group present modes for a particular surface, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetDeviceGroupSurfacePresentModesKHR(
    VkDevice          device,
    VkSurfaceKHR      surface,
    VkDeviceGroupPresentModeFlagsKHR* pModes);
```

- [device](#) is the logical device.
- [surface](#) is the surface.
- [pModes](#) is a pointer to a [VkDeviceGroupPresentModeFlagsKHR](#) in which the supported device group present modes for the surface are returned.

The modes returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded. These modes **must** be a subset of the modes returned by [vkGetDeviceGroupPresentCapabilitiesKHR](#).

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-06212
[surface](#) **must** be supported by all physical devices associated with [device](#), as reported by [vkGetPhysicalDeviceSurfaceSupportKHR](#) or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModesKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-surface-parameter **surface** **must** be a valid [VkSurfaceKHR](#) handle
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-pModes-parameter **pModes** **must** be a valid pointer to a [VkDeviceGroupPresentModeFlagsKHR](#) value
- VUID-vkGetDeviceGroupSurfacePresentModesKHR-commonparent Both of **device**, and **surface** **must** have been created, allocated, or retrieved from the same [VkInstance](#)

Host Synchronization

- Host access to **surface** **must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query the supported device group presentation modes for a surface combined with select other fixed swapchain creation parameters, call:

```
// Provided by VK_EXT_full_screen_exclusive with VK_KHR_device_group or VK_VERSION_1_1
VkResult vkGetDeviceGroupSurfacePresentModes2EXT(
    VkDevice device,
    const VkPhysicalDeviceSurfaceInfo2KHR* pSurfaceInfo,
    VkDeviceGroupPresentModeFlagsKHR* pModes);
```

- **device** is the logical device.
- **pSurfaceInfo** is a pointer to a [VkPhysicalDeviceSurfaceInfo2KHR](#) structure describing the surface and other fixed parameters that would be consumed by [vkCreateSwapchainKHR](#).
- **pModes** is a pointer to a [VkDeviceGroupPresentModeFlagsKHR](#) in which the supported device

group present modes for the surface are returned.

`vkGetDeviceGroupSurfacePresentModes2EXT` behaves similarly to `vkGetDeviceGroupSurfacePresentModesKHR`, with the ability to specify extended inputs via chained input structures.

Valid Usage

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-06213
`pSurfaceInfo->surface` **must** be supported by all physical devices associated with `device`, as reported by `vkGetPhysicalDeviceSurfaceSupportKHR` or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pSurfaceInfo-parameter
`pSurfaceInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceSurfaceInfo2KHR` structure
- VUID-vkGetDeviceGroupSurfacePresentModes2EXT-pModes-parameter
`pModes` **must** be a valid pointer to a `VkDeviceGroupPresentModeFlagsKHR` value

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

When using `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, the application **may** need to know which regions of the surface are used when presenting locally on each physical device. Presentation of swapchain images to this surface need only have valid contents in the regions returned by this command.

To query a set of rectangles used in presentation on the physical device, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_surface
VkResult vkGetPhysicalDevicePresentRectanglesKHR(
    VkPhysicalDevice          physicalDevice,
    VkSurfaceKHR              surface,
    uint32_t*                 pRectCount,
    VkRect2D*                 pRects);
```

- **physicalDevice** is the physical device.
- **surface** is the surface.
- **pRectCount** is a pointer to an integer related to the number of rectangles available or queried, as described below.
- **pRects** is either **NULL** or a pointer to an array of **VkRect2D** structures.

If **pRects** is **NULL**, then the number of rectangles used when presenting the given **surface** is returned in **pRectCount**. Otherwise, **pRectCount** **must** point to a variable set by the application to the number of elements in the **pRects** array, and on return the variable is overwritten with the number of structures actually written to **pRects**. If the value of **pRectCount** is less than the number of rectangles, at most **pRectCount** structures will be written, and **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available rectangles were returned.

The values returned by this command are not invariant, and **may** change in response to the surface being moved, resized, or occluded.

The rectangles returned by this command **must** not overlap.

Valid Usage

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-06211
surface **must** be supported by **physicalDevice**, as reported by **vkGetPhysicalDeviceSurfaceSupportKHR** or an equivalent platform-specific mechanism

Valid Usage (Implicit)

- VUID-vkGetPhysicalDevicePresentRectanglesKHR-physicalDevice-parameter
physicalDevice **must** be a valid **VkPhysicalDevice** handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-surface-parameter
surface **must** be a valid **VkSurfaceKHR** handle
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRectCount-parameter
pRectCount **must** be a valid pointer to a **uint32_t** value
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-pRects-parameter
If the value referenced by **pRectCount** is not **0**, and **pRects** is not **NULL**, **pRects** **must** be a valid pointer to an array of **pRectCount** **VkRect2D** structures
- VUID-vkGetPhysicalDevicePresentRectanglesKHR-commonparent

Both of `physicalDevice`, and `surface` **must** have been created, allocated, or retrieved from the same `VkInstance`

Host Synchronization

- Host access to `surface` **must** be externally synchronized

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

39.8. Present Timing Queries

Traditional game and real-time-animation applications frequently use `VK_PRESENT_MODE_FIFO_KHR` so that presentable images are updated during the vertical blanking period of a given refresh cycle (RC) of the presentation engine's display. On fixed refresh rate displays, this avoids the visual anomaly known as tearing.

However, synchronizing the presentation of images with the RC does not prevent all forms of visual anomalies. Stuttering occurs when the geometry for each presentable image is not accurately positioned for when that image will be displayed. The geometry may appear to move too little some RCs, and too much for others. Sometimes the animation appears to freeze, when the same image is used for more RCs than other images.

In order to minimize stuttering, an application needs to: 1) render and present images at a consistent rate that is, on fixed refresh rate displays, a multiple of the presentation engine's refresh rate; 2) correctly position its geometry for when the presentable image will be displayed to the user. The `VK_EXT_present_timing` or `VK_GOOGLE_display_timing` extension allows an application to satisfy these needs.

The presentation engine's display typically refreshes the pixels that are displayed to the user on a periodic basis. This period **may** be fixed (Fixed Refresh Rate, FRR) or variable (Variable Refresh Rate, VRR).

In order to collect timing information about presentation, a swapchain needs an internal queue to store asynchronously updated results until applications collect them.

To allocate the swapchain's internal timing results queue, call:

```
// Provided by VK_EXT_present_timing
VkResult vkSetSwapchainPresentTimingQueueSizeEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t          size);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to allocate a results queue for.
- **size** is the requested number of slots in the internal results queue.

If this function is called multiple times, the internal queue is reallocated to fit the new **size**. If the new **size** is less than the current number of outstanding results, **VK_NOT_READY** is returned and no allocation is performed.

Valid Usage

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-12229
swapchain must have been created with **VkSwapchainCreateInfoKHR::flags** containing **VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT**

Valid Usage (Implicit)

- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-device-parameter
device must be a valid **VkDevice** handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parameter
swapchain must be a valid **VkSwapchainKHR** handle
- VUID-vkSetSwapchainPresentTimingQueueSizeEXT-swapchain-parent
swapchain must have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **swapchain must** be externally synchronized

Return Codes

Success

- **VK_NOT_READY**
- **VK_SUCCESS**

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's timing properties are modified.

To query the presentation engine's current timing properties for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimingPropertiesEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkSwapchainTimingPropertiesEXT* pSwapchainTimingProperties,
    uint64_t*         pSwapchainTimingPropertiesCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain timing properties for.
- `pSwapchainTimingProperties` is a pointer to an instance of the [VkSwapchainTimingPropertiesEXT](#) structure.
- `pSwapchainTimingPropertiesCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.

If `vkGetSwapchainTimingPropertiesEXT` returns [VK_NOT_READY](#), the implementation was not able to determine the current refresh cycle duration. Some platforms **may** not provide timing properties until after at least one image has been presented to the `swapchain`. If timing properties change for the `swapchain`, these platforms **may** not provide updated results until after at least one additional image has been presented to the `swapchain`.

Valid Usage (Implicit)

- VUID-vkGetSwapchainTimingPropertiesEXT-device-parameter `device` **must** be a valid [VkDevice](#) handle
- VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parameter `swapchain` **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingProperties-parameter `pSwapchainTimingProperties` **must** be a valid pointer to a [VkSwapchainTimingPropertiesEXT](#) structure
- VUID-vkGetSwapchainTimingPropertiesEXT-pSwapchainTimingPropertiesCounter-parameter
If `pSwapchainTimingPropertiesCounter` is not `NULL`, `pSwapchainTimingPropertiesCounter` **must**

be a valid pointer to a `uint64_t` value

- `VUID-vkGetSwapchainTimingPropertiesEXT-swapchain-parent` `swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- `VK_NOT_READY`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSwapchainTimingPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimingPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t            refreshDuration;
    uint64_t            refreshInterval;
} VkSwapchainTimingPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `refreshDuration` is zero or an indication of the duration of a refresh cycle.
- `refreshInterval` is zero or a duration in nanoseconds indicating the interval between refresh cycle durations.

If `refreshDuration` is zero, the presentation engine is not able to determine the duration of the refresh cycle. Similarly, if `refreshInterval` is zero, the presentation engine is not able to determine whether it is operating in VRR mode.

Otherwise, if `refreshInterval` is the same as `refreshDuration`, the presentation engine is operating in

FRR mode. In this case, `refreshDuration` is the number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshInterval` is `UINT64_MAX`, the presentation engine is operating in VRR mode, and `refreshDuration` is the minimum number of nanoseconds from the start of one refresh cycle to the start of the next refresh cycle.

If `refreshDuration` and `refreshInterval` are not zero, `refreshInterval` is a factor of `refreshDuration`.

Valid Usage (Implicit)

- `VOID-VkSwapchainTimingPropertiesEXT-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_TIMING_PROPERTIES_EXT`
- `VOID-VkSwapchainTimingPropertiesEXT-pNext-pNext`
`pNext` **must** be `NULL`

NOTE

Some display technologies allow the vblank interval to be decoupled from the display's effective refresh rate. In other words, presented images are visible for a fixed duration (`refreshDuration`) that is a multiple of the vblank interval (`refreshInterval`) which **may** be much smaller. This allows such displays, for example, to effectively operate at a fixed refresh rate with the ability to quickly change that refresh rate to adapt to the current system's workload.

Note that `VkSwapchainTimingPropertiesEXT` only represents the current swapchain's view of those capabilities, which **may** differ from the actual hardware capabilities, based e.g. on the current surface properties. For example, swapchains that render to a windowed surface requiring complex composition **may** not be able to reach their display hardware's full potential.

NOTE

The rate at which an application renders and presents new images is known as the image present rate (IPR, a.k.a. frame rate). The inverse of IPR, or the duration between each image present, is the image present duration (IPD).

In order to provide a smooth, stutter-free animation on non-VRR displays, an application needs its IPD to be a multiple of `refreshInterval` that is at least equal to `refreshDuration`.

For example, if a FRR display has a set 60Hz refresh rate, where `refreshDuration` is equal to `refreshInterval`, `refreshDuration` will be a value in nanoseconds that is approximately equal to 16.67ms. In such a case, an application will want an IPD of 16.67ms (1X multiplier of `refreshInterval`), or 33.33ms (2X multiplier of `refreshInterval`), or 50.0ms (3X multiplier of `refreshInterval`), etc.

In order to determine a target IPD for a display (i.e. a multiple of `refreshInterval`), an application needs to determine when its images are actually displayed.

Consider an application that has an initial target IPD of 16.67ms (1X multiplier of

`refreshDuration`). It will therefore position the geometry of a new image 16.67ms later than the previous image.

If this application is running on slower hardware, so that it actually takes 20ms to render each new image, the images will not be displayed to the user every 16.67ms, nor every 20ms, which will create visual anomalies. In this case, it is better for the application to adjust its target IPD to 33.33ms (i.e. a 2X multiplier of `refreshDuration`), and tell the presentation engine to not present images any sooner than every 33.33ms. This will allow the geometry to be correctly positioned for each presentable image.

On VRR displays, where `refreshInterval` is `UINT64_MAX`, applications **should** target an IPD that is at least equal to `refreshDuration`.

Adjustments to an application's IPD may be needed because different views of an application's geometry can take different amounts of time to render. For example, looking at the sky may take less time to render than looking at multiple, complex items in a room.

In general, it is good to not frequently change IPD, as that can cause visual anomalies.

Adjustments to a larger IPD because of late images should happen quickly, but adjustments to a smaller IPD should only happen if the periodic feedback of `VkPastPresentationTimingEXT` values indicates that the target IPD can be durably achieved.

The implementation maintains an internal monotonically increasing counter which updates when the presentation engine's list of supported time domains for a swapchain is modified.

To query the time domains supported by the presentation engine for a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetSwapchainTimeDomainPropertiesEXT(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkSwapchainTimeDomainPropertiesEXT* pSwapchainTimeDomainProperties,
    uint64_t*         pTimeDomainsCounter);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to obtain time domain properties for.
- `pSwapchainTimeDomainProperties` is a pointer to an instance of the `VkSwapchainTimeDomainPropertiesEXT` structure.
- `pTimeDomainsCounter` is `NULL` or a pointer to a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domain properties counter.

If upon return `VkSwapchainTimeDomainPropertiesEXT::timeDomainCount` is smaller than the number of time domains supported for the given `swapchain`, `VK_INCOMPLETE` will be returned

instead of `VK_SUCCESS` to indicate that not all the available values were returned.

Valid Usage (Implicit)

- `VUID-vkGetSwapchainTimeDomainPropertiesEXT-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parameter`
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- `VUID-vkGetSwapchainTimeDomainPropertiesEXT-pSwapchainTimeDomainProperties-parameter`
`pSwapchainTimeDomainProperties` **must** be a valid pointer to a `VkSwapchainTimeDomainPropertiesEXT` structure
- `VUID-vkGetSwapchainTimeDomainPropertiesEXT-pTimeDomainsCounter-parameter`
If `pTimeDomainsCounter` is not `NULL`, `pTimeDomainsCounter` **must** be a valid pointer to a `uint64_t` value
- `VUID-vkGetSwapchainTimeDomainPropertiesEXT-swapchain-parent`
`swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSwapchainTimeDomainPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkSwapchainTimeDomainPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           timeDomainCount;
    VkTimeDomainKHR*   pTimeDomains;
    uint64_t*          pTimeDomainIds;
} VkSwapchainTimeDomainPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **timeDomainCount** is an integer related to the number of time domains available or queried, as described below.
- **pTimeDomains** is a pointer to an array of **VkTimeDomainKHR** values representing time domains that are available for the swapchain.
- **pTimeDomainIds** is a pointer to an array of unique identifiers for each time domain.

When calling **vkGetSwapchainTimeDomainPropertiesEXT**, if **pTimeDomains** is **NULL** and **pTimeDomainIds** is **NULL**, then the number of time domains supported for the given **swapchain** is returned in **timeDomainCount**. Otherwise, **timeDomainCount** **must** specify the number of elements in **pTimeDomains** and **pTimeDomainIds**, and on return is overwritten with the number of values actually written to each array.

Implementations **must** advertise support for at least one time domain of **VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT**.

NOTE

Due to the dynamic nature of their underlying **VkSurfaceKHR** properties, swapchains may need to expose multiple swapchain-local opaque time domains using the same **VkTimeDomainKHR** value over time, for example when a surface is moved from one display hardware to another. Arbitrary identifiers, provided in **timeDomainIds**, are used by the implementation to differentiate opaque time domains of identical scopes.

Valid Usage

- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12370
pTimeDomains and **pTimeDomainIds** **must** both be **NULL** or both not be **NULL**
- VUID-VkSwapchainTimeDomainPropertiesEXT-pTimeDomains-12371
If **pTimeDomains** and **pTimeDomainIds** are not **NULL**, then **timeDomainCount** **must** not be zero

Valid Usage (Implicit)

- VUID-VkSwapchainTimeDomainPropertiesEXT-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_SWAPCHAIN_TIME_DOMAIN_PROPERTIES_EXT**

- VUID-VkSwapchainTimeDomainPropertiesEXT-pNext-pNext
pNext **must** be NULL

Because of the asynchronous nature of the presentation engine, the timing information for a given `vkQueuePresentKHR` command **may** only become available some time after the presentation has occurred. These time values **should** be asynchronously queried, and are returned if available. All time values are in nanoseconds, according to the time-domain being used.

To asynchronously query the presentation engine for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_EXT_present_timing
VkResult vkGetPastPresentationTimingEXT(
    VkDevice device,
    const VkPastPresentationTimingInfoEXT* pPastPresentationTimingInfo,
    VkPastPresentationTimingPropertiesEXT* pPastPresentationTimingProperties);
```

- `device` is the device associated with `swapchain`.
- `pPastPresentationTimingInfo` is a pointer to an instance of the `VkPastPresentationTimingInfoEXT` structure.
- `pPastPresentationTimingProperties` is a pointer to an instance of the `VkPastPresentationTimingPropertiesEXT` structure.

If upon return the value of `VkPastPresentationTimingPropertiesEXT::presentationTimingCount` is less than the number of available timing records for the given `VkPastPresentationTimingInfoEXT::swapchain`, `VK_INCOMPLETE` is returned instead of `VK_SUCCESS` to indicate that not all the available values were returned.

Upon return, zero or more slots of the `swapchain` internal timing results queue, equal to the number of entries written to `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` for which `reportComplete` is `VK_TRUE`, are made available for future `vkQueuePresentKHR` calls. Elements of `pPresentationTimings` are arranged in ascending order of present ids.

Timing information **may** become available out of order with regards to their associated order. `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` **can** be set in `VkPastPresentationTimingInfoEXT::flags` to allow `vkGetPastPresentationTimingEXT` to return results in that same order. Otherwise, results are returned in the order of their associated `vkQueuePresentKHR` calls.

There is no requirement for any precise timing relationship between the completion of a present stage and the availability of any associated timing information. However, results **must** be made available in finite time.

As an exception to the normal rules for objects which are externally synchronized, `swapchain` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR` and `vkCreateSwapchainKHR` with `swapchain` used as an `oldSwapchain`. Access to the swapchain

timing information **must** be atomic within the implementation.

Valid Usage

- VUID-vkGetPastPresentationTimingEXT-flags-12230
If `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` is set in `VkPastPresentationTimingInfoEXT::flags`, the `presentStageCount` value of each element of `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` **must** be at least the maximum number of present stages set in `VkPresentTimingInfoEXT::presentStageQueries` among all `vkQueuePresentKHR` calls, with a non-zero `presentStageQueries`, for which complete results have not been returned yet by a previous call
- VUID-vkGetPastPresentationTimingEXT-flags-12231
If `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` is not set in `VkPastPresentationTimingInfoEXT::flags`, the `presentStageCount` value of each element of `VkPastPresentationTimingPropertiesEXT::pPresentationTimings` **must** be at least the number of present stages set in `VkPresentTimingInfoEXT::presentStageQueries` for the earliest call to `vkQueuePresentKHR`, with a non-zero `presentStageQueries`, that corresponds to that element's index and for which complete results have not been returned yet by a previous call

Valid Usage (Implicit)

- VUID-vkGetPastPresentationTimingEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingInfo-parameter
`pPastPresentationTimingInfo` **must** be a valid pointer to a valid `VkPastPresentationTimingInfoEXT` structure
- VUID-vkGetPastPresentationTimingEXT-pPastPresentationTimingProperties-parameter
`pPastPresentationTimingProperties` **must** be a valid pointer to a `VkPastPresentationTimingPropertiesEXT` structure

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`

- [VK_ERROR_VALIDATION_FAILED](#)

The `VkPastPresentationTimingInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkPastPresentationTimingFlagsEXT  flags;
    VkSwapchainKHR       swapchain;
} VkPastPresentationTimingInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkPastPresentationTimingFlagBitsEXT](#) specifying options for queries of past presentation timing information.
- `swapchain` is the swapchain to obtain presentation timing information for.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_INFO_EXT](#)
- VUID-VkPastPresentationTimingInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkPastPresentationTimingInfoEXT-flags-parameter
`flags` **must** be a valid combination of [VkPastPresentationTimingFlagBitsEXT](#) values
- VUID-VkPastPresentationTimingInfoEXT-swapchain-parameter
`swapchain` **must** be a valid [VkSwapchainKHR](#) handle

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPastPresentationTimingFlagsEXT;
```

`VkPastPresentationTimingFlagsEXT` is a bitmask type for setting a mask of zero or more [VkPastPresentationTimingFlagBitsEXT](#).

Bits which **can** be set in [VkPastPresentationTimingInfoEXT::flags](#), specifying options for queries of past presentation timing information, are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPastPresentationTimingFlagBitsEXT {
    VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT = 0x00000001,
    VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT = 0x00000002,
} VkPastPresentationTimingFlagBitsEXT;
```

- `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` specifies that `vkGetPastPresentationTimingEXT` may return partial results for presentation requests that have not completed all requested present stages.
- `VK_PAST_PRESENTATION_TIMING_ALLOW_OUT_OF_ORDER_RESULTS_BIT_EXT` specifies that `vkGetPastPresentationTimingEXT` may return results out of order with respect to the presentation order.

The `VkPastPresentationTimingPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    uint64_t                 timingPropertiesCounter;
    uint64_t                 timeDomainsCounter;
    uint32_t                 presentationTimingCount;
    VkPastPresentationTimingEXT* pPresentationTimings;
} VkPastPresentationTimingPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `timingPropertiesCounter` is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal timing properties counter.
- `timeDomainsCounter` is a 64-bit unsigned integer set by the implementation to the current value of the swapchain's internal time domains list counter.
- `presentationTimingCount` is an integer related to the number of `VkPastPresentationTimingEXT` structures available or queried, as described below.
- `pPresentationTimings` is `NULL` or a pointer to an array of `VkPastPresentationTimingEXT` structures.

When calling `vkGetPastPresentationTimingEXT`, if `pPresentationTimings` is `NULL`, then the number of available timing records for the given `swapchain` is returned in `presentationTimingCount`. Otherwise, `presentationTimingCount` must specify the number of elements in the `pPresentationTimings` array, and on return is overwritten with the number of structures actually written to `pPresentationTimings`.

if `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` is specified in `VkPastPresentationTimingInfoEXT::flags`, `vkGetPastPresentationTimingEXT` may return incomplete results, containing only information for a subset of the requested present stages. Further calls to

`vkGetPastPresentationTimingEXT` will keep providing all available results for a previously incomplete entry until it is complete.

The implementation **must** return a `VkPastPresentationTimingEXT` for every `vkQueuePresentKHR` referencing `swapchain` where a non-zero `VkPresentTimingInfoEXT::presentStageQueries` was specified and at least one present stage has available results.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingPropertiesEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_PROPERTIES_EXT`
- VUID-VkPastPresentationTimingPropertiesEXT-pNext-pNext
`pNext` **must** be `NULL`

NOTE

The presentation engine **may** change the timing properties of the `swapchain` for a variety of reasons.

This **may** occur, for example, if the window system changes its mode, including the refresh rate of the display. Another example is if an application's surface is being composited with other windows of a window system, and then the surface's window becomes a borderless, full-screen window. While composited, the timing properties **may** be FRR, and while full-screen, the timing properties **may** be VRR.

The available time domains for a `swapchain` **may** change for similar or identical reasons. Therefore, it is possible that the same event will cause both the `swapchain`'s internal timing properties counter and time domains list counter to update.

The `VkPastPresentationTimingEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPastPresentationTimingEXT {
    VkStructureType    sType;
    void*              pNext;
    uint64_t            presentId;
    uint64_t            targetTime;
    uint32_t            presentStageCount;
    VkPresentStageTimeEXT* pPresentStages;
    VkTimeDomainKHR     timeDomain;
    uint64_t            timeDomainId;
    VkBool32            reportComplete;
} VkPastPresentationTimingEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` is zero or a value that was given to a previous `vkQueuePresentKHR` command via

VkPresentId2KHR::pPresentIds.

- **targetTime** is the application-provided target absolute time or duration of the associated presentation request in `VkPresentTimingInfoEXT::targetTime`.
- **presentStageCount** is a count of items contained in `pPresentStages`.
- `pPresentStages` a pointer to an array of `VkPresentStageTimeEXT` providing timing information for the presentation request associated with **presentId**.
- **timeDomain** is the time domain used by the presentation engine to report times in `pPresentStages`.
- **timeDomainId** is the id associated with **timeDomain**.
- **reportComplete** is `VK_TRUE` if the presentation engine has reported all the requested results in `pPresentStages`.

When calling `vkGetPastPresentationTimingEXT`, the implementation sets **presentStageCount** to the number of present stages it has written results for. If `VK_PAST_PRESENTATION_TIMING_ALLOW_PARTIAL_RESULTS_BIT_EXT` was specified in `VkPastPresentationTimingInfoEXT::flags`, the implementation **may** return an incomplete report containing fewer present stage results than were queried by the associated presentation request. Otherwise, results for all the present stages queried by the presentation request are written by the implementation.

Timing information for some present stages **may** have a time value of 0, indicating that results for that present stage are not available.

For systems with multiple entities operating within the presentation engine, such as multiple displays, `pPresentStages` will return timing results for one entity which has been affected by the presentation.

timeDomainId **may** be different than the time domain that was specified in `VkPresentTimingInfoEXT::timeDomainId` if the requirements for using this time domain could not be met at the time the presentation engine processed the presentation request. In such a case, the presentation engine **may** pick a time domain to fall back to, if one is available, and report results in that domain. Applications **can** continue to use this fallback time domain in future `vkQueuePresentKHR` calls, or they **can** call `vkGetSwapchainTimeDomainPropertiesEXT` to choose from the currently supported time domains.

Valid Usage (Implicit)

- VUID-VkPastPresentationTimingEXT-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_PAST_PRESENTATION_TIMING_EXT`
- VUID-VkPastPresentationTimingEXT-pNext-pNext
pNext **must** be `NULL`

The `VkPresentStageTimeEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentStageTimeEXT {
    VkPresentStageFlagsEXT    stage;
    uint64_t                  time;
} VkPresentStageTimeEXT;
```

- **stage** is a [VkPresentStageFlagsEXT](#) value specifying a present stage.
- **time** is a time in nanoseconds associated with the **stage**.

To query the duration of a refresh cycle (RC) for the presentation engine's display, call:

```
// Provided by VK_GOOGLE_display_timing
VkResult vkGetRefreshCycleDurationGOOGLE(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    VkRefreshCycleDurationGOOGLE* pDisplayTimingProperties);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to obtain the refresh duration for.
- **pDisplayTimingProperties** is a pointer to a [VkRefreshCycleDurationGOOGLE](#) structure.

Valid Usage (Implicit)

- VUID-vkGetRefreshCycleDurationGOOGLE-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetRefreshCycleDurationGOOGLE-swapchain-parameter **swapchain** **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetRefreshCycleDurationGOOGLE-pDisplayTimingProperties-parameter **pDisplayTimingProperties** **must** be a valid pointer to a [VkRefreshCycleDurationGOOGLE](#) structure
- VUID-vkGetRefreshCycleDurationGOOGLE-swapchain-parent **swapchain** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkRefreshCycleDurationGOOGLE](#) structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkRefreshCycleDurationGOOGLE {
    uint64_t    refreshDuration;
} VkRefreshCycleDurationGOOGLE;
```

- [refreshDuration](#) is the number of nanoseconds from the start of one refresh cycle to the next.

The implementation will maintain a limited amount of history of timing information about previous presents. Because of the asynchronous nature of the presentation engine, the timing information for a given [vkQueuePresentKHR](#) command will become available some time later. These time values can be asynchronously queried, and will be returned if available. All time values are in nanoseconds, relative to a monotonically-increasing clock (e.g. [CLOCK_MONOTONIC](#) (see [clock_gettime\(2\)](#)) on Android and Linux).

To asynchronously query the presentation engine, for newly-available timing information about one or more previous presents to a given swapchain, call:

```
// Provided by VK_GOOGLE_display_timing
VkResult vkGetPastPresentationTimingGOOGLE(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t*         pPresentationTimingCount,
    VkPastPresentationTimingGOOGLE* pPresentationTimings);
```

- [device](#) is the device associated with [swapchain](#).
- [swapchain](#) is the swapchain to obtain presentation timing information duration for.
- [pPresentationTimingCount](#) is a pointer to an integer related to the number of [VkPastPresentationTimingGOOGLE](#) structures to query, as described below.
- [pPresentationTimings](#) is either [NULL](#) or a pointer to an array of [VkPastPresentationTimingGOOGLE](#) structures.

If [pPresentationTimings](#) is [NULL](#), then the number of newly-available timing records for the given [swapchain](#) is returned in [pPresentationTimingCount](#). Otherwise, [pPresentationTimingCount](#) **must** point to a variable set by the user to the number of elements in the [pPresentationTimings](#) array, and on return the variable is overwritten with the number of structures actually written to

`pPresentationTimings`. If the value of `pPresentationTimingCount` is less than the number of newly-available timing records, at most `pPresentationTimingCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available timing records were returned.

Valid Usage (Implicit)

- `VUID-vkGetPastPresentationTimingGOOGLE-device-parameter device` **must** be a valid `VkDevice` handle
- `VUID-vkGetPastPresentationTimingGOOGLE-swapchain-parameter swapchain` **must** be a valid `VkSwapchainKHR` handle
- `VUID-vkGetPastPresentationTimingGOOGLE-pPresentationTimingCount-parameter pPresentationTimingCount` **must** be a valid pointer to a `uint32_t` value
- `VUID-vkGetPastPresentationTimingGOOGLE-pPresentationTimings-parameter`
If the value referenced by `pPresentationTimingCount` is not `0`, and `pPresentationTimings` is not `NULL`, `pPresentationTimings` **must** be a valid pointer to an array of `pPresentationTimingCount` `VkPastPresentationTimingGOOGLE` structures
- `VUID-vkGetPastPresentationTimingGOOGLE-swapchain-parent swapchain` **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPastPresentationTimingGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPastPresentationTimingGOOGLE {
    uint32_t    presentID;
    uint64_t    desiredPresentTime;
    uint64_t    actualPresentTime;
    uint64_t    earliestPresentTime;
    uint64_t    presentMargin;
} VkPastPresentationTimingGOOGLE;
```

- **presentID** is an application-provided value that was given to a previous **vkQueuePresentKHR** command via **VkPresentTimeGOOGLE::presentID** (see below). It **can** be used to uniquely identify a previous present with the **vkQueuePresentKHR** command.
- **desiredPresentTime** is an application-provided value that was given to a previous **vkQueuePresentKHR** command via **VkPresentTimeGOOGLE::desiredPresentTime**. If non-zero, it was used by the application to indicate that an image not be presented any sooner than **desiredPresentTime**.
- **actualPresentTime** is the time when the image of the **swapchain** was actually displayed.
- **earliestPresentTime** is the time when the image of the **swapchain** could have been displayed. This **may** differ from **actualPresentTime** if the application requested that the image be presented no sooner than **VkPresentTimeGOOGLE::desiredPresentTime**.
- **presentMargin** is an indication of how early the **vkQueuePresentKHR** command was processed compared to how soon it needed to be processed, and still be presented at **earliestPresentTime**.

The results for a given **swapchain** and **presentID** are only returned once from **vkGetPastPresentationTimingGOOGLE**.

The application **can** use the **VkPastPresentationTimingGOOGLE** values to occasionally adjust its timing. For example, if **actualPresentTime** is later than expected (e.g. one **refreshDuration** late), the application may increase its target IPD to a higher multiple of **refreshDuration** (e.g. decrease its frame rate from 60Hz to 30Hz). If **actualPresentTime** and **earliestPresentTime** are consistently different, and if **presentMargin** is consistently large enough, the application may decrease its target IPD to a smaller multiple of **refreshDuration** (e.g. increase its frame rate from 30Hz to 60Hz). If **actualPresentTime** and **earliestPresentTime** are same, and if **presentMargin** is consistently high, the application may delay the start of its input-render-present loop in order to decrease the latency between user input and the corresponding present (always leaving some margin in case a new image takes longer to render than the previous image). An application that desires its target IPD to always be the same as **refreshDuration**, can also adjust features until **actualPresentTime** is never late and **presentMargin** is satisfactory.

The full **VK_GOOGLE_display_timing** extension semantics are described for swapchains created with **VK_PRESENT_MODE_FIFO_KHR**. For example, non-zero values of **VkPresentTimeGOOGLE::desiredPresentTime** **must** be honored, and **vkGetPastPresentationTimingGOOGLE** **should** return a **VkPastPresentationTimingGOOGLE** structure with valid values for all images presented with **vkQueuePresentKHR**. The semantics for other present modes are as follows:

- **VK_PRESENT_MODE_IMMEDIATE_KHR**. The presentation engine **may** ignore non-zero values of

`VkPresentTimeGOOGLE::desiredPresentTime` in favor of presenting immediately. The value of `VkPastPresentationTimingGOOGLE::earliestPresentTime` **must** be the same as `VkPastPresentationTimingGOOGLE::actualPresentTime`, which **should** be when the presentation engine displayed the image.

- `VK_PRESENT_MODE_MAILBOX_KHR`. The intention of using this present mode with this extension is to handle cases where an image is presented late, and the next image is presented soon enough to replace it at the next vertical blanking period. For images that are displayed to the user, the value of `VkPastPresentationTimingGOOGLE::actualPresentTime` **must** be when the image was displayed. For images that are not displayed to the user, `vkGetPastPresentationTimingGOOGLE` **may** not return a `VkPastPresentationTimingGOOGLE` structure, or it **may** return a `VkPastPresentationTimingGOOGLE` structure with the value of zero for both `VkPastPresentationTimingGOOGLE::actualPresentTime` and `VkPastPresentationTimingGOOGLE::earliestPresentTime`. It is possible that an application **can** submit images with `VkPresentTimeGOOGLE::desiredPresentTime` values such that new images **may** not be displayed. For example, if `VkPresentTimeGOOGLE::desiredPresentTime` is far enough in the future that an image is not presented before `vkQueuePresentKHR` is called to present another image, the first image will not be displayed to the user. If the application continues to do that, the presentation engine **may** not display new images.
- `VK_PRESENT_MODE_FIFO_RELAXED_KHR`. For images that are presented in time to be displayed at the next vertical blanking period, the semantics are identical as for `VK_PRESENT_MODE_FIFO_KHR`. For images that are presented late, and are displayed after the start of the vertical blanking period (i.e. with tearing), the values of `VkPastPresentationTimingGOOGLE` **may** be treated as if the image was displayed at the start of the vertical blanking period, or **may** be treated the same as for `VK_PRESENT_MODE_IMMEDIATE_KHR`.

39.9. Present Wait

Applications wanting to control the pacing of the application by monitoring when presentation processes have completed to limit the number of outstanding images queued for presentation, need to have a method of being signaled during the presentation process.

Using the `VK_GOOGLE_display_timing` extension, applications can discover when images were presented, but only asynchronously.

Providing a mechanism which allows applications to block, waiting for a specific step of the presentation process to complete allows them to control the amount of outstanding work (and hence the potential lag in responding to user input or changes in the rendering environment).

The `VK_KHR_present_wait2` extension allows applications to tell the presentation engine at the `vkQueuePresentKHR` call that it plans on waiting for presentation by passing a `VkPresentId2KHR` structure. The `presentId` passed in that structure may then be passed to a future `vkWaitForPresent2KHR` call to cause the application to block until that presentation is finished.

This functionality was originally provided by the `VK_KHR_present_wait` extension, which has been deprecated and replaced by `VK_KHR_present_wait2`.

The `VkPresentWait2InfoKHR` structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPresentWait2InfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentId;
    uint64_t           timeout;
} VkPresentWait2InfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentId** is the presentation presentId to wait for.
- **timeout** is the timeout period in units of nanoseconds. **timeout** is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

Valid Usage (Implicit)

- VUID-VkPresentWait2InfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PRESENT_WAIT_2_INFO_KHR](#)
- VUID-VkPresentWait2InfoKHR-pNext-pNext
pNext **must** be **NULL**

39.10. WSI Swapchain

A swapchain object (a.k.a. swapchain) provides the ability to present rendering results to a surface. Swapchain objects are represented by [VkSwapchainKHR](#) handles:

```
// Provided by VK_KHR_swapchain
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSwapchainKHR)
```

A swapchain is an abstraction for an array of presentable images that are associated with a surface. The presentable images are represented by [VkImage](#) objects created by the platform. One image (which **can** be an array image for multiview/stereoscopic-3D surfaces) is displayed at a time, but multiple images **can** be queued for presentation. An application renders to the image, and then queues the image for presentation to the surface.

A native window **cannot** be associated with more than one non-retired swapchain at a time. Further, swapchains **cannot** be created for native windows that have a non-Vulkan graphics API surface associated with them.

NOTE

The presentation engine is an abstraction for the platform's compositor or display engine.

The presentation engine **may** be synchronous or asynchronous with respect to the

application and/or logical device.

Some implementations **may** use the device's graphics queue or dedicated presentation hardware to perform presentation.

The presentable images of a swapchain are owned by the presentation engine. An application **can** acquire use of a presentable image from the presentation engine. Use of a presentable image **must** occur only after the image is returned by [vkAcquireNextImageKHR](#), and before it is released by [vkQueuePresentKHR](#). This includes transitioning the image layout and rendering commands.

An application **can** acquire use of a presentable image with [vkAcquireNextImageKHR](#). After acquiring a presentable image and before modifying it, the application **must** use a synchronization primitive to ensure that the presentation engine has finished reading from the image. The application **can** then transition the image's layout, queue rendering commands to it, etc. Finally, the application presents the image with [vkQueuePresentKHR](#), which releases the acquisition of the image. The application **can** also release the acquisition of the image through [vkReleaseSwapchainImagesKHR](#), if the image is not in use by the device, and skip the present operation.

The presentation engine controls the order in which presentable images are acquired for use by the application.

NOTE

This allows the platform to handle situations which require out-of-order return of images after presentation. At the same time, it allows the application to generate command buffers referencing all of the images in the swapchain at initialization time, rather than in its main loop.

How this all works is described below.

If a swapchain is created with `presentMode` set to either [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#) or [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#), a single presentable image **can** be acquired, referred to as a shared presentable image. A shared presentable image **may** be concurrently accessed by the application and the presentation engine, without transitioning the image's layout after it is initially presented.

- With [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#), the presentation engine is only required to update to the latest contents of a shared presentable image after a present. The application **must** call [vkQueuePresentKHR](#) to guarantee an update. However, the presentation engine **may** update from it at any time.
- With [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#), the presentation engine will automatically present the latest contents of a shared presentable image during every refresh cycle. The application is only required to make one initial call to [vkQueuePresentKHR](#), after which the presentation engine will update from it without any need for further present calls. The application **can** indicate the image contents have been updated by calling [vkQueuePresentKHR](#), but this does not guarantee the timing of when updates will occur.

The presentation engine **may** access a shared presentable image at any time after it is first presented. To avoid tearing, an application **should** coordinate access with the presentation engine.

This requires presentation engine timing information through platform-specific mechanisms and ensuring that color attachment writes are made available during the portion of the presentation engine's refresh cycle they are intended for.

NOTE

The [VK_KHR_shared_presentable_image](#) extension does not provide functionality for determining the timing of the presentation engine's refresh cycles.

In order to query a swapchain's status when rendering to a shared presentable image, call:

```
// Provided by VK_KHR_shared_presentable_image
VkResult vkGetSwapchainStatusKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to query.

Valid Usage (Implicit)

- VUID-vkGetSwapchainStatusKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parameter **swapchain** **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkGetSwapchainStatusKHR-swapchain-parent **swapchain** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

Return Codes

Success

- [VK_SUBOPTIMAL_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT](#)
- [VK_ERROR_OUT_OF_DATE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)

- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The possible return values for `vkGetSwapchainStatusKHR` **should** be interpreted as follows:

- [VK_SUCCESS](#) specifies the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's [VkPresentModeKHR](#).
- [VK_SUBOPTIMAL_KHR](#) the swapchain no longer matches the surface properties exactly, but the presentation engine is presenting the contents of the shared presentable image, as per the swapchain's [VkPresentModeKHR](#).
- [VK_ERROR_OUT_OF_DATE_KHR](#) the surface has changed in such a way that it is no longer compatible with the swapchain.
- [VK_ERROR_SURFACE_LOST_KHR](#) the surface is no longer available.

NOTE

The swapchain state **may** be cached by implementations, so applications **should** regularly call `vkGetSwapchainStatusKHR` when using a swapchain with [VkPresentModeKHR](#) equal to [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#).

To create a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkCreateSwapchainKHR(
    VkDevice                                device,
    const VkSwapchainCreateInfoKHR*         pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkSwapchainKHR*                         pSwapchain);
```

- `device` is the device to create the swapchain for.
- `pCreateInfo` is a pointer to a [VkSwapchainCreateInfoKHR](#) structure specifying the parameters of the created swapchain.
- `pAllocator` is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSwapchain` is a pointer to a [VkSwapchainKHR](#) handle in which the created swapchain object will be returned.

As mentioned above, if `vkCreateSwapchainKHR` succeeds, it will return a handle to a swapchain containing an array of at least `pCreateInfo->minImageCount` presentable images.

While acquired by the application, presentable images **can** be used in any way that equivalent non-presentable images **can** be used. A presentable image is equivalent to a non-presentable image created with the following [VkImageCreateInfo](#) parameters:

VkImageCreateInfo Field	Value
flags	<p>VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT is set if VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR is set</p> <p>VK_IMAGE_CREATE_PROTECTED_BIT is set if VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR is set</p> <p>VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR are both set if VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR is set</p> <p>all other bits are unset</p>
imageType	VK_IMAGE_TYPE_2D
format	pCreateInfo->imageFormat
extent	{pCreateInfo->imageExtent.width, pCreateInfo->imageExtent.height, 1}
mipLevels	1
arrayLayers	pCreateInfo->imageArrayLayers
samples	VK_SAMPLE_COUNT_1_BIT
tiling	VK_IMAGE_TILING_OPTIMAL
usage	pCreateInfo->imageUsage
sharingMode	pCreateInfo->imageSharingMode
queueFamilyIndexCount	pCreateInfo->queueFamilyIndexCount
pQueueFamilyIndices	pCreateInfo->pQueueFamilyIndices
initialLayout	VK_IMAGE_LAYOUT_UNDEFINED

The `pCreateInfo->surface` **must** not be destroyed until after the swapchain is destroyed.

If `oldSwapchain` is `VK_NULL_HANDLE`, and the native window referred to by `pCreateInfo->surface` is already associated with a Vulkan swapchain, `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR` **must** be returned.

If `oldSwapchain` is a valid swapchain and there are outstanding calls to `vkWaitForPresent2KHR`, then `vkCreateSwapchainKHR` **may** block until those calls complete.

If the native window referred to by `pCreateInfo->surface` is already associated with a non-Vulkan graphics API surface, `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR` **must** be returned.

The native window referred to by `pCreateInfo->surface` **must** not become associated with a non-

Vulkan graphics API surface before all associated Vulkan swapchains have been destroyed.

`vkCreateSwapchainKHR` will return `VK_ERROR_DEVICE_LOST` if the logical device was lost. The `VkSwapchainKHR` is a child of the `device`, and **must** be destroyed before the `device`. However, `VkSurfaceKHR` is not a child of any `VkDevice` and is not affected by the lost device. After successfully recreating a `VkDevice`, the same `VkSurfaceKHR` **can** be used to create a new `VkSwapchainKHR`, provided the previous one was destroyed.

If the `oldSwapchain` parameter of `pCreateInfo` is a valid swapchain, which has exclusive full-screen access, that access is released from `pCreateInfo->oldSwapchain`. If the command succeeds in this case, the newly created swapchain will automatically acquire exclusive full-screen access from `pCreateInfo->oldSwapchain`.

NOTE

This implicit transfer is intended to avoid exiting and entering full-screen exclusive mode, which may otherwise cause unwanted visual updates to the display.

In some cases, swapchain creation **may** fail if exclusive full-screen mode is requested for application control, but for some implementation-specific reason exclusive full-screen access is unavailable for the particular combination of parameters provided. If this occurs, `VK_ERROR_INITIALIZATION_FAILED` will be returned.

NOTE

In particular, it will fail if the `imageExtent` member of `pCreateInfo` does not match the extents of the monitor. Other reasons for failure may include the application not being set as high-dpi aware, or if the physical device and monitor are not compatible in this mode.

If the `pNext` chain of `VkSwapchainCreateInfoKHR` includes a `VkSwapchainPresentBarrierCreateInfoNV` structure, then that structure includes additional swapchain creation parameters specific to the present barrier. Swapchain creation **may** fail if the state of the current system restricts the usage of the present barrier feature `VkSurfaceCapabilitiesPresentBarrierNV`, or a swapchain itself does not satisfy all the required conditions. In this scenario `VK_ERROR_INITIALIZATION_FAILED` is returned.

When the `VkSurfaceKHR` in `VkSwapchainCreateInfoKHR` is a display surface, then the `VkDisplayModeKHR` in display surface's `VkDisplaySurfaceCreateInfoKHR` is associated with a particular `VkDisplayKHR`. Swapchain creation **may** fail if that `VkDisplayKHR` is not acquired by the application. In this scenario `VK_ERROR_INITIALIZATION_FAILED` is returned.

Valid Usage (Implicit)

- VUID-vkCreateSwapchainKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateSwapchainKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkSwapchainCreateInfoKHR` structure
- VUID-vkCreateSwapchainKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkCreateSwapchainKHR-pSwapchain-parameter
`pSwapchain` **must** be a valid pointer to a `VkSwapchainKHR` handle
- VUID-vkCreateSwapchainKHR-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_COMPRESSION_EXHAUSTED_EXT`
- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkSwapchainCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkSwapchainCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkSwapchainCreateFlagsKHR flags;
    VkSurfaceKHR         surface;
    uint32_t             minImageCount;
    VkFormat             imageFormat;
    VkColorSpaceKHR      imageColorSpace;
    VkExtent2D           imageExtent;
    uint32_t             imageArrayLayers;
    VkImageUsageFlags    imageUsage;
    VkSharingMode         imageSharingMode;
    uint32_t             queueFamilyIndexCount;
    const uint32_t*       pQueueFamilyIndices;
    VkSurfaceTransformFlagBitsKHR preTransform;
    VkCompositeAlphaFlagBitsKHR compositeAlpha;
    VkPresentModeKHR     presentMode;
    VkBool32             clipped;
    VkSwapchainKHR       oldSwapchain;
} VkSwapchainCreateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkSwapchainCreateFlagBitsKHR](#) indicating parameters of the swapchain creation.
- **surface** is the surface onto which the swapchain will present images. If the creation succeeds, the swapchain becomes associated with **surface**.
- **minImageCount** is the minimum number of presentable images that the application needs. The implementation will either create the swapchain with at least that many images, or it will fail to create the swapchain.
- **imageFormat** is a [VkFormat](#) value specifying the format the swapchain image(s) will be created with.
- **imageColorSpace** is a [VkColorSpaceKHR](#) value specifying the way the swapchain interprets image data.
- **imageExtent** is the size (in pixels) of the swapchain image(s). The behavior is platform-dependent if the image extent does not match the surface's **currentExtent** as returned by [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#).

NOTE

On some platforms, it is normal that **maxImageExtent** **may** become **(0, 0)**, for example when the window is minimized. In such a case, it is not possible to create a swapchain due to the Valid Usage requirements, unless scaling is selected through [VkSwapchainPresentScalingCreateInfoKHR](#), if supported.

- **imageArrayLayers** is the number of views in a multiview/stereo surface. For non-stereoscopic-3D

applications, this value is 1.

- **imageUsage** is a bitmask of **VkImageUsageFlagBits** describing the intended usage of the (acquired) swapchain images.
- **imageSharingMode** is the sharing mode used for the image(s) of the swapchain.
- **queueFamilyIndexCount** is the number of queue families having access to the image(s) of the swapchain when **imageSharingMode** is **VK_SHARING_MODE_CONCURRENT**.
- **pQueueFamilyIndices** is a pointer to an array of queue family indices having access to the images(s) of the swapchain when **imageSharingMode** is **VK_SHARING_MODE_CONCURRENT**.
- **preTransform** is a **VkSurfaceTransformFlagBitsKHR** value describing the transform, relative to the presentation engine's natural orientation, applied to the image content prior to presentation. If it does not match the **currentTransform** value returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR**, the presentation engine will transform the image content as part of the presentation operation.
- **compositeAlpha** is a **VkCompositeAlphaFlagBitsKHR** value indicating the alpha compositing mode to use when this surface is composited together with other surfaces on certain window systems.
- **presentMode** is the presentation mode the swapchain will use. A swapchain's present mode determines how incoming present requests will be processed and queued internally.
- **clipped** specifies whether the Vulkan implementation is allowed to discard rendering operations that affect regions of the surface that are not visible.
 - If **clipped** is **VK_TRUE**, the presentable images associated with the swapchain **may** not own all of their pixels. Pixels in the presentable images that correspond to regions of the target surface obscured by another window on the desktop, or subject to some other clipping mechanism will have undefined content when read back. Fragment shaders **may** not execute for these pixels, and thus any side effects they would have had will not occur. Setting **VK_TRUE** does not guarantee any clipping will occur, but allows more efficient presentation methods to be used on some platforms.
 - If **clipped** is **VK_FALSE**, presentable images associated with the swapchain will own all of the pixels they contain.

NOTE

Applications **should** set this value to **VK_TRUE** if they do not expect to read back the content of presentable images before presenting them or after reacquiring them, and if their fragment shaders do not have any side effects that require them to run for all pixels in the presentable image.

- **oldSwapchain** is **VK_NULL_HANDLE**, or the existing non-retired swapchain currently associated with **surface**. Providing a valid **oldSwapchain** **may** aid in the resource reuse, and also allows the application to still present any images that are already acquired from it.

Upon calling **vkCreateSwapchainKHR** with an **oldSwapchain** that is not **VK_NULL_HANDLE**, **oldSwapchain** is retired — even if creation of the new swapchain fails. The new swapchain is created in the non-retired state whether or not **oldSwapchain** is **VK_NULL_HANDLE**.

Upon calling **vkCreateSwapchainKHR** with an **oldSwapchain** that is not **VK_NULL_HANDLE**, any images from **oldSwapchain** that are not acquired by the application **may** be freed by the implementation,

which **may** occur even if creation of the new swapchain fails. The application **can** destroy **oldSwapchain** to free all memory associated with **oldSwapchain**.

NOTE

Multiple retired swapchains **can** be associated with the same **VkSurfaceKHR** through multiple uses of **oldSwapchain** that outnumber calls to **vkDestroySwapchainKHR**.

After **oldSwapchain** is retired, the application **can** pass to **vkQueuePresentKHR** any images it had already acquired from **oldSwapchain**. E.g., an application may present an image from the old swapchain before an image from the new swapchain is ready to be presented. As usual, **vkQueuePresentKHR** **may** fail if **oldSwapchain** has entered a state that causes **VK_ERROR_OUT_OF_DATE_KHR** to be returned.

The application **can** continue to use a shared presentable image obtained from **oldSwapchain** until a presentable image is acquired from the new swapchain, as long as it has not entered a state that causes it to return **VK_ERROR_OUT_OF_DATE_KHR**.

Valid Usage

- VUID-VkSwapchainCreateInfoKHR-surface-01270
surface **must** be a surface that is supported by the device as determined using **vkGetPhysicalDeviceSurfaceSupportKHR**
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01272
minImageCount **must** be less than or equal to the value returned in the **maxImageCount** member of the **VkSurfaceCapabilitiesKHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR** for the surface if the returned **maxImageCount** is not zero
- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10155
If the **swapchainMaintenance1** feature is not enabled, then the **pNext** chain **must** not include a **VkSwapchainPresentModesCreateInfoKHR** structure
- VUID-VkSwapchainCreateInfoKHR-presentMode-02839
If **presentMode** is not **VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR** nor **VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR**, then **minImageCount** **must** be greater than or equal to the value returned in the **minImageCount** member of the **VkSurfaceCapabilitiesKHR** structure returned by **vkGetPhysicalDeviceSurfaceCapabilitiesKHR** for the surface
- VUID-VkSwapchainCreateInfoKHR-minImageCount-01383
minImageCount **must** be **1** if **presentMode** is either **VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR** or **VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR**
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01273
imageFormat and **imageColorSpace** **must** match the **format** and **colorSpace** members, respectively, of one of the **VkSurfaceFormatKHR** structures returned by **vkGetPhysicalDeviceSurfaceFormatsKHR** for the surface
- VUID-VkSwapchainCreateInfoKHR-pNext-07781
If a **VkSwapchainPresentScalingCreateInfoKHR** structure was not included in the **pNext**

chain, or it is included and `VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior` is zero then `imageExtent` **must** be between `minImageExtent` and `maxImageExtent`, inclusive, where `minImageExtent` and `maxImageExtent` are members of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface

- VUID-VkSwapchainCreateInfoKHR-pNext-07782

If a `VkSwapchainPresentScalingCreateInfoKHR` structure was included in the `pNext` chain and `VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior` is not zero then `imageExtent` **must** be between `minScaledImageExtent` and `maxScaledImageExtent`, inclusive, where `minScaledImageExtent` and `maxScaledImageExtent` are members of the `VkSurfacePresentScalingCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface and `presentMode`

- VUID-VkSwapchainCreateInfoKHR-swapchainMaintenance1-10157

If the `swapchainMaintenance1` feature is not enabled, then `flags` **must** not include `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR`

- VUID-VkSwapchainCreateInfoKHR-imageExtent-01689

`imageExtent` members `width` and `height` **must** both be non-zero

- VUID-VkSwapchainCreateInfoKHR-imageArrayLayers-01275

`imageArrayLayers` **must** be greater than 0 and less than or equal to the `maxImageArrayLayers` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface

- VUID-VkSwapchainCreateInfoKHR-presentMode-01427

If `presentMode` is `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`, `VK_PRESENT_MODE_IMMEDIATE_KHR`, `VK_PRESENT_MODE_MAILBOX_KHR`, `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR`, `imageUsage` **must** be a subset of the supported usage flags present in the `supportedUsageFlags` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for `surface`

- VUID-VkSwapchainCreateInfoKHR-imageUsage-01384

If `presentMode` is `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`, `imageUsage` **must** be a subset of the supported usage flags present in the `sharedPresentSupportedUsageFlags` member of the `VkSharedPresentSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for `surface`

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01277

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01278

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, `queueFamilyIndexCount` **must** be greater than 1

- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-01428

If `imageSharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties` or `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to

create device

- VUID-VkSwapchainCreateInfoKHR-preTransform-01279
`preTransform` **must** be one of the bits present in the `supportedTransforms` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-01280
`compositeAlpha` **must** be one of the bits present in the `supportedCompositeAlpha` member of the `VkSurfaceCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-presentMode-01281
`presentMode` **must** be one of the `VkPresentModeKHR` values returned by `vkGetPhysicalDeviceSurfacePresentModesKHR` for the surface
- VUID-VkSwapchainCreateInfoKHR-presentModeFifoLatestReady-10161
If the `presentModeFifoLatestReady` feature is not enabled, `presentMode` **must** not be `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`
- VUID-VkSwapchainCreateInfoKHR-physicalDeviceCount-01429
If the logical device was created with `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` equal to 1, `flags` **must** not contain `VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR`
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-01933
If `oldSwapchain` is not `VK_NULL_HANDLE`, `oldSwapchain` **must** be a non-retired swapchain associated with native window referred to by `surface`
- VUID-VkSwapchainCreateInfoKHR-imageFormat-01778
The implied image creation parameters of the swapchain **must** be supported as reported by `vkGetPhysicalDeviceImageFormatProperties`
- VUID-VkSwapchainCreateInfoKHR-flags-03168
If `flags` contains `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` then the `pNext` chain **must** include a `VkImageFormatListCreateInfo` structure with a `viewFormatCount` greater than zero and `pViewFormats` **must** have an element equal to `imageFormat`
- VUID-VkSwapchainCreateInfoKHR-pNext-04099
If a `VkImageFormatListCreateInfo` structure was included in the `pNext` chain and `VkImageFormatListCreateInfo::viewFormatCount` is not zero then all of the formats in `VkImageFormatListCreateInfo::pViewFormats` **must** be compatible with the `format` as described in the compatibility table
- VUID-VkSwapchainCreateInfoKHR-flags-04100
If `flags` does not contain `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` and the `pNext` chain include a `VkImageFormatListCreateInfo` structure then `VkImageFormatListCreateInfo::viewFormatCount` **must** be 0 or 1
- VUID-VkSwapchainCreateInfoKHR-flags-03187
If `flags` contains `VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR`, then `VkSurfaceProtectedCapabilitiesKHR::supportsProtected` **must** be `VK_TRUE` in the `VkSurfaceProtectedCapabilitiesKHR` structure returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for `surface`

- VUID-VkSwapchainCreateInfoKHR-pNext-02679
If the **pNext** chain includes a [VkSurfaceFullScreenExclusiveInfoEXT](#) structure with its **fullScreenExclusive** member set to [VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT](#), and **surface** was created using [vkCreateWin32SurfaceKHR](#), a [VkSurfaceFullScreenExclusiveWin32InfoEXT](#) structure **must** be included in the **pNext** chain
- VUID-VkSwapchainCreateInfoKHR-pNext-06752
If the **imageCompressionControlSwapchain** feature is not enabled, the **pNext** chain **must** not include an [VkImageCompressionControlEXT](#) structure
- VUID-VkSwapchainCreateInfoKHR-presentTiming-12232
If none of the **presentTiming**, **presentAtAbsoluteTime**, or **presentAtRelativeTime** features are enabled, **flags** **must** not contain [VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT](#)

Valid Usage (Implicit)

- VUID-VkSwapchainCreateInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR](#)
- VUID-VkSwapchainCreateInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkDeviceGroupSwapchainCreateInfoKHR](#), [VkImageCompressionControlEXT](#), [VkImageFormatListCreateInfo](#), [VkSurfaceFullScreenExclusiveInfoEXT](#), [VkSurfaceFullScreenExclusiveWin32InfoEXT](#), [VkSwapchainCounterCreateInfoEXT](#), [VkSwapchainDisplayNativeHdrCreateInfoAMD](#), [VkSwapchainLatencyCreateInfoNV](#), [VkSwapchainPresentBarrierCreateInfoNV](#), [VkSwapchainPresentModesCreateInfoKHR](#), or [VkSwapchainPresentScalingCreateInfoKHR](#)
- VUID-VkSwapchainCreateInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkSwapchainCreateInfoKHR-flags-parameter
flags **must** be a valid combination of [VkSwapchainCreateFlagBitsKHR](#) values
- VUID-VkSwapchainCreateInfoKHR-surface-parameter
surface **must** be a valid [VkSurfaceKHR](#) handle
- VUID-VkSwapchainCreateInfoKHR-imageFormat-parameter
imageFormat **must** be a valid [VkFormat](#) value
- VUID-VkSwapchainCreateInfoKHR-imageColorSpace-parameter
imageColorSpace **must** be a valid [VkColorSpaceKHR](#) value
- VUID-VkSwapchainCreateInfoKHR-imageUsage-parameter
imageUsage **must** be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkSwapchainCreateInfoKHR-imageUsage-requiredbitmask
imageUsage **must** not be 0
- VUID-VkSwapchainCreateInfoKHR-imageSharingMode-parameter
imageSharingMode **must** be a valid [VkSharingMode](#) value
- VUID-VkSwapchainCreateInfoKHR-preTransform-parameter

`preTransform` **must** be a valid `VkSurfaceTransformFlagBitsKHR` value

- VUID-VkSwapchainCreateInfoKHR-compositeAlpha-parameter
`compositeAlpha` **must** be a valid `VkCompositeAlphaFlagBitsKHR` value
- VUID-VkSwapchainCreateInfoKHR-presentMode-parameter
`presentMode` **must** be a valid `VkPresentModeKHR` value
- VUID-VkSwapchainCreateInfoKHR-oldSwapchain-parameter
If `oldSwapchain` is not `VK_NULL_HANDLE`, `oldSwapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-VkSwapchainCreateInfoKHR-commonparent
Both of `oldSwapchain`, and `surface` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkInstance`

Host Synchronization

- Host access to `surface` **must** be externally synchronized
- Host access to `oldSwapchain` **must** be externally synchronized

Bits which **can** be set in `VkSwapchainCreateInfoKHR::flags`, specifying parameters of swapchain creation, are:

```
// Provided by VK_KHR_swapchain
typedef enum VkSwapchainCreateFlagBitsKHR {
    // Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
    VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR = 0x00000001,
    // Provided by VK_VERSION_1_1 with VK_KHR_swapchain
    VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_swapchain_mutable_format
    VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR = 0x00000004,
    // Provided by VK_EXT_present_timing
    VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT = 0x00000200,
    // Provided by VK_KHR_present_id2
    VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR = 0x00000040,
    // Provided by VK_KHR_present_wait2
    VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR = 0x00000080,
    // Provided by VK_KHR_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR = 0x00000008,
    // Provided by VK_EXT_swapchain_maintenance1
    VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT =
VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR,
} VkSwapchainCreateFlagBitsKHR;
```

- `VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR` specifies that images created from the swapchain (i.e. with the `swapchain` member of `VkImageSwapchainCreateInfoKHR` set to this swapchain's handle) **must** use

[VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT](#).

- [VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR](#) specifies that images created from the swapchain are protected images.
- [VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR](#) specifies that the images of the swapchain **can** be used to create a [VkImageView](#) with a different format than what the swapchain was created with. The list of allowed image view formats is specified by adding a [VkImageFormatListCreateInfo](#) structure to the [pNext](#) chain of [VkSwapchainCreateInfoKHR](#). In addition, this flag also specifies that the swapchain **can** be created with usage flags that are not supported for the format the swapchain is created with but are supported for at least one of the allowed image view formats.
- [VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR](#) specifies that the implementation **may** defer allocation of memory associated with each swapchain image until its index is to be returned from [vkAcquireNextImageKHR](#) or [vkAcquireNextImage2KHR](#) for the first time.
- [VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR](#) specifies that applications **can** include the [VkPresentId2KHR](#) structure in the [pNext](#) chain of the [VkPresentInfoKHR](#) structure to associate an identifier with each presentation request.
- [VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR](#) specifies that applications **can** use [vkWaitForPresent2KHR](#) to wait for the presentation engine to have begun presentation of the presentation request associated with [VkPresentWait2InfoKHR::presentId](#) on [swapchain](#).
- [VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT](#) specifies that features supported by the swapchain device in [VkPhysicalDevicePresentTimingFeaturesEXT](#) **can** be used to collect timing information or schedule presentation requests at specific times.

```
// Provided by VK_KHR_swapchain
typedef VkFlags VkSwapchainCreateFlagsKHR;
```

[VkSwapchainCreateFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkSwapchainCreateFlagBitsKHR](#).

If the [pNext](#) chain of [VkSwapchainCreateInfoKHR](#) includes a [VkDeviceGroupSwapchainCreateInfoKHR](#) structure, then that structure includes a set of device group present modes that the swapchain **can** be used with.

The [VkDeviceGroupSwapchainCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupSwapchainCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceGroupPresentModeFlagsKHR modes;
} VkDeviceGroupSwapchainCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `modes` is a bitfield of modes that the swapchain **can** be used with.

If this structure is not present, `modes` is considered to be `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

Valid Usage (Implicit)

- VUID-VkDeviceGroupSwapchainCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR`
- VUID-VkDeviceGroupSwapchainCreateInfoKHR-modes-parameter
`modes` **must** be a valid combination of `VkDeviceGroupPresentModeFlagBitsKHR` values
- VUID-VkDeviceGroupSwapchainCreateInfoKHR-modes-requiredbitmask
`modes` **must** not be `0`

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

If the `pNext` chain of `VkSwapchainCreateInfoKHR` includes a `VkSwapchainDisplayNativeHdrCreateInfoAMD` structure, then that structure includes additional swapchain creation parameters specific to display native HDR support.

The `VkSwapchainDisplayNativeHdrCreateInfoAMD` structure is defined as:

```
// Provided by VK_AMD_display_native_hdr
typedef struct VkSwapchainDisplayNativeHdrCreateInfoAMD {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           localDimmingEnable;
} VkSwapchainDisplayNativeHdrCreateInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `localDimmingEnable` specifies whether local dimming is enabled for the swapchain.

If the `pNext` chain of `VkSwapchainCreateInfoKHR` does not include this structure, the default value for `localDimmingEnable` is `VK_TRUE`, meaning local dimming is initially enabled for the swapchain.

Valid Usage (Implicit)

- VUID-VkSwapchainDisplayNativeHdrCreateInfoAMD-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_DISPLAY_NATIVE_HDR_CREATE_INFO_AMD`

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

Valid Usage

- VUID-VkSwapchainDisplayNativeHdrCreateInfoAMD-localDimmingEnable-04449
It is only valid to set `localDimmingEnable` to `VK_TRUE` if `VkDisplayNativeHdrSurfaceCapabilitiesAMD::localDimmingSupport` is supported

The local dimming HDR setting may also be changed over the life of a swapchain by calling:

```
// Provided by VK_AMD_display_native_hdr
void vkSetLocalDimmingAMD(
    VkDevice          device,
    VkSwapchainKHR    swapChain,
    VkBool32          localDimmingEnable);
```

- `device` is the device associated with `swapChain`.
- `swapChain` handle to enable local dimming.
- `localDimmingEnable` specifies whether local dimming is enabled for the swapchain.

Valid Usage (Implicit)

- VUID-vkSetLocalDimmingAMD-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetLocalDimmingAMD-swapChain-parameter
`swapChain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkSetLocalDimmingAMD-swapChain-parent
`swapChain` **must** have been created, allocated, or retrieved from `device`

Valid Usage

- VUID-vkSetLocalDimmingAMD-localDimmingSupport-04618
`VkDisplayNativeHdrSurfaceCapabilitiesAMD::localDimmingSupport` **must** be supported

If the `pNext` chain of `VkSwapchainCreateInfoKHR` includes a `VkSurfaceFullScreenExclusiveInfoEXT`

structure, then that structure specifies the application's preferred full-screen presentation behavior. If this structure is not present, `fullScreenExclusive` is considered to be `VK_FULL_SCREEN_EXCLUSIVE_DEFAULT_EXT`.

To enable surface counters when creating a swapchain, add a `VkSwapchainCounterCreateInfoEXT` structure to the `pNext` chain of `VkSwapchainCreateInfoKHR`. `VkSwapchainCounterCreateInfoEXT` is defined as:

```
// Provided by VK_EXT_display_control
typedef struct VkSwapchainCounterCreateInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkSurfaceCounterFlagsEXT surfaceCounters;
} VkSwapchainCounterCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `surfaceCounters` is a bitmask of `VkSurfaceCounterFlagBitsEXT` specifying surface counters to enable for the swapchain.

Valid Usage

- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-01244
The bits in `surfaceCounters` **must** be supported by `VkSwapchainCreateInfoKHR::surface`, as reported by `vkGetPhysicalDeviceSurfaceCapabilities2EXT`

Valid Usage (Implicit)

- VUID-VkSwapchainCounterCreateInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_COUNTER_CREATE_INFO_EXT`
- VUID-VkSwapchainCounterCreateInfoEXT-surfaceCounters-parameter
`surfaceCounters` **must** be a valid combination of `VkSurfaceCounterFlagBitsEXT` values

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

The requested counters become active when the first presentation command for the associated swapchain is processed by the presentation engine. To query the value of an active counter, use:

```
// Provided by VK_EXT_display_control
VkResult vkGetSwapchainCounterEXT(
    VkDevice                                device,
    VkSwapchainKHR                          swapchain,
    VkSurfaceCounterFlagBitsEXT             counter,
    uint64_t*                               pCounterValue);
```

- `device` is the `VkDevice` associated with `swapchain`.
- `swapchain` is the swapchain from which to query the counter value.
- `counter` is a `VkSurfaceCounterFlagBitsEXT` value specifying the counter to query.
- `pCounterValue` will return the current value of the counter.

If a counter is not available because the swapchain is out of date, the implementation **may** return `VK_ERROR_OUT_OF_DATE_KHR`.

Valid Usage

- VUID-vkGetSwapchainCounterEXT-swapchain-01245
One or more present commands on `swapchain` **must** have been processed by the presentation engine

Valid Usage (Implicit)

- VUID-vkGetSwapchainCounterEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetSwapchainCounterEXT-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkGetSwapchainCounterEXT-counter-parameter
`counter` **must** be a valid `VkSurfaceCounterFlagBitsEXT` value
- VUID-vkGetSwapchainCounterEXT-pCounterValue-parameter
`pCounterValue` **must** be a valid pointer to a `uint64_t` value
- VUID-vkGetSwapchainCounterEXT-swapchain-parent
`swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_OUT_OF_DATE_KHR`

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To specify compression properties for the swapchain images in this swapchain, add a [VkImageCompressionControlEXT](#) structure to the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure.

Applications **can** modify the presentation mode used by the swapchain on a per-presentation basis. However, all presentation modes the application intends to use with the swapchain **must** be specified at swapchain creation time. To specify more than one presentation mode when creating a swapchain, include the [VkSwapchainPresentModesCreateInfoKHR](#) structure in the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure.

The [VkSwapchainPresentModesCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModesCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           presentModeCount;
    const VkPresentModeKHR* pPresentModes;
} VkSwapchainPresentModesCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModesCreateInfoKHR
typedef VkSwapchainPresentModesCreateInfoKHR VkSwapchainPresentModesCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [presentModeCount](#) is the number of presentation modes provided.
- [pPresentModes](#) is a list of presentation modes with [presentModeCount](#) entries

Valid Usage

- VUID-VkSwapchainPresentModesCreateInfoKHR-None-07762
Each entry in [pPresentModes](#) **must** be one of the [VkPresentModeKHR](#) values returned by [vkGetPhysicalDeviceSurfacePresentModesKHR](#) for the surface
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeFifoLatestReady-10160
If the [presentModeFifoLatestReady](#) feature is not enabled, [pPresentModes](#) **must** not contain [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#)
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-07763
The entries in [pPresentModes](#) **must** be a subset of the present modes returned in

VkSurfacePresentModeCompatibilityKHR::pPresentModes,
VkSwapchainCreateInfoKHR::presentMode in VkSurfacePresentModeKHR

given

- VUID-VkSwapchainPresentModesCreateInfoKHR-presentMode-07764
VkSwapchainCreateInfoKHR::presentMode **must** be included in pPresentModes

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModesCreateInfoKHR-sType-sType
sType **must** be VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODES_CREATE_INFO_KHR
- VUID-VkSwapchainPresentModesCreateInfoKHR-pPresentModes-parameter
pPresentModes **must** be a valid pointer to an array of presentModeCount valid VkPresentModeKHR values
- VUID-VkSwapchainPresentModesCreateInfoKHR-presentModeCount-arraylength
presentModeCount **must** be greater than 0

Structure Chaining

Extends the structure

- VkSwapchainCreateInfoKHR

When an application presents a swapchain image with dimensions different than those of the target surface, different behavior is possible on different platforms per their respective specifications:

- Presentation fails and VK_ERROR_OUT_OF_DATE_KHR is returned
- Scaling is done and VK_SUCCESS or VK_SUBOPTIMAL_KHR is returned
- Unspecified scaling using an arbitrary combination of stretching, centering and/or clipping.

Applications **can** define specific behavior when creating a swapchain by including the VkSwapchainPresentScalingCreateInfoKHR structure in the pNext chain of the VkSwapchainCreateInfoKHR structure.

The VkSwapchainPresentScalingCreateInfoKHR structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentScalingCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkPresentScalingFlagsKHR    scalingBehavior;
    VkPresentGravityFlagsKHR    presentGravityX;
    VkPresentGravityFlagsKHR    presentGravityY;
} VkSwapchainPresentScalingCreateInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentScalingCreateInfoKHR
typedef VkSwapchainPresentScalingCreateInfoKHR VkSwapchainPresentScalingCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **scalingBehavior** is `0` or the scaling method to use when the dimensions of the surface and swapchain images differ.
- **presentGravityX** is `0` or the x-axis direction in which swapchain image pixels gravitate relative to the surface when **scalingBehavior** does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.
- **presentGravityY** is `0` or the y-axis direction in which swapchain image pixels gravitate relative to the surface when **scalingBehavior** does not result in a one-to-one pixel mapping between the scaled swapchain image and the surface.

If **scalingBehavior** is `0`, the result of presenting a swapchain image with dimensions that do not match the surface dimensions is implementation and platform-dependent. If **presentGravityX** or **presentGravityY** are `0`, the presentation gravity **must** match that defined by the native platform surface on platforms which define surface gravity.

Valid Usage

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07765
If **presentGravityX** is `0`, **presentGravityY** **must** be `0`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07766
If **presentGravityX** is not `0`, **presentGravityY** **must** not be `0`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07767
scalingBehavior **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07768
presentGravityX **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07769
presentGravityY **must** not have more than one bit set
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07770
scalingBehavior **must** be `0` or a valid scaling method for the surface as returned in [VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling](#), given [VkSwapchainCreateInfoKHR::presentMode](#) in [VkSurfacePresentModeKHR](#)
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-07771
If the swapchain is created with [VkSwapchainPresentModesCreateInfoKHR](#), **scalingBehavior** **must** be `0` or a valid scaling method for the surface as returned in [VkSurfacePresentScalingCapabilitiesKHR::supportedPresentScaling](#), given each present mode in [VkSwapchainPresentModesCreateInfoKHR::pPresentModes](#) in [VkSurfacePresentModeKHR](#)

- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07772
`presentGravityX` **must** be 0 or a valid x-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX`, given `VkSwapchainCreateInfoKHR::presentMode` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-07773
If the swapchain is created with `VkSwapchainPresentModesCreateInfoKHR`, `presentGravityX` **must** be 0 or a valid x-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityX`, given each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07774
`presentGravityY` **must** be 0 or a valid y-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY`, given `VkSwapchainCreateInfoKHR::presentMode` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-07775
If the swapchain is created with `VkSwapchainPresentModesCreateInfoKHR`, `presentGravityY` **must** be 0 or a valid y-axis present gravity for the surface as returned in `VkSurfacePresentScalingCapabilitiesKHR::supportedPresentGravityY`, given each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-swapchainMaintenance1-10154
If the `swapchainMaintenance1` feature is not enabled, then `scalingBehavior`, `presentGravityX`, and `presentGravityY` **must** be 0

Valid Usage (Implicit)

- VUID-VkSwapchainPresentScalingCreateInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_SCALING_CREATE_INFO_KHR`
- VUID-VkSwapchainPresentScalingCreateInfoKHR-scalingBehavior-parameter
`scalingBehavior` **must** be a valid combination of `VkPresentScalingFlagBitsKHR` values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityX-parameter
`presentGravityX` **must** be a valid combination of `VkPresentGravityFlagBitsKHR` values
- VUID-VkSwapchainPresentScalingCreateInfoKHR-presentGravityY-parameter
`presentGravityY` **must** be a valid combination of `VkPresentGravityFlagBitsKHR` values

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

To destroy a swapchain object call:

```
// Provided by VK_KHR_swapchain
void vkDestroySwapchainKHR(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the [VkDevice](#) associated with **swapchain**.
- **swapchain** is the swapchain to destroy.
- **pAllocator** is the allocator used for host memory allocated for the swapchain object when there is no more specific allocator available (see [Memory Allocation](#)).

The application **must** not destroy a swapchain until after completion of all outstanding operations on images that were acquired from the swapchain. **swapchain** and all associated [VkImage](#) handles are destroyed, and **must** not be acquired or used any more by the application. The memory of each [VkImage](#) will only be freed after that image is no longer used by the presentation engine. For example, if one image of the swapchain is being displayed in a window, the memory for that image **may** not be freed until the window is destroyed, or another swapchain is created for the window. Destroying the swapchain does not invalidate the parent [VkSurfaceKHR](#), and a new swapchain **can** be created with it.

When a swapchain associated with a display surface is destroyed, if the image most recently presented to the display surface is from the swapchain being destroyed, then either any display resources modified by presenting images from any swapchain associated with the display surface **must** be reverted by the implementation to their state prior to the first present performed on one of these swapchains, or such resources **must** be left in their current state.

If **swapchain** has exclusive full-screen access, it is released before the swapchain is destroyed.

Valid Usage

- VUID-vkDestroySwapchainKHR-swapchain-01282
All uses of presentable images acquired from **swapchain** **must** have completed execution
- VUID-vkDestroySwapchainKHR-swapchain-01283
If [VkAllocationCallbacks](#) were provided when **swapchain** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroySwapchainKHR-swapchain-01284
If no [VkAllocationCallbacks](#) were provided when **swapchain** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroySwapchainKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkDestroySwapchainKHR-swapchain-parameter

If `swapchain` is not `VK_NULL_HANDLE`, `swapchain` **must** be a valid `VkSwapchainKHR` handle

- VUID-vkDestroySwapchainKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkDestroySwapchainKHR-swapchain-parent

If `swapchain` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

When the `VK_KHR_display_swapchain` extension is enabled, multiple swapchains that share presentable images are created by calling:

```
// Provided by VK_KHR_display_swapchain
VkResult vkCreateSharedSwapchainsKHR(
    VkDevice          device,
    uint32_t          swapchainCount,
    const VkSwapchainCreateInfoKHR* pCreateInfos,
    const VkAllocationCallbacks* pAllocator,
    VkSwapchainKHR*    pSwapchains);
```

- `device` is the device to create the swapchains for.
- `swapchainCount` is the number of swapchains to create.
- `pCreateInfos` is a pointer to an array of `VkSwapchainCreateInfoKHR` structures specifying the parameters of the created swapchains.
- `pAllocator` is the allocator used for host memory allocated for the swapchain objects when there is no more specific allocator available (see [Memory Allocation](#)).
- `pSwapchains` is a pointer to an array of `VkSwapchainKHR` handles in which the created swapchain objects will be returned.

`vkCreateSharedSwapchainsKHR` is similar to `vkCreateSwapchainKHR`, except that it takes an array of `VkSwapchainCreateInfoKHR` structures, and returns an array of swapchain objects.

The swapchain creation parameters that affect the properties and number of presentable images **must** match between all the swapchains. If the displays used by any of the swapchains do not use the same presentable image layout or are incompatible in a way that prevents sharing images, swapchain creation will fail with the result code `VK_ERROR_INCOMPATIBLE_DISPLAY_KHR`. If any error occurs, no swapchains will be created. Images presented to multiple swapchains **must** be re-acquired from all of them before being modified. After destroying one or more of the swapchains, the remaining swapchains and the presentable images **can** continue to be used.

Valid Usage (Implicit)

- VUID-vkCreateSharedSwapchainsKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreateSharedSwapchainsKHR-pCreateInfos-parameter
`pCreateInfos` **must** be a valid pointer to an array of `swapchainCount` valid `VkSwapchainCreateInfoKHR` structures
- VUID-vkCreateSharedSwapchainsKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateSharedSwapchainsKHR-pSwapchains-parameter
`pSwapchains` **must** be a valid pointer to an array of `swapchainCount` `VkSwapchainKHR` handles
- VUID-vkCreateSharedSwapchainsKHR-device-queuecount
The device **must** have been created with at least `1` queue
- VUID-vkCreateSharedSwapchainsKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than `0`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_DEVICE_LOST`
- `VK_ERROR_INCOMPATIBLE_DISPLAY_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_SURFACE_LOST_KHR`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To obtain the array of presentable images associated with a swapchain, call:

```
// Provided by VK_KHR_swapchain
VkResult vkGetSwapchainImagesKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint32_t*         pSwapchainImageCount,
    VkImage*          pSwapchainImages);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to query.
- `pSwapchainImageCount` is a pointer to an integer related to the number of presentable images available or queried, as described below.
- `pSwapchainImages` is either `NULL` or a pointer to an array of `VkImage` handles.

If `pSwapchainImages` is `NULL`, then the number of presentable images for `swapchain` is returned in `pSwapchainImageCount`. Otherwise, `pSwapchainImageCount` **must** point to a variable set by the application to the number of elements in the `pSwapchainImages` array, and on return the variable is overwritten with the number of structures actually written to `pSwapchainImages`. If the value of `pSwapchainImageCount` is less than the number of presentable images for `swapchain`, at most `pSwapchainImageCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available presentable images were returned.

Valid Usage (Implicit)

- VUID-vkGetSwapchainImagesKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetSwapchainImagesKHR-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkGetSwapchainImagesKHR-pSwapchainImageCount-parameter `pSwapchainImageCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetSwapchainImagesKHR-pSwapchainImages-parameter
If the value referenced by `pSwapchainImageCount` is not `0`, and `pSwapchainImages` is not `NULL`, `pSwapchainImages` **must** be a valid pointer to an array of `pSwapchainImageCount` `VkImage` handles
- VUID-vkGetSwapchainImagesKHR-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

NOTE

By knowing all presentable images used in the swapchain, the application can

create command buffers that reference these images prior to entering its main rendering loop. However, command buffers are not allowed to reference presentable images created with `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR` until their indices have been returned from `vkAcquireNextImageKHR` at least once.

Images returned by `vkGetSwapchainImagesKHR` are fully backed by memory before they are passed to the application, as if they are each bound completely and contiguously to a single `VkDeviceMemory` object, unless the swapchain is created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR` flag. All presentable images are initially in the `VK_IMAGE_LAYOUT_UNDEFINED` layout, thus before using presentable images, the application **must** transition them to a valid layout for the intended use.

Further, the lifetime of presentable images is controlled by the implementation, so applications **must** not destroy a presentable image. See `vkDestroySwapchainKHR` for further details on the lifetime of presentable images.

Images **can** also be created by using `vkCreateImage` with `VkImageSwapchainCreateInfoKHR` and bound to swapchain memory using `vkBindImageMemory2` with `VkBindImageMemorySwapchainInfoKHR`. These images **can** be used anywhere swapchain images are used, and are useful in logical devices with multiple physical devices to create peer memory bindings of swapchain memory. These images and bindings have no effect on what memory is presented. Unlike images retrieved from `vkGetSwapchainImagesKHR`, these images **must** be destroyed with `vkDestroyImage`.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_KHR_swapchain
VkResult vkAcquireNextImageKHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    uint64_t          timeout,
    VkSemaphore        semaphore,
    VkFence            fence,
    uint32_t*         pImageIndex);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain from which an image is being acquired.
- `timeout` specifies how long the function waits, in nanoseconds, if no image is available.
- `semaphore` is `VK_NULL_HANDLE` or a semaphore defining a [semaphore signal operation](#).
- `fence` is `VK_NULL_HANDLE` or a fence to signal.
- `pImageIndex` is a pointer to a `uint32_t` in which the index of the next image to use (i.e. an index into the array of images returned by `vkGetSwapchainImagesKHR`) is returned.

If the `swapchain` has been created with the `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR` flag, the image whose

index is returned in `pImageIndex` will be fully backed by memory before this call returns to the application, as if it is bound completely and contiguously to a single `VkDeviceMemory` object.

If `semaphore` defines a `semaphore signal operation`, its first `synchronization scope` includes acquisition of the image.

Valid Usage

- VUID-vkAcquireNextImageKHR-swapchain-01285
`swapchain` **must** not be in the retired state
- VUID-vkAcquireNextImageKHR-semaphore-01286
If `semaphore` is not `VK_NULL_HANDLE`, it **must** be unsignaled
- VUID-vkAcquireNextImageKHR-semaphore-01779
If `semaphore` is not `VK_NULL_HANDLE`, it **must** not have any uncompleted signal or wait operations pending
- VUID-vkAcquireNextImageKHR-fence-01287
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** be unsignaled
- VUID-vkAcquireNextImageKHR-fence-10066
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** not be associated with any other queue command that has not yet completed execution on that queue
- VUID-vkAcquireNextImageKHR-semaphore-01780
`semaphore` and `fence` **must** not both be equal to `VK_NULL_HANDLE`
- VUID-vkAcquireNextImageKHR-surface-07783
If `forward progress` cannot be guaranteed for the `surface` used to create the `swapchain` member of `pAcquireInfo`, `timeout` **must** not be `UINT64_MAX`
- VUID-vkAcquireNextImageKHR-semaphore-03265
`semaphore` **must** have a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`

Valid Usage (Implicit)

- VUID-vkAcquireNextImageKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkAcquireNextImageKHR-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkAcquireNextImageKHR-semaphore-parameter
If `semaphore` is not `VK_NULL_HANDLE`, `semaphore` **must** be a valid `VkSemaphore` handle
- VUID-vkAcquireNextImageKHR-fence-parameter
If `fence` is not `VK_NULL_HANDLE`, `fence` **must** be a valid `VkFence` handle
- VUID-vkAcquireNextImageKHR-pImageIndex-parameter
`pImageIndex` **must** be a valid pointer to a `uint32_t` value
- VUID-vkAcquireNextImageKHR-swapchain-parent
`swapchain` **must** have been created, allocated, or retrieved from `device`

- VUID-vkAcquireNextImageKHR-semaphore-parent
If **semaphore** is a valid handle, it **must** have been created, allocated, or retrieved from **device**
- VUID-vkAcquireNextImageKHR-fence-parent
If **fence** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized
- Host access to **semaphore** **must** be externally synchronized
- Host access to **fence** **must** be externally synchronized

Return Codes

Success

- **VK_NOT_READY**
- **VK_SUBOPTIMAL_KHR**
- **VK_SUCCESS**
- **VK_TIMEOUT**

Failure

- **VK_ERROR_DEVICE_LOST**
- **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT**
- **VK_ERROR_OUT_OF_DATE_KHR**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_SURFACE_LOST_KHR**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

If an image is acquired successfully, **vkAcquireNextImageKHR** **must** either return **VK_SUCCESS** or **VK_SUBOPTIMAL_KHR**. The implementation **may** return **VK_SUBOPTIMAL_KHR** if the swapchain no longer matches the surface properties exactly, but **can** still be used for presentation.

When successful, **vkAcquireNextImageKHR** acquires a presentable image from **swapchain** that an application **can** use, and sets **pImageIndex** to the index of that image within the swapchain. The presentation engine **may** not have finished reading from the image at the time it is acquired, so the application **must** use **semaphore** and/or **fence** to ensure that the image layout and contents are not modified until the presentation engine reads have completed. Once **vkAcquireNextImageKHR** successfully acquires an image, the semaphore signal operation referenced by **semaphore**, if not

`VK_NULL_HANDLE`, and the fence signal operation referenced by `fence`, if not `VK_NULL_HANDLE`, are submitted for execution. If `vkAcquireNextImageKHR` does not successfully acquire an image, `semaphore` and `fence` are unaffected. The order in which images are acquired is implementation-dependent, and **may** be different than the order the images were presented.

If `timeout` is zero, then `vkAcquireNextImageKHR` does not wait, and will either successfully acquire an image, or fail and return `VK_NOT_READY` if no image is available.

If the specified timeout period expires before an image is acquired, `vkAcquireNextImageKHR` returns `VK_TIMEOUT`. If `timeout` is `UINT64_MAX`, the timeout period is treated as infinite, and `vkAcquireNextImageKHR` will block until an image is acquired or an error occurs.

Let `S` be the number of images in `swapchain`. If `swapchain` is created with `VkSwapchainPresentModesCreateInfoKHR`, let `M` be the maximum of the values in `VkSurfaceCapabilitiesKHR::minImageCount` when queried with each present mode in `VkSwapchainPresentModesCreateInfoKHR::pPresentModes` in `VkSurfacePresentModeKHR`. Otherwise, let `M` be the value of `VkSurfaceCapabilitiesKHR::minImageCount` without a `VkSurfacePresentModeKHR` as part of the query input.

`vkAcquireNextImageKHR` **should** not be called if the number of images that the application has currently acquired is greater than `S-M`. If `vkAcquireNextImageKHR` is called when the number of images that the application has currently acquired is less than or equal to `S-M`, `vkAcquireNextImageKHR` **must** return in finite time with an allowed `VkResult` code.

NOTE

Returning a result in finite time guarantees that the implementation cannot deadlock an application, or suspend its execution indefinitely with correct API usage. Acquiring too many images at once may block indefinitely, which is covered by valid usage when attempting to use `UINT64_MAX`. For example, a scenario here is when a compositor holds on to images which are currently being presented, and there are not any vacant images left to be acquired.

If the swapchain images no longer match native surface properties, either `VK_SUBOPTIMAL_KHR` or `VK_ERROR_OUT_OF_DATE_KHR` **must** be returned. If `VK_ERROR_OUT_OF_DATE_KHR` is returned, no image is acquired and attempts to present previously acquired images to the swapchain will also fail with `VK_ERROR_OUT_OF_DATE_KHR`. Applications need to create a new swapchain for the surface to continue presenting if `VK_ERROR_OUT_OF_DATE_KHR` is returned.

NOTE

`VK_SUBOPTIMAL_KHR` **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain in this state, or to re-create the swapchain to better match the platform surface properties.

If device loss occurs (see [Lost Device](#)) before the timeout has expired, `vkAcquireNextImageKHR` **must** return in finite time with either one of the allowed success codes, or `VK_ERROR_DEVICE_LOST`.

If `semaphore` is not `VK_NULL_HANDLE`, the semaphore **must** be unsignaled, with no signal or wait operations pending. It will become signaled when the application **can** use the image.

NOTE

Use of **semaphore** allows rendering operations to be recorded and submitted before the presentation engine has completed its use of the image.

If **fence** is not equal to **VK_NULL_HANDLE**, the fence **must** be unsignaled, with no signal operations pending. It will become signaled when the application **can** use the image.

NOTE

Applications **should** not rely on **vkAcquireNextImageKHR** blocking in order to meter their rendering speed. The implementation **may** return from this function immediately regardless of how many presentation requests are queued, and regardless of when queued presentation requests will complete relative to the call. Instead, applications **can** use **fence** to meter their frame generation work to match the presentation rate.

An application **must** wait until either the **semaphore** or **fence** is signaled before accessing the image's data.

NOTE

When the presentable image will be accessed by some stage S, the recommended idiom for ensuring correct synchronization is:

- The **VkSubmitInfo** used to submit the image layout transition for execution includes **vkAcquireNextImageKHR::semaphore** in its **pWaitSemaphores** member, with the corresponding element of **pWaitDstStageMask** including S.
- The **synchronization command** that performs any necessary image layout transition includes S in both the **srcStageMask** and **dstStageMask**.

After a successful return, the image indicated by **pImageIndex** and its data will be unmodified compared to when it was presented.

NOTE

Exclusive ownership of presentable images corresponding to a swapchain created with **VK_SHARING_MODE_EXCLUSIVE** as defined in **Resource Sharing** is not altered by a call to **vkAcquireNextImageKHR**. That means upon the first acquisition from such a swapchain presentable images are not owned by any queue family, while at subsequent acquisitions the presentable images remain owned by the queue family the image was previously presented on.

The possible return values for **vkAcquireNextImageKHR** depend on the **timeout** provided:

- **VK_SUCCESS** is returned if an image became available.
- **VK_ERROR_SURFACE_LOST_KHR** is returned if the surface becomes no longer available.
- **VK_NOT_READY** is returned if **timeout** is zero and no image was available.
- **VK_TIMEOUT** is returned if **timeout** is greater than zero and less than **UINT64_MAX**, and no image became available within the time allowed.
- **VK_SUBOPTIMAL_KHR** **may** be returned if an image became available, and the swapchain no longer matches the surface properties exactly, but **can** still be used to present to the surface successfully.

NOTE

This **may** happen, for example, if the platform surface has been resized but the platform is able to scale the presented images to the new size to produce valid surface updates. It is up to the application to decide whether it prefers to continue using the current swapchain indefinitely or temporarily in this state, or to re-create the swapchain to better match the platform surface properties.

- [VK_ERROR_OUT_OF_DATE_KHR](#) is returned if the surface has changed in such a way that it is no longer compatible with the swapchain, and further presentation requests using the swapchain will fail. Applications **must** query the new surface properties and recreate their swapchain if they wish to continue presenting to the surface.

If the native surface and presented image sizes no longer match, presentation **may** fail unless the swapchain is created with a non-zero value in [VkSwapchainPresentScalingCreateInfoKHR::scalingBehavior](#) . If presentation does succeed, the mapping from the presented image to the native surface is defined by the [VkSwapchainPresentScalingCreateInfoKHR](#) structure if provided. Otherwise it is implementation-defined. It is the application's responsibility to detect surface size changes and react appropriately. If presentation fails because of a mismatch in the surface and presented image sizes, a [VK_ERROR_OUT_OF_DATE_KHR](#) error will be returned.

NOTE

For example, consider a 4x3 window/surface that gets resized to be 3x4 (taller than wider). On some window systems, the portion of the window/surface that was previously and still is visible (the 3x3 part) will contain the same contents as before, while the remaining parts of the window will have undefined contents. Other window systems **may** squash/stretch the image to fill the new window size without any undefined contents, or apply some other mapping.

To acquire an available presentable image to use, and retrieve the index of that image, call:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
VkResult vkAcquireNextImage2KHR(
    VkDevice                                device,
    const VkAcquireNextImageInfoKHR*       pAcquireInfo,
    uint32_t*                               pImageIndex);
```

- **device** is the device associated with **swapchain**.
- **pAcquireInfo** is a pointer to a [VkAcquireNextImageInfoKHR](#) structure containing parameters of the acquire.
- **pImageIndex** is a pointer to a **uint32_t** value specifying the index of the next image to use.

If the **swapchain** has been created with the [VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR](#) flag, the image whose index is returned in **pImageIndex** will be fully backed by memory before this call returns to the application.

Valid Usage

- VUID-vkAcquireNextImage2KHR-surface-07784

If **forward progress** cannot be guaranteed for the **surface** used to create **swapchain**, the **timeout** member of **pAcquireInfo** **must** not be **UINT64_MAX**

Valid Usage (Implicit)

- VUID-vkAcquireNextImage2KHR-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkAcquireNextImage2KHR-pAcquireInfo-parameter
pAcquireInfo **must** be a valid pointer to a valid **VkAcquireNextImageInfoKHR** structure
- VUID-vkAcquireNextImage2KHR-pImageIndex-parameter
pImageIndex **must** be a valid pointer to a **uint32_t** value

Return Codes

Success

- **VK_NOT_READY**
- **VK_SUBOPTIMAL_KHR**
- **VK_SUCCESS**
- **VK_TIMEOUT**

Failure

- **VK_ERROR_DEVICE_LOST**
- **VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT**
- **VK_ERROR_OUT_OF_DATE_KHR**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_SURFACE_LOST_KHR**
- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkAcquireNextImageInfoKHR** structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkAcquireNextImageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint64_t           timeout;
    VkSemaphore         semaphore;
    VkFence             fence;
    uint32_t           deviceMask;
} VkAcquireNextImageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is a non-retired swapchain from which an image is acquired.
- `timeout` specifies how long the function waits, in nanoseconds, if no image is available.
- `semaphore` is `VK_NULL_HANDLE` or a semaphore that defines a [semaphore signal operation](#).
- `fence` is `VK_NULL_HANDLE` or a fence to signal.
- `deviceMask` is a mask of physical devices for which the swapchain image will be ready to use when the semaphore or fence is signaled.

If `vkAcquireNextImageKHR` is used, the device mask is considered to include all physical devices in the logical device.

NOTE

`vkAcquireNextImage2KHR` signals at most one semaphore, even if the application requests waiting for multiple physical devices to be ready via the `deviceMask`. However, only a single physical device **can** wait on that semaphore, since the semaphore becomes unsignaled when the wait succeeds. For other physical devices to wait for the image to be ready, it is necessary for the application to submit semaphore signal operation(s) to that first physical device to signal additional semaphore(s) after the wait succeeds, which the other physical device(s) **can** wait upon.

Valid Usage

- VUID-VkAcquireNextImageInfoKHR-swapchain-01675
`swapchain` **must** not be in the retired state
- VUID-VkAcquireNextImageInfoKHR-semaphore-01288
If `semaphore` is not `VK_NULL_HANDLE`, it **must** be unsignaled
- VUID-VkAcquireNextImageInfoKHR-semaphore-01781
If `semaphore` is not `VK_NULL_HANDLE`, it **must** not have any uncompleted signal or wait operations pending
- VUID-VkAcquireNextImageInfoKHR-fence-01289

If **fence** is not `VK_NULL_HANDLE`, **fence** **must** be unsignaled

- VUID-VkAcquireNextImageInfoKHR-fence-10067

If **fence** is not `VK_NULL_HANDLE`, **fence** **must** not be associated with any other queue command that has not yet completed execution on that queue

- VUID-VkAcquireNextImageInfoKHR-semaphore-01782
semaphore and **fence** **must** not both be equal to `VK_NULL_HANDLE`
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01290
deviceMask **must** be a valid device mask
- VUID-VkAcquireNextImageInfoKHR-deviceMask-01291
deviceMask **must** not be zero
- VUID-VkAcquireNextImageInfoKHR-semaphore-03266
semaphore **must** have a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`

Valid Usage (Implicit)

- VUID-VkAcquireNextImageInfoKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR`
- VUID-VkAcquireNextImageInfoKHR-pNext-pNext
pNext **must** be `NULL`
- VUID-VkAcquireNextImageInfoKHR-swapchain-parameter
swapchain **must** be a valid `VkSwapchainKHR` handle
- VUID-VkAcquireNextImageInfoKHR-semaphore-parameter
If **semaphore** is not `VK_NULL_HANDLE`, **semaphore** **must** be a valid `VkSemaphore` handle
- VUID-VkAcquireNextImageInfoKHR-fence-parameter
If **fence** is not `VK_NULL_HANDLE`, **fence** **must** be a valid `VkFence` handle
- VUID-VkAcquireNextImageInfoKHR-commonparent
Each of **fence**, **semaphore**, and **swapchain** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized
- Host access to **semaphore** **must** be externally synchronized
- Host access to **fence** **must** be externally synchronized

After queueing all rendering commands and transitioning the image to the correct layout, to queue an image for presentation, call:

```
// Provided by VK_KHR_swapchain
VkResult vkQueuePresentKHR(
    VkQueue queue,
    const VkPresentInfoKHR* pPresentInfo);
```

- `queue` is a queue that is capable of presentation to the target surface's platform on the same device as the image's swapchain.
- `pPresentInfo` is a pointer to a `VkPresentInfoKHR` structure specifying parameters of the presentation.

NOTE There is no requirement for an application to present images in the same order that they were acquired - applications can arbitrarily present any image that is currently acquired.

NOTE The origin of the native orientation of the surface coordinate system is not specified in the Vulkan specification; it depends on the platform. For most platforms the origin is by default upper-left, meaning the pixel of the presented `VkImage` at coordinates (0,0) would appear at the upper left pixel of the platform surface (assuming `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, and the display standing the right way up).

The result codes `VK_ERROR_OUT_OF_DATE_KHR` and `VK_SUBOPTIMAL_KHR` have the same meaning when returned by `vkQueuePresentKHR` as they do when returned by `vkAcquireNextImageKHR`. If any `swapchain` member of `pPresentInfo` was created with `VK_FULL_SCREEN_EXCLUSIVE_APPLICATION_CONTROLLED_EXT`, `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` will be returned if that swapchain does not have exclusive full-screen access, possibly for implementation-specific reasons outside of the application's control. If multiple swapchains are presented, the result code is determined by applying the following rules in order:

- If the device is lost, `VK_ERROR_DEVICE_LOST` is returned.
- If any of the target surfaces are no longer available the error `VK_ERROR_SURFACE_LOST_KHR` is returned.
- If any of the presents would have a result of `VK_ERROR_OUT_OF_DATE_KHR` if issued separately then `VK_ERROR_OUT_OF_DATE_KHR` is returned.
- If any of the presents would have a result of `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT` if issued separately then `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT` is returned.
- If any of the presents would have a result of `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` if issued separately then `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT` is returned.
- If any of the presents would have a result of `VK_SUBOPTIMAL_KHR` if issued separately then `VK_SUBOPTIMAL_KHR` is returned.
- Otherwise `VK_SUCCESS` is returned.

Any writes to memory backing the images referenced by the `pImageIndices` and `pSwapchains` members of `pPresentInfo`, that are available before `vkQueuePresentKHR` is executed, are automatically made visible to the read access performed by the presentation engine. This automatic visibility operation for an image happens-after the semaphore wait operation, and happens-before the presentation engine accesses the image.

Presentation is a read-only operation that will not affect the content of the presentable images. Upon reacquiring the image and transitioning it away from the `VK_IMAGE_LAYOUT_PRESENT_SRC_KHR` layout, the contents will be the same as they were prior to transitioning the image to the present source layout and presenting it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

Calls to `vkQueuePresentKHR` **may** block, but **must** return in finite time. The processing of the presentation happens in issue order with other queue operations, but semaphores **must** be used to ensure that prior rendering and other commands in the specified queue complete before the presentation begins. The presentation command itself does not delay processing of subsequent commands on the queue. However, presentation requests sent to a particular queue are always performed in order. Exact presentation timing is controlled by the semantics of the presentation engine and native platform in use.

If an image is presented to a swapchain created from a display surface, the mode of the associated display will be updated, if necessary, to match the mode specified when creating the display surface. The mode switch and presentation of the specified image will be performed as one atomic operation.

Queueing an image for presentation defines a set of *queue operations*, including waiting on the semaphores and submitting a presentation request to the presentation engine. However, the scope of this set of queue operations does not include the actual processing of the image by the presentation engine.

If `vkQueuePresentKHR` fails to enqueue the corresponding set of queue operations, it **may** return `VK_ERROR_OUT_OF_HOST_MEMORY` or `VK_ERROR_OUT_OF_DEVICE_MEMORY`. If it does, the implementation **must** ensure that the state and contents of any resources or synchronization primitives referenced is unaffected by the call or its failure.

If `vkQueuePresentKHR` fails in such a way that the implementation is unable to make that guarantee, the implementation **must** return `VK_ERROR_DEVICE_LOST`.

However, if the presentation request is rejected by the presentation engine with an error `VK_ERROR_OUT_OF_DATE_KHR`, `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`, `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT`, or `VK_ERROR_SURFACE_LOST_KHR`, the set of queue operations are still considered to be enqueued and thus any semaphore wait operation specified in `VkPresentInfoKHR` will execute when the corresponding queue operation is complete.

`vkQueuePresentKHR` releases the acquisition of the images referenced by `imageIndices`. The queue family corresponding to the queue `vkQueuePresentKHR` is executed on **must** have ownership of the presented images as defined in [Resource Sharing](#). `vkQueuePresentKHR` does not alter the queue family ownership, but the presented images **must** not be used again before they have been reacquired

using `vkAcquireNextImageKHR`.

NOTE

The application **can** continue to present any acquired images from a retired swapchain as long as the swapchain has not entered a state that causes `vkQueuePresentKHR` to return `VK_ERROR_OUT_OF_DATE_KHR`.

Valid Usage

- VUID-vkQueuePresentKHR-pSwapchains-01292
Each element of `pSwapchains` member of `pPresentInfo` **must** be a swapchain that is created for a surface for which presentation is supported from `queue` as determined using a call to `vkGetPhysicalDeviceSurfaceSupportKHR`
- VUID-vkQueuePresentKHR-pSwapchains-01293
If more than one member of `pSwapchains` was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same display mode
- VUID-vkQueuePresentKHR-pSwapchains-10285
If more than one member of `pSwapchains` was created from a display surface, all display surfaces referenced that refer to the same display **must** use the same `stereoType`
- VUID-vkQueuePresentKHR-pWaitSemaphores-01294
When a semaphore wait operation referring to a binary semaphore defined by the elements of the `pWaitSemaphores` member of `pPresentInfo` executes on `queue`, there **must** be no other queues waiting on the same semaphore
- VUID-vkQueuePresentKHR-pWaitSemaphores-03267
All elements of the `pWaitSemaphores` member of `pPresentInfo` **must** be created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_BINARY`
- VUID-vkQueuePresentKHR-pWaitSemaphores-03268
All elements of the `pWaitSemaphores` member of `pPresentInfo` **must** reference a semaphore signal operation that has been submitted for execution and any `semaphore signal operations` on which it depends **must** have also been submitted for execution

Valid Usage (Implicit)

- VUID-vkQueuePresentKHR-queue-parameter
`queue` **must** be a valid `VkQueue` handle
- VUID-vkQueuePresentKHR-pPresentInfo-parameter
`pPresentInfo` **must** be a valid pointer to a valid `VkPresentInfoKHR` structure

Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with `VK_DEVICE_QUEUE_CREATE INTERNALLY SYNCHRONIZED_BIT_KHR`

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

Return Codes

Success

- [VK_SUBOPTIMAL_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT](#)
- [VK_ERROR_OUT_OF_DATE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPresentInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain
typedef struct VkPresentInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             waitSemaphoreCount;
    const VkSemaphore*   pWaitSemaphores;
    uint32_t             swapchainCount;
    const VkSwapchainKHR* pSwapchains;
    const uint32_t*       pImageIndices;
    VkResult*            pResults;
} VkPresentInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [waitSemaphoreCount](#) is the number of semaphores to wait for before issuing the present request.

The number **may** be zero.

- **pWaitSemaphores** is **NULL** or a pointer to an array of **VkSemaphore** objects with **waitSemaphoreCount** entries, and specifies the semaphores to wait for before issuing the present request.
- **swapchainCount** is the number of swapchains being presented to by this command.
- **pSwapchains** is a pointer to an array of **VkSwapchainKHR** objects with **swapchainCount** entries.
- **pImageIndices** is a pointer to an array of indices into the array of each swapchain's presentable images, with **swapchainCount** entries. Each entry in this array identifies the image to present on the corresponding entry in the **pSwapchains** array.
- **pResults** is a pointer to an array of **VkResult** typed elements with **swapchainCount** entries. Applications that do not need per-swapchain results **can** use **NULL** for **pResults**. If non-**NULL**, each entry in **pResults** will be set to the **VkResult** for presenting the swapchain corresponding to the same index in **pSwapchains**.

Before an application **can** present an image, the image's layout **must** be transitioned to the **VK_IMAGE_LAYOUT_PRESENT_SRC_KHR** layout, or for a shared presentable image the **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR** layout.

NOTE

When transitioning the image to the appropriate layout, there is no need to delay subsequent processing, or perform any visibility operations (as **vkQueuePresentKHR** performs automatic visibility operations). To achieve this, the **dstAccessMask** member of the **VkImageMemoryBarrier** **should** be **0**, and the **dstStageMask** parameter **should** be **VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT**.

The second **synchronization scope** of each **semaphore wait operation** defined by this structure includes presentation of each image indicated by **pSwapchains** and **pImageIndices**.

Valid Usage

- VUID-VkPresentInfoKHR-pSwapchain-09231
Elements of **pSwapchain** **must** be unique
- VUID-VkPresentInfoKHR-pImageIndices-01430
Each element of **pImageIndices** **must** be the index of a presentable image acquired from the swapchain specified by the corresponding element of the **pSwapchains** array, and the presented image subresource **must** be in the **VK_IMAGE_LAYOUT_PRESENT_SRC_KHR** or **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR** layout at the time the operation is executed on a **VkDevice**
- VUID-VkPresentInfoKHR-pNext-06235
If a **VkPresentIdKHR** structure is included in the **pNext** chain, and the **presentId** feature is not enabled, each **presentIds** entry in that structure **must** be **NULL**
- VUID-VkPresentInfoKHR-swapchainMaintenance1-10158
If the **swapchainMaintenance1** feature is not enabled, then the **pNext** chain **must** not include a **VkSwapchainPresentFenceInfoKHR** structure
- VUID-VkPresentInfoKHR-pSwapchains-09199
If any element of the **pSwapchains** array has been created with

[VkSwapchainPresentModesCreateInfoKHR](#), all of the elements of this array **must** be created with [VkSwapchainPresentModesCreateInfoKHR](#)

- VUID-VkPresentInfoKHR-pNext-09759
If the **pNext** chain of this structure includes a [VkFrameBoundaryTensorsARM](#) structure then it **must** also include a [VkFrameBoundaryEXT](#) structure
- VUID-VkPresentInfoKHR-pNext-10821
If a [VkPresentId2KHR](#) structure is included in the **pNext** chain, and the **presentId2** feature is not enabled, each **presentIds** entry in that structure **must** be zero
- VUID-VkPresentInfoKHR-presentId2Supported-10822
If a [VkPresentId2KHR](#) structure is included and contains non-zero **presentIds**, **presentId2Supported** **must** be [VK_TRUE](#) in the [VkSurfaceCapabilitiesPresentId2KHR](#) structure returned by [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#) for the **surface**

Valid Usage (Implicit)

- VUID-VkPresentInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_PRESENT_INFO_KHR](#)
- VUID-VkPresentInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkDeviceGroupPresentInfoKHR](#), [VkDisplayPresentInfoKHR](#), [VkFrameBoundaryEXT](#), [VkFrameBoundaryTensorsARM](#), [VkPresentFrameTokenGGP](#), [VkPresentId2KHR](#), [VkPresentIdKHR](#), [VkPresentRegionsKHR](#), [VkPresentTimesInfoGOOGLE](#), [VkPresentTimingsInfoEXT](#), [VkSetPresentConfigNV](#), [VkSwapchainPresentFenceInfoKHR](#), or [VkSwapchainPresentModeInfoKHR](#)
- VUID-VkPresentInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPresentInfoKHR-pWaitSemaphores-parameter
If **waitSemaphoreCount** is not 0, **pWaitSemaphores** **must** be a valid pointer to an array of **waitSemaphoreCount** valid [VkSemaphore](#) handles
- VUID-VkPresentInfoKHR-pSwapchains-parameter
pSwapchains **must** be a valid pointer to an array of **swapchainCount** valid [VkSwapchainKHR](#) handles
- VUID-VkPresentInfoKHR-pImageIndices-parameter
pImageIndices **must** be a valid pointer to an array of **swapchainCount** [uint32_t](#) values
- VUID-VkPresentInfoKHR-pResults-parameter
If **pResults** is not **NULL**, **pResults** **must** be a valid pointer to an array of **swapchainCount** [VkResult](#) values
- VUID-VkPresentInfoKHR-swapchainCount-arraylength
swapchainCount **must** be greater than 0
- VUID-VkPresentInfoKHR-commonparent
Both of the elements of **pSwapchains**, and the elements of **pWaitSemaphores** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from

the same [VkDevice](#)

Host Synchronization

- Host access to each member of [pWaitSemaphores](#) **must** be externally synchronized
- Host access to each member of [pSwapchains](#) **must** be externally synchronized

When the [VK_KHR_incremental_present](#) extension is enabled, additional fields **can** be specified that allow an application to specify that only certain rectangular regions of the presentable images of a swapchain are changed. This is an optimization hint that a presentation engine **may** use to only update the region of a surface that is actually changing. The application still **must** ensure that all pixels of a presented image contain the desired values, in case the presentation engine ignores this hint. An application **can** provide this hint by adding a [VkPresentRegionsKHR](#) structure to the [pNext](#) chain of the [VkPresentInfoKHR](#) structure.

The [VkPresentRegionsKHR](#) structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionsKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkPresentRegionKHR* pRegions;
} VkPresentRegionsKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [swapchainCount](#) is the number of swapchains being presented to by this command.
- [pRegions](#) is [NULL](#) or a pointer to an array of [VkPresentRegionKHR](#) elements with [swapchainCount](#) entries. If not [NULL](#), each element of [pRegions](#) contains the region that has changed since the last present to the swapchain in the corresponding entry in the [VkPresentInfoKHR::pSwapchains](#) array.

Valid Usage

- VUID-VkPresentRegionsKHR-swapchainCount-01260
[swapchainCount](#) **must** be the same value as [VkPresentInfoKHR::swapchainCount](#), where [VkPresentInfoKHR](#) is included in the [pNext](#) chain of this [VkPresentRegionsKHR](#) structure

Valid Usage (Implicit)

- VUID-VkPresentRegionsKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR](#)

- VUID-VkPresentRegionsKHR-pRegions-parameter
If `pRegions` is not `NULL`, `pRegions` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentRegionKHR` structures
- VUID-VkPresentRegionsKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

For a given image and swapchain, the region to present is specified by the `VkPresentRegionKHR` structure, which is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkPresentRegionKHR {
    uint32_t      rectangleCount;
    const VkRectLayerKHR* pRectangles;
} VkPresentRegionKHR;
```

- `rectangleCount` is the number of rectangles in `pRectangles`, or zero if the entire image has changed and should be presented.
- `pRectangles` is either `NULL` or a pointer to an array of `VkRectLayerKHR` structures. The `VkRectLayerKHR` structure is the framebuffer coordinates, plus layer, of a portion of a presentable image that has changed and **must** be presented. If non-`NULL`, each entry in `pRectangles` is a rectangle of the given image that has changed since the last image was presented to the given swapchain. The rectangles **must** be specified relative to `VkSurfaceCapabilitiesKHR::currentTransform`, regardless of the swapchain's `preTransform`. The presentation engine will apply the `preTransform` transformation to the rectangles, along with any further transformation it applies to the image content.

Valid Usage (Implicit)

- VUID-VkPresentRegionKHR-pRectangles-parameter
If `rectangleCount` is not `0`, and `pRectangles` is not `NULL`, `pRectangles` **must** be a valid pointer to an array of `rectangleCount` valid `VkRectLayerKHR` structures

The `VkRectLayerKHR` structure is defined as:

```
// Provided by VK_KHR_incremental_present
typedef struct VkRectLayerKHR {
    VkOffset2D    offset;
    VkExtent2D    extent;
    uint32_t      layer;
} VkRectLayerKHR;
```

- **offset** is the origin of the rectangle, in pixels.
- **extent** is the size of the rectangle, in pixels.
- **layer** is the layer of the image. For images with only one layer, the value of **layer** **must** be 0.

Some platforms allow the size of a surface to change, and then scale the pixels of the image to fit the surface. **VkRectLayerKHR** specifies pixels of the swapchain's image(s), which will be constant for the life of the swapchain.

Valid Usage

- VUID-VkRectLayerKHR-offset-04864
The sum of **offset** and **extent**, after being transformed according to the **preTransform** member of the **VkSwapchainCreateInfoKHR** structure, **must** be no greater than the **imageExtent** member of the **VkSwapchainCreateInfoKHR** structure passed to **vkCreateSwapchainKHR**
- VUID-VkRectLayerKHR-layer-01262
layer **must** be less than the **imageArrayLayers** member of the **VkSwapchainCreateInfoKHR** structure passed to **vkCreateSwapchainKHR**

When the **VK_KHR_display_swapchain** extension is enabled, additional fields **can** be specified when presenting an image to a swapchain by setting **VkPresentInfoKHR::pNext** to point to a **VkDisplayPresentInfoKHR** structure.

The **VkDisplayPresentInfoKHR** structure is defined as:

```
// Provided by VK_KHR_display_swapchain
typedef struct VkDisplayPresentInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkRect2D            srcRect;
    VkRect2D            dstRect;
    VkBool32            persistent;
} VkDisplayPresentInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **srcRect** is a rectangular region of pixels to present. It **must** be a subset of the image being

presented. If `VkDisplayPresentInfoKHR` is not specified, this region will be assumed to be the entire presentable image.

- `dstRect` is a rectangular region within the visible region of the swapchain's display mode. If `VkDisplayPresentInfoKHR` is not specified, this region will be assumed to be the entire visible region of the swapchain's mode. If the specified rectangle is a subset of the display mode's visible region, content from display planes below the swapchain's plane will be visible outside the rectangle. If there are no planes below the swapchain's, the area outside the specified rectangle will be black. If portions of the specified rectangle are outside of the display's visible region, pixels mapping only to those portions of the rectangle will be discarded.
- `persistent`: If this is `VK_TRUE`, the display engine will enable buffered mode on displays that support it. This allows the display engine to stop sending content to the display until a new image is presented. The display will instead maintain a copy of the last presented image. This allows less power to be used, but **may** increase presentation latency. If `VkDisplayPresentInfoKHR` is not specified, persistent mode will not be used.

If the extent of the `srcRect` and `dstRect` are not equal, the presented pixels will be scaled accordingly.

Valid Usage

- VUID-VkDisplayPresentInfoKHR-srcRect-01257
`srcRect` **must** specify a rectangular region that is a subset of the image being presented
- VUID-VkDisplayPresentInfoKHR-dstRect-01258
`dstRect` **must** specify a rectangular region that is a subset of the `visibleRegion` parameter of the display mode the swapchain being presented uses
- VUID-VkDisplayPresentInfoKHR-persistentContent-01259
If the `persistentContent` member of the `VkDisplayPropertiesKHR` structure returned by `vkGetPhysicalDeviceDisplayPropertiesKHR` for the display the present operation targets is `VK_FALSE`, then `persistent` **must** be `VK_FALSE`

Valid Usage (Implicit)

- VUID-VkDisplayPresentInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR`

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

If the `pNext` chain of `VkPresentInfoKHR` includes a `VkDeviceGroupPresentInfoKHR` structure, then that structure includes an array of device masks and a device group present mode.

The `VkDeviceGroupPresentInfoKHR` structure is defined as:

```
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
VK_KHR_swapchain
typedef struct VkDeviceGroupPresentInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 swapchainCount;
    const uint32_t*          pDeviceMasks;
    VkDeviceGroupPresentModeFlagBitsKHR mode;
} VkDeviceGroupPresentInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is zero or the number of elements in `pDeviceMasks`.
- `pDeviceMasks` is a pointer to an array of device masks, one for each element of `VkPresentInfoKHR::pSwapchains`.
- `mode` is a `VkDeviceGroupPresentModeFlagBitsKHR` value specifying the device group present mode that will be used for this present.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of `pDeviceMasks` selects which instance of the swapchain image is presented. Each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of `pDeviceMasks` selects which instances of the swapchain image are component-wise summed and the sum of those images is presented. If the sum in any component is outside the representable range, the value of that component is undefined. Each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`.

If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then each element of `pDeviceMasks` selects which instance(s) of the swapchain images are presented. For each bit set in each element of `pDeviceMasks`, the corresponding physical device **must** have a presentation engine as reported by `VkDeviceGroupPresentCapabilitiesKHR`.

If `VkDeviceGroupPresentInfoKHR` is not provided or `swapchainCount` is zero then the masks are considered to be 1. If `VkDeviceGroupPresentInfoKHR` is not provided, `mode` is considered to be `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`.

Valid Usage

- VUID-VkDeviceGroupPresentInfoKHR-swapchainCount-01297
`swapchainCount` **must** equal 0 or `VkPresentInfoKHR::swapchainCount`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01298
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-mode-01299
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_REMOTE_BIT_KHR`, then each element of `pDeviceMasks` **must** have exactly one bit set, and some physical device in the logical device **must** include that bit in its `VkDeviceGroupPresentCapabilitiesKHR::presentMask`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01300
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_SUM_BIT_KHR`, then each element of `pDeviceMasks` **must** have a value for which all set bits are set in one of the elements of `VkDeviceGroupPresentCapabilitiesKHR::presentMask`
- VUID-VkDeviceGroupPresentInfoKHR-mode-01301
If `mode` is `VK_DEVICE_GROUP_PRESENT_MODE_LOCAL_MULTI_DEVICE_BIT_KHR`, then for each bit set in each element of `pDeviceMasks`, the corresponding element of `VkDeviceGroupPresentCapabilitiesKHR::presentMask` **must** be non-zero
- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-01302
The value of each element of `pDeviceMasks` **must** be equal to the device mask passed in `VkAcquireNextImageInfoKHR::deviceMask` when the image index was last acquired
- VUID-VkDeviceGroupPresentInfoKHR-mode-01303
`mode` **must** have exactly one bit set, and that bit **must** have been included in `VkDeviceGroupSwapchainCreateInfoKHR::modes`

Valid Usage (Implicit)

- VUID-VkDeviceGroupPresentInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR`
- VUID-VkDeviceGroupPresentInfoKHR-pDeviceMasks-parameter
If `swapchainCount` is not 0, `pDeviceMasks` **must** be a valid pointer to an array of `swapchainCount` `uint32_t` values
- VUID-VkDeviceGroupPresentInfoKHR-mode-parameter
`mode` **must** be a valid `VkDeviceGroupPresentModeFlagBitsKHR` value

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

When the `presentAtAbsoluteTime` or `presentAtRelativeTime` feature is enabled, an application **can** instruct the presentation engine to attempt to display an image at a specified time, or for a minimum duration, by including the `VkPresentTimingsInfoEXT` structure in the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentTimingsInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingsInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             swapchainCount;
    const VkPresentTimingInfoEXT* pTimingInfos;
} VkPresentTimingsInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pTimingInfos` is `NULL` or a pointer to an array of `VkPresentTimingInfoEXT` elements with `swapchainCount` entries. If not `NULL`, each element of `pTimingInfos` contains timing information for the presentation of the image corresponding to the entry in the `VkPresentInfoKHR::pImageIndices` array.

Valid Usage

- VUID-VkPresentTimingsInfoEXT-swapchainCount-12233
`swapchainCount` **must** be equal to `VkPresentInfoKHR::swapchainCount`
- VUID-VkPresentTimingsInfoEXT-pSwapchains-12234
All swapchains in `VkPresentInfoKHR::pSwapchains` **must** have been created with the `VkSwapchainCreateInfoKHR::flags` field containing `VK_SWAPCHAIN_CREATE_PRESENT_TIMING_BIT_EXT`
- VUID-VkPresentTimingsInfoEXT-pSwapchains-12235
For each member of `VkPresentInfoKHR::pSwapchains`, if the associated `VkPresentTimingInfoEXT::targetTime` is not zero, the swapchain's current present mode **must** be `VK_PRESENT_MODE_FIFO_LATEST_READY_KHR`, `VK_PRESENT_MODE_FIFO_KHR` or `VK_PRESENT_MODE_FIFO_RELAXED_KHR`

Valid Usage (Implicit)

- VUID-VkPresentTimingsInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMINGS_INFO_EXT`
- VUID-VkPresentTimingsInfoEXT-pTimingInfos-parameter
If `pTimingInfos` is not `NULL`, `pTimingInfos` **must** be a valid pointer to an array of `swapchainCount` valid `VkPresentTimingInfoEXT` structures

- VUID-VkPresentTimingsInfoEXT-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

Structure Chaining

Extends the structure

- [VkPresentInfoKHR](#)

The `VkPresentTimingInfoEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPresentTimingInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkPresentTimingInfoFlagsEXT flags;
    uint64_t             targetTime;
    uint64_t             timeDomainId;
    VkPresentStageFlagsEXT presentStageQueries;
    VkPresentStageFlagsEXT targetTimeDomainPresentStage;
} VkPresentTimingInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkPresentTimingInfoFlagBitsEXT](#) specifying options for how to interpret the timing information.
- `targetTime` is zero or a value specifying the target present time or duration, in nanoseconds, of the presentation request.
- `timeDomainId` is the id of the time domain used to specify the absolute target present time and the timing results obtained in a subsequent [vkGetPastPresentationTimingEXT](#) call for the current presentation request.
- `presentStageQueries` is zero or a valid [VkPresentStageFlagsEXT](#) value indicating which present stages the presentation engine will collect timing information for.
- `targetTimeDomainPresentStage` is a valid [VkPresentStageFlagsEXT](#) specifying a single present stage used to interpret `targetTime`.

If `targetTime` is not zero, the implementation attempts to align the [VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT](#) present stage of that presentation request with the time specified in `targetTime` according to the time domain used. If [VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT](#) is not set in `flags`, it indicates that the application would strictly prefer the image to not be visible before `targetTime` has lapsed.

If `targetTime` is not zero and `timeDomainId` is associated with a [VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT](#) time domain, `targetTimeDomainPresentStage` is

used to specify which present stage's time domain `targetTime` is specified for. Otherwise, `targetTimeDomainPresentStage` is ignored.

If `presentStageQueries` is not zero, a slot in the swapchain's internal results queue is reserved to hold the requested present timing data until the application retrieves them. If no slots are available, presentation fails and returns `VK_ERROR_PRESENT_TIMING_QUEUE_FULL_EXT`.

NOTE

Some platforms, due to hardware or system limitations, **may** not be able to accurately time `targetTime` with the actual physical event of the image becoming visible on the display. However, those timing capabilities **may** still be useful and result in improved animation quality.

As such, the `presentAtAbsoluteTime` and `presentAtRelativeTime` features do not provide a strict guarantee regarding the completion of the `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` present stage relative to the `targetTime`, and implementations **must** strive to make it as consistent and accurate as possible.

NOTE

Applications that specify an absolute present time **should** regularly rebase their calculations for their next target time on the feedback from `vkGetPastPresentationTimingEXT` to compensate for accumulated precision errors or potential clock drift. It is recommended that when targeting the time of a vertical blanking period, applications set `VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT` to allow the implementation to compensate for small precision errors that may cause an image to be displayed one refresh cycle later than intended.

Some implementations **may** not provide timing data for the `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` present stage. Applications **should** use the supported present stage nearest to it to compute a desired target presentation time.

Valid Usage

- VUID-VkPresentTimingInfoEXT-targetTime-12236

If `targetTime` is not zero and `flags` does not contain `VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT`, the `presentAtAbsoluteTime` feature **must** be enabled and the `presentAtAbsoluteTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the swapchain **must** be `VK_TRUE`

- VUID-VkPresentTimingInfoEXT-targetTime-12237

If `targetTime` is not zero and `flags` contains `VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT`, the `presentAtRelativeTime` feature **must** be enabled and the `presentAtRelativeTimeSupported` member of the `VkPresentTimingSurfaceCapabilitiesEXT` returned by `vkGetPhysicalDeviceSurfaceCapabilities2KHR` for the surface associated with the

swapchain **must** be `VK_TRUE`

- VUID-VkPresentTimingInfoEXT-timeDomainId-12238

If `timeDomainId` is associated with a `VK_TIME_DOMAIN_PRESENT_STAGE_LOCAL_EXT` time domain, and `targetTime` is not zero, `targetTimeDomainPresentStage` **must** be a single `VkPresentStageFlagsEXT` value

- VUID-VkPresentTimingInfoEXT-timeDomainId-12400

`timeDomainId` **must** be an id previously returned by `vkGetSwapchainTimeDomainPropertiesEXT`

Valid Usage (Implicit)

- VUID-VkPresentTimingInfoEXT-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMING_INFO_EXT`

- VUID-VkPresentTimingInfoEXT-pNext-pNext

`pNext` **must** be `NULL`

- VUID-VkPresentTimingInfoEXT-flags-parameter

`flags` **must** be a valid combination of `VkPresentTimingInfoFlagBitsEXT` values

- VUID-VkPresentTimingInfoEXT-presentStageQueries-parameter

`presentStageQueries` **must** be a valid combination of `VkPresentStageFlagBitsEXT` values

- VUID-VkPresentTimingInfoEXT-targetTimeDomainPresentStage-parameter

`targetTimeDomainPresentStage` **must** be a valid combination of `VkPresentStageFlagBitsEXT` values

Bits which **can** be set in `VkPresentTimingInfoEXT::flags`, specifying options for how to interpret timing information:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentTimingInfoFlagBitsEXT {
    VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT = 0x00000001,
    VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT = 0x00000002,
} VkPresentTimingInfoFlagBitsEXT;
```

- `VK_PRESENT_TIMING_INFO_PRESENT_AT_RELATIVE_TIME_BIT_EXT` specifies that `VkPresentTimingInfoEXT::targetTime` is to be interpreted as a relative time from the previous presentation's `VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT` stage. If the swapchain has never been used to present an image, the provided `targetTime` is ignored.
- `VK_PRESENT_TIMING_INFO_PRESENT_AT_NEAREST_REFRESH_CYCLE_BIT_EXT` specifies that the application would prefer the image to be presented earlier than the time specified in `VkPresentTimingInfoEXT::targetTime` if that time falls within the first half of a refresh cycle. In that case, the presentation engine **may** choose to display the image at the start of that refresh cycle.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentTimingInfoFlagsEXT;
```

VkPresentTimingInfoFlagsEXT is a bitmask type for setting a mask of zero or more **VkPresentTimingInfoFlagBitsEXT**.

Presenting an image to the user typically involves multiple stages. Bits which **can** be set to specify present stages are:

```
// Provided by VK_EXT_present_timing
typedef enum VkPresentStageFlagBitsEXT {
    VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT = 0x00000001,
    VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT = 0x00000002,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT = 0x00000004,
    VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT = 0x00000008,
} VkPresentStageFlagBitsEXT;
```

- **VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT** marks the end of the set of queue operations enqueued by **vkQueuePresentKHR** on the provided **VkQueue** for a presentation request.
- **VK_PRESENT_STAGE_REQUEST_DEQUEUED_BIT_EXT** is the stage after which the presentation request has been dequeued from the swapchain's internal presentation request queue, if any, as specified by the present mode associated with that request.
- **VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_OUT_BIT_EXT** is the stage after which data for the first pixel of the presentation request associated with the image has left the presentation engine for a display hardware.
- **VK_PRESENT_STAGE_IMAGE_FIRST_PIXEL_VISIBLE_BIT_EXT** is the stage after which a display hardware has made the first pixel visible for the presentation request associated with the image to be presented.

NOTE

The set of queue operations delimited by **VK_PRESENT_STAGE_QUEUE_OPERATIONS_END_BIT_EXT** includes the wait for the semaphores specified in **VkPresentInfoKHR::pWaitSemaphores**, if any, and any work implicitly enqueued by the implementation.

```
// Provided by VK_EXT_present_timing
typedef VkFlags VkPresentStageFlagsEXT;
```

VkPresentStageFlagsEXT is a bitmask type for setting a mask of zero or more **VkPresentStageFlagBitsEXT**.

When the **VK_GOOGLE_display_timing** extension is enabled, additional fields **can** be specified that allow an application to specify the earliest time that an image should be displayed. This allows an application to avoid stutter that is caused by an image being displayed earlier than planned. Such

stuttering can occur with both fixed and variable-refresh-rate displays, because stuttering occurs when the geometry is not correctly positioned for when the image is displayed. An application **can** instruct the presentation engine that an image should not be displayed earlier than a specified time by adding a `VkPresentTimesInfoGOOGLE` structure to the `pNext` chain of the `VkPresentInfoKHR` structure.

The `VkPresentTimesInfoGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimesInfoGOOGLE {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             swapchainCount;
    const VkPresentTimeGOOGLE* pTimes;
} VkPresentTimesInfoGOOGLE;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pTimes` is `NULL` or a pointer to an array of `VkPresentTimeGOOGLE` elements with `swapchainCount` entries. If not `NULL`, each element of `pTimes` contains the earliest time to present the image corresponding to the entry in the `VkPresentInfoKHR::pImageIndices` array.

Valid Usage

- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-01247
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where `VkPresentInfoKHR` is included in the `pNext` chain of this `VkPresentTimesInfoGOOGLE` structure

Valid Usage (Implicit)

- VUID-VkPresentTimesInfoGOOGLE-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_TIMES_INFO_GOOGLE`
- VUID-VkPresentTimesInfoGOOGLE-pTimes-parameter
If `pTimes` is not `NULL`, `pTimes` **must** be a valid pointer to an array of `swapchainCount` `VkPresentTimeGOOGLE` structures
- VUID-VkPresentTimesInfoGOOGLE-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

The `VkPresentTimeGOOGLE` structure is defined as:

```
// Provided by VK_GOOGLE_display_timing
typedef struct VkPresentTimeGOOGLE {
    uint32_t    presentID;
    uint64_t    desiredPresentTime;
} VkPresentTimeGOOGLE;
```

- `presentID` is an application-provided identification value, that **can** be used with the results of `vkGetPastPresentationTimingGOOGLE`, in order to uniquely identify this present. In order to be useful to the application, it **should** be unique within some period of time that is meaningful to the application.
- `desiredPresentTime` specifies that the image given **should** not be displayed to the user any earlier than this time. `desiredPresentTime` is a time in nanoseconds, relative to a monotonically-increasing clock (e.g. `CLOCK_MONOTONIC` (see `clock_gettime(2)`) on Android and Linux). A value of zero specifies that the presentation engine **may** display the image at any time. This is useful when the application desires to provide `presentID`, but does not need a specific `desiredPresentTime`.

The `VkPresentIdKHR` structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPresentIdKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t            swapchainCount;
    const uint64_t*     pPresentIds;
} VkPresentIdKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to the `vkQueuePresentKHR` command.
- `pPresentIds` is `NULL` or a pointer to an array of `uint64_t` with `swapchainCount` entries. If not `NULL`, each non-zero value in `pPresentIds` specifies the present id to be associated with the presentation of the swapchain with the same index in the `vkQueuePresentKHR` call.

For applications to be able to reference specific presentation events queued by a call to `vkQueuePresentKHR`, an identifier needs to be associated with them. When the `presentId` feature is enabled, applications **can** include the `VkPresentIdKHR` structure in the `pNext` chain of the `VkPresentInfoKHR` structure to supply identifiers.

Each `VkSwapchainKHR` has a `presentId` associated with it. This value is initially zero when the `VkSwapchainKHR` is created.

When a `VkPresentIdKHR` structure with a non-`NULL` `pPresentIds` is included in the `pNext` chain of a

`VkPresentInfoKHR` structure, each `pSwapchains` entry has a `presentId` associated in the `pPresentIds` array at the same index as the swapchain in the `pSwapchains` array. If this `presentId` is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated `presentId`. A non-zero `presentId` **must** be greater than any non-zero `presentId` passed previously by the application for the same swapchain.

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the `presentId` value, but implementations **should** make this as close as possible to the presentation of the first pixel in the new image to the user.

Valid Usage

- VUID-VkPresentIdKHR-swapchainCount-04998
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where this `VkPresentIdKHR` is in the `pNext` chain of the `VkPresentInfoKHR` structure
- VUID-VkPresentIdKHR-presentIds-04999
Each non-zero entry in `presentIds` **must** be greater than all previously submitted `present` ids for the associated swapchain in `VkPresentInfoKHR::pSwapchains`

Valid Usage (Implicit)

- VUID-VkPresentIdKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_ID_KHR`
- VUID-VkPresentIdKHR-pPresentIds-parameter
If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount` `uint64_t` values
- VUID-VkPresentIdKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

When the `presentWait` feature is enabled, an application **can** wait for an image to be presented to the user by first specifying a `presentId` for the target presentation by adding a `VkPresentIdKHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait
VkResult vkWaitForPresentKHR(
    VkDevice                                device,
    VkSwapchainKHR                          swapchain,
    uint64_t                                presentId,
    uint64_t                                timeout);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the non-retired swapchain on which an image was queued for presentation.
- **presentId** is the presentation presentId to wait for.
- **timeout** is the timeout period in units of nanoseconds. **timeout** is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer than one nanosecond, and **may** be longer than the requested period.

The call to **vkWaitForPresentKHR** will block until either the **presentId** associated with **swapchain** is greater than or equal to **presentId**, or **timeout** nanoseconds passes. When the swapchain becomes OUT_OF_DATE, the call will either return **VK_SUCCESS** (if the image was delivered to the presentation engine and may have been presented to the user) or will return early with status **VK_ERROR_OUT_OF_DATE_KHR** (if the image could not be presented to the user).

There is no requirement for any precise timing relationship between the presentation of the image to the user and the update of the **presentId** value, but implementations **should** make this as close as possible to the presentation of the first pixel in the next image being presented to the user.

For **VK_PRESENT_MODE_MAILBOX_KHR** (or other present mode where images may be replaced in the presentation queue) any wait of this type associated with such an image **must** be signaled no later than a wait associated with the replacing image would be signaled.

As an exception to the normal rules for objects which are externally synchronized, the **swapchain** passed to **vkWaitForPresentKHR** **may** be simultaneously used by other threads in calls to functions other than **vkDestroySwapchainKHR**. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresentKHR-swapchain-04997
swapchain **must** not be in the retired state
- VUID-vkWaitForPresentKHR-presentWait-06234
The **presentWait** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkWaitForPresentKHR-device-parameter
device **must** be a valid **VkDevice** handle

- VUID-vkWaitForPresentKHR-swapchain-parameter
swapchain **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkWaitForPresentKHR-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **swapchain** **must** be externally synchronized

Return Codes

Success

- [VK_SUBOPTIMAL_KHR](#)
- [VK_SUCCESS](#)
- [VK_TIMEOUT](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT](#)
- [VK_ERROR_OUT_OF_DATE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkPresentId2KHR](#) structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPresentId2KHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const uint64_t*     pPresentIds;
} VkPresentId2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **swapchainCount** is the number of swapchains being presented to the [vkQueuePresentKHR](#) command.

- `pPresentIds` is `NULL` or a pointer to an array of `uint64_t` with `swapchainCount` entries. If not `NULL`, each non-zero value in `pPresentIds` specifies the present id to be associated with the presentation of the swapchain with the same index in the `vkQueuePresentKHR` call.

For applications to be able to reference specific presentation events queued by a call to `vkQueuePresentKHR`, an identifier needs to be associated with them.

When the `VkSurfaceCapabilitiesPresentId2KHR` surface capability is present for a surface, applications **can** include the `VkPresentId2KHR` structure in the `pNext` chain of the `VkPresentInfoKHR` structure to associate an identifier with each presentation request. The `pPresentIds` provides an identifier for the swapchain present at the corresponding index in `VkPresentInfoKHR`'s `pSwapchains` array.

If this `presentId` is non-zero, then the application **can** later use this value to refer to that image presentation. A value of zero indicates that this presentation has no associated `presentId`. A non-zero `presentId` **must** be greater than any non-zero `presentId` passed previously by the application for the same swapchain.

If a non-zero `presentId` was provided, this may be used with `vkWaitForPresent2KHR` for the application to synchronize against the presentation engine's processing of the presentation request.

NOTE

The ID namespace used by this extension **must** be shared with other extensions that allow the application to provide a 64-bit monotonically increasing presentation ID, such as the original `VK_KHR_present_id`.

This is to allow existing extensions that depend on `VK_KHR_present_id` to use `VK_KHR_present_id2` provided IDs without change, as well as to simplify writing future extensions that require application provided presentation IDs.

Valid Usage

- VUID-VkPresentId2KHR-swapchainCount-10818
`swapchainCount` **must** be the same value as `VkPresentInfoKHR::swapchainCount`, where this `VkPresentId2KHR` is in the `pNext` chain of the `VkPresentInfoKHR` structure
- VUID-VkPresentId2KHR-presentIds-10819
Each non-zero entry in `presentIds` **must** be greater than all previously submitted present ids for the associated swapchain in `VkPresentInfoKHR::pSwapchains`
- VUID-VkPresentId2KHR-None-10820
The swapchain must have been created with `VK_SWAPCHAIN_CREATE_PRESENT_ID_2_BIT_KHR` bit set in the `VkSwapchainCreateFlagBitsKHR` field

Valid Usage (Implicit)

- VUID-VkPresentId2KHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PRESENT_ID_2_KHR`

- VUID-VkPresentId2KHR-pPresentIds-parameter
If `pPresentIds` is not `NULL`, `pPresentIds` **must** be a valid pointer to an array of `swapchainCount uint64_t` values
- VUID-VkPresentId2KHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than `0`

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

When the `VkSurfaceCapabilitiesPresentWait2KHR` surface capability is present for a given surface, an application **can** wait for an image to be presented to the user by first specifying a `presentId` for the target presentation by adding a `VkPresentId2KHR` structure to the `pNext` chain of the `VkPresentInfoKHR` structure and then waiting for that presentation to complete by calling:

```
// Provided by VK_KHR_present_wait2
VkResult vkWaitForPresent2KHR(
    VkDevice          device,
    VkSwapchainKHR    swapchain,
    const VkPresentWait2InfoKHR* pPresentWait2Info);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the non-retired swapchain on which an image was queued for presentation.
- `pPresentWait2Info` is a pointer to a `VkPresentWait2InfoKHR` structure specifying the parameters of the wait.

`vkWaitForPresent2KHR` waits for the presentation engine to have begun presentation of the presentation request associated with the `VkPresentWait2InfoKHR::presentId` on `swapchain`, or for `VkPresentWait2InfoKHR::timeout` to have expired.

The wait request will complete when the timeout expires, or after the corresponding presentation request has either taken effect within the presentation engine or has been replaced without presentation.

The timing relationship between the presentation of the image to the user and the wait request completing is implementation-dependent due to variations in window system implementations.

If the `swapchain` becomes `VK_ERROR_OUT_OF_DATE_KHR` either before or during this call, the call **may** either return `VK_SUCCESS` (if the image was delivered to the presentation engine and **may** have been presented to the user) or return early with status `VK_ERROR_OUT_OF_DATE_KHR` (if the image could not be presented to the user).

As an exception to the normal rules for objects which are externally synchronized, the `swapchain` passed to `vkWaitForPresent2KHR` **may** be simultaneously used by other threads in calls to functions

other than [vkDestroySwapchainKHR](#). Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage

- VUID-vkWaitForPresent2KHR-presentWait2-10814
The [presentWait2](#) feature **must** be enabled
- VUID-vkWaitForPresent2KHR-None-10815
The [VkSurfaceCapabilitiesPresentWait2KHR](#) surface capability **must** be present for the underlying surface
- VUID-vkWaitForPresent2KHR-None-10816
The swapchain must have been created with [VK_SWAPCHAIN_CREATE_PRESENT_WAIT_2_BIT_KHR](#) bit set in the [VkSwapchainCreateFlagBitsKHR](#) field
- VUID-vkWaitForPresent2KHR-presentId-10817
The [presentId](#) value **must** have been associated with a [vkQueuePresentKHR](#) request on the [swapchain](#) which returned a non-error value

Valid Usage (Implicit)

- VUID-vkWaitForPresent2KHR-device-parameter
[device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkWaitForPresent2KHR-swapchain-parameter
[swapchain](#) **must** be a valid [VkSwapchainKHR](#) handle
- VUID-vkWaitForPresent2KHR-pPresentWait2Info-parameter
[pPresentWait2Info](#) **must** be a valid pointer to a valid [VkPresentWait2InfoKHR](#) structure
- VUID-vkWaitForPresent2KHR-swapchain-parent
[swapchain](#) **must** have been created, allocated, or retrieved from [device](#)

Host Synchronization

- Host access to [swapchain](#) **must** be externally synchronized

Return Codes

Success

- [VK_SUBOPTIMAL_KHR](#)
- [VK_SUCCESS](#)
- [VK_TIMEOUT](#)

Failure

- [VK_ERROR_DEVICE_LOST](#)
- [VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT](#)
- [VK_ERROR_OUT_OF_DATE_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

When the [VK_GGP_frame_token](#) extension is enabled, a Google Games Platform frame token **can** be specified when presenting an image to a swapchain by adding a [VkPresentFrameTokenGGP](#) structure to the [pNext](#) chain of the [VkPresentInfoKHR](#) structure.

The [VkPresentFrameTokenGGP](#) structure is defined as:

```
// Provided by VK_GGP_frame_token
typedef struct VkPresentFrameTokenGGP {
    VkStructureType    sType;
    const void*        pNext;
    GgpFrameToken      frameToken;
} VkPresentFrameTokenGGP;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [frameToken](#) is the Google Games Platform frame token.

Valid Usage

- VUID-VkPresentFrameTokenGGP-frameToken-02680
[frameToken](#) **must** be a valid [GgpFrameToken](#)

Valid Usage (Implicit)

- VUID-VkPresentFrameTokenGGP-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_PRESENT_FRAME_TOKEN_GGP](#)

Structure Chaining

Extends the structure

- [VkPresentInfoKHR](#)

The [VkSwapchainPresentModeInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentModeInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             swapchainCount;
    const VkPresentModeKHR* pPresentModes;
} VkSwapchainPresentModeInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentModeInfoKHR
typedef VkSwapchainPresentModeInfoKHR VkSwapchainPresentModeInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pPresentModes` is a list of presentation modes with `swapchainCount` entries.

If the `pNext` chain of [VkPresentInfoKHR](#) includes a [VkSwapchainPresentModeInfoKHR](#) structure, then that structure defines the presentation modes used for the current and subsequent presentation operations.

When the application changes present modes with [VkSwapchainPresentModeInfoKHR](#), images that have already been queued for presentation will continue to be presented according to the previous present mode. The current image being queued for presentation and subsequent images will be presented according to the new present mode. The behavior during the transition between the two modes is defined as follows.

- Transition from [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#) to [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#): the presentation engine updates the shared presentable image according to the behavior of [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#).
- Transition from [VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR](#) to [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#): the presentation engine **may** update the shared presentable image or defer that to its regular refresh cycle, according to the behavior of [VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR](#).
- Transition between [VK_PRESENT_MODE_FIFO_KHR](#) and [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#): Images continue to be appended to the same FIFO

queue, and the behavior with respect to waiting for vertical blanking period will follow the new mode for current and subsequent images.

- Transition from [VK_PRESENT_MODE_IMMEDIATE_KHR](#) to [VK_PRESENT_MODE_FIFO_KHR](#) or [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#) or [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#) : As all prior present requests in the [VK_PRESENT_MODE_IMMEDIATE_KHR](#) mode are applied immediately, there are no outstanding present operations in this mode, and current and subsequent images are appended to the FIFO queue and presented according to the new mode.
- Transition from [VK_PRESENT_MODE_MAILBOX_KHR](#) to [VK_PRESENT_MODE_FIFO_KHR](#) or [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#) or [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#) : Presentation in FIFO modes require waiting for the next vertical blanking period, with [VK_PRESENT_MODE_MAILBOX_KHR](#) allowing the pending present operation to be replaced by a new one. In this case, the current present operation will replace the pending present operation and is applied according to the new mode.
- Transition from [VK_PRESENT_MODE_FIFO_KHR](#) or [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#) or [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#) to [VK_PRESENT_MODE_IMMEDIATE_KHR](#) or [VK_PRESENT_MODE_MAILBOX_KHR](#): If the FIFO queue is empty, presentation is done according to the behavior of the new mode. If there are present operations in the FIFO queue, once the last present operation is performed based on the respective vertical blanking period, the current and subsequent updates are applied according to the new mode.
- Transition between [VK_PRESENT_MODE_FIFO_KHR](#) or [VK_PRESENT_MODE_FIFO_RELAXED_KHR](#), and [VK_PRESENT_MODE_FIFO_LATEST_READY_KHR](#): Images continue to be appended to the same FIFO queue, and the behavior with respect to waiting for vertical blanking period and dequeuing requests will follow the new mode for current and subsequent images.
- The behavior during transition between any other present modes, if possible, is implementation defined.

Valid Usage

- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-07760
[swapchainCount](#) **must** be equal to [VkPresentInfoKHR::swapchainCount](#)
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-07761
Each entry in [pPresentModes](#) **must** be a presentation mode specified in [VkSwapchainPresentModesCreateInfoKHR::pPresentModes](#) when creating the entry's corresponding swapchain

Valid Usage (Implicit)

- VUID-VkSwapchainPresentModeInfoKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_MODE_INFO_KHR](#)
- VUID-VkSwapchainPresentModeInfoKHR-pPresentModes-parameter
[pPresentModes](#) **must** be a valid pointer to an array of [swapchainCount](#) valid [VkPresentModeKHR](#) values

- VUID-VkSwapchainPresentModeInfoKHR-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

Structure Chaining

Extends the structure

- [VkPresentInfoKHR](#)

The `VkSwapchainPresentFenceInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkSwapchainPresentFenceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           swapchainCount;
    const VkFence*      pFences;
} VkSwapchainPresentFenceInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkSwapchainPresentFenceInfoKHR
typedef VkSwapchainPresentFenceInfoKHR VkSwapchainPresentFenceInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainCount` is the number of swapchains being presented to by this command.
- `pFences` is a list of fences with `swapchainCount` entries. Each entry **must** be `VK_NULL_HANDLE` or the handle of a fence to signal when the relevant operations on the associated swapchain have completed.

The set of *queue operations* defined by queuing an image for presentation, as well as operations performed by the presentation engine, access the payloads of objects associated with the presentation operation. The associated objects include:

- The swapchain image, its implicitly bound memory, and any other resources bound to that memory.
- The wait semaphores specified when queuing the image for presentation.

The application **can** provide a fence that the implementation will signal after all such queue operations have completed, and after the presentation engine has taken a reference to the payloads of all objects provided in `VkPresentInfoKHR` that the presentation engine accesses as part of the present operation. The fence **may** not wait for the present operation to complete. For all binary wait semaphores imported by the presentation engine using the equivalent of reference transference, as described in [Importing Semaphore Payloads](#), this fence **must** not signal until all such semaphore payloads have been reset by the presentation engine.

The application **can** destroy the wait semaphores associated with a given presentation operation when at least one of the associated fences is signaled, and **can** destroy the swapchain when the fences associated with all past presentation requests referring to that swapchain have signaled.

Fences associated with presentations to the same swapchain on the same [VkQueue](#) **must** be signaled in the same order as the present operations.

To specify a fence for each swapchain in a present operation, include the [VkSwapchainPresentFenceInfoKHR](#) structure in the [pNext](#) chain of the [VkPresentInfoKHR](#) structure.

Valid Usage

- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-07757
[swapchainCount](#) **must** be equal to [VkPresentInfoKHR::swapchainCount](#)
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07758
Each element of [pFences](#) that is not [VK_NULL_HANDLE](#) **must** be unsignaled
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-07759
Each element of [pFences](#) that is not [VK_NULL_HANDLE](#) **must** not be associated with any other queue command that has not yet completed execution on that queue

Valid Usage (Implicit)

- VUID-VkSwapchainPresentFenceInfoKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_FENCE_INFO_KHR](#)
- VUID-VkSwapchainPresentFenceInfoKHR-pFences-parameter
[pFences](#) **must** be a valid pointer to an array of [swapchainCount](#) valid or [VK_NULL_HANDLE](#) [VkFence](#) handles
- VUID-VkSwapchainPresentFenceInfoKHR-swapchainCount-arraylength
[swapchainCount](#) **must** be greater than 0

Structure Chaining

Extends the structure

- [VkPresentInfoKHR](#)

To release images previously acquired through [vkAcquireNextImage2KHR](#) or [vkAcquireNextImageKHR](#), call:

```
// Provided by VK_KHR_swapchain_maintenance1
VkResult vkReleaseSwapchainImagesKHR(
    VkDevice device,
    const VkReleaseSwapchainImagesInfoKHR* pReleaseInfo);
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to vkReleaseSwapchainImagesKHR
VkResult vkReleaseSwapchainImagesEXT(
    VkDevice device,
    const VkReleaseSwapchainImagesInfoKHR* pReleaseInfo);
```

- **device** is the device associated with [VkReleaseSwapchainImagesInfoKHR::swapchain](#).
- **pReleaseInfo** is a pointer to a [VkReleaseSwapchainImagesInfoKHR](#) structure containing parameters of the release.

Only images that are not in use by the device **can** be released.

Releasing images is a read-only operation that will not affect the content of the released images. Upon reacquiring the image, the image contents and its layout will be the same as they were prior to releasing it. However, if a mechanism other than Vulkan is used to modify the platform window associated with the swapchain, the content of all presentable images in the swapchain becomes undefined.

NOTE

This functionality is useful during swapchain recreation, where acquired images from the old swapchain can be released instead of presented.

Valid Usage

- VUID-vkReleaseSwapchainImagesKHR-swapchainMaintenance1-10159
Feature **swapchainMaintenance1** **must** be enabled

Valid Usage (Implicit)

- VUID-vkReleaseSwapchainImagesKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkReleaseSwapchainImagesKHR-pReleaseInfo-parameter
pReleaseInfo **must** be a valid pointer to a valid [VkReleaseSwapchainImagesInfoKHR](#) structure

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_SURFACE_LOST_KHR](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The `VkReleaseSwapchainImagesInfoKHR` structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkReleaseSwapchainImagesInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkSwapchainKHR     swapchain;
    uint32_t           imageIndexCount;
    const uint32_t*    pImageIndices;
} VkReleaseSwapchainImagesInfoKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkReleaseSwapchainImagesInfoKHR
typedef VkReleaseSwapchainImagesInfoKHR VkReleaseSwapchainImagesInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is a swapchain to which images are being released.
- `imageIndexCount` is the number of image indices to be released.
- `pImageIndices` is a pointer to an array of indices into the array of `swapchain`'s presentable images, with `imageIndexCount` entries.

Valid Usage

- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07785
Each element of `pImageIndices` **must** be the index of a presentable image acquired from the swapchain specified by `swapchain`
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-07786
All uses of presentable images identified by elements of `pImageIndices` **must** have completed execution

Valid Usage (Implicit)

- VUID-VkReleaseSwapchainImagesInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_RELEASE_SWAPCHAIN_IMAGES_INFO_KHR`
- VUID-VkReleaseSwapchainImagesInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkReleaseSwapchainImagesInfoKHR-swapchain-parameter
`swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-VkReleaseSwapchainImagesInfoKHR-pImageIndices-parameter
`pImageIndices` **must** be a valid pointer to an array of `imageIndexCount` `uint32_t` values

- VUID-VkReleaseSwapchainImagesInfoKHR-imageIndexCount-arraylength
`imageIndexCount` **must** be greater than 0

Host Synchronization

- Host access to `swapchain` **must** be externally synchronized

39.11. HDR Metadata

This section describes how to improve color reproduction of content to better reproduce colors as seen on the display used to originally optimize the content.

To provide HDR metadata to an implementation, call:

```
// Provided by VK_EXT_hdr_metadata
void vkSetHdrMetadataEXT(
    VkDevice          device,
    uint32_t          swapchainCount,
    const VkSwapchainKHR* pSwapchains,
    const VkHdrMetadataEXT* pMetadata);
```

- `device` is the logical device where the swapchain(s) were created.
- `swapchainCount` is the number of swapchains included in `pSwapchains`.
- `pSwapchains` is a pointer to an array of `swapchainCount` `VkSwapchainKHR` handles.
- `pMetadata` is a pointer to an array of `swapchainCount` `VkHdrMetadataEXT` structures.

The metadata will be applied to the specified `VkSwapchainKHR` objects at the next `vkQueuePresentKHR` call using that `VkSwapchainKHR` object. The metadata will persist until a subsequent `vkSetHdrMetadataEXT` changes it.

Valid Usage (Implicit)

- VUID-vkSetHdrMetadataEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkSetHdrMetadataEXT-pSwapchains-parameter
`pSwapchains` **must** be a valid pointer to an array of `swapchainCount` valid `VkSwapchainKHR` handles
- VUID-vkSetHdrMetadataEXT-pMetadata-parameter
`pMetadata` **must** be a valid pointer to an array of `swapchainCount` valid `VkHdrMetadataEXT` structures
- VUID-vkSetHdrMetadataEXT-swapchainCount-arraylength
`swapchainCount` **must** be greater than 0

- VUID-vkSetHdrMetadataEXT-pSwapchains-parent
Each element of **pSwapchains** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to each member of **pSwapchains** **must** be externally synchronized

The **VkHdrMetadataEXT** structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkHdrMetadataEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkXYColorEXT       displayPrimaryRed;
    VkXYColorEXT       displayPrimaryGreen;
    VkXYColorEXT       displayPrimaryBlue;
    VkXYColorEXT       whitePoint;
    float              maxLuminance;
    float              minLuminance;
    float              maxContentLightLevel;
    float              maxFrameAverageLightLevel;
} VkHdrMetadataEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **displayPrimaryRed** is a **VkXYColorEXT** structure specifying the red primary of the display used to optimize the content
- **displayPrimaryGreen** is a **VkXYColorEXT** structure specifying the green primary of the display used to optimize the content
- **displayPrimaryBlue** is a **VkXYColorEXT** structure specifying the blue primary of the display used to optimize the content
- **whitePoint** is a **VkXYColorEXT** structure specifying the white-point of the display used to optimize the content
- **maxLuminance** is the maximum luminance of the display used to optimize the content in nits
- **minLuminance** is the minimum luminance of the display used to optimize the content in nits
- **maxContentLightLevel** is the value in nits of the desired luminance for the brightest pixels in the displayed image.
- **maxFrameAverageLightLevel** is the value in nits of the average luminance of the frame which has the brightest average luminance anywhere in the content.

If any of the above values are unknown, they **can** be set to 0.

NOTE | The meta-data provided here is intended to be used as defined in the SMPTE 2086,

CTA 861.3 and CIE 15:2004 specifications. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrMetadataEXT-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_HDR_METADATA_EXT`
- VUID-VkHdrMetadataEXT-pNext-pNext
pNext **must** be `NULL` or a pointer to a valid instance of `VkHdrVividDynamicMetadataHUAWEI`
- VUID-VkHdrMetadataEXT-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique

When **hdrVivid** feature is enabled, HDR Vivid dynamic metadata **can** be set to control the reproduction of content by including the `VkHdrVividDynamicMetadataHUAWEI` in the **pNext** chain of `VkHdrMetadataEXT`.

The `VkHdrVividDynamicMetadataHUAWEI` structure is defined as:

```
// Provided by VK_HUAWEI_hdr_vivid
typedef struct VkHdrVividDynamicMetadataHUAWEI {
    VkStructureType    sType;
    const void*        pNext;
    size_t             dynamicMetadataSize;
    const void*        pDynamicMetadata;
} VkHdrVividDynamicMetadataHUAWEI;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **dynamicMetadataSize** is the size in bytes of the dynamic metadata.
- **pDynamicMetadata** is a pointer to the dynamic metadata.

NOTE

The HDR Vivid metadata is intended to be used as defined in the T/UWA 005.1-2022 specification. The validity and use of this data is outside the scope of Vulkan.

Valid Usage (Implicit)

- VUID-VkHdrVividDynamicMetadataHUAWEI-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_HDR_VIVID_DYNAMIC_METADATA_HUAWEI`
- VUID-VkHdrVividDynamicMetadataHUAWEI-pDynamicMetadata-parameter
pDynamicMetadata **must** be a valid pointer to an array of **dynamicMetadataSize** bytes
- VUID-VkHdrVividDynamicMetadataHUAWEI-dynamicMetadataSize-arraylength
dynamicMetadataSize **must** be greater than 0

Structure Chaining

Extends the structure

- [VkHdrMetadataEXT](#)

The [VkXYColorEXT](#) structure is defined as:

```
// Provided by VK_EXT_hdr_metadata
typedef struct VkXYColorEXT {
    float    x;
    float    y;
} VkXYColorEXT;
```

- [x](#) is the x chromaticity coordinate.
- [y](#) is the y chromaticity coordinate.

Chromaticity coordinates are as specified in CIE 15:2004 “Calculation of chromaticity coordinates” (Section 7.3) and are limited to between 0 and 1 for real colors.

39.12. Lag Control

Some implementations support extensions to reduce display latency and control the swapchain present interval, as described in the remainder of this section.

39.12.1. Anti-Lag

The [VK_AMD_anti_lag](#) extension lowers latency between receiving input and displaying on the screen. It adds a command to indicate when input is being processed for a frame, and when that frame’s images are presented.

To lower latency, call:

```
// Provided by VK_AMD_anti_lag
void vkAntiLagUpdateAMD(
    VkDevice          device,
    const VkAntiLagDataAMD* pData);
```

- [device](#) is the logical device
- [pData](#) is a pointer to a [VkAntiLagDataAMD](#) structure containing latency reduction parameters.

This command should be executed immediately before the application processes user input. If [pData](#) is not `NULL` and [VkAntiLagDataAMD::pPresentationInfo](#) is not `NULL`, this command **should** be executed again before [vkQueuePresentKHR](#), with [pPresentationInfo](#) set to matching values.

Valid Usage

- VUID-vkAntiLagUpdateAMD-antiLag-10061
The **antiLag** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkAntiLagUpdateAMD-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkAntiLagUpdateAMD-pData-parameter
pData **must** be a valid pointer to a valid [VkAntiLagDataAMD](#) structure

The [VkAntiLagDataAMD](#) structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagDataAMD {
    VkStructureType          sType;
    const void*              pNext;
    VkAntiLagModeAMD         mode;
    uint32_t                 maxFPS;
    const VkAntiLagPresentationInfoAMD* pPresentationInfo;
} VkAntiLagDataAMD;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **mode** is a [VkAntiLagModeAMD](#) value specifying the anti-lag status.
- **maxFPS** is the framerate limit, in frames per second, used by the application. This limit will be imposed if anti-lag is enabled. If the application tries to render faster, the framerate will be reduced to match this limit. A value of 0 will disable the limit.
- **pPresentationInfo** is a pointer to a [VkAntiLagPresentationInfoAMD](#) structure containing information about the application stage.

This structure specifies anti-lag parameters.

Valid Usage (Implicit)

- VUID-VkAntiLagDataAMD-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_ANTI_LAG_DATA_AMD](#)
- VUID-VkAntiLagDataAMD-mode-parameter
mode **must** be a valid [VkAntiLagModeAMD](#) value
- VUID-VkAntiLagDataAMD-pPresentationInfo-parameter
If **pPresentationInfo** is not **NULL**, **pPresentationInfo** **must** be a valid pointer to a valid

VkAntiLagPresentationInfoAMD structure

Possible values of `VkAntiLagDataAMD::mode`, specifying the anti-lag status, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagModeAMD {
    VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD = 0,
    VK_ANTI_LAG_MODE_ON_AMD = 1,
    VK_ANTI_LAG_MODE_OFF_AMD = 2,
} VkAntiLagModeAMD;
```

- `VK_ANTI_LAG_MODE_DRIVER_CONTROL_AMD` specifies that anti-lag will be enabled or disabled depending on driver settings.
- `VK_ANTI_LAG_MODE_ON_AMD` specifies that anti-lag will be enabled.
- `VK_ANTI_LAG_MODE_OFF_AMD` specifies that anti-lag will be disabled.

The `VkAntiLagPresentationInfoAMD` structure is defined as:

```
// Provided by VK_AMD_anti_lag
typedef struct VkAntiLagPresentationInfoAMD {
    VkStructureType    sType;
    void*              pNext;
    VkAntiLagStageAMD  stage;
    uint64_t           frameIndex;
} VkAntiLagPresentationInfoAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stage` is a `VkAntiLagStageAMD` value specifying the current application stage.
- `frameIndex` is set just before the application processes input data (`VK_ANTI_LAG_STAGE_INPUT_AMD`). The same `frameIndex` value **should** be set before the frame with current input data will be presented by `vkQueuePresentKHR` (`VK_ANTI_LAG_STAGE_PRESENT_AMD`). This **should** be done for each frame.

This structure specifies information about the presentation stage for which anti-lag parameters are being set.

Valid Usage (Implicit)

- VUID-VkAntiLagPresentationInfoAMD-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ANTI_LAG_PRESENTATION_INFO_AMD`
- VUID-VkAntiLagPresentationInfoAMD-stage-parameter
`stage` **must** be a valid `VkAntiLagStageAMD` value

Possible values of `VkAntiLagPresentationInfoAMD::stage`, specifying the current application stage, are:

```
// Provided by VK_AMD_anti_lag
typedef enum VkAntiLagStageAMD {
    VK_ANTI_LAG_STAGE_INPUT_AMD = 0,
    VK_ANTI_LAG_STAGE_PRESENT_AMD = 1,
} VkAntiLagStageAMD;
```

- `VK_ANTI_LAG_STAGE_INPUT_AMD` specifies the stage before processing input.
- `VK_ANTI_LAG_STAGE_PRESENT_AMD` specifies the stage before `vkQueuePresentKHR`.

39.12.2. Latency Reduction

To enable or disable low latency mode on a swapchain, call:

```
// Provided by VK_NV_low_latency2
VkResult vkSetLatencySleepModeNV(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    const VkLatencySleepModeInfoNV* pSleepModeInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to enable or disable low latency mode on.
- `pSleepModeInfo` is `NULL` or a pointer to a `VkLatencySleepModeInfoNV` structure specifying the parameters of the latency sleep mode.

If `pSleepModeInfo` is `NULL`, `vkSetLatencySleepModeNV` will disable low latency mode, low latency boost, and set the minimum present interval previously specified by `VkLatencySleepModeInfoNV` to zero on `swapchain`. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to `vkSetLatencySleepModeNV` **may** be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencySleepModeNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkSetLatencySleepModeNV-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkSetLatencySleepModeNV-pSleepModeInfo-parameter `pSleepModeInfo` **must** be a valid pointer to a valid `VkLatencySleepModeInfoNV` structure
- VUID-vkSetLatencySleepModeNV-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkLatencySleepModeInfoNV](#) structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepModeInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           lowLatencyMode;
    VkBool32           lowLatencyBoost;
    uint32_t           minimumIntervalUs;
} VkLatencySleepModeInfoNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [lowLatencyMode](#) is the toggle to enable or disable low latency mode.
- [lowLatencyBoost](#) allows an application to hint to the GPU to increase performance to provide additional latency savings at a cost of increased power consumption.
- [minimumIntervalUs](#) is the microseconds between [vkQueuePresentKHR](#) calls for a given swapchain that [vkLatencySleepNV](#) will enforce.

If [lowLatencyMode](#) is [VK_FALSE](#), [lowLatencyBoost](#) will still hint to the GPU to increase its power state and [vkLatencySleepNV](#) will still enforce [minimumIntervalUs](#) between [vkQueuePresentKHR](#) calls.

Valid Usage (Implicit)

- VUID-VkLatencySleepModeInfoNV-sType-sType
[sType](#) must be [VK_STRUCTURE_TYPE_LATENCY_SLEEP_MODE_INFO_NV](#)

To provide the synchronization primitive used to delay host CPU work for lower latency rendering, call:

```
// Provided by VK_NV_low_latency2
VkResult vkLatencySleepNV(
    VkDevice                                device,
    VkSwapchainKHR                          swapchain,
    const VkLatencySleepInfoNV*             pSleepInfo);
```

- **device** is the device associated with **swapchain**.
- **swapchain** is the swapchain to delay associated CPU work based on **VkLatencySubmissionPresentIdNV** submissions.
- **pSleepInfo** is a pointer to a **VkLatencySleepInfoNV** structure specifying the parameters of the latency sleep.

vkLatencySleepNV returns immediately. Applications **should** use **vkWaitSemaphores** with **pSleepInfo->signalSemaphore** to delay host CPU work. CPU work refers to application work done before presenting which includes but is not limited to: input sampling, simulation, command buffer recording, command buffer submission, and present submission. Applications **should** call this function before input sampling, and exactly once between presents.

Valid Usage (Implicit)

- VUID-vkLatencySleepNV-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkLatencySleepNV-swapchain-parameter
swapchain **must** be a valid **VkSwapchainKHR** handle
- VUID-vkLatencySleepNV-pSleepInfo-parameter
pSleepInfo **must** be a valid pointer to a valid **VkLatencySleepInfoNV** structure
- VUID-vkLatencySleepNV-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- **VK_SUCCESS**

Failure

- **VK_ERROR_UNKNOWN**
- **VK_ERROR_VALIDATION_FAILED**

The **VkLatencySleepInfoNV** structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkSemaphore         signalSemaphore;
    uint64_t           value;
} VkLatencySleepInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `signalSemaphore` is a semaphore that is signaled to indicate that the application **should** resume input sampling work.
- `value` is the value that `signalSemaphore` is set to for resuming sampling work.

Valid Usage

- VUID-VkLatencySleepInfoNV-signalSemaphore-09361
`signalSemaphore` **must** be a timeline semaphore

Valid Usage (Implicit)

- VUID-VkLatencySleepInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SLEEP_INFO_NV`
- VUID-VkLatencySleepInfoNV-signalSemaphore-parameter
`signalSemaphore` **must** be a valid `VkSemaphore` handle

An application **can** provide timestamps at various stages of its frame generation work by calling:

```
// Provided by VK_NV_low_latency2
void vkSetLatencyMarkerNV(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    const VkSetLatencyMarkerInfoNV* pLatencyMarkerInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to capture timestamps on.
- `pSetLatencyMarkerInfo` is a pointer to a `VkSetLatencyMarkerInfoNV` structure specifying the parameters of the marker to set.

At the beginning and end of simulation and render threads and beginning and end of `vkQueuePresentKHR` calls, `vkSetLatencyMarkerNV` **can** be called to provide timestamps for the application's reference. These timestamps are returned with a call to `vkGetLatencyTimingsNV`

alongside driver provided timestamps at various points of interest with regards to latency within the application. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to **vkSetLatencyMarkerNV** **may** be simultaneously used by other threads in calls to functions other than **vkDestroySwapchainKHR**. Access to the swapchain data associated with this extension **must** be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencyMarkerNV-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkSetLatencyMarkerNV-swapchain-parameter
swapchain **must** be a valid **VkSwapchainKHR** handle
- VUID-vkSetLatencyMarkerNV-pLatencyMarkerInfo-parameter
pLatencyMarkerInfo **must** be a valid pointer to a valid **VkSetLatencyMarkerInfoNV** structure
- VUID-vkSetLatencyMarkerNV-swapchain-parent
swapchain **must** have been created, allocated, or retrieved from **device**

The **VkSetLatencyMarkerInfoNV** structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSetLatencyMarkerInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
    VkLatencyMarkerNV  marker;
} VkSetLatencyMarkerInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **presentID** is an application provided value that is used to associate the timestamp with a **vkQueuePresentKHR** command using **VkPresentIdKHR::pPresentIds** or **VkPresentId2KHR::pPresentIds** for a given present.
- **marker** is the type of timestamp to be recorded.

Valid Usage (Implicit)

- VUID-VkSetLatencyMarkerInfoNV-sType-sType
sType **must** be **VK_STRUCTURE_TYPE_SET_LATENCY_MARKER_INFO_NV**
- VUID-VkSetLatencyMarkerInfoNV-marker-parameter
marker **must** be a valid **VkLatencyMarkerNV** value

The **VkLatencyMarkerNV** enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkLatencyMarkerNV {
    VK_LATENCY_MARKER_SIMULATION_START_NV = 0,
    VK_LATENCY_MARKER_SIMULATION_END_NV = 1,
    VK_LATENCY_MARKER_RENDERSUBMIT_START_NV = 2,
    VK_LATENCY_MARKER_RENDERSUBMIT_END_NV = 3,
    VK_LATENCY_MARKER_PRESENT_START_NV = 4,
    VK_LATENCY_MARKER_PRESENT_END_NV = 5,
    VK_LATENCY_MARKER_INPUT_SAMPLE_NV = 6,
    VK_LATENCY_MARKER_TRIGGER_FLASH_NV = 7,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV = 8,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_END_NV = 9,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV = 10,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV = 11,
} VkLatencyMarkerNV;
```

The members of the [VkLatencyMarkerNV](#) are used as arguments for [vkSetLatencyMarkerNV](#) in the use cases described below:

- [VK_LATENCY_MARKER_SIMULATION_START_NV](#) **should** be called at the start of the simulation execution each frame, but after the call to [vkLatencySleepNV](#).
- [VK_LATENCY_MARKER_SIMULATION_END_NV](#) **should** be called at the end of the simulation execution each frame.
- [VK_LATENCY_MARKER_RENDERSUBMIT_START_NV](#) **should** be called at the beginning of the render submission execution each frame. This **should** be wherever Vulkan API calls are made and **must** not span into asynchronous rendering.
- [VK_LATENCY_MARKER_RENDERSUBMIT_END_NV](#) **should** be called at the end of the render submission execution each frame.
- [VK_LATENCY_MARKER_PRESENT_START_NV](#) **should** be called just before [vkQueuePresentKHR](#).
- [VK_LATENCY_MARKER_PRESENT_END_NV](#) **should** be called when [vkQueuePresentKHR](#) returns.
- [VK_LATENCY_MARKER_INPUT_SAMPLE_NV](#) **should** be called just before the application gathers input data.
- [VK_LATENCY_MARKER_TRIGGER_FLASH_NV](#) **should** be called anywhere between [VK_LATENCY_MARKER_SIMULATION_START_NV](#) and [VK_LATENCY_MARKER_SIMULATION_END_NV](#) whenever a left mouse click occurs.

To get an array containing the newest collected latency data, call:

```
// Provided by VK_NV_low_latency2
void vkGetLatencyTimingsNV(
    VkDevice                device,
    VkSwapchainKHR          swapchain,
    VkGetLatencyMarkerInfoNV* pLatencyMarkerInfo);
```

- [device](#) is the device associated with [swapchain](#).

- `swapchain` is the swapchain to return data from.
- `pLatencyMarkerInfo` is a pointer to a `VkGetLatencyMarkerInfoNV` structure specifying the parameters for returning latency information.

The timings returned by `vkGetLatencyTimingsNV` contain the timestamps requested from `vkSetLatencyMarkerNV` and additional implementation-specific markers defined in `VkLatencyTimingsFrameReportNV`.

Valid Usage (Implicit)

- VUID-vkGetLatencyTimingsNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetLatencyTimingsNV-swapchain-parameter `swapchain` **must** be a valid `VkSwapchainKHR` handle
- VUID-vkGetLatencyTimingsNV-pLatencyMarkerInfo-parameter `pLatencyMarkerInfo` **must** be a valid pointer to a `VkGetLatencyMarkerInfoNV` structure
- VUID-vkGetLatencyTimingsNV-swapchain-parent `swapchain` **must** have been created, allocated, or retrieved from `device`

The `VkGetLatencyMarkerInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkGetLatencyMarkerInfoNV {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             timingCount;
    VkLatencyTimingsFrameReportNV* pTimings;
} VkGetLatencyMarkerInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is either `NULL` or a pointer to a structure extending this structure.
- `timingCount` is an integer related to the number of previous frames of latency data available or queried, as described below.
- `pTimings` is either `NULL` or a pointer to an array of `VkLatencyTimingsFrameReportNV` structures.

If `pTimings` is `NULL` then the maximum number of queryable frame data is returned in `timingCount`. Otherwise, `timingCount` **must** be set by the application to the number of elements in the `pTimings` array, and on return is overwritten with the number of values actually written to `pTimings`. The elements of `pTimings` are arranged in the order they were requested in, with the oldest data in the first entry.

Valid Usage (Implicit)

- VUID-VkGetLatencyMarkerInfoNV-sType-sType

sType must be [VK_STRUCTURE_TYPE_GET_LATENCY_MARKER_INFO_NV](#)

- **VOID-VkGetLatencyMarkerInfoNV-pTimings-parameter**

If **timingCount** is not 0, and **pTimings** is not NULL, **pTimings** must be a valid pointer to an array of **timingCount** [VkLatencyTimingsFrameReportNV](#) structures

The [VkLatencyTimingsFrameReportNV](#) structure describes latency data returned by [vkGetLatencyTimingsNV](#)

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencyTimingsFrameReportNV {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           presentID;
    uint64_t           inputSampleTimeUs;
    uint64_t           simStartTimeUs;
    uint64_t           simEndTimeUs;
    uint64_t           renderSubmitStartTimeUs;
    uint64_t           renderSubmitEndTimeUs;
    uint64_t           presentStartTimeUs;
    uint64_t           presentEndTimeUs;
    uint64_t           driverStartTimeUs;
    uint64_t           driverEndTimeUs;
    uint64_t           osRenderQueueStartTimeUs;
    uint64_t           osRenderQueueEndTimeUs;
    uint64_t           gpuRenderStartTimeUs;
    uint64_t           gpuRenderEndTimeUs;
} VkLatencyTimingsFrameReportNV;
```

The members of the [VkLatencyTimingsFrameReportNV](#) structure describe the following:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **presentID** is the application provided value that is used to associate the timestamp with a [vkQueuePresentKHR](#) command using [VkPresentIdKHR::pPresentIds](#) or [VkPresentId2KHR::pPresentIds](#) for a given present.
- **simStartTimeUs** is the timestamp written when [vkSetLatencyMarkerNV](#) is called with the [VkLatencyMarkerNV](#) enum [VK_LATENCY_MARKER_SIMULATION_START_NV](#).
- **simEndTimeUs** is the timestamp written when [vkSetLatencyMarkerNV](#) is called with the [VkLatencyMarkerNV](#) enum [VK_LATENCY_MARKER_SIMULATION_END_NV](#).
- **renderStartTimeUs** is the timestamp written when [vkSetLatencyMarkerNV](#) is called with the [VkLatencyMarkerNV](#) enum [VK_LATENCY_MARKER_RENDERSUBMIT_START_NV](#).
- **renderEndTimeUs** is the timestamp written when [vkSetLatencyMarkerNV](#) is called with the [VkLatencyMarkerNV](#) enum [VK_LATENCY_MARKER_RENDERSUBMIT_END_NV](#).
- **presentStartTimeUs** is the timestamp written when [vkSetLatencyMarkerNV](#) is called with the [VkLatencyMarkerNV](#) enum [VK_LATENCY_MARKER_PRESENT_START_NV](#).

- `presentEndTimeUs` is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_PRESENT_END_NV`.
- `driverStartTimeUs` is the timestamp written when the first `vkQueueSubmit` for the frame is called.
- `driverEndTimeUs` is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.
- `osRenderQueueStartTimeUs` is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.
- `osRenderQueueEndTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderStartTimeUs` is the timestamp written when the first submission reaches the GPU.
- `gpuRenderEndTimeUs` is the timestamp written when the final submission finishes on the GPU for the frame.

Valid Usage (Implicit)

- VUID-VkLatencyTimingsFrameReportNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_TIMINGS_FRAME_REPORT_NV`

The `VkLatencySubmissionPresentIdNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySubmissionPresentIdNV {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           presentID;
} VkLatencySubmissionPresentIdNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentID` is used to associate the `vkQueueSubmit` with the `presentId` used for a given `vkQueuePresentKHR` via `VkPresentIdKHR::pPresentIds` or `VkPresentId2KHR::pPresentIds`.

For any submission to be tracked with low latency mode pacing, it needs to be associated with other submissions in a given present. To associate a submission with `presentID` for low latency mode, the `pNext` chain of `vkQueueSubmit` **must** include a `VkLatencySubmissionPresentIdNV` structure.

Valid Usage (Implicit)

- VUID-VkLatencySubmissionPresentIdNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SUBMISSION_PRESENT_ID_NV`

Structure Chaining

Extends the structures

- [VkSubmitInfo](#)
- [VkSubmitInfo2](#)

To mark a queue as *out of band*, so that all `vkQueueSubmit` calls on the queue are ignored for latency evaluation, call:

```
// Provided by VK_NV_low_latency2
void vkQueueNotifyOutOfBandNV(
    VkQueue queue,
    const VkOutOfBandQueueTypeInfoNV* pQueueTypeInfo);
```

- `queue` is the `VkQueue` to be marked as out of band.
- `pQueueTypeInfo` is a pointer to a [VkOutOfBandQueueTypeInfoNV](#) structure specifying the queue type.

Valid Usage (Implicit)

- VUID-vkQueueNotifyOutOfBandNV-queue-parameter
`queue` **must** be a valid [VkQueue](#) handle
- VUID-vkQueueNotifyOutOfBandNV-pQueueTypeInfo-parameter
`pQueueTypeInfo` **must** be a valid pointer to a valid [VkOutOfBandQueueTypeInfoNV](#) structure

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
-	-	-	Any	-

The [VkOutOfBandQueueTypeInfoNV](#) structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkOutOfBandQueueTypeInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkOutOfBandQueueTypeNV queueType;
} VkOutOfBandQueueTypeInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueType` describes the usage of the queue to be marked as out of band.

Valid Usage (Implicit)

- VUID-VkOutOfBandQueueTypeInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_OUT_OF_BAND_QUEUE_TYPE_INFO_NV`
- VUID-VkOutOfBandQueueTypeInfoNV-queueType-parameter
`queueType` **must** be a valid `VkOutOfBandQueueTypeNV` value

The `VkOutOfBandQueueTypeNV` enum is defined as:

```
// Provided by VK_NV_low_latency2
typedef enum VkOutOfBandQueueTypeNV {
    VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV = 0,
    VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV = 1,
} VkOutOfBandQueueTypeNV;
```

The members of the `VkOutOfBandQueueTypeNV` are used to describe the queue type in `VkOutOfBandQueueTypeInfoNV` as described below:

- `VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV` specifies that work will be submitted to this queue.
- `VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV` specifies that this queue will be presented from.

To allow low latency mode to be used by a swapchain, add a `VkSwapchainLatencyCreateInfoNV` structure to the `pNext` chain of `VkSwapchainCreateInfoKHR`.

The `VkSwapchainLatencyCreateInfoNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkSwapchainLatencyCreateInfoNV {
    VkStructureType    sType;
    const void*        pNext;
    VkBool32           latencyModeEnable;
} VkSwapchainLatencyCreateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `latencyModeEnable` is `VK_TRUE` if the created swapchain will utilize low latency mode, `VK_FALSE` otherwise.

Valid Usage (Implicit)

- VUID-VkSwapchainLatencyCreateInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SWAPCHAIN_LATENCY_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

The `VkLatencySurfaceCapabilitiesNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
typedef struct VkLatencySurfaceCapabilitiesNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           presentModeCount;
    VkPresentModeKHR*   pPresentModes;
} VkLatencySurfaceCapabilitiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeCount` is the number of presentation modes provided.
- `pPresentModes` is list of presentation modes optimized for use with low latency mode with `presentModeCount` entries.

If `pPresentModes` is `NULL`, then the number of present modes that are optimized for use with low latency mode returned in `presentModeCount`. Otherwise, `presentModeCount` **must** be set by the application to the number of elements in the `pPresentModes` array, and on return is overwritten with the number of values actually written to `pPresentModes`. If the value of `presentModeCount` is less than the number of optimized present modes, at most `presentModeCount` values will be written to `pPresentModes`.

Valid Usage (Implicit)

- VUID-VkLatencySurfaceCapabilitiesNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_SURFACE_CAPABILITIES_NV`
- VUID-VkLatencySurfaceCapabilitiesNV-pPresentModes-parameter
If `presentModeCount` is not 0, and `pPresentModes` is not `NULL`, `pPresentModes` **must** be a valid pointer to an array of `presentModeCount` `VkPresentModeKHR` values

Structure Chaining

Extends the structure

- [VkSurfaceCapabilities2KHR](#)

39.13. Present Barrier

The [VK_NV_present_barrier](#) extension allows applications to synchronize corresponding presentation requests across multiple swapchains using the *present barrier*. A swapchain is said to be using the *present barrier* if the swapchain is created by adding a [VkSwapchainPresentBarrierCreateInfoNV](#) structure to the [pNext](#) chain of the [VkSwapchainCreateInfoKHR](#) structure, and setting [VkSwapchainPresentBarrierCreateInfoNV::presentBarrierEnable](#) to true.

A set of corresponding presentation requests is defined as exactly one queued presentation request associated with each swapchain using the present barrier, whether or not that queued request has executed. A given presentation request is added, when created by calling [vkQueuePresentKHR](#) and specifying a swapchain using the present barrier, either to the oldest existing set of corresponding requests for which there is no existing member associated with the request's swapchain, or to a new set of corresponding requests if no such set exists.

A set of corresponding requests is said to be *full* when it contains one request from each swapchain using the present barrier. Queued presentation of an image to a swapchain using the *present barrier* is *deferred* by the implementation until the set of corresponding requests is full, and the visibility operations associated with all requests in that set, as described by [vkQueuePresentKHR](#), have completed.

Additionally, the set of swapchains using the present barrier can be in the same process, or different processes running under the same operating system. And if the required synchronization hardware is connected and correctly configured, this extension also supports applications to synchronize corresponding presentation requests using the *present barrier* across distributed systems. However, the configuration mechanism of the required hardware is outside the scope of the Vulkan specification and this extension.

The [VkSwapchainPresentBarrierCreateInfoNV](#) structure is defined as:

```
// Provided by VK_NV_present_barrier
typedef struct VkSwapchainPresentBarrierCreateInfoNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentBarrierEnable;
} VkSwapchainPresentBarrierCreateInfoNV;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.

- `presentBarrierEnable` is a boolean value indicating a request for using the *present barrier*.

If the `pNext` chain of `VkSwapchainCreateInfoKHR` does not include this structure, the default value for `presentBarrierEnable` is `VK_FALSE`, meaning the swapchain does not request to use the present barrier. Additionally, when recreating a swapchain that was using the present barrier, and the `pNext` chain of `VkSwapchainCreateInfoKHR` does not include this structure, it means the swapchain will stop using the present barrier.

Valid Usage (Implicit)

- VUID-VkSwapchainPresentBarrierCreateInfoNV-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_BARRIER_CREATE_INFO_NV`

Structure Chaining

Extends the structure

- `VkSwapchainCreateInfoKHR`

39.13.1. Present Metering

Present Metering evenly paces out the next `numFramesPerBatch` `vkQueuePresentKHR` presents. This gives smoother pacing between presents in applications with frame generation integrations.

The `VkSetPresentConfigNV` structure is defined as:

```
// Provided by VK_NV_present_metering
typedef struct VkSetPresentConfigNV {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           numFramesPerBatch;
    uint32_t           presentConfigFeedback;
} VkSetPresentConfigNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `numFramesPerBatch` is the number of frames to batch
- `presentConfigFeedback` will return the success or error status

The metering configuration applies to all swapchains in the array in `VkPresentInfoKHR`. The configuration specified by `VkSetPresentConfigNV` applies to the next `numFramesPerBatch` calls to `vkQueuePresentKHR` and needs to be updated every `numFramesPerBatch` presents.

Valid Usage

- VUID-VkSetPresentConfigNV-numFramesPerBatch-10581
`numFramesPerBatch` **must** not be larger than 8

Valid Usage (Implicit)

- VUID-VkSetPresentConfigNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_SET_PRESENT_CONFIG_NV`

Structure Chaining

Extends the structure

- `VkPresentInfoKHR`

Chapter 40. Deferred Host Operations

Certain Vulkan commands are inherently expensive for the host CPU to execute. It is often desirable to offload such work onto background threads, and to parallelize the work across multiple CPUs. The concept of *deferred operations* allows applications and drivers to coordinate the execution of expensive host commands using an application-managed thread pool.

The [VK_KHR_deferred_host_operations](#) extension defines the infrastructure and usage patterns for *deferrable commands*, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on [VK_KHR_deferred_host_operations](#). This specification will refer to such extensions as *deferral extensions*.

40.1. Requesting Deferral

When an application requests an operation deferral, the implementation **may** defer the operation. When deferral is requested and the implementation defers any operation, the implementation **must** return [VK_OPERATION_DEFERRED_KHR](#) as the success code if no errors occurred. When deferral is requested, the implementation **should** defer the operation when the workload is significant, however if the implementation chooses not to defer any of the requested operations and instead executes all of them immediately, the implementation **must** return [VK_OPERATION_NOT_DEFERRED_KHR](#) as the success code if no errors occurred.

A deferred operation is created *complete* with an initial result value of [VK_SUCCESS](#). The deferred operation becomes *pending* when an operation has been successfully deferred with that deferred operation object.

A deferred operation is considered pending until the deferred operation completes. A pending deferred operation becomes *complete* when it has been fully executed by one or more threads. Pending deferred operations will never complete until they are *joined* by an application thread, using [vkDeferredOperationJoinKHR](#). Applications **can** join multiple threads to the same deferred operation, enabling concurrent execution of subtasks within that operation.

The application **can** query the status of a [VkDeferredOperationKHR](#) using the [vkGetDeferredOperationMaxConcurrencyKHR](#) or [vkGetDeferredOperationResultKHR](#) commands.

Parameters to the command requesting a deferred operation **may** be accessed by the implementation at any time until the deferred operation enters the complete state. The application **must** obey the following rules while a deferred operation is pending:

- Externally synchronized parameters **must** not be accessed.
- Pointer parameters **must** not be modified (e.g. reallocated/freed).
- The contents of pointer parameters which **may** be read by the command **must** not be modified.
- The contents of pointer parameters which **may** be written by the command **must** not be read.
- Vulkan object parameters **must** not be passed as externally synchronized parameters to any other command.

When the deferred operation is complete, the application **should** call [vkGetDeferredOperationResultKHR](#) to obtain the [VkResult](#) indicating success or failure of the operation. The [VkResult](#) value returned will be one of the values that the command requesting the deferred operation is able to return. Writes to output parameters of the requesting command will happen-before the deferred operation is complete.

When a deferral is requested for a command, the implementation **may** perform memory management operations on the allocator supplied to [vkCreateDeferredOperationKHR](#) for the deferred operation object, as described in the [Memory Allocation](#) chapter. Such allocations **must** occur on the thread which requests deferral.

If an allocator was supplied for the deferred command at the time of the deferral request, then the implementation **may** perform memory management operations on this allocator during the execution of [vkDeferredOperationJoinKHR](#). These operations **may** occur concurrently and **may** be performed by any joined thread. The application **must** ensure that the supplied allocator is able to operate correctly under these conditions.

40.2. Deferred Host Operations API

The [VkDeferredOperationKHR](#) handle is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeferredOperationKHR)
```

This handle refers to a tracking structure which manages the execution state for a deferred command.

To construct the tracking object for a deferred command, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkCreateDeferredOperationKHR(
    VkDevice device,
    const VkAllocationCallbacks* pAllocator,
    VkDeferredOperationKHR* pDeferredOperation);
```

- [device](#) is the device which owns [operation](#).
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pDeferredOperation](#) is a pointer to a handle in which the created [VkDeferredOperationKHR](#) is returned.

Valid Usage (Implicit)

- VUID-vkCreateDeferredOperationKHR-device-parameter [device](#) **must** be a valid [VkDevice](#) handle
- VUID-vkCreateDeferredOperationKHR-pAllocator-parameter

If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- `VUID-vkCreateDeferredOperationKHR-pDeferredOperation-parameter`
`pDeferredOperation` **must** be a valid pointer to a `VkDeferredOperationKHR` handle
- `VUID-vkCreateDeferredOperationKHR-device-queuecount`
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To assign a thread to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkDeferredOperationJoinKHR(
    VkDevice                device,
    VkDeferredOperationKHR  operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation that the calling thread should work on.

The `vkDeferredOperationJoinKHR` command will execute a portion of the deferred operation on the calling thread.

The return value will be one of the following:

- A return value of `VK_SUCCESS` indicates that `operation` is complete. The application **should** use `vkGetDeferredOperationResultKHR` to retrieve the result of `operation`.
- A return value of `VK_THREAD_DONE_KHR` indicates that the deferred operation is not complete, but there is no work remaining to assign to threads. Future calls to `vkDeferredOperationJoinKHR` are not necessary and will simply harm performance. This situation **may** occur when other threads executing `vkDeferredOperationJoinKHR` are about to complete `operation`, and the implementation is unable to partition the workload any further.
- A return value of `VK_THREAD_IDLE_KHR` indicates that the deferred operation is not complete, and there is no work for the thread to do at the time of the call. This situation **may** occur if the operation encounters a temporary reduction in parallelism. By returning `VK_THREAD_IDLE_KHR`, the implementation is signaling that it expects that more opportunities for parallelism will emerge as execution progresses, and that future calls to

`vkDeferredOperationJoinKHR` **can** be beneficial. In the meantime, the application **can** perform other work on the calling thread.

Implementations **must** guarantee forward progress by enforcing the following invariants:

1. If only one thread has invoked `vkDeferredOperationJoinKHR` on a given operation, that thread **must** execute the operation to completion and return `VK_SUCCESS`.
2. If multiple threads have concurrently invoked `vkDeferredOperationJoinKHR` on the same operation, then at least one of them **must** complete the operation and return `VK_SUCCESS`.

Valid Usage (Implicit)

- VUID-vkDeferredOperationJoinKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkDeferredOperationJoinKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkDeferredOperationJoinKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`
- `VK_THREAD_DONE_KHR`
- `VK_THREAD_IDLE_KHR`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

When a deferred operation is completed, the application **can** destroy the tracking object by calling:

```
// Provided by VK_KHR_deferred_host_operations
void vkDestroyDeferredOperationKHR(
    VkDevice                device,
    VkDeferredOperationKHR  operation,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the device which owns `operation`.
- `operation` is the completed operation to be destroyed.

- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyDeferredOperationKHR-operation-03434
If `VkAllocationCallbacks` were provided when `operation` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyDeferredOperationKHR-operation-03435
If no `VkAllocationCallbacks` were provided when `operation` was created, `pAllocator` **must** be `NULL`
- VUID-vkDestroyDeferredOperationKHR-operation-03436
`operation` **must** be completed

Valid Usage (Implicit)

- VUID-vkDestroyDeferredOperationKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyDeferredOperationKHR-operation-parameter
If `operation` is not `VK_NULL_HANDLE`, `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkDestroyDeferredOperationKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyDeferredOperationKHR-operation-parent
If `operation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `operation` **must** be externally synchronized

To query the number of additional threads that can usefully be joined to a deferred operation, call:

```
// Provided by VK_KHR_deferred_host_operations
uint32_t vkGetDeferredOperationMaxConcurrencyKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the deferred operation to be queried.

The returned value is the maximum number of threads that can usefully execute a deferred

operation concurrently, reported for the state of the deferred operation at the point this command is called. This value is intended to be used to better schedule work onto available threads. Applications **can** join any number of threads to the deferred operation and expect it to eventually complete, though excessive joins **may** return `VK_THREAD_DONE_KHR` immediately, performing no useful work.

If `operation` is complete, `vkGetDeferredOperationMaxConcurrencyKHR` returns zero.

If `operation` is currently joined to any threads, the value returned by this command **may** immediately be out of date.

If `operation` is pending, implementations **must** not return zero unless at least one thread is currently executing `vkDeferredOperationJoinKHR` on `operation`. If there are such threads, the implementation **should** return an estimate of the number of additional threads which it could profitably use.

Implementations **may** return $2^{32}-1$ to indicate that the maximum concurrency is unknown and cannot be easily derived. Implementations **may** return values larger than the maximum concurrency available on the host CPU. In these situations, an application **should** clamp the return value rather than oversubscribing the machine.

NOTE

The recommended usage pattern for applications is to query this value once, after deferral, and schedule no more than the specified number of threads to join the operation. Each time a joined thread receives `VK_THREAD_IDLE_KHR`, the application should schedule an additional join at some point in the future, but is not required to do so.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationMaxConcurrencyKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkGetDeferredOperationMaxConcurrencyKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

The `vkGetDeferredOperationResultKHR` function is defined as:

```
// Provided by VK_KHR_deferred_host_operations
VkResult vkGetDeferredOperationResultKHR(
    VkDevice          device,
    VkDeferredOperationKHR operation);
```

- `device` is the device which owns `operation`.
- `operation` is the operation whose deferred result is being queried.

If no command has been deferred on `operation`, `vkGetDeferredOperationResultKHR` returns `VK_SUCCESS`.

If the deferred operation is pending, `vkGetDeferredOperationResultKHR` returns `VK_NOT_READY`.

If the deferred operation is complete, it returns the appropriate return value from the original command. This value **must** be one of the `VkResult` values which could have been returned by the original command if the operation had not been deferred.

Valid Usage (Implicit)

- VUID-vkGetDeferredOperationResultKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeferredOperationResultKHR-operation-parameter `operation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkGetDeferredOperationResultKHR-operation-parent `operation` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_NOT_READY`
- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Chapter 41. Private Data

The private data extension provides a way for users to associate arbitrary application-defined data with Vulkan objects. This association is accomplished by storing 64-bit unsigned integers of application-defined data in private data slots. A private data slot represents a storage allocation for one data item for each child object of the device.

An application **can** reserve private data slots at device creation. To reserve private data slots, insert a [VkDevicePrivateDataCreateInfo](#) in the **pNext** chain in [VkDeviceCreateInfo](#) before device creation. Multiple [VkDevicePrivateDataCreateInfo](#) structures **can** be chained together, and the sum of the requested slots will be reserved. This is an exception to the specified valid usage for [structure pointer chains](#). Reserving slots in this manner is not strictly necessary but it **may** improve performance.

Private data slots are represented by [VkPrivateDataSlot](#) handles:

```
// Provided by VK_VERSION_1_3
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPrivateDataSlot)
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlot
typedef VkPrivateDataSlot VkPrivateDataSlotEXT;
```

To create a private data slot, call:

```
// Provided by VK_VERSION_1_3
VkResult vkCreatePrivateDataSlot(
    VkDevice                                device,
    const VkPrivateDataSlotCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkPrivateDataSlot*                      pPrivateDataSlot);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkCreatePrivateDataSlot
VkResult vkCreatePrivateDataSlotEXT(
    VkDevice                                device,
    const VkPrivateDataSlotCreateInfo*      pCreateInfo,
    const VkAllocationCallbacks*            pAllocator,
    VkPrivateDataSlot*                      pPrivateDataSlot);
```

- **device** is the logical device associated with the creation of the object(s) holding the private data slot.
- **pCreateInfo** is a pointer to a [VkPrivateDataSlotCreateInfo](#)
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.

- `pPrivateDataSlot` is a pointer to a `VkPrivateDataSlot` handle in which the resulting private data slot is returned

Valid Usage

- VUID-vkCreatePrivateDataSlot-privateData-04564
The `privateData` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCreatePrivateDataSlot-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCreatePrivateDataSlot-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid `VkPrivateDataSlotCreateInfo` structure
- VUID-vkCreatePrivateDataSlot-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreatePrivateDataSlot-pPrivateDataSlot-parameter
`pPrivateDataSlot` **must** be a valid pointer to a `VkPrivateDataSlot` handle
- VUID-vkCreatePrivateDataSlot-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkPrivateDataSlotCreateInfo` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPrivateDataSlotCreateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkPrivateDataSlotCreateFlags flags;
} VkPrivateDataSlotCreateInfo;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlotCreateInfo
typedef VkPrivateDataSlotCreateInfo VkPrivateDataSlotCreateInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.

Valid Usage (Implicit)

- VUID-VkPrivateDataSlotCreateInfo-sType-sType
sType must be [VK_STRUCTURE_TYPE_PRIVATE_DATA_SLOT_CREATE_INFO](#)
- VUID-VkPrivateDataSlotCreateInfo-pNext-pNext
pNext must be **NULL**
- VUID-VkPrivateDataSlotCreateInfo-flags-zero bitmask
flags must be 0

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkPrivateDataSlotCreateFlags;
```

```
// Provided by VK_EXT_private_data
// Equivalent to VkPrivateDataSlotCreateFlags
typedef VkPrivateDataSlotCreateFlags VkPrivateDataSlotCreateFlagsEXT;
```

VkPrivateDataSlotCreateFlags is a bitmask type for setting a mask, but is currently reserved for future use.

To destroy a private data slot, call:

```
// Provided by VK_VERSION_1_3
void vkDestroyPrivateDataSlot(
    VkDevice device,
    VkPrivateDataSlot privateDataSlot,
    const VkAllocationCallbacks* pAllocator);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkDestroyPrivateDataSlot
void vkDestroyPrivateDataSlotEXT(
    VkDevice device,
    VkPrivateDataSlot privateDataSlot,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device associated with the creation of the object(s) holding the private data slot.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **privateDataSlot** is the private data slot to destroy.

Valid Usage

- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04062
If **VkAllocationCallbacks** were provided when **privateDataSlot** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-04063
If no **VkAllocationCallbacks** were provided when **privateDataSlot** was created, **pAllocator** **must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyPrivateDataSlot-device-parameter
device **must** be a valid **VkDevice** handle
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parameter
If **privateDataSlot** is not **VK_NULL_HANDLE**, **privateDataSlot** **must** be a valid **VkPrivateDataSlot** handle
- VUID-vkDestroyPrivateDataSlot-pAllocator-parameter
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure
- VUID-vkDestroyPrivateDataSlot-privateDataSlot-parent
If **privateDataSlot** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **privateDataSlot** **must** be externally synchronized

To store application-defined data in a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
VkResult vkSetPrivateData(
    VkDevice          device,
    VkObjectType      objectType,
    uint64_t          objectHandle,
    VkPrivateDataSlot privateDataSlot,
    uint64_t          data);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkSetPrivateData
VkResult vkSetPrivateDataEXT(
    VkDevice          device,
    VkObjectType      objectType,
    uint64_t          objectHandle,
    VkPrivateDataSlot privateDataSlot,
    uint64_t          data);
```

- **device** is the device that created the object.
- **objectType** is a [VkObjectType](#) specifying the type of object to associate data with.
- **objectHandle** is a handle to the object to associate data with.
- **privateDataSlot** is a handle to a [VkPrivateDataSlot](#) specifying location of private data storage.
- **data** is application-defined data to associate the object with. This data will be stored at **privateDataSlot**.

Valid Usage

- VUID-vkSetPrivateData-objectHandle-04016
objectHandle **must** be **device** or a child of **device**
- VUID-vkSetPrivateData-objectHandle-04017
objectHandle **must** be a valid handle to an object of type **objectType**

Valid Usage (Implicit)

- VUID-vkSetPrivateData-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkSetPrivateData-objectType-parameter
objectType **must** be a valid [VkObjectType](#) value
- VUID-vkSetPrivateData-privateDataSlot-parameter
privateDataSlot **must** be a valid [VkPrivateDataSlot](#) handle
- VUID-vkSetPrivateData-privateDataSlot-parent
privateDataSlot **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)

- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To retrieve application-defined data from a slot associated with a Vulkan object, call:

```
// Provided by VK_VERSION_1_3
void vkGetPrivateData(
    VkDevice                device,
    VkObjectType            objectType,
    uint64_t                objectHandle,
    VkPrivateDataSlot        privateDataSlot,
    uint64_t*               pData);
```

```
// Provided by VK_EXT_private_data
// Equivalent to vkGetPrivateData
void vkGetPrivateDataEXT(
    VkDevice                device,
    VkObjectType            objectType,
    uint64_t                objectHandle,
    VkPrivateDataSlot        privateDataSlot,
    uint64_t*               pData);
```

- `device` is the device that created the object
- `objectType` is a [VkObjectType](#) specifying the type of object data is associated with.
- `objectHandle` is a handle to the object data is associated with.
- `privateDataSlot` is a handle to a [VkPrivateDataSlot](#) specifying location of private data pointer storage.
- `pData` is a pointer to specify where application-defined data is returned. `0` will be written in the absence of a previous call to `vkSetPrivateData` using the object specified by `objectHandle`.

NOTE

Due to platform details on Android, implementations might not be able to reliably return `0` from calls to `vkGetPrivateData` for [VkSwapchainKHR](#) objects on which `vkSetPrivateData` has not previously been called. This erratum is exclusive to the Android platform and objects of type [VkSwapchainKHR](#).

Valid Usage

- VUID-vkGetPrivateData-objectType-04018
`objectHandle` **must** be `device` or a child of `device`
- VUID-vkGetPrivateData-objectHandle-09498
`objectHandle` **must** be a valid handle to an object of type `objectType`

Valid Usage (Implicit)

- VUID-vkGetPrivateData-device-parameter
device must be a valid [VkDevice](#) handle
- VUID-vkGetPrivateData-objectType-parameter
objectType must be a valid [VkObjectType](#) value
- VUID-vkGetPrivateData-privateDataSlot-parameter
privateDataSlot must be a valid [VkPrivateDataSlot](#) handle
- VUID-vkGetPrivateData-pData-parameter
pData must be a valid pointer to a [uint64_t](#) value
- VUID-vkGetPrivateData-privateDataSlot-parent
privateDataSlot must have been created, allocated, or retrieved from **device**

Chapter 42. Acceleration Structures

42.1. Acceleration Structures

Acceleration structures are data structures used by the implementation to efficiently manage scene geometry as it is [traversed during a ray tracing query](#). The application is responsible for managing acceleration structure objects (see [Acceleration Structures](#)), including allocation, destruction, executing builds or updates, and synchronizing resources used during ray tracing queries.

There are two types of acceleration structures, *top level acceleration structures* and *bottom level acceleration structures*.

An acceleration structure is considered to be constructed if an [acceleration structure build command](#) or [copy command](#) has been executed with the given acceleration structure as the destination.

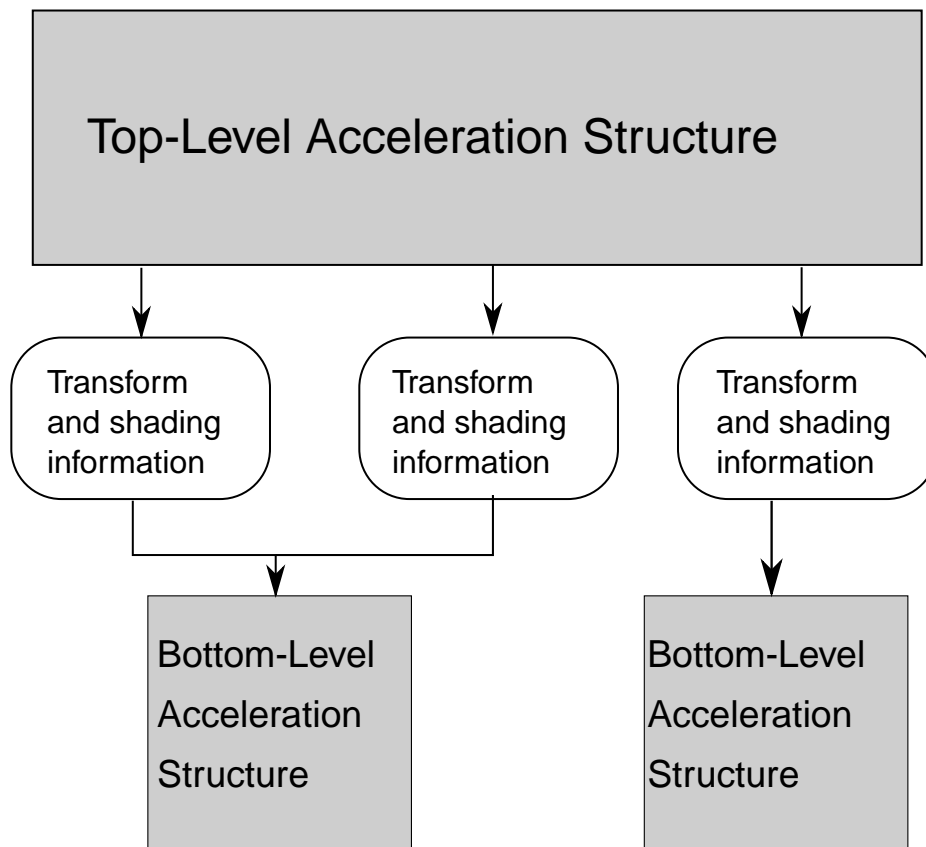

Figure 27. Acceleration Structure

Caption

The diagram shows the relationship between top and bottom level acceleration structures.

42.1.1. Geometry

Geometries refer to a triangle, sphere, linear swept sphere (LSS), or axis-aligned bounding box.

A triangle is a fundamental geometric primitive defined by three vertices in 3D space, forming a flat, planar surface.

An axis-aligned bounding box (AABB) is a rectangular box defined by two points (minimum and maximum corners) that encloses a 3D object or scene. Its faces are aligned with the coordinate axes, making intersection tests efficient for spatial partitioning and acceleration structures.

A sphere primitive is defined by a position and a radius.

The linear swept sphere (LSS) primitive is comprised of two sphere endcaps and a truncated cone midsection. The midsection is constructed so that it tangentially intersects with the endcaps. Two points, P_0 and P_1 , and two radii, r_0 and r_1 , fully describe the primitive.

The following figure shows an example of the LSS primitive composed of two sphere endcaps connected by a midsection. The solid non-dotted outline indicates the intersectable portion of the primitive.

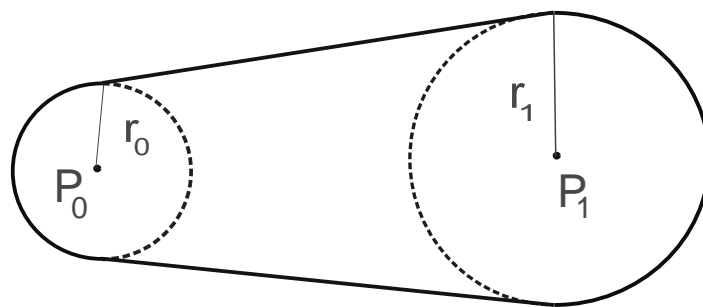

Figure 28. LSS primitive

Endcaps on LSS primitives are optional and are controlled by [VkAccelerationStructureGeometryLinearSweptSpheresDataNV::endCapsMode](#). The following figure shows an example of the LSS primitive without the endcaps with only the midsection present.

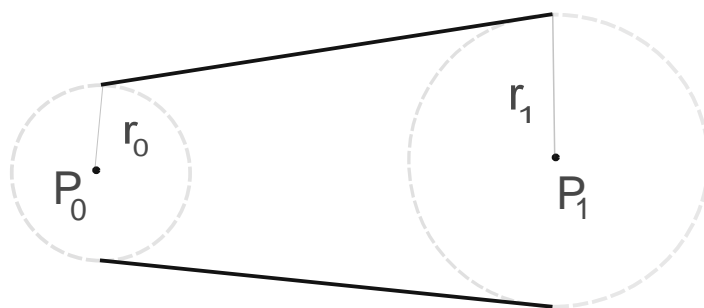

Figure 29. LSS primitive with no endcaps

A LSS geometry can be defined in multiple ways. If only the vertex and radius data are specified in [VkAccelerationStructureGeometryLinearSweptSpheresDataNV](#) without specifying the index data, LSS primitives are drawn in pairs of vertices. Each primitive i is defined by entries $(i \times 2, i \times 2 + 1)$ in the vertex and radius buffers. For example, if a vertex buffer contains vertices A, B, C, D, E, F and G, (assuming each character represents a position vector) with corresponding radii as r_A , r_B , r_C , r_D , r_E , r_F and r_G respectively, the LSS primitives drawn will be as shown below with G skipped because it does not have a corresponding vertex pair.

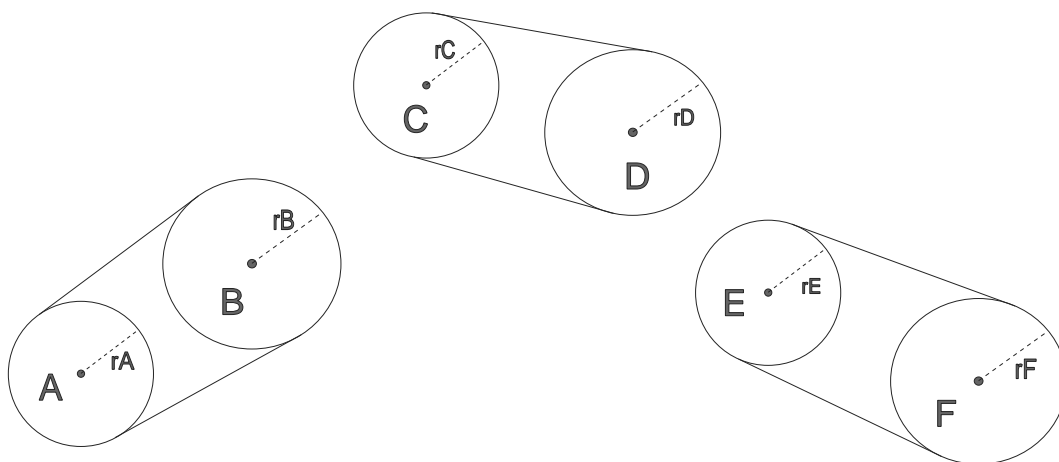

Figure 30. Lss primitives drawn with only vertex data

LSS primitives **can** be chained together by specifying an index buffer and indexing mode in the [VkAccelerationStructureGeometryLinearSweptSpheresDataNV](#) structure.

If the [VkRayTracingLssIndexingModeNV::indexingMode](#) is set to [VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV](#), then the consecutive pair of indices in the index buffer select the vertices that define the LSS chain. For example, assuming the same vertex buffer as before, if the index buffer contains indices [6, 5, 5, 4, 4, 3, 2, 1], the LSS primitives will be

chained as shown:

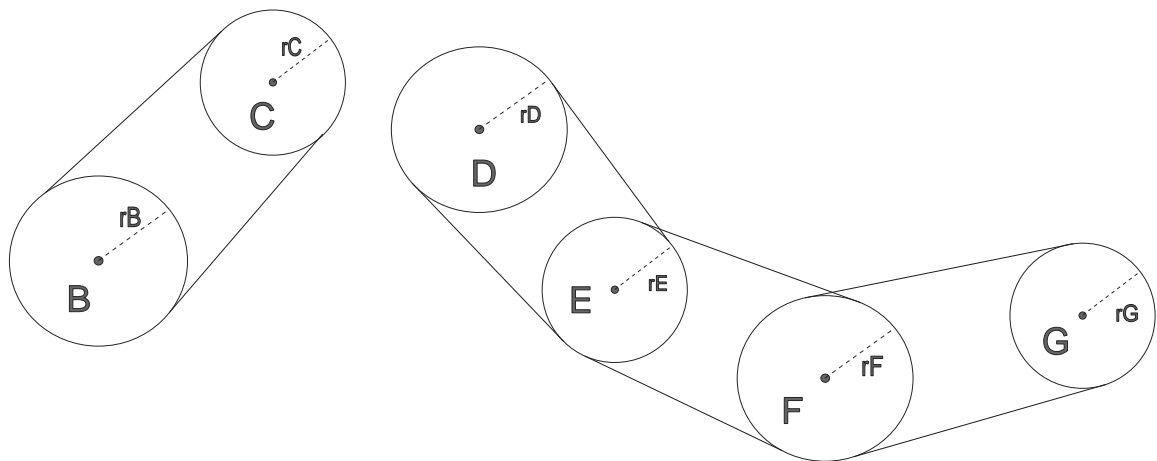

Figure 31. Lss primitives drawn with `VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV` indexing mode

Note that due to the lack of a [3, 2] pair, there is a break in the chain and D is not connected to C.

If the `VkRayTracingLssIndexingModeNV::indexingMode` is set to `VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV`, then each LSS primitive is defined by two successive positions and radii, (k, k

1), where k is a single index in the index buffer. For example, if the index buffer contains indices [0, 1, 2, 4], the LSS primitives will be chained as shown below. Note that due to the absence of index 3 in the index buffer, there is a break in the chain and D is not connected to E.

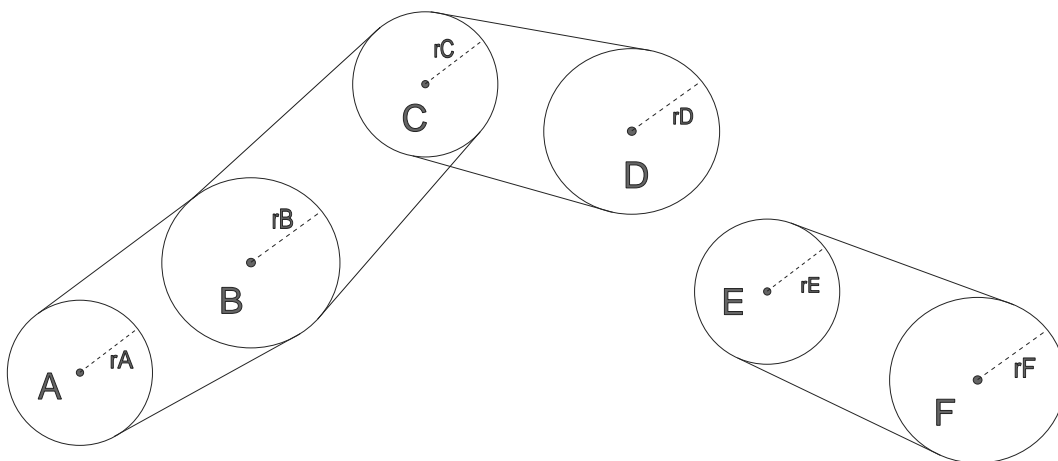

Figure 32. Lss primitives drawn with `VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV` indexing mode

42.1.2. Top Level Acceleration Structures

Opaque acceleration structure for an array of instances. The descriptor or device address referencing this is the starting point for traversal.

The top level acceleration structure takes a reference to any bottom level acceleration structure referenced by its instances. Those bottom level acceleration structure objects **must** be valid when

the top level acceleration structure is accessed.

42.1.3. Bottom Level Acceleration Structures

Opaque acceleration structure for an array of geometries.

42.1.4. Acceleration Structure Update Rules

The API defines two types of operations to produce acceleration structures from geometry:

- A *build* operation is used to construct an acceleration structure.
- An *update* operation is used to modify an existing acceleration structure.

An update operation imposes certain constraints on the input, in exchange for considerably faster execution. When performing an update, the application is required to provide a full description of the acceleration structure, but is prohibited from changing anything other than instance definitions, transform matrices, and vertex or AABB positions. All other aspects of the description **must** exactly match the one from the original build.

More precisely, the application **must** not use an update operation to do any of the following:

- Change primitives or instances from *active* to *inactive*, or vice versa (as defined in [Inactive Primitives and Instances](#)).
- Change the index or vertex formats of triangle geometry.
- Change triangle geometry transform pointers from null to non-null or vice versa.
- Change the number of geometries or instances in the structure.
- Change the geometry flags for any geometry in the structure.
- Change the number of vertices or primitives for any geometry in the structure.

If the original acceleration structure was built using opacity micromaps and [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT](#) was set in *flags*, the application **must** provide a micromap matching the original micromap in structure with only opacity values updated. The application is prohibited from changing anything other than the specific opacity values assigned to the triangles.

More precisely, the application **must** not use an update operation to do any of the following:

- Remove micromaps or [VkOpacityMicromapSpecialIndexEXT](#) values from a geometry which previously had them, or vice versa.
- Change between use of [VkOpacityMicromapSpecialIndexEXT](#) values and explicit micro-map triangles.
- Change the subdivision level or format of the micromap triangle associated with any acceleration-structure triangle.

If the original acceleration structure was built using opacity micromaps and [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT](#) was set in *flags*, the application **must** provide a micromap to the update operation.

If `VkMicromapBuildSizesInfoEXT::discardable` is `VK_FALSE`, a `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` or `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT` operation transfers the reference in the acceleration structure to the new micromap.

If the original acceleration structure was built using opacity micromaps and neither opacity micromap update flag is set, the application **must** provide the original micromap to the update operation.

If the original acceleration structure was built using displacement micromaps and `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_BIT_NV` was set in `flags`, the application **must** provide a displacement micromap to the update operation.

If the original acceleration structure was built using displacement micromaps and the displacement micromap update flag is not set the application **must** provide the original micromap to the update operation.

42.1.5. Inactive Primitives and Instances

Acceleration structures allow the use of particular input values to signal *inactive* primitives or instances.

An *inactive* triangle is one for which the first (X) component of any vertex is NaN. If any other vertex component is NaN, and the first is not, the behavior is undefined. If the vertex format does not have a NaN representation, then all triangles are considered active.

An *inactive* instance is one whose acceleration structure reference is `0`.

An *inactive* AABB is one for which the minimum X coordinate is NaN. If any other component is NaN, and the first is not, the behavior is undefined.

An *inactive* LSS or sphere is one where any of the radius or position component is NaN.

In the above definitions, “NaN” refers to any type of NaN. Signaling, non-signaling, quiet, loud, or otherwise.

An inactive object is considered invisible to all rays, and **should** not be represented in the acceleration structure. Implementations **should** ensure that the presence of inactive objects does not seriously degrade traversal performance.

Inactive objects are counted in the auto-generated index sequences which are provided to shaders via `InstanceId` and `PrimitiveId` SPIR-V decorations. This allows objects in the scene to change freely between the active and inactive states, without affecting the layout of any arrays which are being indexed using the ID values.

Any transition between the active and inactive states requires a full acceleration structure rebuild. Applications **must** not perform an acceleration structure update where an object is active in the source acceleration structure but would be inactive in the destination, or vice versa.

The active/inactive state of primitives **must** not be changed with acceleration structure updates. For chained LSS, using the `VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV` mode,

entire chains **must** be either active or inactive. If any chain contains both active and inactive primitives, the behavior is undefined.

42.1.6. Degenerate Primitives and Instances

Degenerate primitives and instances behave differently to [inactive primitives and instances](#), and are defined as:

- triangles that have one or more vertices whose respective (X), (Y), (Z) components are identical, or have three vertices that have at least two of the (X), (Y), or (Z) components identical, therefore forming a line or point. Degenerate triangles do not generate any intersections.
- AABBs whose `minX=maxX`, `minY=maxY`, and `minZ=maxZ`. Degenerate AABBs **may** invoke the intersection shader.
- LSS primitives where both the radii are set to `0`.
- sphere primitives whose radius is set to `0`.
- instances that reference bottom level acceleration structures that contain no active primitives. When building an acceleration structure, implementations **should** treat degenerate instances as though they are a point at the instance origin, specified by [VkAccelerationStructureInstanceKHR::transform](#).

Unlike *inactive* primitives and instances, *degenerate* primitives and instances **may** transition from the degenerate to the non-degenerate state, or vice versa, when performing an acceleration structure update.

If an acceleration structure is built without [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR](#) set in [VkAccelerationStructureInfoNV::flags](#) or [VkAccelerationStructureBuildGeometryInfoKHR::flags](#), degenerate primitives **may** be discarded. Primitives that are defined with the same index value for more than one vertex **can** always be discarded.

42.1.7. Building Acceleration Structures

To build acceleration structures call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` [VkAccelerationStructureBuildGeometryInfoKHR](#) structures defining the geometry used to build each acceleration structure.

- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

The `vkCmdBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkCmdBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being used by any of the builds.

The input buffers passed to this commands will be referenced by the implementation for the duration of this command's execution on the device.

After the command completes, the acceleration structure **may** hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures **must** be fully self-contained.

The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of future commands, provided proper synchronization is used as described below.

NOTE

A `VkAccelerationStructureBuildRangeInfoKHR` structure is not used when building an acceleration structure with a geometry type of `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`.

NOTE

The required alignment of the device addresses passed in to parameters below might not be provided by the base address of a `VkBuffer` created with the correct usage flags and must still be manually aligned by the application code.

Accesses to the acceleration structure scratch buffers as identified by the `VkAccelerationStructureBuildGeometryInfoKHR::scratchData` buffer device addresses **must** be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of (`VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` | `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`). Accesses to each `VkAccelerationStructureBuildGeometryInfoKHR::srcAccelerationStructure` and `VkAccelerationStructureBuildGeometryInfoKHR::dstAccelerationStructure` **must** be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` or `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`, as appropriate.

Accesses to other input buffers as identified by any used values of `VkAccelerationStructureGeometryMotionTrianglesDataNV::vertexData`, `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD::compressedData`,

VkAccelerationStructureGeometryTrianglesDataKHR::vertexData,
 VkAccelerationStructureGeometryTrianglesDataKHR::indexData,
 VkAccelerationStructureGeometryTrianglesDataKHR::transformData,
 VkAccelerationStructureGeometryAabbsDataKHR::data, and
 VkAccelerationStructureGeometryInstancesDataKHR::data **must** be synchronized with the
 VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage and an access
 type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresKHR-accelerationStructure-08923
 The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresKHR-mode-04628
 The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkCmdBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
 If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-04630
 For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03403
 The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
 The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
 The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03699
 For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03700
 For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its

`dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03663

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, `inactive primitives` in its `srcAccelerationStructure` member **must** not be made active

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03664

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made `inactive`

- VUID-vkCmdBuildAccelerationStructuresKHR-None-03407

The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03701

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03702

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03667

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03668

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03758

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03759

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03760

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03761

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03762

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03763

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each

VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.vertexFormat member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03764

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.maxVertex member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03765

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, its geometry.triangles.indexType member **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03766

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was NULL when srcAccelerationStructure was last built, then it **must** be NULL

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03767

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_TRIANGLES_KHR, if its geometry.triangles.transformData address was not NULL when srcAccelerationStructure was last built, then it **must** not be NULL

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10898

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or ppGeometries members, if geometryType is VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD, the numTriangles member of the VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD structure in the pNext chain **must** have the same value which was specified when srcAccelerationStructure was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10899

For each element of pInfos, if its mode member is VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR, then for each VkAccelerationStructureGeometryKHR structure referred to by its pGeometries or

`ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numVertices` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10900

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxPrimitiveIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10901

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxGeometryIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10902

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `format` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10903

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `dataSize` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each

`VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03707

For each element of `pInfos`, its `dstAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03708

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03709

For each element of `pInfos`, if an acceleration structure is referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, it **must** be bound to device memory

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12258

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12259

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkCmdBuildAccelerationStructuresKHR-geometry-03673

The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12260

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and the size reported by `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12261

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and the size reported by `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03710

For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03804

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03711

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to:

- the `size of the format` specified in `vertexFormat`, in bytes, if that format is a `packed format`
- the `component size` of the format specified in `vertexFormat`, in bytes, if that format is not a `packed format`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03806

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not

`VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03712
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to the size in bytes of the type in `indexType`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03808
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03810
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03811
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03714
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03715
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03716
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03717
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-03813
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-12281
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR`

`::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be 0 or a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` for a valid bottom level acceleration structure

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10607

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT` is set in `VkAccelerationStructureInstanceKHR::flags` then `geometry.instances.data.deviceAddress` **must** refer to an acceleration structure that was built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags`

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-09547

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10904

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be 0

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10905

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11846

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, if `VkAccelerationStructureGeometrySpheresDataNV::indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be 0

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11847

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, if `VkAccelerationStructureGeometrySpheresDataNV::indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11848

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11849

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::radiusData.deviceAddress` **must** be a valid `VkDeviceAddress`

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11850

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of

VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if
VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is
VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be 0

- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11851
For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV, if
VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType is not
VK_INDEX_TYPE_NONE_KHR, then its indexData.deviceAddress **must** be a valid
VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11852
For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of
VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV,
VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.deviceAddress
must be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11853
For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of
VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV,
VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData.deviceAddress
must be a valid VkDeviceAddress
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10126
For each pInfos[i], dstAccelerationStructure **must** have been created with a value of
VkAccelerationStructureCreateInfoKHR::size greater than or equal to either:
 - the memory size required by the build operation, as returned by
vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and with each
element of the pMaxPrimitiveCounts array greater than or equal to the equivalent
ppBuildRangeInfos[i][j].primitiveCount values for j in [0,pInfos[i].geometryCount) or,
 - the result of querying the corresponding
VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR, if updating a
compacted acceleration structure
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-03676
Each element of ppBuildRangeInfos[i] **must** be a valid pointer to an array of pInfos
[i].geometryCount VkAccelerationStructureBuildRangeInfoKHR structures, or NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-10906
For each element of pInfos[i] whose pGeometries or ppGeometries members have a
geometryType of VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD,
ppBuildRangeInfos[i] **must** be NULL
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-11845
For each element of pInfos[i].pGeometries or pInfos[i].ppGeometries with a geometryType of
VK_GEOMETRY_TYPE_TRIANGLES_KHR, if there is an instance of
VkAccelerationStructureGeometryMotionTrianglesDataNV in the
geometry.triangles.pNext chain, then its vertexData.deviceAddress **must** be a valid
VkDeviceAddress

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBuildAccelerationStructuresKHR-pInfos-parameter **pInfos** **must** be a valid pointer to an array of **infoCount** valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter **ppBuildRangeInfos** **must** be a valid pointer to an array of **infoCount** [VkAccelerationStructureBuildRangeInfoKHR](#) structures
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdBuildAccelerationStructuresKHR-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#) operations
- VUID-vkCmdBuildAccelerationStructuresKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresKHR-infoCount-arraylength
infoCount **must** be greater than 0

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildAccelerationStructuresKHR is not affected by [conditional rendering](#)

To build acceleration structures with some parameters sourced on the device call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdBuildAccelerationStructuresIndirectKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkDeviceAddress*         pIndirectDeviceAddresses,
    const uint32_t*                pIndirectStrides,
    const uint32_t* const*         ppMaxPrimitiveCounts);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of acceleration structures to build.
- `pInfos` is a pointer to an array of `infoCount` [VkAccelerationStructureBuildGeometryInfoKHR](#) structures defining the geometry used to build each acceleration structure.
- `pIndirectDeviceAddresses` is a pointer to an array of `infoCount` buffer device addresses which point to `pInfos[i].geometryCount` [VkAccelerationStructureBuildRangeInfoKHR](#) structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.
- `pIndirectStrides` is a pointer to an array of `infoCount` byte strides between elements of `pIndirectDeviceAddresses`.
- `ppMaxPrimitiveCounts` is a pointer to an array of `infoCount` pointers to arrays of `pInfos[i].geometryCount` values indicating the maximum number of primitives that will be built by this command for each geometry.

Accesses to acceleration structures, scratch buffers, vertex buffers, index buffers, and instance buffers **must** be synchronized as with [vkCmdBuildAccelerationStructuresKHR](#).

Accesses to any element of `pIndirectDeviceAddresses` **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an [access type](#) of [VK_ACCESS_INDIRECT_COMMAND_READ_BIT](#).

Valid Usage

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-accelerationStructureIndirectBuild-03650
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureIndirectBuild` feature **must** be enabled
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-mode-04628
The `mode` member of each element of `pInfos` **must** be a valid [VkBuildAccelerationStructureModeKHR](#) value

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-srcAccelerationStructure-04629
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-04630
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03403
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03698
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03800
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03699
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03700
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03663
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, inactive primitives in its `srcAccelerationStructure` member **must** not be made active
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03664
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made inactive
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-None-03407
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of

pInfos

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03701
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03702
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03703
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03704
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-scratchData-03705
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-dstAccelerationStructure-03706
The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03667
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03668
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03758
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03759
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03760
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03761
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03762
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03763
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03764
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03765
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified

when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03766

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03767

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10898

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numTriangles` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10899

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numVertices` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10900

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxPrimitiveIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10901

For each element of `pInfos`, if its `mode` member is

`VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxGeometryIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10902

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `format` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10903

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `dataSize` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppMaxPrimitiveCounts[i][j]` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03707
For each element of `pInfos`, its `dstAccelerationStructure` member **must** be bound to device memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03708
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** be bound to device memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03709
For each element of `pInfos`, if an acceleration structure is referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, it **must** be bound to device memory
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12258
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12259
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where `N` is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-geometry-03673
The buffers from which the buffer device addresses for all of the `geometry.triangles.vertexData`, `geometry.triangles.indexData`, `geometry.triangles.transformData`, `geometry.aabbs.data`, and `geometry.instances.data` members of all `pInfos[i].pGeometries` and `pInfos[i].ppGeometries` are queried **must** have been created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12260
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and the size reported by `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12261
If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and the size reported by `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count is non-zero, `pInfos[i].scratchData.deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03710
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03804
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03711
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.deviceAddress` **must** be aligned to:
 - the `size of the format` specified in `vertexFormat`, in bytes, if that format is a `packed format`
 - the `component size` of the format specified in `vertexFormat`, in bytes, if that format is not a `packed format`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03806
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03712
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and with `geometry.triangles.indexType` not equal to `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.deviceAddress` **must** be aligned to the size in bytes of the type in `indexType`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03808
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03810
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.deviceAddress` is not `0`, it **must** be aligned to `16` bytes

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03811
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03714
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03715
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_FALSE`, `geometry.instances.data.deviceAddress` **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03716
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, `geometry.instances.data.deviceAddress` **must** be aligned to 8 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03717
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `geometry.arrayOfPointers` is `VK_TRUE`, each element of `geometry.instances.data.deviceAddress` in device memory **must** be aligned to 16 bytes
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03813
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-12281
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.deviceAddress` **must** be 0 or a value obtained from `vkGetAccelerationStructureDeviceAddressKHR` for a valid bottom level acceleration structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10607
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, if `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT` is set in `VkAccelerationStructureInstanceKHR::flags` then `geometry.instances.data.deviceAddress` **must** refer to an acceleration structure that was built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_BIT_EXT` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-09547
`commandBuffer` **must** not be a protected command buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10904
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of

`VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be 0

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-10905
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11846
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, if `VkAccelerationStructureGeometrySpheresDataNV::indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11847
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, if `VkAccelerationStructureGeometrySpheresDataNV::indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11848
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11849
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::radiusData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11850
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEEP_SPHERES_NV`, if `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be 0
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11851
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEEP_SPHERES_NV`, if `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11852
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEEP_SPHERES_NV`, `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-11853
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of

VK_GEOMETRY_TYPE_LINEAR_SWEEP_SPHERES_NV,
VkAccelerationStructureGeometryLinearSweepSpheresDataNV::radiusData.deviceAddress
must be a valid VkDeviceAddress

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03646
For each element of pIndirectDeviceAddresses[i], all device addresses between pIndirectDeviceAddresses[i] and pIndirectDeviceAddresses[i] + (pInfos[i].geometryCount × pIndirectStrides[i]) - 1 **must** be in the buffer device address range of the same buffer
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03647
For each element of pIndirectDeviceAddresses, the buffer from which it was queried **must** have been created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT usage flag set
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03648
Each element of pIndirectDeviceAddresses **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-03787
Each element of pIndirectStrides **must** be a multiple of 4
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-03651
Each VkAccelerationStructureBuildRangeInfoKHR structure referenced by any element of pIndirectDeviceAddresses **must** be a valid VkAccelerationStructureBuildRangeInfoKHR structure
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-03652
pInfos[i].dstAccelerationStructure **must** have been created with a value of VkAccelerationStructureCreateInfoKHR::size greater than or equal to the memory size required by the build operation, as returned by vkGetAccelerationStructureBuildSizesKHR with pBuildInfo = pInfos[i] and pMaxPrimitiveCounts = ppMaxPrimitiveCounts[i]
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-03653
Each ppMaxPrimitiveCounts[i][j] **must** be greater than or equal to the primitiveCount value specified by the VkAccelerationStructureBuildRangeInfoKHR structure located at pIndirectDeviceAddresses[i] + (j × pIndirectStrides[i])

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-parameter
commandBuffer **must** be a valid VkCommandBuffer handle
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pInfos-parameter
pInfos **must** be a valid pointer to an array of infoCount valid VkAccelerationStructureBuildGeometryInfoKHR structures
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectDeviceAddresses-parameter
pIndirectDeviceAddresses **must** be a valid pointer to an array of infoCount VkDeviceAddress values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-pIndirectStrides-parameter
pIndirectStrides **must** be a valid pointer to an array of infoCount uint32_t values

- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-ppMaxPrimitiveCounts-parameter `ppMaxPrimitiveCounts` **must** be a valid pointer to an array of `infoCount uint32_t` values
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildAccelerationStructuresIndirectKHR-infoCount-arraylength
`infoCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdBuildAccelerationStructuresIndirectKHR` is not affected by `conditional rendering`

The `VkAccelerationStructureBuildGeometryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildGeometryInfoKHR {
    VkStructureType                sType;
    const void*                    pNext;
    VkAccelerationStructureTypeKHR type;
    VkBuildAccelerationStructureFlagsKHR flags;
    VkBuildAccelerationStructureModeKHR mode;
    VkAccelerationStructureKHR     srcAccelerationStructure;
    VkAccelerationStructureKHR     dstAccelerationStructure;
    uint32_t                       geometryCount;
    const VkAccelerationStructureGeometryKHR* pGeometries;
    const VkAccelerationStructureGeometryKHR* ppGeometries;
    VkDeviceOrHostAddressKHR       scratchData;
} VkAccelerationStructureBuildGeometryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a `VkAccelerationStructureTypeKHR` value specifying the type of acceleration structure being built.
- `flags` is a bitmask of `VkBuildAccelerationStructureFlagBitsKHR` specifying additional parameters of the acceleration structure.
- `mode` is a `VkBuildAccelerationStructureModeKHR` value specifying the type of operation to perform.
- `srcAccelerationStructure` is a pointer to an existing acceleration structure that is to be used to update the `dstAccelerationStructure` acceleration structure when `mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`.
- `dstAccelerationStructure` is a pointer to the target acceleration structure for the build.
- `geometryCount` specifies the number of geometries that will be built into `dstAccelerationStructure`.
- `pGeometries` is a pointer to an array of `VkAccelerationStructureGeometryKHR` structures.
- `ppGeometries` is a pointer to an array of pointers to `VkAccelerationStructureGeometryKHR` structures.
- `scratchData` is the device or host address of memory that will be used as scratch memory for the build.

Only one of `pGeometries` or `ppGeometries` **can** be a valid pointer, the other **must** be `NULL`. Each element of the non-`NULL` array describes the data used to build each acceleration structure geometry.

The index of each element of the `pGeometries` or `ppGeometries` members of `VkAccelerationStructureBuildGeometryInfoKHR` is used as the *geometry index* during ray traversal. The geometry index is available in ray shaders via the `RayGeometryIndexKHR` built-in, and is **used to determine hit and intersection shaders executed during traversal**. The geometry index is available to ray queries via the `OpRayQueryGetIntersectionGeometryIndexKHR` instruction.

Setting `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in `flags` indicates that this build is a motion top level acceleration structure. A motion top level uses instances of format `VkAccelerationStructureMotionInstanceNV` if `VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers` is `VK_FALSE`.

If `VkAccelerationStructureGeometryInstancesDataKHR::arrayOfPointers` is `VK_TRUE`, the pointer for each element of the array of instance pointers consists of 4 bits of `VkAccelerationStructureMotionInstanceTypeNV` in the low 4 bits of the pointer identifying the type of structure at the pointer. The device address accessed is the value in the array with the low 4 bits set to zero. The structure at the pointer is one of `VkAccelerationStructureInstanceKHR`, `VkAccelerationStructureMatrixMotionInstanceNV` or `VkAccelerationStructureSRTMotionInstanceNV`, depending on the type value encoded in the low 4 bits.

A top level acceleration structure with either motion instances or vertex motion in its instances **must** set `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in `flags`.

Members `srcAccelerationStructure` and `dstAccelerationStructure` **may** be the same or different for an update operation (when `mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`). If they are the same, the update happens in-place. Otherwise, the target acceleration structure is updated and the source is not modified.

Valid Usage

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03654
`type` **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-03788
If `geometryCount` is not 0, exactly one of `pGeometries` or `ppGeometries` **must** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03789
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** be `VK_GEOMETRY_TYPE_INSTANCES_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03790
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, `geometryCount` **must** be 1
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03791
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` the `geometryType` member of elements of either `pGeometries` or `ppGeometries` **must** not be `VK_GEOMETRY_TYPE_INSTANCES_KHR`
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03792
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then the `geometryType` member of each geometry in either `pGeometries` or `ppGeometries` **must** be the same
- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03793
If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` then `geometryCount`

must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxGeometryCount`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-10884

If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the `geometryType` member of either `pGeometries` or `ppGeometries` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, then `geometryCount` **must** be 1

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03794

If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the `geometryType` member of either `pGeometries` or `ppGeometries` is `VK_GEOMETRY_TYPE_AABBS_KHR`, the total number of AABBs in all geometries **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-03795

If `type` is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` and the `geometryType` member of either `pGeometries` or `ppGeometries` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the total number of triangles in all geometries **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPrimitiveCount`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-03796

If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR` bit set, then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR` bit set

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-dstAccelerationStructure-04927

If `dstAccelerationStructure` was created with `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` set in `VkAccelerationStructureCreateInfoKHR::createFlags`, `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` **must** be set in `flags`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04928

If `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` is set in `flags`, `dstAccelerationStructure` **must** have been created with `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV` set in `VkAccelerationStructureCreateInfoKHR::createFlags`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-04929

If `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` is set in `flags`, `type` **must** not be `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`

- VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-07334

If `flags` has the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT` bit set then it **must** not have the `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` bit set

Valid Usage (Implicit)

- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR`
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-pNext-pNext` **must** be `NULL`
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-type-parameter` **type** **must** be a valid `VkAccelerationStructureTypeKHR` value
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-flags-parameter` **flags** **must** be a valid combination of `VkBuildAccelerationStructureFlagBitsKHR` values
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-pGeometries-parameter`
If `geometryCount` is not `0`, and `pGeometries` is not `NULL`, `pGeometries` **must** be a valid pointer to an array of `geometryCount` valid `VkAccelerationStructureGeometryKHR` structures
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-ppGeometries-parameter`
If `geometryCount` is not `0`, and `ppGeometries` is not `NULL`, `ppGeometries` **must** be a valid pointer to an array of `geometryCount` valid pointers to valid `VkAccelerationStructureGeometryKHR` structures
- `VUID-VkAccelerationStructureBuildGeometryInfoKHR-commonparent`
Both of `dstAccelerationStructure`, and `srcAccelerationStructure` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

The `VkBuildAccelerationStructureModeKHR` enumeration is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureModeKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR = 0,
    VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR = 1,
} VkBuildAccelerationStructureModeKHR;
```

- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR` specifies that the destination acceleration structure will be built using the specified geometries.
- `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` specifies that the destination acceleration structure will be built using data in a source acceleration structure, updated by the specified geometries.

The `VkDeviceOrHostAddressKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure, VK_NV_cooperative_vector
typedef union VkDeviceOrHostAddressKHR {
    VkDeviceAddress    deviceAddress;
    void*              hostAddress;
} VkDeviceOrHostAddressKHR;
```

- `deviceAddress` is a buffer device address as returned by the [vkGetBufferDeviceAddressKHR](#) command.
- `hostAddress` is a host memory address.

The `VkDeviceOrHostAddressConstKHR` union is defined as:

```
// Provided by VK_KHR_acceleration_structure, VK_NV_cooperative_vector
typedef union VkDeviceOrHostAddressConstKHR {
    VkDeviceAddress    deviceAddress;
    const void*        hostAddress;
} VkDeviceOrHostAddressConstKHR;
```

- `deviceAddress` is a buffer device address as returned by the [vkGetBufferDeviceAddressKHR](#) command.
- `hostAddress` is a const host memory address.

The `VkAccelerationStructureGeometryKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkGeometryTypeKHR  geometryType;
    VkAccelerationStructureGeometryDataKHR geometry;
    VkGeometryFlagsKHR flags;
} VkAccelerationStructureGeometryKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `geometryType` describes which type of geometry this `VkAccelerationStructureGeometryKHR` refers to.
- `geometry` is a [VkAccelerationStructureGeometryDataKHR](#) union describing the geometry data for the relevant geometry type.
- `flags` is a bitmask of [VkGeometryFlagBitsKHR](#) values describing additional properties of how the geometry should be built.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_KHR](#)
- VUID-VkAccelerationStructureGeometryKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD](#), [VkAccelerationStructureGeometryLinearSweptSpheresDataNV](#), or [VkAccelerationStructureGeometrySpheresDataNV](#)
- VUID-VkAccelerationStructureGeometryKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkAccelerationStructureGeometryKHR-geometryType-parameter
geometryType **must** be a valid [VkGeometryTypeKHR](#) value
- VUID-VkAccelerationStructureGeometryKHR-triangles-parameter
If **geometryType** is [VK_GEOMETRY_TYPE_TRIANGLES_KHR](#), the **triangles** member of **geometry** **must** be a valid [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure
- VUID-VkAccelerationStructureGeometryKHR-aabbs-parameter
If **geometryType** is [VK_GEOMETRY_TYPE_AABBS_KHR](#), the **aabbs** member of **geometry** **must** be a valid [VkAccelerationStructureGeometryAabbsDataKHR](#) structure
- VUID-VkAccelerationStructureGeometryKHR-instances-parameter
If **geometryType** is [VK_GEOMETRY_TYPE_INSTANCES_KHR](#), the **instances** member of **geometry** **must** be a valid [VkAccelerationStructureGeometryInstancesDataKHR](#) structure
- VUID-VkAccelerationStructureGeometryKHR-flags-parameter
flags **must** be a valid combination of [VkGeometryFlagBitsKHR](#) values

The [VkAccelerationStructureGeometryDataKHR](#) union is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef union VkAccelerationStructureGeometryDataKHR {
    VkAccelerationStructureGeometryTrianglesDataKHR    triangles;
    VkAccelerationStructureGeometryAabbsDataKHR        aabbs;
    VkAccelerationStructureGeometryInstancesDataKHR    instances;
} VkAccelerationStructureGeometryDataKHR;
```

- **triangles** is a [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure.
- **aabbs** is a [VkAccelerationStructureGeometryAabbsDataKHR](#) structure.
- **instances** is a [VkAccelerationStructureGeometryInstancesDataKHR](#) structure.

The [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryTrianglesDataKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkFormat              vertexFormat;
    VkDeviceOrHostAddressConstKHR vertexData;
    VkDeviceSize          vertexStride;
    uint32_t              maxVertex;
    VkIndexType           indexType;
    VkDeviceOrHostAddressConstKHR indexData;
    VkDeviceOrHostAddressConstKHR transformData;
} VkAccelerationStructureGeometryTrianglesDataKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vertexFormat** is the [VkFormat](#) of each vertex element.
- **vertexData** is a device or host address of memory containing vertex data for this geometry.
- **vertexStride** is the stride in bytes between each vertex.
- **maxVertex** is the number of vertices in **vertexData** minus one.
- **indexType** is the [VkIndexType](#) of each index element.
- **indexData** is a device or host address of memory containing index data for this geometry. When **indexType** is [VK_INDEX_TYPE_NONE_KHR](#) it **must** be **NULL**.
- **transformData** is a device or host address to memory containing an optional reference to a [VkTransformMatrixKHR](#) structure describing a transformation from the space in which the vertices in this geometry are described to the space in which the acceleration structure is defined.

NOTE

Unlike the stride for vertex buffers in [VkVertexInputBindingDescription](#) for graphics pipelines which must not exceed **maxVertexInputBindingStride**, **vertexStride** for acceleration structure geometry is instead restricted to being a 32-bit value.

Valid Usage

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03735
vertexStride **must** be a multiple of the size in bytes of the smallest component of **vertexFormat**
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexStride-03819
vertexStride **must** be less than or equal to $2^{32}-1$
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-03797
The **format** **features** of **vertexFormat** **must** contain [VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR](#)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-03798
`indexType` must be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_KHR`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_TRIANGLES_DATA_KHR`
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkAccelerationStructureGeometryMotionTrianglesDataNV`, `VkAccelerationStructureTrianglesDisplacementMicromapNV`, or `VkAccelerationStructureTrianglesOpacityMicromapEXT`
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-sType-unique
The `sType` value of each structure in the `pNext` chain must be unique
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-vertexFormat-parameter
`vertexFormat` must be a valid `VkFormat` value
- VUID-VkAccelerationStructureGeometryTrianglesDataKHR-indexType-parameter
`indexType` must be a valid `VkIndexType` value

The `VkAccelerationStructureGeometryMotionTrianglesDataNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureGeometryMotionTrianglesDataNV {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceOrHostAddressConstKHR vertexData;
} VkAccelerationStructureGeometryMotionTrianglesDataNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexData` is a pointer to vertex data for this geometry at time 1.0

If `VkAccelerationStructureGeometryMotionTrianglesDataNV` is included in the `pNext` chain of a `VkAccelerationStructureGeometryTrianglesDataKHR` structure, the basic vertex positions are used for the position of the triangles in the geometry at time 0.0 and the `vertexData` in `VkAccelerationStructureGeometryMotionTrianglesDataNV` is used for the vertex positions at time 1.0, with positions linearly interpolated at intermediate times.

Indexing for `VkAccelerationStructureGeometryMotionTrianglesDataNV` `vertexData` is equivalent to the basic vertex position data.

Valid Usage (Implicit)

- `VUID-VkAccelerationStructureGeometryMotionTrianglesDataNV-sType-sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MOTION_TRIANGLES_DATA_NV`

Structure Chaining

Extends the structure

- `VkAccelerationStructureGeometryTrianglesDataKHR`

The `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkAccelerationStructureTrianglesOpacityMicromapEXT {
    VkStructureType    sType;
    void*              pNext;
    VkIndexType         indexType;
    VkDeviceOrHostAddressConstKHR indexBuffer;
    VkDeviceSize        indexStride;
    uint32_t            baseTriangle;
    uint32_t            usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkMicromapEXT        micromap;
} VkAccelerationStructureTrianglesOpacityMicromapEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is a device or host address of memory containing the triangle indices. When `indexType` is `VK_INDEX_TYPE_NONE_KHR` it **must** be `NULL`.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.
- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesOpacityMicromapEXT` is included in the `pNext` chain of a

[VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD](#)X or [VkAccelerationStructureGeometryTrianglesDataKHR](#) structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride` if present. If `indexBuffer` is `NULL` then the index used is the index of the triangle in the geometry.

If that value is the unsigned cast of one of the values from [VkOpacityMicromapSpecialIndexEXT](#) then that triangle behaves as described for that special value in [Ray Opacity Micromap](#).

Otherwise that triangle uses the opacity micromap information from `micromap` at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection and special index handling **must** be equal to the sum of matching `count` provided.

If `micromap` is `VK_NULL_HANDLE`, then every value read from `indexBuffer` **must** be one of the values in [VkOpacityMicromapSpecialIndexEXT](#).

Valid Usage

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-07335
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10719
`indexType` **must** be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_KHR`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10722
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then `indexStride` **must** be a multiple of the size in bytes of `indexType`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-10723
If `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then `indexStride` **must** be less than or equal to $2^{32}-1$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_OPACITY_MICROMAP_EXT`
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-pUsageCounts-parameter

If `usageCountsCount` is not 0, and `pUsageCounts` is not NULL, `pUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures

- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-ppUsageCounts-parameter
If `usageCountsCount` is not 0, and `ppUsageCounts` is not NULL, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures
- VUID-VkAccelerationStructureTrianglesOpacityMicromapEXT-micromap-parameter
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkMicromapEXT` handle

Structure Chaining

Extends the structures

- `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD`
- `VkAccelerationStructureGeometryTrianglesDataKHR`

The `VkOpacityMicromapSpecialIndexEXT` enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkOpacityMicromapSpecialIndexEXT {
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT = -1,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT = -2,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT = -3,
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT = -4,
    // Provided by VK_EXT_opacity_micromap with VK_NV_cluster_acceleration_structure
    VK_OPACITY_MICROMAP_SPECIAL_INDEX_CLUSTER_GEOMETRY_DISABLE_OPACITY_MICROMAP_NV = -
5,
} VkOpacityMicromapSpecialIndexEXT;
```

- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT` specifies that the entire triangle is fully transparent.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_OPAQUE_EXT` specifies that the entire triangle is fully opaque.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_TRANSPARENT_EXT` specifies that the entire triangle is unknown-transparent.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_UNKNOWN_OPAQUE_EXT` specifies that the entire triangle is unknown-opaque.
- `VK_OPACITY_MICROMAP_SPECIAL_INDEX_CLUSTER_GEOMETRY_DISABLE_OPACITY_MICROMAP_NV` specifies that `Opacity Micromap` will be disabled for this triangle and opacity value will be picked from `VkClusterAccelerationStructureBuildTriangleClusterInfoNV::baseGeometryIndexAndGeometryFlags` instead. Note that this special index is only valid for `Cluster Geometry`.

The `VkAccelerationStructureTrianglesDisplacementMicromapNV` structure is defined as:

```
// Provided by VK_NV_displacement_micromap
typedef struct VkAccelerationStructureTrianglesDisplacementMicromapNV {
    VkStructureType           sType;
    void*                     pNext;
    VkFormat                  displacementBiasAndScaleFormat;
    VkFormat                  displacementVectorFormat;
    VkDeviceOrHostAddressConstKHR displacementBiasAndScaleBuffer;
    VkDeviceSize              displacementBiasAndScaleStride;
    VkDeviceOrHostAddressConstKHR displacementVectorBuffer;
    VkDeviceSize              displacementVectorStride;
    VkDeviceOrHostAddressConstKHR displacedMicromapPrimitiveFlags;
    VkDeviceSize              displacedMicromapPrimitiveFlagsStride;
    VkIndexType               indexType;
    VkDeviceOrHostAddressConstKHR indexBuffer;
    VkDeviceSize              indexStride;
    uint32_t                  baseTriangle;
    uint32_t                  usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkMicromapEXT             micromap;
} VkAccelerationStructureTrianglesDisplacementMicromapNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `displacementBiasAndScaleFormat` is the format of displacement bias and scale used in this displacement micromap reference.
- `displacementVectorFormat` is the format of displacement vector used in this displacement micromap reference.
- `displacementBiasAndScaleBuffer` is the address containing the bias and scale.
- `displacementBiasAndScaleStride` is the byte stride between bias and scale values.
- `displacementVectorBuffer` is the address containing the displacement vector values.
- `displacementVectorStride` is the byte stride between displacement vector values.
- `displacedMicromapPrimitiveFlags` is the address containing the primitive flags.
- `displacedMicromapPrimitiveFlagsStride` is the byte stride between primitive flag values.
- `indexType` is the type of triangle indices used when indexing this micromap.
- `indexBuffer` is a device or host address of memory containing the triangle indices. When `indexType` is `VK_INDEX_TYPE_NONE_KHR` it **must** be `NULL`.
- `indexStride` is the byte stride between triangle indices.
- `baseTriangle` is the base value added to the non-negative triangle indices.
- `usageCountsCount` specifies the number of usage counts structures that will be used to determine the size of this micromap.
- `pUsageCounts` is a pointer to an array of `VkMicromapUsageEXT` structures.

- `ppUsageCounts` is a pointer to an array of pointers to `VkMicromapUsageEXT` structures.
- `micromap` is the handle to the micromap object to include in this geometry.

If `VkAccelerationStructureTrianglesDisplacementMicromapNV` is included in the `pNext` chain of a `VkAccelerationStructureGeometryTrianglesDataKHR` structure, that geometry will reference that micromap.

For each triangle in the geometry, the acceleration structure build fetches an index from `indexBuffer` using `indexType` and `indexStride`. That triangle uses the displacement micromap information from `micromap` at that index plus `baseTriangle`.

Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`. The elements of the non-`NULL` array describe the total count used to build this geometry. For a given `format` and `subdivisionLevel` the number of triangles in this geometry matching those values after indirection **must** be equal to the sum of matching `count` provided.

Valid Usage

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-09501
`displacementBiasAndScaleFormat` **must** not be `VK_FORMAT_UNDEFINED`
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementVectorFormat-09502
`displacementVectorFormat` **must** not be `VK_FORMAT_UNDEFINED`
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-07992
Only one of `pUsageCounts` or `ppUsageCounts` **can** be a valid pointer, the other **must** be `NULL`

Valid Usage (Implicit)

- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-sType-sType **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_DISPLACEMENT_MICROMAP_NV`
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementBiasAndScaleFormat-parameter
`displacementBiasAndScaleFormat` **must** be a valid `VkFormat` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-displacementVectorFormat-parameter
`displacementVectorFormat` **must** be a valid `VkFormat` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-indexType-parameter
`indexType` **must** be a valid `VkIndexType` value
- VUID-VkAccelerationStructureTrianglesDisplacementMicromapNV-pUsageCounts-parameter
If `usageCountsCount` is not 0, and `pUsageCounts` is not `NULL`, `pUsageCounts` **must** be a valid

pointer to an array of `usageCountsCount` `VkMicromapUsageEXT` structures

- `VOID-VkAccelerationStructureTrianglesDisplacementMicromapNV-ppUsageCounts-parameter`

If `usageCountsCount` is not `0`, and `ppUsageCounts` is not `NULL`, `ppUsageCounts` **must** be a valid pointer to an array of `usageCountsCount` valid pointers to `VkMicromapUsageEXT` structures

- `VOID-VkAccelerationStructureTrianglesDisplacementMicromapNV-micromap-parameter`
If `micromap` is not `VK_NULL_HANDLE`, `micromap` **must** be a valid `VkMicromapEXT` handle

Structure Chaining

Extends the structure

- `VkAccelerationStructureGeometryTrianglesDataKHR`

To build an acceleration structure for the `VK_NV_ray_tracing` extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdBuildAccelerationStructureNV(
    VkCommandBuffer                commandBuffer,
    const VkAccelerationStructureInfoNV* pInfo,
    VkBuffer                       instanceData,
    VkDeviceSize                   instanceOffset,
    VkBool32                       update,
    VkAccelerationStructureNV      dst,
    VkAccelerationStructureNV      src,
    VkBuffer                       scratch,
    VkDeviceSize                   scratchOffset);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` contains the shared information for the acceleration structure's structure.
- `instanceData` is the buffer containing an array of `VkAccelerationStructureInstanceKHR` structures defining acceleration structures. This parameter **must** be `NULL` for bottom level acceleration structures.
- `instanceOffset` is the offset in bytes (relative to the start of `instanceData`) at which the instance data is located.
- `update` specifies whether to update the `dst` acceleration structure with the data in `src`.
- `dst` is a pointer to the target acceleration structure for the build.
- `src` is a pointer to an existing acceleration structure that is to be used to update the `dst` acceleration structure.
- `scratch` is the `VkBuffer` that will be used as scratch memory for the build.
- `scratchOffset` is the offset in bytes relative to the start of `scratch` that will be used as a scratch memory.

Accesses to `dst`, `src`, and `scratch` must be synchronized with the `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage and an access type of `VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR` or `VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`.

Valid Usage

- VUID-vkCmdBuildAccelerationStructureNV-geometryCount-02241
`geometryCount` must be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxGeometryCount`
- VUID-vkCmdBuildAccelerationStructureNV-dst-02488
`dst` must have been created with compatible `VkAccelerationStructureInfoNV` where `VkAccelerationStructureInfoNV::type` and `VkAccelerationStructureInfoNV::flags` are identical, `VkAccelerationStructureInfoNV::instanceCount` and `VkAccelerationStructureInfoNV::geometryCount` for `dst` are greater than or equal to the build size and each geometry in `VkAccelerationStructureInfoNV::pGeometries` for `dst` has greater than or equal to the number of vertices, indices, and AABBs
- VUID-vkCmdBuildAccelerationStructureNV-update-02489
If `update` is `VK_TRUE`, `src` must not be `VK_NULL_HANDLE`
- VUID-vkCmdBuildAccelerationStructureNV-update-02490
If `update` is `VK_TRUE`, `src` must have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV` set in `VkAccelerationStructureInfoNV::flags` in the original build
- VUID-vkCmdBuildAccelerationStructureNV-update-02491
If `update` is `VK_FALSE`, the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `VkAccelerationStructureMemoryRequirementsInfoNV::accelerationStructure` set to `dst` and `VkAccelerationStructureMemoryRequirementsInfoNV::type` set to `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` must be less than or equal to the size of `scratch` minus `scratchOffset`
- VUID-vkCmdBuildAccelerationStructureNV-update-02492
If `update` is `VK_TRUE`, the `size` member of the `VkMemoryRequirements` structure returned from a call to `vkGetAccelerationStructureMemoryRequirementsNV` with `VkAccelerationStructureMemoryRequirementsInfoNV::accelerationStructure` set to `dst` and `VkAccelerationStructureMemoryRequirementsInfoNV::type` set to `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` must be less than or equal to the size of `scratch` minus `scratchOffset`
- VUID-vkCmdBuildAccelerationStructureNV-scratch-03522
`scratch` must have been created with the `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag set
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-03523
If `instanceData` is not `VK_NULL_HANDLE`, `instanceData` must have been created with the `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` usage flag set
- VUID-vkCmdBuildAccelerationStructureNV-accelerationStructureReference-12264

Each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `instanceData` **must** be a value obtained from `vkGetAccelerationStructureHandleNV` for a bottom level acceleration structure

- VUID-vkCmdBuildAccelerationStructureNV-update-03524
If `update` is `VK_TRUE`, then objects that were previously active **must** not be made inactive as per [Inactive Primitives and Instances](#)
- VUID-vkCmdBuildAccelerationStructureNV-update-03525
If `update` is `VK_TRUE`, then objects that were previously inactive **must** not be made active as per [Inactive Primitives and Instances](#)
- VUID-vkCmdBuildAccelerationStructureNV-update-03526
If `update` is `VK_TRUE`, the `src` and `dst` objects **must** either be the same object or not have any [memory aliasing](#)
- VUID-vkCmdBuildAccelerationStructureNV-dst-07787
`dst` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via `vkBindAccelerationStructureMemoryNV`

Valid Usage (Implicit)

- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildAccelerationStructureNV-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkAccelerationStructureInfoNV` structure
- VUID-vkCmdBuildAccelerationStructureNV-instanceData-parameter
If `instanceData` is not `VK_NULL_HANDLE`, `instanceData` **must** be a valid `VkBuffer` handle
- VUID-vkCmdBuildAccelerationStructureNV-dst-parameter
`dst` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-vkCmdBuildAccelerationStructureNV-src-parameter
If `src` is not `VK_NULL_HANDLE`, `src` **must** be a valid `VkAccelerationStructureNV` handle
- VUID-vkCmdBuildAccelerationStructureNV-scratch-parameter
`scratch` **must** be a valid `VkBuffer` handle
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdBuildAccelerationStructureNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdBuildAccelerationStructureNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildAccelerationStructureNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildAccelerationStructureNV-videocoding
This command **must** only be called outside of a video coding scope

- VUID-vkCmdBuildAccelerationStructureNV-commonparent

Each of `commandBuffer`, `dst`, `instanceData`, `scratch`, and `src` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdBuildAccelerationStructureNV` is not affected by [conditional rendering](#)

The `VkTransformMatrixKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkTransformMatrixKHR {
    float    matrix[3][4];
} VkTransformMatrixKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkTransformMatrixKHR
typedef VkTransformMatrixKHR VkTransformMatrixNV;
```

- `matrix` is a 3x4 row-major affine transformation matrix.

Valid Usage

- VUID-VkTransformMatrixKHR-matrix-03799

The first three columns of `matrix` **must** define an invertible 3x3 matrix

The `VkAccelerationStructureGeometryAabbsDataKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryAabbsDataKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceSize         stride;
} VkAccelerationStructureGeometryAabbsDataKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `data` is a device or host address of memory containing `VkAabbPositionsKHR` structures containing position data for each axis-aligned bounding box in the geometry.
- `stride` is the stride in bytes between each entry in `data`. The stride **must** be a multiple of 8.

Valid Usage

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03545
`stride` **must** be a multiple of 8
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-stride-03820
`stride` **must** be less than or equal to $2^{32}-1$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometryAabbsDataKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_AABBS_DATA_KHR`
- VUID-VkAccelerationStructureGeometryAabbsDataKHR-pNext-pNext
`pNext` **must** be `NULL`

The `VkAabbPositionsKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAabbPositionsKHR {
    float  minX;
    float  minY;
    float  minZ;
    float  maxX;
    float  maxY;
    float  maxZ;
} VkAabbPositionsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkAabbPositionsKHR
typedef VkAabbPositionsKHR VkAabbPositionsNV;
```

- **minX** is the x position of one opposing corner of a bounding box.
- **minY** is the y position of one opposing corner of a bounding box.
- **minZ** is the z position of one opposing corner of a bounding box.
- **maxX** is the x position of the other opposing corner of a bounding box.
- **maxY** is the y position of the other opposing corner of a bounding box.
- **maxZ** is the z position of the other opposing corner of a bounding box.

Valid Usage

- VUID-VkAabbPositionsKHR-minX-03546
minX must be less than or equal to **maxX**
- VUID-VkAabbPositionsKHR-minY-03547
minY must be less than or equal to **maxY**
- VUID-VkAabbPositionsKHR-minZ-03548
minZ must be less than or equal to **maxZ**

The **VkAccelerationStructureGeometryInstancesDataKHR** structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureGeometryInstancesDataKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkBool32                 arrayOfPointers;
    VkDeviceOrHostAddressConstKHR data;
} VkAccelerationStructureGeometryInstancesDataKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **arrayOfPointers** specifies whether **data** is used as an array of addresses or just an array.
- **data** is either the address of an array of device or host addresses referencing individual **VkAccelerationStructureInstanceKHR** structures or packed motion instance information as described in **motion instances** if **arrayOfPointers** is **VK_TRUE**, or the address of an array of **VkAccelerationStructureInstanceKHR** or **VkAccelerationStructureMotionInstanceNV** structures. Addresses and **VkAccelerationStructureInstanceKHR** structures are tightly packed. **VkAccelerationStructureMotionInstanceNV** structures have a stride of 160 bytes.

Valid Usage (Implicit)

- `VOID-VkAccelerationStructureGeometryInstancesDataKHR-sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_INSTANCES_DATA_KHR`
- `VOID-VkAccelerationStructureGeometryInstancesDataKHR-pNext` **must** be `NULL`

Acceleration structure instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location. Multiple instances **can** point to the same bottom level acceleration structure.

An acceleration structure instance is defined by the structure:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureInstanceKHR {
    VkTransformMatrixKHR    transform;
    uint32_t                instanceCustomIndex:24;
    uint32_t                mask:8;
    uint32_t                instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t                accelerationStructureReference;
} VkAccelerationStructureInstanceKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkAccelerationStructureInstanceKHR
typedef VkAccelerationStructureInstanceKHR VkAccelerationStructureInstanceNV;
```

- `transform` is a `VkTransformMatrixKHR` structure describing a transformation to be applied to the acceleration structure.
- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of `VkGeometryInstanceFlagBitsKHR` values to apply to this instance.
- `accelerationStructureReference` is either :
 - a device address containing the value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV` for a bottom level acceleration structure (used by device operations which reference acceleration structures) or,

- a device address containing a bottom level cluster acceleration structure built using [vkCmdBuildClusterAccelerationStructureIndirectNV](#)
- a [VkAccelerationStructureKHR](#) object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
 - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInstanceKHR-flags-parameter
`flags` **must** be a valid combination of [VkGeometryInstanceFlagBitsKHR](#) values

Possible values of `flags` in the instance modifying the behavior of that instance are:

```

// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryInstanceFlagBitsKHR {
    VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR = 0x00000002,
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR = 0x00000004,
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR = 0x00000008,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT = 0x00000010,
    // Provided by VK_EXT_opacity_micromap
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT = 0x00000020,
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR =
VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_CULL_DISABLE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_NV =
VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_NV =
VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR,
    // Provided by VK_EXT_opacity_micromap
    // VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_EXT =
VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT,
    // Provided by VK_EXT_opacity_micromap
    // VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT is a legacy alias
    VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT =
VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT,
} VkGeometryInstanceFlagBitsKHR;

```

```

// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryInstanceFlagBitsKHR
typedef VkGeometryInstanceFlagBitsKHR VkGeometryInstanceFlagBitsNV;

```

- [VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR](#) disables face culling for this instance.
- [VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR](#) specifies that the [facing determination](#) for geometry in this instance is inverted. Because the facing is determined in object space, an instance transform does not change the winding, but a geometry transform does.
- [VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR](#) causes this instance to act as though [VK_GEOMETRY_OPAQUE_BIT_KHR](#) were specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V [NoOpaqueKHR](#) ray flag.

- [VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR](#) causes this instance to act as though [VK_GEOMETRY_OPAQUE_BIT_KHR](#) were not specified on all geometries referenced by this instance. This behavior **can** be overridden by the SPIR-V [OpaqueKHR](#) ray flag.

[VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR](#) and [VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR](#) **must** not be used in the same flag.

```
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryInstanceFlagsKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkGeometryInstanceFlagsKHR
typedef VkGeometryInstanceFlagsKHR VkGeometryInstanceFlagsNV;
```

[VkGeometryInstanceFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkGeometryInstanceFlagBitsKHR](#).

Acceleration structure motion instances **can** be built into top-level acceleration structures. Each acceleration structure instance is a separate entry in the top-level acceleration structure which includes all the geometry of a bottom-level acceleration structure at a transformed location including a type of motion and parameters to determine the motion of the instance over time.

An acceleration structure motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMotionInstanceNV {
    VkAccelerationStructureMotionInstanceTypeNV    type;
    VkAccelerationStructureMotionInstanceFlagsNV    flags;
    VkAccelerationStructureMotionInstanceDataNV    data;
} VkAccelerationStructureMotionInstanceNV;
```

- **type** is a [VkAccelerationStructureMotionInstanceTypeNV](#) enumerant identifying which type of motion instance this is and which type of the union is valid.
- **flags** is currently unused, but is required to keep natural alignment of **data**.
- **data** is a [VkAccelerationStructureMotionInstanceDataNV](#) containing motion instance data for this instance.

NOTE

If writing this other than with a standard C compiler, note that the final structure should be 152 bytes in size.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMotionInstanceNV-type-parameter **type** **must** be a valid [VkAccelerationStructureMotionInstanceTypeNV](#) value

- VUID-VkAccelerationStructureMotionInstanceNV-flags-zero bitmask
flags must be 0
- VUID-VkAccelerationStructureMotionInstanceNV-staticInstance-parameter
If **type** is `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV`, the **staticInstance** member of **data** **must** be a valid `VkAccelerationStructureInstanceKHR` structure
- VUID-VkAccelerationStructureMotionInstanceNV-matrixMotionInstance-parameter
If **type** is `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV`, the **matrixMotionInstance** member of **data** **must** be a valid `VkAccelerationStructureMatrixMotionInstanceNV` structure
- VUID-VkAccelerationStructureMotionInstanceNV-srtMotionInstance-parameter
If **type** is `VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV`, the **srtMotionInstance** member of **data** **must** be a valid `VkAccelerationStructureSRTMotionInstanceNV` structure

Acceleration structure motion instance is defined by the union:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef union VkAccelerationStructureMotionInstanceDataNV {
    VkAccelerationStructureInstanceKHR          staticInstance;
    VkAccelerationStructureMatrixMotionInstanceNV matrixMotionInstance;
    VkAccelerationStructureSRTMotionInstanceNV  srtMotionInstance;
} VkAccelerationStructureMotionInstanceDataNV;
```

- **staticInstance** is a `VkAccelerationStructureInstanceKHR` structure containing data for a static instance.
- **matrixMotionInstance** is a `VkAccelerationStructureMatrixMotionInstanceNV` structure containing data for a matrix motion instance.
- **srtMotionInstance** is a `VkAccelerationStructureSRTMotionInstanceNV` structure containing data for an SRT motion instance.

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef VkFlags VkAccelerationStructureMotionInstanceFlagsNV;
```

`VkAccelerationStructureMotionInstanceFlagsNV` is a bitmask type for setting a mask, but is currently reserved for future use.

The `VkAccelerationStructureMotionInstanceTypeNV` enumeration is defined as:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef enum VkAccelerationStructureMotionInstanceTypeNV {
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV = 0,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV = 1,
    VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV = 2,
} VkAccelerationStructureMotionInstanceTypeNV;
```

- [VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_STATIC_NV](#) specifies that the instance is a static instance with no instance motion.
- [VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_MATRIX_MOTION_NV](#) specifies that the instance is a motion instance with motion specified by interpolation between two matrices.
- [VK_ACCELERATION_STRUCTURE_MOTION_INSTANCE_TYPE_SRT_MOTION_NV](#) specifies that the instance is a motion instance with motion specified by interpolation in the SRT decomposition.

An acceleration structure matrix motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureMatrixMotionInstanceNV {
    VkTransformMatrixKHR    transformT0;
    VkTransformMatrixKHR    transformT1;
    uint32_t                instanceCustomIndex:24;
    uint32_t                mask:8;
    uint32_t                instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t                accelerationStructureReference;
} VkAccelerationStructureMatrixMotionInstanceNV;
```

- [transformT0](#) is a [VkTransformMatrixKHR](#) structure describing a transformation to be applied to the acceleration structure at time 0.
- [transformT1](#) is a [VkTransformMatrixKHR](#) structure describing a transformation to be applied to the acceleration structure at time 1.
- [instanceCustomIndex](#) is a 24-bit application-specified index value accessible to ray shaders in the [InstanceCustomIndexKHR](#) built-in.
- [mask](#) is an 8-bit visibility mask for the geometry. The instance **may** only be hit if [Cull Mask & instance.mask != 0](#)
- [instanceShaderBindingTableRecordOffset](#) is a 24-bit offset used in calculating the hit shader binding table index.
- [flags](#) is an 8-bit mask of [VkGeometryInstanceFlagBitsKHR](#) values to apply to this instance.
- [accelerationStructureReference](#) is either:
 - a device address containing the value obtained from [vkGetAccelerationStructureDeviceAddressKHR](#) or [vkGetAccelerationStructureHandleNV](#) (used by device operations which reference acceleration structures) or,

- a [VkAccelerationStructureKHR](#) object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
 - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for a matrix motion instance at a point in time is derived by component-wise linear interpolation of the two transforms. That is, for a `time` in [0,1] the resulting transform is

$$\text{transformT0} \times (1 - \text{time}) + \text{transformT1} \times \text{time}$$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureMatrixMotionInstanceNV-flags-parameter `flags` **must** be a valid combination of [VkGeometryInstanceFlagBitsKHR](#) values

An acceleration structure SRT motion instance is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkAccelerationStructureSRTMotionInstanceNV {
    VkSRTDataNV          transformT0;
    VkSRTDataNV          transformT1;
    uint32_t              instanceCustomIndex:24;
    uint32_t              mask:8;
    uint32_t              instanceShaderBindingTableRecordOffset:24;
    VkGeometryInstanceFlagsKHR flags:8;
    uint64_t              accelerationStructureReference;
} VkAccelerationStructureSRTMotionInstanceNV;
```

- `transformT0` is a [VkSRTDataNV](#) structure describing a transformation to be applied to the acceleration structure at time 0.
- `transformT1` is a [VkSRTDataNV](#) structure describing a transformation to be applied to the

acceleration structure at time 1.

- `instanceCustomIndex` is a 24-bit application-specified index value accessible to ray shaders in the `InstanceCustomIndexKHR` built-in.
- `mask` is an 8-bit visibility mask for the geometry. The instance **may** only be hit if `Cull Mask & instance.mask != 0`
- `instanceShaderBindingTableRecordOffset` is a 24-bit offset used in calculating the hit shader binding table index.
- `flags` is an 8-bit mask of `VkGeometryInstanceFlagBitsKHR` values to apply to this instance.
- `accelerationStructureReference` is either:
 - a device address containing the value obtained from `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV` (used by device operations which reference acceleration structures) or,
 - a `VkAccelerationStructureKHR` object (used by host operations which reference acceleration structures).

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is for the following:

- `instanceCustomIndex` and `mask` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceCustomIndex` occupies the 24 least significant bits of that memory
 - `mask` occupies the 8 most significant bits of that memory
- `instanceShaderBindingTableRecordOffset` and `flags` occupy the same memory as if a single `uint32_t` was specified in their place
 - `instanceShaderBindingTableRecordOffset` occupies the 24 least significant bits of that memory
 - `flags` occupies the 8 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

The transform for a SRT motion instance at a point in time is derived from component-wise linear interpolation of the two SRT transforms. That is, for a `time` in [0,1] the resulting transform is

$$\text{transformT0} \times (1 - \text{time}) + \text{transformT1} \times \text{time}$$

Valid Usage (Implicit)

- VUID-VkAccelerationStructureSRTMotionInstanceNV-flags-parameter
`flags` **must** be a valid combination of `VkGeometryInstanceFlagBitsKHR` values

An acceleration structure SRT transform is defined by the structure:

```
// Provided by VK_NV_ray_tracing_motion_blur
typedef struct VkSRTDataNV {
    float    sx;
    float    a;
    float    b;
    float    pvx;
    float    sy;
    float    c;
    float    pvy;
    float    sz;
    float    pvz;
    float    qx;
    float    qy;
    float    qz;
    float    qw;
    float    tx;
    float    ty;
    float    tz;
} VkSRTDataNV;
```

- **sx** is the x component of the scale of the transform
- **a** is one component of the shear for the transform
- **b** is one component of the shear for the transform
- **pvx** is the x component of the pivot point of the transform
- **sy** is the y component of the scale of the transform
- **c** is one component of the shear for the transform
- **py** is the y component of the pivot point of the transform
- **sz** is the z component of the scale of the transform
- **pz** is the z component of the pivot point of the transform
- **qx** is the x component of the rotation quaternion
- **qy** is the y component of the rotation quaternion
- **qz** is the z component of the rotation quaternion
- **qw** is the w component of the rotation quaternion
- **tx** is the x component of the post-rotation translation
- **ty** is the y component of the post-rotation translation
- **tz** is the z component of the post-rotation translation

This transform decomposition consists of three elements. The first is a matrix *S*, consisting of a scale, shear, and translation, usually used to define the pivot point of the following rotation. This matrix is constructed from the parameters above by:

$$S = \begin{pmatrix} sx & a & b & pvx \\ 0 & sy & c & pvy \\ 0 & 0 & sz & pvz \end{pmatrix}$$

The rotation quaternion is defined as:

$$R = [qx, qy, qz, qw]$$

This is a rotation around a conceptual normalized axis [ax, ay, az] of amount **theta** such that:

$$[qx, qy, qz] = \sin(\text{theta}/2) \times [ax, ay, az]$$

and

$$qw = \cos(\text{theta}/2)$$

Finally, the transform has a translation T constructed from the parameters above by:

$$T = \begin{pmatrix} 1 & 0 & 0 & tx \\ 0 & 1 & 0 & ty \\ 0 & 0 & 1 & tz \end{pmatrix}$$

The effective derived transform is then given by

$$T \times R \times S$$

If a **VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD** structure is included in the **pNext** chain of a **VkAccelerationStructureGeometryKHR** structure whose **geometryType** member is **VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD**, then that structure defines triangle geometry using compressed data.

The **VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD** structure is defined as:

```
// Provided by VK_AMD_dense_geometry_format
typedef struct VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR compressedData;
    VkDeviceSize             dataSize;
    uint32_t                 numTriangles;
    uint32_t                 numVertices;
    uint32_t                 maxPrimitiveIndex;
    uint32_t                 maxGeometryIndex;
    VkCompressedTriangleFormatAMD format;
} VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `compressedData` specifies the base address of the compressed data.
- `dataSize` specifies the size of the compressed data.
- `numTriangles` specifies the total number of triangles encoded in the compressed data.
- `numVertices` specifies the number of vertices in the compressed data.
- `maxPrimitiveIndex` specifies the maximum primitive index encoded in the compressed data.
- `maxGeometryIndex` specifies the maximum geometry index encoded in the compressed data.
- `format` specifies the `VkCompressedTriangleFormatAMD` format of the compressed data.

If `format` is `VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMD`, `numVertices` specifies the sum of vertex counts across all blocks.

Valid Usage

- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-compressedData-10885
The buffer from which `compressedData.deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_2_COMPRESSED_DATA_DGF1_BIT_AMD` usage flag set
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-denseGeometryFormat-10886
The `VkPhysicalDeviceDenseGeometryFormatFeaturesAMD::denseGeometryFormat` feature **must** be enabled
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-format-10887
If `format` is `VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMD`, then `compressedData` **must** be aligned to `VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMD` (128) bytes
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-format-10888
If `format` is `VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMD`, then `dataSize` **must** be a multiple of `VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMD` (128) bytes
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-pNext-10890
`pNext` **must** be `NULL` or a pointer to a valid `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure
- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-pNext-10891
If `pNext` is a pointer to a valid `VkAccelerationStructureTrianglesOpacityMicromapEXT` structure, the `micromap` feature **must** be enabled

Valid Usage (Implicit)

- VUID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-sType-sType
`sType` **must** be

[VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DENSE_GEOMETRY_FORMAT_TRIANGLES_DATA_AMD](#)

- `VOID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-compressedData`-parameter
`compressedData` **must** be a valid [VkDeviceOrHostAddressConstKHR](#) union
- `VOID-VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD-format`-parameter
`format` **must** be a valid [VkCompressedTriangleFormatAMD](#) value

Structure Chaining

Extends the structure

- [VkAccelerationStructureGeometryKHR](#)

[VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMD](#) is the alignment requirement in bytes for compressed triangle data as specified in [VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD::compressedData](#).

```
#define VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_ALIGNMENT_AMD 128U
```

[VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMD](#) is the stride requirement in bytes for compressed triangle data as specified in [VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD::dataSize](#).

```
#define VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_BYTE_STRIDE_AMD 128U
```

The [VkCompressedTriangleFormatAMD](#) enumeration is defined as:

```
// Provided by VK_AMD_dense_geometry_format
typedef enum VkCompressedTriangleFormatAMD {
    VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMD = 0,
} VkCompressedTriangleFormatAMD;
```

- [VK_COMPRESSED_TRIANGLE_FORMAT_DGF1_AMD](#) specifies that the compressed triangle data is in [Dense Geometry Format](#), version 1, consisting of an array of 128B DGF blocks.

[VkAccelerationStructureBuildRangeInfoKHR](#) is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildRangeInfoKHR {
    uint32_t    primitiveCount;
    uint32_t    primitiveOffset;
    uint32_t    firstVertex;
    uint32_t    transformOffset;
} VkAccelerationStructureBuildRangeInfoKHR;
```

- `primitiveCount` defines the number of primitives for a corresponding acceleration structure geometry.
- `primitiveOffset` defines an offset in bytes into the memory where primitive data is defined.
- `firstVertex` is the index of the first vertex to build from for triangle geometry.
- `transformOffset` defines an offset in bytes into the memory where a transform matrix is defined.

The primitive count and primitive offset are interpreted differently depending on the `VkGeometryTypeKHR` used:

- For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `primitiveCount` is the number of triangles to be built, where each triangle is treated as 3 vertices.
 - If the geometry uses indices, `primitiveCount` × 3 indices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices.
 - If the geometry does not use indices, `primitiveCount` × 3 vertices are consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData`, starting at an offset of `primitiveOffset` + `VkAccelerationStructureGeometryTrianglesDataKHR::vertexStride` × `firstVertex`.
 - If `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` is not `NULL`, a single `VkTransformMatrixKHR` structure is consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData`, at an offset of `transformOffset`. This matrix describes a transformation from the space in which the vertices for all triangles in this geometry are described to the space in which the acceleration structure is defined.
- For geometries of type `VK_GEOMETRY_TYPE_AABBs_KHR`, `primitiveCount` is the number of axis-aligned bounding boxes. `primitiveCount` `VkAabbPositionsKHR` structures are consumed from `VkAccelerationStructureGeometryAabbsDataKHR::data`, starting at an offset of `primitiveOffset`.
- For geometries of type `VK_GEOMETRY_TYPE_SPHERES_NV`, `primitiveCount` is the number of spheres to be built, where each sphere is treated as 1 vertex.
 - If the geometry uses indices, `primitiveCount` indices are consumed from `VkAccelerationStructureGeometrySpheresDataNV::indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices and radii.
 - If the geometry does not use indices, `primitiveCount` vertices and radii are consumed from `VkAccelerationStructureGeometrySpheresDataNV::vertexData`, starting at an offset of

$\text{primitiveOffset} + \text{VkAccelerationStructureGeometrySpheresDataNV::vertexStride} \times \text{firstVertex}$ and $\text{VkAccelerationStructureGeometrySpheresDataNV::radiusData}$, starting at an offset of $\text{primitiveOffset} + \text{VkAccelerationStructureGeometrySpheresDataNV::radiusStride} \times \text{firstVertex}$ respectively.

- For geometries of type `VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV`, `primitiveCount` is the number of LSS primitives to be built, where each LSS primitive is treated as 2 vertices.
 - If the geometry uses indices, $\text{primitiveCount} \times 2$ indices are consumed from `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexData`, starting at an offset of `primitiveOffset`. The value of `firstVertex` is added to the index values before fetching vertices and radii.
 - If the geometry does not use indices, $\text{primitiveCount} \times 2$ vertices and radii are consumed from `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData`, starting at an offset of $\text{primitiveOffset} + \text{VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexStride} \times \text{firstVertex}$ and `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData`, starting at an offset of $\text{primitiveOffset} + \text{VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusStride} \times \text{firstVertex}$ respectively.
- For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `primitiveCount` is the number of acceleration structures. `primitiveCount` `VkAccelerationStructureInstanceKHR` or `VkAccelerationStructureMotionInstanceNV` structures are consumed from `VkAccelerationStructureGeometryInstancesDataKHR::data`, starting at an offset of `primitiveOffset`.

Valid Usage

- VOID-VkAccelerationStructureBuildRangeInfoKHR-vertexData-10418
The number of vertices consumed from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData` **must** be less than or equal to `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex + 1`
- VOID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03656
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry uses indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::indexData` **must** be a multiple of the element size of `VkAccelerationStructureGeometryTrianglesDataKHR::indexType`
- VOID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03657
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry does not use indices, the offset `primitiveOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::vertexData` **must** be a multiple of:
 - the size of the format specified in `VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`, if that format is a packed format
 - the component size of the `VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`, if that format is not a packed format

- VUID-VkAccelerationStructureBuildRangeInfoKHR-maxVertex-10774
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry uses indices, then `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex` **must** be greater than or equal to `firstVertex` plus the maximum index value found in the `VkAccelerationStructureGeometryTrianglesDataKHR::indexData` in the range `[primitiveOffset, primitiveOffset + primitiveCount x 3]`
- VUID-VkAccelerationStructureBuildRangeInfoKHR-None-10775
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the geometry does not use indices, then `VkAccelerationStructureGeometryTrianglesDataKHR::maxVertex` **must** be greater than or equal to `firstVertex + primitiveCount x 3 - 1`
- VUID-VkAccelerationStructureBuildRangeInfoKHR-transformOffset-03658
For geometries of type `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the offset `transformOffset` from `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` **must** be a multiple of 16
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03659
For geometries of type `VK_GEOMETRY_TYPE_AABBS_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryAabbsDataKHR::data` **must** be a multiple of 8
- VUID-VkAccelerationStructureBuildRangeInfoKHR-primitiveOffset-03660
For geometries of type `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the offset `primitiveOffset` from `VkAccelerationStructureGeometryInstancesDataKHR::data` **must** be a multiple of 16

If `VkAccelerationStructureGeometryLinearSweptSpheresDataNV` is included in the `pNext` chain of a `VkAccelerationStructureGeometryKHR` structure, then that structure defines the linear swept sphere's (LSS) geometry data.

The `VkAccelerationStructureGeometryLinearSweptSpheresDataNV` structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkAccelerationStructureGeometryLinearSweptSpheresDataNV {
    VkStructureType          sType;
    const void*              pNext;
    VkFormat                 vertexFormat;
    VkDeviceOrHostAddressConstKHR vertexData;
    VkDeviceSize             vertexStride;
    VkFormat                 radiusFormat;
    VkDeviceOrHostAddressConstKHR radiusData;
    VkDeviceSize             radiusStride;
    VkIndexType              indexType;
    VkDeviceOrHostAddressConstKHR indexData;
    VkDeviceSize             indexStride;
    VkRayTracingLssIndexingModeNV indexingMode;
    VkRayTracingLssPrimitiveEndCapsModeNV endCapsMode;
} VkAccelerationStructureGeometryLinearSweptSpheresDataNV;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the `VkFormat` of each LSS vertex element.
- `vertexData` is a device or host address of memory containing vertex data for this geometry.
- `vertexStride` is the stride in bytes between each vertex element.
- `radiusFormat` is the `VkFormat` of each LSS radius.
- `radiusData` is a device or host address of memory containing LSS radius data value.
- `radiusStride` is the stride in bytes between each radius value.
- `indexType` is the `VkIndexType` of each index element.
- `indexData` is a device or host address of memory containing index data for vertex and radius buffers for this geometry. When `indexType` is `VK_INDEX_TYPE_NONE_KHR` it **must** be `NULL`.
- `indexStride` is the stride in bytes between each index element.
- `indexingMode` is a `VkRayTracingLssIndexingModeNV` value specifying the mode of indexing.
- `endCapsMode` is a `VkRayTracingLssPrimitiveEndCapsModeNV` value specifying the endcaps mode for LSS primitives.

If an index buffer is not specified in `indexData`, LSS primitives are rendered individually using subsequent pairs of vertices similar to `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`.

Valid Usage

- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-None-10419
The `linearSweptSpheres` feature **must** be enabled
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexStride-10421
`vertexStride` **must** be a multiple of:
 - the `size of the format` specified in `vertexFormat` if that format is a `packed format`
 - the `component size` specified in `vertexFormat` if that format is not a `packed format`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexStride-10422
`vertexStride` and `radiusStride` **must** be less than or equal to $2^{32}-1$
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexFormat-10423
The `format features` of `vertexFormat` **must** contain `VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusFormat-10424
The `format features` of `radiusFormat` **must** contain `VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_RADIUS_BUFFER_BIT_NV`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusData-10426
All values referenced in `radiusData` **must** be greater than or equal to `0`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexingMode-10427
If `indexingMode` is `VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESSIVE_NV`, `indexData` **must** not be `NULL`
- VUID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexData-10428

`indexType` must be `VK_INDEX_TYPE_UINT16`, `VK_INDEX_TYPE_UINT32`, or `VK_INDEX_TYPE_NONE_KHR`

Valid Usage (Implicit)

- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-sType-sType` must be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_LINEAR_SWEEP_SPHERES_DATA_NV`
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexFormat-parameter`
`vertexFormat` must be a valid `VkFormat` value
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-vertexData-parameter`
`vertexData` must be a valid `VkDeviceOrHostAddressConstKHR` union
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusFormat-parameter`
`radiusFormat` must be a valid `VkFormat` value
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-radiusData-parameter`
`radiusData` must be a valid `VkDeviceOrHostAddressConstKHR` union
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexType-parameter`
`indexType` must be a valid `VkIndexType` value
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexData-parameter`
`indexData` must be a valid `VkDeviceOrHostAddressConstKHR` union
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-indexingMode-parameter`
`indexingMode` must be a valid `VkRayTracingLssIndexingModeNV` value
- `VOID-VkAccelerationStructureGeometryLinearSweptSpheresDataNV-endCapsMode-parameter`
`endCapsMode` must be a valid `VkRayTracingLssPrimitiveEndCapsModeNV` value

Structure Chaining

Extends the structure

- `VkAccelerationStructureGeometryKHR`

Chaining LSS primitives can be achieved by specifying an index buffer in `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexData` and setting `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexingMode` to one of

VkRayTracingLssIndexingModeNV values:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef enum VkRayTracingLssIndexingModeNV {
    VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV = 0,
    VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESIVE_NV = 1,
} VkRayTracingLssIndexingModeNV;
```

- [VK_RAY_TRACING_LSS_INDEXING_MODE_LIST_NV](#) specifies that a list of indices is provided where each consecutive pair of indices define a LSS primitive.
- [VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESIVE_NV](#) specifies a successive implicit indexing format, in which each LSS primitive is defined by two successive positions and radii, (k, k + 1), where k is a single index provided in the index buffer. In this indexing scheme, there is a 1:1 mapping between the index buffer and primitive index within the geometry.

The default behavior with endcaps in a LSS chain is that both endcaps will be enabled for all beginning and end points. To change the LSS chain's endcaps mode use [VkAccelerationStructureGeometryLinearSweptSpheresDataNV::endCapsMode](#). The possible values for [endCapsMode](#) are:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef enum VkRayTracingLssPrimitiveEndCapsModeNV {
    VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_NONE_NV = 0,
    VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV = 1,
} VkRayTracingLssPrimitiveEndCapsModeNV;
```

- [VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_NONE_NV](#) disables all endcaps and the chain boundaries have no influence.
- [VK_RAY_TRACING_LSS_PRIMITIVE_END_CAPS_MODE_CHAINED_NV](#) specifies that when [VK_RAY_TRACING_LSS_INDEXING_MODE_SUCCESIVE_NV](#) is used as indexing mode for the LSS primitive, the first primitive in each chain will have both endcaps enabled, and every following primitive in the chain only has endcaps at the trailing position enabled.

In addition to LSS primitives, simple sphere geometry is also supported. Spheres do not have an endcap mode. If an index buffer is present, each entry represents a single position and radius describing one sphere primitive. If no index buffer is provided, the vertex position and radius values are sequentially read from the corresponding buffers.

If [VkAccelerationStructureGeometrySpheresDataNV](#) is included in the [pNext](#) chain of a [VkAccelerationStructureGeometryKHR](#) structure, then that structure defines the sphere's geometry data.

The [VkAccelerationStructureGeometrySpheresDataNV](#) structure is defined as:

```
// Provided by VK_NV_ray_tracing_linear_swept_spheres
typedef struct VkAccelerationStructureGeometrySpheresDataNV {
    VkStructureType      sType;
    const void*          pNext;
    VkFormat             vertexFormat;
    VkDeviceOrHostAddressConstKHR vertexData;
    VkDeviceSize         vertexStride;
    VkFormat             radiusFormat;
    VkDeviceOrHostAddressConstKHR radiusData;
    VkDeviceSize         radiusStride;
    VkIndexType          indexType;
    VkDeviceOrHostAddressConstKHR indexData;
    VkDeviceSize         indexStride;
} VkAccelerationStructureGeometrySpheresDataNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **vertexFormat** is the **VkFormat** of each sphere's vertex element.
- **vertexData** is a device or host address of memory containing vertex data in form of pairs of centers of spheres that define all sphere geometry.
- **vertexStride** is the stride in bytes between each vertex element.
- **radiusFormat** is the **VkFormat** of each sphere's radius.
- **radiusData** is a device or host address of memory containing sphere's radius data value.
- **radiusStride** is the stride in bytes between each radius value.
- **indexType** is the **VkIndexType** of each index element.
- **indexData** is a device or host address of memory containing index data for vertex and radius buffers for this geometry. When **indexType** is **VK_INDEX_TYPE_NONE_KHR** it **must** be **NULL**.
- **indexStride** is the stride in bytes between each index element.

Valid Usage

- VUID-VkAccelerationStructureGeometrySpheresDataNV-None-10429
The **spheres** feature **must** be enabled
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexStride-10431
vertexStride **must** be a multiple of:
 - the **size of the format** specified in **vertexFormat** if that format is a **packed format**
 - the smallest **component size** specified in **vertexFormat** if that format is not a **packed format**
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexStride-10432
vertexStride and **radiusStride** **must** be less than or equal to $2^{32}-1$
- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexFormat-10434

The [format](#) [features](#) of [vertexFormat](#) **must** contain [VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR](#)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusFormat-10435

The [format](#) [features](#) of [radiusFormat](#) **must** contain [VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_RADIUS_BUFFER_BIT_NV](#)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusData-10436

All values referenced in [radiusData](#) **must** be greater than or equal to [0](#)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexData-10437

[indexType](#) **must** be [VK_INDEX_TYPE_UINT16](#), [VK_INDEX_TYPE_UINT32](#), [VK_INDEX_TYPE_NONE_KHR](#)

Valid Usage (Implicit)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-sType-sType

[sType](#) **must** be [VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_SPHERES_DATA_NV](#)

- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexFormat-parameter

[vertexFormat](#) **must** be a valid [VkFormat](#) value

- VUID-VkAccelerationStructureGeometrySpheresDataNV-vertexData-parameter

[vertexData](#) **must** be a valid [VkDeviceOrHostAddressConstKHR](#) union

- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusFormat-parameter

[radiusFormat](#) **must** be a valid [VkFormat](#) value

- VUID-VkAccelerationStructureGeometrySpheresDataNV-radiusData-parameter

[radiusData](#) **must** be a valid [VkDeviceOrHostAddressConstKHR](#) union

- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexType-parameter

[indexType](#) **must** be a valid [VkIndexType](#) value

- VUID-VkAccelerationStructureGeometrySpheresDataNV-indexData-parameter

[indexData](#) **must** be a valid [VkDeviceOrHostAddressConstKHR](#) union

Structure Chaining

Extends the structure

- [VkAccelerationStructureGeometryKHR](#)

42.1.8. Copying Acceleration Structures

An additional command exists for copying acceleration structures without updating their contents. The acceleration structure object **can** be compacted in order to improve performance. Before copying, an application **must** query the size of the resulting acceleration structure.

To query acceleration structure size parameters call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdWriteAccelerationStructuresPropertiesKHR(
    VkCommandBuffer                commandBuffer,
    uint32_t                       accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType                    queryType,
    VkQueryPool                    queryPool,
    uint32_t                       firstQuery);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **accelerationStructureCount** is the count of acceleration structures for which to query the property.
- **pAccelerationStructures** is a pointer to an array of existing previously built acceleration structures.
- **queryType** is a **VkQueryType** value specifying the type of queries managed by the pool.
- **queryPool** is the query pool that will manage the results of the query.
- **firstQuery** is the first query index within the query pool that will contain the **accelerationStructureCount** number of results.

Accesses to any of the acceleration structures listed in **pAccelerationStructures** **must** be **synchronized** with the **VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR** pipeline stage or the **VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR** pipeline stage, and an **access type** of **VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR**.

- If **queryType** is **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR**, then the value written out is the number of bytes required by a compacted acceleration structure.
- If **queryType** is **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR**, then the value written out is the number of bytes required by a serialized acceleration structure.

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructure-08924
The **VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure** feature **must** be enabled
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02493
queryPool **must** have been created with a **queryType** matching **queryType**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-02494
The queries identified by **queryPool** and **firstQuery** **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-buffer-03736
Each element of **pAccelerationStructures** **must** be bound to device memory
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-query-04880
The sum of **firstQuery** plus **accelerationStructureCount** **must** be less than or equal to the number of queries in **queryPool**

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-04964
All acceleration structures in **pAccelerationStructures** **must** have been built prior to the execution of this command
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
All acceleration structures in **pAccelerationStructures** **must** have been built with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR** if **queryType** is **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-06742
queryType **must** be **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR**, **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR**, **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR**, or **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR**

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-parameter **commandBuffer** **must** be a valid **VkCommandBuffer** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
pAccelerationStructures **must** be a valid pointer to an array of **accelerationStructureCount** valid **VkAccelerationStructureKHR** handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryType-parameter
queryType **must** be a valid **VkQueryType** value
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-queryPool-parameter
queryPool **must** be a valid **VkQueryPool** handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-recording
commandBuffer **must** be in the **recording state**
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commandBuffer-cmdpool
The **VkCommandPool** that **commandBuffer** was allocated from **must** support **VK_QUEUE_COMPUTE_BIT** operations
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
accelerationStructureCount **must** be greater than 0
- VUID-vkCmdWriteAccelerationStructuresPropertiesKHR-commonparent
Each of **commandBuffer**, **queryPool**, and the elements of **pAccelerationStructures** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdWriteAccelerationStructuresPropertiesKHR` is not affected by [conditional rendering](#)

To query acceleration structure size parameters for the [VK_NV_ray_tracing](#) extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdWriteAccelerationStructuresPropertiesNV(
    VkCommandBuffer          commandBuffer,
    uint32_t                 accelerationStructureCount,
    const VkAccelerationStructureNV* pAccelerationStructures,
    VkQueryType              queryType,
    VkQueryPool              queryPool,
    uint32_t                 firstQuery);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `accelerationStructureCount` is the count of acceleration structures for which to query the property.
- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a [VkQueryType](#) value specifying the type of queries managed by the pool.
- `queryPool` is the query pool that will manage the results of the query.
- `firstQuery` is the first query index within the query pool that will contain the `accelerationStructureCount` number of results.

Accesses to any of the acceleration structures listed in `pAccelerationStructures` **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an [access type](#) of [VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR](#).

Valid Usage

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03755
`queryPool` **must** have been created with a `queryType` matching `queryType`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-03756
The queries identified by `queryPool` and `firstQuery` **must** be *unavailable*
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructure-03757
`accelerationStructure` **must** be bound completely and contiguously to a single `VkDeviceMemory` object via `vkBindAccelerationStructureMemoryNV`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-04958
All acceleration structures in `pAccelerationStructures` **must** have been built prior to the execution of this command
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-06215
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-06216
`queryType` **must** be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`

Valid Usage (Implicit)

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-pAccelerationStructures-parameter
`pAccelerationStructures` **must** be a valid pointer to an array of `accelerationStructureCount` valid `VkAccelerationStructureNV` handles
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-videocoding

This command **must** only be called outside of a video coding scope

- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-accelerationStructureCount-arraylength
`accelerationStructureCount` **must** be greater than 0
- VUID-vkCmdWriteAccelerationStructuresPropertiesNV-commonparent
Each of `commandBuffer`, `queryPool`, and the elements of `pAccelerationStructures` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdWriteAccelerationStructuresPropertiesNV` is not affected by [conditional rendering](#)

To copy an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureKHR(
    VkCommandBuffer          commandBuffer,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a `VkCopyAccelerationStructureInfoKHR` structure defining the copy operation.

This command copies the `pInfo->src` acceleration structure to the `pInfo->dst` acceleration structure in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be [synchronized](#) with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the

VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR or VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureKHR-accelerationStructure-08925
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureKHR-src-11633
The source acceleration structure `pInfo->src` **must** have been constructed prior to the execution of this command on the device

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureInfoKHR` structure
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyAccelerationStructureKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyAccelerationStructureKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyAccelerationStructureKHR is not affected by [conditional rendering](#)

The `VkCopyAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the source acceleration structure for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureInfoKHR-mode-03410
`mode` **must** be `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR` or `VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR`
- VUID-VkCopyAccelerationStructureInfoKHR-src-04963
The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureInfoKHR-src-03411
If `mode` is `VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR`, `src` **must** have been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` in the build

- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03718
The range of **src** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-buffer-03719
The range of **dst** accessed by this command **must** be fully backed by physical memory
- VUID-VkCopyAccelerationStructureInfoKHR-dst-07791
The range of memory backing **dst** that is accessed by this command **must** not overlap the memory backing **src** that is accessed by this command

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureInfoKHR-sType-sType
sType **must** be `VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_INFO_KHR`
- VUID-VkCopyAccelerationStructureInfoKHR-pNext-pNext
pNext **must** be `NULL`
- VUID-VkCopyAccelerationStructureInfoKHR-src-parameter
src **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkCopyAccelerationStructureInfoKHR-dst-parameter
dst **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-VkCopyAccelerationStructureInfoKHR-mode-parameter
mode **must** be a valid `VkCopyAccelerationStructureModeKHR` value
- VUID-VkCopyAccelerationStructureInfoKHR-commonparent
Both of **dst**, and **src** **must** have been created, allocated, or retrieved from the same `VkDevice`

To copy an acceleration structure for the `VK_NV_ray_tracing` extension call:

```
// Provided by VK_NV_ray_tracing
void vkCmdCopyAccelerationStructureNV(
    VkCommandBuffer          commandBuffer,
    VkAccelerationStructureNV dst,
    VkAccelerationStructureNV src,
    VkCopyAccelerationStructureModeKHR mode);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **dst** is the target acceleration structure for the copy.
- **src** is the source acceleration structure for the copy.
- **mode** is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Accesses to **src** and **dst** **must** be `synchronized` with the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR` pipeline stage or the `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` pipeline stage, and an access

type of [VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR](#) or [VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR](#) as appropriate.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureNV-mode-03410
`mode` **must** be [VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR](#) or [VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR](#)
- VUID-vkCmdCopyAccelerationStructureNV-src-04963
The source acceleration structure `src` **must** have been constructed prior to the execution of this command
- VUID-vkCmdCopyAccelerationStructureNV-src-03411
If `mode` is [VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR](#), `src` **must** have been constructed with [VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR](#) in the build
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03718
The range of `src` accessed by this command **must** be fully backed by physical memory
- VUID-vkCmdCopyAccelerationStructureNV-buffer-03719
The range of `dst` accessed by this command **must** be fully backed by physical memory
- VUID-vkCmdCopyAccelerationStructureNV-dst-07791
The range of memory backing `dst` that is accessed by this command **must** not overlap the memory backing `src` that is accessed by this command

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyAccelerationStructureNV-dst-parameter
`dst` **must** be a valid [VkAccelerationStructureNV](#) handle
- VUID-vkCmdCopyAccelerationStructureNV-src-parameter
`src` **must** be a valid [VkAccelerationStructureNV](#) handle
- VUID-vkCmdCopyAccelerationStructureNV-mode-parameter
`mode` **must** be a valid [VkCopyAccelerationStructureModeKHR](#) value
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdCopyAccelerationStructureNV-commandBuffer-cmdpool
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#) operations
- VUID-vkCmdCopyAccelerationStructureNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureNV-suspended
This command **must** not be called between suspended render pass instances

- VUID-vkCmdCopyAccelerationStructureNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdCopyAccelerationStructureNV-commonparent
Each of **commandBuffer**, **dst**, and **src** **must** have been created, allocated, or retrieved from the same **VkDevice**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyAccelerationStructureNV is not affected by [conditional rendering](#)

Possible values of **mode** specifying additional operations to perform during the copy, are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkCopyAccelerationStructureModeKHR {
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR = 0,
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR = 1,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR = 2,
    // Provided by VK_KHR_acceleration_structure
    VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR = 3,
    // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR,
    // Provided by VK_NV_ray_tracing
    VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_NV =
VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR,
} VkCopyAccelerationStructureModeKHR;
```

```
// Provided by VK_NV_ray_tracing
// Equivalent to VkCopyAccelerationStructureModeKHR
typedef VkCopyAccelerationStructureModeKHR VkCopyAccelerationStructureModeNV;
```

- [VK_COPY_ACCELERATION_STRUCTURE_MODE_CLONE_KHR](#) creates a direct copy of the acceleration structure specified in `src` into the one specified by `dst`. The `dst` acceleration structure **must** have been created with the same parameters as `src`. If `src` contains references to other acceleration structures, `dst` will reference the same acceleration structures.
- [VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR](#) creates a more compact version of an acceleration structure `src` into `dst`. The acceleration structure `dst` **must** have been created with a size at least as large as that returned by [vkCmdWriteAccelerationStructuresPropertiesNV](#), [vkCmdWriteAccelerationStructuresPropertiesKHR](#), or [vkWriteAccelerationStructuresPropertiesKHR](#) after the build of the acceleration structure specified by `src`. If `src` contains references to other acceleration structures, `dst` will reference the same acceleration structures.
- [VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR](#) serializes the acceleration structure to a semi-opaque format which can be reloaded on a compatible implementation.
- [VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR](#) deserializes the semi-opaque serialization format in the buffer to the acceleration structure.

To copy an acceleration structure to device memory call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyAccelerationStructureToMemoryKHR(
    VkCommandBuffer                                commandBuffer,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a [VkCopyAccelerationStructureToMemoryInfoKHR](#) structure defining the copy operation.

Accesses to `pInfo->src` **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR](#) pipeline stage or the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage, and an `access type` of [VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR](#). Accesses to the buffer indicated by `pInfo->dst.deviceAddress` **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR](#) pipeline stage or the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage, and an `access type` of [VK_ACCESS_TRANSFER_WRITE_BIT](#).

This command produces the same results as [vkCopyAccelerationStructureToMemoryKHR](#), but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either [vkCmdCopyMemoryToAccelerationStructureKHR](#) or [vkCopyMemoryToAccelerationStructureKHR](#).

The defined header structure for the serialized data consists of:

- `VK_UUID_SIZE` bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- `VK_UUID_SIZE` bytes of data identifying the compatibility for comparison using `vkGetDeviceAccelerationStructureCompatibilityKHR`
- A 64-bit integer of the total size matching the value queried using `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- A 64-bit integer of the deserialized size to be passed in to `VkAccelerationStructureCreateInfoKHR::size`
- A 64-bit integer of the count of the number of acceleration structure handles following. This value matches the value queried using `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`. This will be zero for a bottom-level acceleration structure. For top-level acceleration structures this number is implementation-dependent; the number of and ordering of the handles may not match the instance descriptions which were used to build the acceleration structure.

The corresponding handles matching the values returned by `vkGetAccelerationStructureDeviceAddressKHR` or `vkGetAccelerationStructureHandleNV` are tightly packed in the buffer following the count. The application is expected to store a mapping between those handles and the original application-generated bottom-level acceleration structures to provide when deserializing. The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-accelerationStructure-08926
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03739
`pInfo->dst.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-03740
`pInfo->dst.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-None-03559
`pInfo->src` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureToMemoryInfoKHR` structure

- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyAccelerationStructureToMemoryKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdCopyAccelerationStructureToMemoryKHR` is not affected by [conditional rendering](#)

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyAccelerationStructureToMemoryInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkAccelerationStructureKHR src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyAccelerationStructureToMemoryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **src** is the source acceleration structure for the copy.
- **dst** is the device or host address of memory which is the target for the copy.
- **mode** is a [VkCopyAccelerationStructureModeKHR](#) value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-04959
The source acceleration structure **src** **must** have been constructed prior to the execution of this command
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-dst-03561
The memory pointed to by **dst** **must** be at least as large as the serialization size of **src**, as reported by [vkWriteAccelerationStructuresPropertiesKHR](#) or [vkCmdWriteAccelerationStructuresPropertiesKHR](#) with a query type of [VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR](#)
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-03412
mode **must** be [VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR](#)

Valid Usage (Implicit)

- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_COPY_ACCELERATION_STRUCTURE_TO_MEMORY_INFO_KHR](#)
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-pNext-pNext
pNext **must** be NULL
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-src-parameter
src **must** be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyAccelerationStructureToMemoryInfoKHR-mode-parameter
mode **must** be a valid [VkCopyAccelerationStructureModeKHR](#) value

To copy device memory to an acceleration structure call:

```
// Provided by VK_KHR_acceleration_structure
void vkCmdCopyMemoryToAccelerationStructureKHR(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure defining the copy operation.

Accesses to **pInfo->dst** **must** be [synchronized](#) with the

VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR. Accesses to the buffer indicated by `pInfo->src.deviceAddress` **must** be synchronized with the VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR pipeline stage or the VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR pipeline stage, and an access type of VK_ACCESS_TRANSFER_READ_BIT.

This command can accept acceleration structures produced by either `vkCmdCopyAccelerationStructureToMemoryKHR` or `vkCopyAccelerationStructureToMemoryKHR`.

The structure provided as input to deserialize is as described in `vkCmdCopyAccelerationStructureToMemoryKHR`, with any acceleration structure handles filled in with the newly-queried handles to bottom level acceleration structures created before deserialization. These do not need to be built at deserialize time, but **must** be created.

Valid Usage

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-accelerationStructure-08927
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03742
`pInfo->src.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-03743
`pInfo->src.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-buffer-03745
`pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToAccelerationStructureInfoKHR` structure
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-suspended
This command **must** not be called between suspended render pass instances

- VUID-vkCmdCopyMemoryToAccelerationStructureKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryToAccelerationStructureKHR` is not affected by [conditional rendering](#)

The `VkCopyMemoryToAccelerationStructureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkCopyMemoryToAccelerationStructureInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkAccelerationStructureKHR dst;
    VkCopyAccelerationStructureModeKHR mode;
} VkCopyMemoryToAccelerationStructureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address of memory containing the source data for the copy.
- `dst` is the target acceleration structure for the copy.
- `mode` is a `VkCopyAccelerationStructureModeKHR` value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-src-04960
The source memory pointed to by **src** **must** contain data previously serialized using [vkCmdCopyAccelerationStructureToMemoryKHR](#), potentially modified to relocate acceleration structure references as described in that command
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-03413
mode **must** be [VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pInfo-03414
The data in **src** **must** have a format compatible with the destination physical device as returned by [vkGetDeviceAccelerationStructureCompatibilityKHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-03746
dst **must** have been created with a **size** greater than or equal to that used to serialize the data in **src**

Valid Usage (Implicit)

- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_COPY_MEMORY_TO_ACCELERATION_STRUCTURE_INFO_KHR](#)
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-pNext-pNext
pNext **must** be **NULL**
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-dst-parameter
dst **must** be a valid [VkAccelerationStructureKHR](#) handle
- VUID-VkCopyMemoryToAccelerationStructureInfoKHR-mode-parameter
mode **must** be a valid [VkCopyAccelerationStructureModeKHR](#) value

To check if a serialized acceleration structure is compatible with the current device call:

```
// Provided by VK_KHR_acceleration_structure
void vkGetDeviceAccelerationStructureCompatibilityKHR(
    VkDevice device,
    const VkAccelerationStructureVersionInfoKHR* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- **device** is the device to check the version against.
- **pVersionInfo** is a pointer to a [VkAccelerationStructureVersionInfoKHR](#) structure specifying version information to check against the device.
- **pCompatibility** is a pointer to a [VkAccelerationStructureCompatibilityKHR](#) value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-accelerationStructure-08928
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pVersionInfo-parameter
`pVersionInfo` **must** be a valid pointer to a valid `VkAccelerationStructureVersionInfoKHR` structure
- VUID-vkGetDeviceAccelerationStructureCompatibilityKHR-pCompatibility-parameter
`pCompatibility` **must** be a valid pointer to a `VkAccelerationStructureCompatibilityKHR` value

The `VkAccelerationStructureVersionInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureVersionInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const uint8_t*      pVersionData;
} VkAccelerationStructureVersionInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVersionData` is a pointer to the version header of an acceleration structure as defined in `vkCmdCopyAccelerationStructureToMemoryKHR`

NOTE

`pVersionData` is a *pointer* to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values instead of two `VK_UUID_SIZE` arrays as the expected use case for this member is to be pointed at the header of a previously serialized acceleration structure (via `vkCmdCopyAccelerationStructureToMemoryKHR` or `vkCopyAccelerationStructureToMemoryKHR`) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- VUID-VkAccelerationStructureVersionInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_INFO_KHR`

- VUID-VkAccelerationStructureVersionInfoKHR-pNext-pNext
pNext must be **NULL**
- VUID-VkAccelerationStructureVersionInfoKHR-pVersionData-parameter
pVersionData must be a valid pointer to an array of $2 \times VK_UUID_SIZE$ **uint8_t** values

Possible values of **pCompatibility** returned by **vkGetDeviceAccelerationStructureCompatibilityKHR** are:

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCompatibilityKHR {
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR = 0,
    VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR = 1,
} VkAccelerationStructureCompatibilityKHR;
```

- **VK_ACCELERATION_STRUCTURE_COMPATIBILITY_COMPATIBLE_KHR** if the **pVersionData** version acceleration structure is compatible with **device**.
- **VK_ACCELERATION_STRUCTURE_COMPATIBILITY_INCOMPATIBLE_KHR** if the **pVersionData** version acceleration structure is not compatible with **device**.

42.2. Cluster Level Acceleration Structures

Acceleration structure build times in ray tracing applications with extensive geometry **can** be reduced by introducing alternative acceleration structure types that facilitate bottom-level acceleration structure construction using pre-generated primitive clusters, improving geometry reuse. This **can** be achieved by incorporating additional acceleration structure types:

1. [Cluster Level Acceleration Structure](#)
2. [Cluster Template Acceleration Structure](#)
3. [Cluster Level Bottom Level Acceleration Structure](#)

Cluster Level Acceleration Structure (CLAS) is an intermediate acceleration structure constructed from triangles, which serves as a building block for [Cluster Level Bottom Level Acceleration Structure](#). A CLAS shares similarities with a traditional [bottom level acceleration structure](#) but has several key distinctions. A CLAS **can** only contain a limited number of [triangles and vertices](#). CLAS objects cannot be directly referenced in a top level acceleration structure, instead, they **must** be part of a [Cluster Level Bottom Level Acceleration Structure](#). The [geometry indices](#) within a CLAS are local to it, potentially non-consecutive, and customizable per primitive. Each CLAS **can** also have a user-defined 32-bit [ClusterID](#), which is accessible in the hit shaders. The vertex positions within a CLAS **can** be quantized by [zeroing](#) specific floating-point mantissa bits to optimize storage.

Cluster Template Acceleration Structure is a partially constructed [CLAS](#) designed for efficient instantiation into multiple [CLAS](#) objects. During a cluster template build, some pre-computation is performed independent of vertex positions, allowing reuse across multiple CLAS objects with different vertex data. A cluster template itself does not require vertex positions but it retains non-positional properties similar to a CLAS, which are then inherited during instantiation. A cluster

template **must** be instantiated into a CLAS object to be usable.

Cluster Level Bottom Level Acceleration Structure is a new alternative to the existing [bottom level acceleration structures](#), which is constructed using references to already built [CLAS](#) objects and is the only cluster acceleration structure that **can** be referenced in a top level acceleration structure.

These cluster acceleration structures **can** be built or moved by a single versatile multi-indirect function [vkCmdBuildClusterAccelerationStructureIndirectNV](#). To determine the memory requirements for executing this function, call:

```
// Provided by VK_NV_cluster_acceleration_structure
void vkGetClusterAccelerationStructureBuildSizesNV(
    VkDevice device,
    const VkClusterAccelerationStructureInputInfoNV* pInfo,
    VkAccelerationStructureBuildSizesInfoKHR* pSizeInfo);
```

- **device** is the logical device that owns the acceleration structure.
- **pInfo** is a pointer to a [VkClusterAccelerationStructureInputInfoNV](#) structure containing parameters required for the memory requirements query.
- **pSizeInfo** is a pointer to a [VkAccelerationStructureBuildSizesInfoKHR](#) structure which returns the size required for an acceleration structure and scratch buffer, given the build parameters. The size requirements for a scratch buffer **may** be zero.

If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV](#), acceleration structure and scratch memory sizes are returned for all [VkClusterAccelerationStructureInputInfoNV::maxAccelerationStructureCount](#) acceleration structures. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV](#), scratch memory size for all [VkClusterAccelerationStructureInputInfoNV::maxAccelerationStructureCount](#) acceleration structures and the acceleration structure memory size for a single acceleration structure is returned. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#), only scratch memory size is returned for the requested acceleration structures.

Valid Usage

- VUID-vkGetClusterAccelerationStructureBuildSizesNV-clusterAccelerationStructure-10438 The [VkPhysicalDeviceClusterAccelerationStructureFeaturesNV::clusterAccelerationStructure](#) feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetClusterAccelerationStructureBuildSizesNV-device-parameter **device** **must** be a valid [VkDevice](#) handle

- VUID-vkGetClusterAccelerationStructureBuildSizesNV-pInfo-parameter
pInfo must be a valid pointer to a valid [VkClusterAccelerationStructureInputInfoNV](#) structure
- VUID-vkGetClusterAccelerationStructureBuildSizesNV-pSizeInfo-parameter
pSizeInfo must be a valid pointer to a [VkAccelerationStructureBuildSizesInfoKHR](#) structure

The [VkClusterAccelerationStructureInputInfoNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureInputInfoNV {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                 maxAccelerationStructureCount;
    VkBuildAccelerationStructureFlagsKHR flags;
    VkClusterAccelerationStructureOpTypeNV opType;
    VkClusterAccelerationStructureOpModeNV opMode;
    VkClusterAccelerationStructureOpInputNV opInput;
} VkClusterAccelerationStructureInputInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxAccelerationStructureCount** is the maximum number of acceleration structures that will be provided to the multi indirect operation.
- **flags** is a bitmask of [VkBuildAccelerationStructureFlagsKHR](#) specifying flags for the multi indirect operation.
- **opType** is a [VkClusterAccelerationStructureOpTypeNV](#) value specifying the type of operation to perform.
- **opMode** is a [VkClusterAccelerationStructureOpModeNV](#) value specifying the mode of operation.
- **opInput** is a [VkClusterAccelerationStructureOpInputNV](#) value specifying the descriptions of the operation.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureInputInfoNV-sType-sType
sType must be [VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_INPUT_INFO_NV](#)
- VUID-VkClusterAccelerationStructureInputInfoNV-pNext-pNext
pNext must be **NULL**
- VUID-VkClusterAccelerationStructureInputInfoNV-flags-parameter
flags must be a valid combination of [VkBuildAccelerationStructureFlagBitsKHR](#) values
- VUID-VkClusterAccelerationStructureInputInfoNV-opType-parameter
opType must be a valid [VkClusterAccelerationStructureOpTypeNV](#) value

- VUID-VkClusterAccelerationStructureInputInfoNV-opMode-parameter
opMode **must** be a valid [VkClusterAccelerationStructureOpModeNV](#) value
- VUID-VkClusterAccelerationStructureInputInfoNV-pClustersBottomLevel-parameter
If **opType** is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV](#), the **pClustersBottomLevel** member of **opInput** **must** be a valid pointer to a [VkClusterAccelerationStructureClustersBottomLevelInputNV](#) structure
- VUID-VkClusterAccelerationStructureInputInfoNV-pTriangleClusters-parameter
If **opType** is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV](#), [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV](#), [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV](#), or [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV](#), the **pTriangleClusters** member of **opInput** **must** be a valid pointer to a [VkClusterAccelerationStructureTriangleClusterInputNV](#) structure
- VUID-VkClusterAccelerationStructureInputInfoNV-pMoveObjects-parameter
If **opType** is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV](#), the **pMoveObjects** member of **opInput** **must** be a valid pointer to a [VkClusterAccelerationStructureMoveObjectsInputNV](#) structure

Values which **can** be set in [VkClusterAccelerationStructureOpTypeNV](#) are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureOpTypeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV = 2,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV = 3,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV = 4,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV = 5,
} VkClusterAccelerationStructureOpTypeNV;
```

- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV](#) specifies that a cluster acceleration structure, cluster acceleration structure template or a bottom level acceleration structure built from cluster acceleration structures will be moved. If a cluster acceleration structure is moved, the bottom level cluster acceleration structures containing it will have to be re-built. If used with [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#), it returns the size of existing cluster acceleration structures.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV](#) specifies that bottom level cluster acceleration structures will be built.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV](#) specifies that cluster acceleration structures will be built.

- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV](#) specifies that a template for cluster acceleration structure will be built.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV](#) specifies that a template for a cluster acceleration structure will be instantiated, resulting in a built cluster acceleration structure.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV](#) specifies that the vertex indices of the cluster template acceleration structure will be fetched.

Values which **can** be set in [VkClusterAccelerationStructureOpModeNV](#) are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureOpModeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV = 2,
} VkClusterAccelerationStructureOpModeNV;
```

- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV](#) specifies that the build or move operation will implicitly distribute built or compacted cluster acceleration structures starting at the address provided in [VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData](#). If a move operation is being performed, the acceleration structures will be tightly compacted.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV](#) specifies that the build or move operation will explicitly write built or compacted cluster acceleration structures in the array of addresses provided in [VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray](#).
- [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#) specifies that computed cluster acceleration structure sizes will be written to [VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray](#).

The [VkClusterAccelerationStructureOpInputNV](#) union is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef union VkClusterAccelerationStructureOpInputNV {
    VkClusterAccelerationStructureClustersBottomLevelInputNV* pClustersBottomLevel;
    VkClusterAccelerationStructureTriangleClusterInputNV* pTriangleClusters;
    VkClusterAccelerationStructureMoveObjectsInputNV* pMoveObjects;
} VkClusterAccelerationStructureOpInputNV;
```

- [pClustersBottomLevel](#) is a [VkClusterAccelerationStructureClustersBottomLevelInputNV](#) structure specifying an upper threshold on parameters to build multiple bottom level acceleration structures from multiple cluster level acceleration structures.
- [pTriangleClusters](#) is a [VkClusterAccelerationStructureTriangleClusterInputNV](#) structure specifying an upper threshold on parameters to build a regular or templated cluster acceleration structure.

- `pMoveObjects` is a `VkClusterAccelerationStructureMoveObjectsInputNV` structure specifying an upper threshold on the number of bytes moved and the type of acceleration structure being moved.

The `VkClusterAccelerationStructureClustersBottomLevelInputNV` structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureClustersBottomLevelInputNV {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTotalClusterCount;
    uint32_t           maxClusterCountPerAccelerationStructure;
} VkClusterAccelerationStructureClustersBottomLevelInputNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTotalClusterCount` is the total number of clusters acceleration structures that will be built or moved across all input arguments.
- `maxClusterCountPerAccelerationStructure` is the maximum number of clusters acceleration structures that will be built or moved per input argument.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureClustersBottomLevelInputNV-sType-sType **must** be `VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_CLUSTERS_BOTTOM_LEVEL_INPUT_NV`
- VUID-VkClusterAccelerationStructureClustersBottomLevelInputNV-pNext-pNext **must** be `NULL`

The `VkClusterAccelerationStructureTriangleClusterInputNV` structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureTriangleClusterInputNV {
    VkStructureType    sType;
    void*              pNext;
    VkFormat           vertexFormat;
    uint32_t           maxGeometryIndexValue;
    uint32_t           maxClusterUniqueGeometryCount;
    uint32_t           maxClusterTriangleCount;
    uint32_t           maxClusterVertexCount;
    uint32_t           maxTotalTriangleCount;
    uint32_t           maxTotalVertexCount;
    uint32_t           minPositionTruncateBitCount;
} VkClusterAccelerationStructureTriangleClusterInputNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexFormat` is the `VkFormat` of each vertex element.
- `maxGeometryIndexValue` is the maximum geometry index value for any constructed geometry.
- `maxClusterUniqueGeometryCount` is the maximum number of unique values of the geometry index for each cluster or cluster template.
- `maxClusterTriangleCount` is the maximum number of triangles in a cluster or cluster template.
- `maxClusterVertexCount` is the maximum number of unique vertices in the cluster's index buffer.
- `maxTotalTriangleCount` is the sum of all triangles across all clusters or cluster templates.
- `maxTotalVertexCount` is the maximum number of vertices across all clusters or cluster templates.
- `minPositionTruncateBitCount` is the least value specified in cluster build in `VkClusterAccelerationStructureBuildTriangleClusterInfoNV::positionTruncateBitCount` or cluster template build in `VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::positionTruncateBitCount`.

Valid Usage

- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-vertexFormat-10439
The `format` features of `vertexFormat` **must** contain `VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-maxClusterTriangleCount-10440
`maxClusterTriangleCount` **must** be less than or equal to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxTrianglesPerCluster`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-maxClusterVertexCount-10441
`maxClusterVertexCount` **must** be less than or equal to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxVerticesPerCluster`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-minPositionTruncateBitCount-10442
`minPositionTruncateBitCount` **must** be less than or equal to `32`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_TRIANGLE_CLUSTER_INPUT_NV`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkClusterAccelerationStructureTriangleClusterInputNV-vertexFormat-parameter

vertexFormat must be a valid **VkFormat** value

The **VkClusterAccelerationStructureMoveObjectsInputNV** structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureMoveObjectsInputNV {
    VkStructureType          sType;
    void*                    pNext;
    VkClusterAccelerationStructureTypeNV type;
    VkBool32                 noMoveOverlap;
    VkDeviceSize             maxMovedBytes;
} VkClusterAccelerationStructureMoveObjectsInputNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **type** is a **VkClusterAccelerationStructureTypeNV** value identifying the type of cluster acceleration structure.
- **noMoveOverlap** specifies if the source and destination cluster acceleration structures overlap in memory for the move operation. If set to **VK_TRUE**, the source cluster acceleration structure remains valid after the move and move operation acts like a copy.
- **maxMovedBytes** is the maximum number of bytes that **may** be moved in this operation.

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-sType-sType
sType must be **VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_MOVE_OBJECTS_INPUT_NV**
- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-pNext-pNext
pNext must be **NULL**
- VUID-VkClusterAccelerationStructureMoveObjectsInputNV-type-parameter
type must be a valid **VkClusterAccelerationStructureTypeNV** value

Values which **can** be set in **VkClusterAccelerationStructureTypeNV** are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureTypeNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_CLUSTERS_BOTTOM_LEVEL_NV = 0,
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_NV = 1,
    VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_TEMPLATE_NV = 2,
} VkClusterAccelerationStructureTypeNV;
```

- **VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_CLUSTERS_BOTTOM_LEVEL_NV** specifies a bottom level cluster acceleration structure.

- [VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_NV](#) specifies a cluster acceleration structure.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_TYPE_TRIANGLE_CLUSTER_TEMPLATE_NV](#) specifies a template cluster acceleration structure.

To build or move a cluster acceleration structure or a cluster acceleration structure template call:

```
// Provided by VK_NV_cluster_acceleration_structure
void vkCmdBuildClusterAccelerationStructureIndirectNV(
    VkCommandBuffer                      commandBuffer,
    const VkClusterAccelerationStructureCommandsInfoNV* pCommandInfos);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pCommandInfos` is a pointer to a [VkClusterAccelerationStructureCommandsInfoNV](#) structure containing parameters required for building or moving the cluster acceleration structure.

Similar to [vkCmdBuildAccelerationStructuresKHR](#), this command **may** initiate multiple acceleration structures builds and there is no ordering or synchronization implied between any of the individual acceleration structure builds. Accesses to the acceleration structure scratch memory as identified by the [VkClusterAccelerationStructureCommandsInfoNV::scratchData](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an [access type](#) of ([VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR](#) | [VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR](#)).

Accesses to each [VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData](#), [VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray](#) and [VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an [access type](#) of [VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR](#).

Accesses to memory with input data as identified by any used values of [VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray](#) and [VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an [access type](#) of [VK_ACCESS_INDIRECT_COMMAND_READ_BIT](#).

Valid Usage

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-clusterAccelerationStructure-10443
The [VkPhysicalDeviceClusterAccelerationStructureFeaturesNV::clusterAccelerationStructure](#) feature **must** be enabled
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pNext-10444
The `pNext` chain of the bound ray tracing pipeline **must** include a [VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV](#) structure
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10445

`pCommandInfos->input.maxAccelerationStructureCount` **must** be less than or equal to the value used in `pInfo->maxAccelerationStructureCount` in `vkGetClusterAccelerationStructureBuildSizesNV` to determine the memory requirements for the build operation

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-scratchData-12300

The scratch memory of the cluster acceleration structure specified in `VkClusterAccelerationStructureCommandsInfoNV::scratchData`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`, **must** be larger than or equal to the scratch size queried with `vkGetClusterAccelerationStructureBuildSizesNV`

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-scratchData-12301

The scratch address of the cluster acceleration structure specified in `VkClusterAccelerationStructureCommandsInfoNV::scratchData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`, **must** be aligned based on the cluster acceleration structure type and its alignment properties as queried with `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV`

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10448

If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV`, `pCommandInfos->srcInfosArray` **must** be an array of `VkClusterAccelerationStructureMoveObjectsInfoNV` structures

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10449

If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV`, `pCommandInfos->srcInfosArray` **must** be an array of `VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV` structures

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10450

If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV`, `pCommandInfos->srcInfosArray` **must** be an array of `VkClusterAccelerationStructureBuildTriangleClusterInfoNV` structures

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10451

If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV`, `pCommandInfos->srcInfosArray` **must** be an array of `VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV` structures

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10452

If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV`, `pCommandInfos->srcInfosArray` **must** be an array of

`VkClusterAccelerationStructureInstantiateClusterInfoNV` structures

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10832
If `pCommandInfos->input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV`, `pCommandInfos->srcInfosArray` **must** be an array of `VkClusterAccelerationStructureGetTemplateIndicesInfoNV` structures
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10453
The value in `pCommandInfos->srcInfosCount` **must** be less than or equal to `pCommandInfos->input.maxAccelerationStructureCount`
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-10454
The number of inputs specified in `pCommandInfos->srcInfosArray` **must** be greater than or equal to `pCommandInfos->srcInfosCount`
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-dstAddressesArray-12302
The memory regions specified in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** not overlap with each other or with `pCommandInfos->scratchData`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-dstImplicitData-12303
The memory region specified in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, for multiple acceleration structure builds **must** not overlap with `pCommandInfos->scratchData`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12304
`pCommandInfos->scratchData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`, **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12305
`pCommandInfos->srcInfosArray`, or the address indirectly referenced in

`VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray` when
`VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains
`VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV`, **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12306
`pCommandInfos->srcInfosCount`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV`, **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12381
`pCommandInfos->dstAddressesArray`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESSES_ARRAY_BIT_NV`, **must** be a device address range allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12382
All destination addresses contained in `pCommandInfos->dstAddressesArray`, or in the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESSES_ARRAY_BIT_NV`, **must** be device address ranges allocated to the application from buffers created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` usage flag set
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-12308
`pCommandInfos->dstImplicitData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-pCommandInfos-parameter **pCommandInfos** **must** be a valid pointer to a valid [VkClusterAccelerationStructureCommandsInfoNV](#) structure
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-recording **commandBuffer** **must** be in the [recording state](#)
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-commandBuffer-cmdpool
The [VkCommandPool](#) that **commandBuffer** was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#) operations
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildClusterAccelerationStructureIndirectNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the [VkCommandPool](#) that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdBuildClusterAccelerationStructureIndirectNV` is not affected by [conditional rendering](#)

The [VkClusterAccelerationStructureCommandsInfoNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureCommandsInfoNV {
    VkStructureType                sType;
    void*                          pNext;
    VkClusterAccelerationStructureInputInfoNV input;
    VkDeviceAddress                dstImplicitData;
    VkDeviceAddress                scratchData;
    VkStridedDeviceAddressRegionKHR dstAddressesArray;
    VkStridedDeviceAddressRegionKHR dstSizesArray;
    VkStridedDeviceAddressRegionKHR srcInfosArray;
    VkDeviceAddress                srcInfosCount;
    VkClusterAccelerationStructureAddressResolutionFlagsNV addressResolutionFlags;
} VkClusterAccelerationStructureCommandsInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **input** is [VkClusterAccelerationStructureInputInfoNV](#) structure describing the build or move parameters for the cluster acceleration structure.
- **dstImplicitData** is the device address for memory where the implicit build of cluster acceleration structure will be saved. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV](#) or [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#), this value is ignored.
- **scratchData** is the device address of scratch memory that will be used during cluster acceleration structure move or build.
- **dstAddressesArray** is a [VkStridedDeviceAddressRegionKHR](#) that specifies addresses and stride for moved or built cluster acceleration structures, depending on the value of [VkClusterAccelerationStructureInputInfoNV::opMode](#). If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV](#) and [VkStridedDeviceAddressRegionKHR::deviceAddress](#) is not `0`, then the implementation writes the cluster addresses to the specified region. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV](#), the implementation reads the cluster addresses from the specified region. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#), this member is ignored.
- **dstSizesArray** is a [VkStridedDeviceAddressRegionKHR](#) containing sizes of moved or built cluster acceleration structures. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV](#) or [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV](#), then the sizes are saved. If [VkClusterAccelerationStructureInputInfoNV::opMode](#) is [VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV](#), then the sizes are read from.
- **srcInfosArray** is a [VkStridedDeviceAddressRegionKHR](#) where input data for the build or move

operation is read from. If the stride is 0, the structures are assumed to be packed tightly. Its format is dependent on `VkClusterAccelerationStructureInputInfoNV::opType` as per the table below.

<code>input.opType</code>	Format of <code>srcInfosArray</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV</code>	<code>VkClusterAccelerationStructureMoveObjectsInfoNV</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV</code>	<code>VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV</code>	<code>VkClusterAccelerationStructureBuildTriangleClusterInfoNV</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMPLATE_NV</code>	<code>VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV</code>	<code>VkClusterAccelerationStructureInstantiateClusterInfoNV</code>
<code>VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_GET_CLUSTER_TEMPLATE_INDICES_NV</code>	<code>VkClusterAccelerationStructureGetTemplateIndicesInfoNV</code>

- `srcInfosCount` is the device address of memory containing the count of number of build or move operations to perform. The actual value is the minimum of this value and the value specified in `input.maxAccelerationStructureCount`. If this value is 0, the count is determined by `input.maxAccelerationStructureCount` alone.
- `addressResolutionFlags` is a bitmask of `VkClusterAccelerationStructureAddressResolutionFlagBitsNV` values specifying how an implementation will interpret the device addresses in this structure.

Valid Usage

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12309
If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV`, `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, **must** be a valid `VkDeviceAddress`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12310
If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV` and `input.opType` is not `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV`, the memory in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the memory

indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV` **must** be equal to or larger than the `VkAccelerationStructureBuildSizesInfoKHR::accelerationStructureSize` value returned from `vkGetClusterAccelerationStructureBuildSizesNV` with same input parameters

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12311

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_IMPLICIT_DESTINATIONS_NV` and `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV`, the memory in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, **must** be equal to or larger than the sum of all the built acceleration structures that are being moved

- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-10469

If `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_MOVE_OBJECTS_NV`, the total memory moved **must** not be larger than the size provided in `VkClusterAccelerationStructureMoveObjectsInputNV::maxMovedBytes`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12312

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_COMPUTE_SIZES_NV`, `VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV`, **must** be a valid `VkDeviceAddress`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12313

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV`, the address in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** be a valid `VkDeviceAddress`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12314

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV`, the addresses in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the memory indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV`

`::addressResolutionFlags` contains
`VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** be large enough to accommodate built or moved clusters

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12315

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV`, the buffers in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the buffers indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** not overlap

- VUID-VkClusterAccelerationStructureCommandsInfoNV-opMode-12316

If `VkClusterAccelerationStructureInputInfoNV::opMode` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_MODE_EXPLICIT_DESTINATIONS_NV`, the addresses in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the addresses indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** be aligned based on the cluster acceleration structure type and its alignment properties as described in `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstAddressesArray-10474

The stride in `dstAddressesArray` **must** be greater than or equal to 8

- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstSizesArray-10475

The stride in `dstSizesArray` **must** be greater than or equal to 4

- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosArray-10476

The stride in `srcInfosArray` **must** be greater than the type of structure the address is describing

- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12317

If `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_NV`, then depending on the `VkClusterAccelerationStructureInputInfoNV::opMode`, `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, or addresses specified in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the addresses indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_A`

`DDRESS_ARRAY_BIT_NV`, **must** be aligned to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterByteAlignment`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12318

If `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_TRIANGLE_CLUSTER_TEMP_LATE_NV`, then depending on the `VkClusterAccelerationStructureInputInfoNV::opMode`, `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, or addresses specified in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the addresses indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** be aligned to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterTemplateByteAlignment`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12319

If `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_INSTANTIATE_TRIANGLE_CLUSTER_NV`, then depending on the `VkClusterAccelerationStructureInputInfoNV::opMode`, `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV`, or addresses specified in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`, or the addresses indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV`, **must** be aligned to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterByteAlignment`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-scratchData-12320

`VkClusterAccelerationStructureCommandsInfoNV::scratchData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`, **must** be aligned to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterScratchByteAlignment`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-buildScratchSize-12321

If the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR`

structure returned from a call to `vkGetClusterAccelerationStructureBuildSizesNV` is not 0, then `VkClusterAccelerationStructureCommandsInfoNV::scratchData`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::scratchData` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV`, **must** be a valid `VkDeviceAddress`

- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosCount-12322
`VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount`, or the address indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV`, **must** be 4-byte aligned
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-12323
 If `input.opType` is `VK_CLUSTER_ACCELERATION_STRUCTURE_OP_TYPE_BUILD_CLUSTERS_BOTTOM_LEVEL_NV`, the total and per argument number of cluster acceleration structures referenced in `VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray`, or the structures indirectly referenced in `VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray` when `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags` contains `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV`, **must** be equal or less than the maximum values with which memory requirements were queried in `vkGetClusterAccelerationStructureBuildSizesNV` with `VkClusterAccelerationStructureOpInputNV::pClustersBottomLevel`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureCommandsInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_CLUSTER_ACCELERATION_STRUCTURE_COMMANDS_INFO_NV`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkClusterAccelerationStructureCommandsInfoNV-input-parameter
`input` **must** be a valid `VkClusterAccelerationStructureInputInfoNV` structure
- VUID-VkClusterAccelerationStructureCommandsInfoNV-dstImplicitData-parameter
 If `dstImplicitData` is not 0, `dstImplicitData` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-scratchData-parameter
`scratchData` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-srcInfosCount-parameter
 If `srcInfosCount` is not 0, `srcInfosCount` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureCommandsInfoNV-addressResolutionFlags-parameter
`addressResolutionFlags` **must** be a valid combination of `VkClusterAccelerationStructureAddressResolutionFlagBitsNV` values

Bits which **can** be set in `VkClusterAccelerationStructureCommandsInfoNV::addressResolutionFlags`, specifying how the device address in `VkClusterAccelerationStructureCommandsInfoNV` are interpreted, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureAddressResolutionFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_NONE_NV = 0,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV = 0x00000001,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV = 0x00000002,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESS_ARRAY_BIT_NV = 0x00000004,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV = 0x00000008,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV = 0x00000010,

    VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV = 0x00000020,
} VkClusterAccelerationStructureAddressResolutionFlagBitsNV;
```

- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_NONE_NV` specifies that no address resolution flags are provided.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_IMPLICIT_DATA_BIT_NV` specifies another level of indirection when reading `VkClusterAccelerationStructureCommandsInfoNV::dstImplicitData`.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SCRATCH_DATA_BIT_NV` specifies another level of indirection when reading `VkClusterAccelerationStructureCommandsInfoNV::scratchData`.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_ADDRESSES_ARRAY_BIT_NV` specifies another level of indirection when reading `VkClusterAccelerationStructureCommandsInfoNV::dstAddressesArray`.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_DST_SIZES_ARRAY_BIT_NV` specifies another level of indirection when reading `VkClusterAccelerationStructureCommandsInfoNV::dstSizesArray`.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_ARRAY_BIT_NV` specifies another level of indirection when reading `VkClusterAccelerationStructureCommandsInfoNV::srcInfosArray`.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_ADDRESS_RESOLUTION_INDIRECTED_SRC_INFOS_COUNT_BIT_NV` specifies another level of indirection when reading

[VkClusterAccelerationStructureCommandsInfoNV::srcInfosCount](#).

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureAddressResolutionFlagsNV;
```

[VkClusterAccelerationStructureAddressResolutionFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkClusterAccelerationStructureAddressResolutionFlagBitsNV](#).

The [VkClusterAccelerationStructureMoveObjectsInfoNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureMoveObjectsInfoNV {
    VkDeviceAddress    srcAccelerationStructure;
} VkClusterAccelerationStructureMoveObjectsInfoNV;
```

- [srcAccelerationStructure](#) is the device address of the source cluster acceleration structure that will be moved.

Valid Usage

- VUID-VkClusterAccelerationStructureMoveObjectsInfoNV-srcAccelerationStructure-10483 [srcAccelerationStructure](#) **must** be a type of [cluster acceleration structure](#)

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureMoveObjectsInfoNV-srcAccelerationStructure-parameter [srcAccelerationStructure](#) **must** be a valid [VkDeviceAddress](#) value

The [VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV {
    uint32_t          clusterReferencesCount;
    uint32_t          clusterReferencesStride;
    VkDeviceAddress    clusterReferences;
} VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV;
```

- [clusterReferencesCount](#) is the number of clusters this bottom level acceleration structure will be built from.
- [clusterReferencesStride](#) is the stride in [clusterReferences](#).
- [clusterReferences](#) is the device memory containing the address of the clusters.

Valid Usage

- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-10484
All cluster references in `clusterReferences` **must** be unique
- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-10485
`clusterReferences` **must** have at least `clusterReferencesCount` values
- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferencesStride-10486
`clusterReferencesStride` **must** be greater than or equal to 8

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildClustersBottomLevelInfoNV-clusterReferences-parameter
`clusterReferences` **must** be a valid `VkDeviceAddress` value

Bits which **can** be set in `VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV::geometryFlags`, specifying geometry flags for cluster acceleration structure, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureGeometryFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_CULL_DISABLE_BIT_NV = 0x00000001,
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_NO_DUPLICATE_ANYHIT_INVOCATION_BIT_NV =
0x00000002,
    VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_OPAQUE_BIT_NV = 0x00000004,
} VkClusterAccelerationStructureGeometryFlagBitsNV;
```

- `VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_CULL_DISABLE_BIT_NV` disables face culling for this geometry.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_NO_DUPLICATE_ANYHIT_INVOCATION_BIT_NV` specifies that the implementation **must** only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent an implementation **may** invoke the any-hit shader more than once for this geometry.
- `VK_CLUSTER_ACCELERATION_STRUCTURE_GEOMETRY_OPAQUE_BIT_NV` specifies that this geometry does not invoke the any-hit shaders even if present in a hit group.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureGeometryFlagsNV;
```

`VkClusterAccelerationStructureGeometryFlagsNV` is a bitmask type for setting a mask of zero or more `VkClusterAccelerationStructureGeometryFlagBitsNV`.

The [VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV {
    uint32_t    geometryIndex:24;
    uint32_t    reserved:5;
    uint32_t    geometryFlags:3;
} VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV;
```

- **geometryIndex** specifies the geometry index for all triangles in the cluster acceleration structure.
- **reserved** is reserved for future use.
- **geometryFlags** is a bitmask of [VkClusterAccelerationStructureGeometryFlagBitsNV](#) values describing geometry flags for the cluster acceleration structure.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- **geometryIndex**, **reserved** and **mask** occupy the same memory as if a single **uint32_t** was specified in their place
 - **geometryIndex** occupies the 24 least significant bits of that memory
 - **geometryFlags** occupies the 3 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Valid Usage

- VUID-VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV-reserved-10487
reserved must be 0

Bits which **can** be set in [VkClusterAccelerationStructureBuildTriangleClusterInfoNV::clusterFlags](#), specifying flags for clusters in an acceleration structure, are:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureClusterFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_CLUSTER_ALLOW_DISABLE_OPACITY_MICROMAPS_NV =
    0x00000001,
} VkClusterAccelerationStructureClusterFlagBitsNV;
```

- [VK_CLUSTER_ACCELERATION_STRUCTURE_CLUSTER_ALLOW_DISABLE_OPACITY_MICROMAPS_NV](#) specifies that the specified cluster acceleration structure **may** be referenced in an instance with [VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT](#) set.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureClusterFlagsNV;
```

VkClusterAccelerationStructureClusterFlagsNV is a bitmask type for setting a mask of zero or more **VkClusterAccelerationStructureClusterFlagBitsNV**.

The **VkClusterAccelerationStructureBuildTriangleClusterInfoNV** structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildTriangleClusterInfoNV {
    uint32_t                clusterID;
    VkClusterAccelerationStructureClusterFlagsNV clusterFlags;
    uint32_t                triangleCount:9;
    uint32_t                vertexCount:9;
    uint32_t                positionTruncateBitCount:6;
    uint32_t                indexType:4;
    uint32_t                opacityMicromapIndexType:4;
    VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV
    baseGeometryIndexAndGeometryFlags;
    uint16_t                indexBufferStride;
    uint16_t                vertexBufferStride;
    uint16_t                geometryIndexAndFlagsBufferStride;
    uint16_t                opacityMicromapIndexBufferStride;
    VkDeviceAddress          indexBuffer;
    VkDeviceAddress          vertexBuffer;
    VkDeviceAddress          geometryIndexAndFlagsBuffer;
    VkDeviceAddress          opacityMicromapArray;
    VkDeviceAddress          opacityMicromapIndexBuffer;
} VkClusterAccelerationStructureBuildTriangleClusterInfoNV;
```

- **clusterID** is a user specified identifier assigned to this cluster.
- **clusterFlags** is a bitmask of **VkClusterAccelerationStructureClusterFlagBitsNV** values describing flags how the cluster should be built.
- **triangleCount** is the number of triangles in this cluster.
- **vertexCount** is the number of unique vertices in this cluster.
- **positionTruncateBitCount** is the number of bits starting at the lowest bit (i.e. the LSBs of the mantissa), of each vertex position that will be truncated to zero to improve floating-point

compression.

- `indexType` is a single `VkClusterAccelerationStructureIndexFormatFlagBitsNV` value specifying the index type in `indexBuffer`.
- `opacityMicromapIndexType` is a single `VkClusterAccelerationStructureIndexFormatFlagBitsNV` value specifying the index type in `opacityMicromapIndexBuffer`.
- `baseGeometryIndexAndGeometryFlags` is a `VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV` value specifying the base geometry index and flags for all triangles in the cluster.
- `indexBufferStride` is the stride in bytes in `indexBuffer` with `0` meaning the values are tightly-packed.
- `vertexBufferStride` is the stride in bytes in `vertexBuffer` with `0` meaning the values are tightly-packed.
- `geometryIndexAndFlagsBufferStride` is the stride in bytes in `geometryIndexAndFlagsBuffer` with `0` meaning the values are tightly-packed.
- `opacityMicromapIndexBufferStride` is the stride in bytes in `opacityMicromapIndexBuffer` with `0` meaning the values are tightly-packed.
- `indexBuffer` is a device address containing the indices of the vertices in the cluster and are of type `indexType`.
- `vertexBuffer` is a device address containing the vertex data of the triangles in the cluster with format specified in `VkClusterAccelerationStructureTriangleClusterInputNV::vertexFormat`.
- `geometryIndexAndFlagsBuffer` is either `0` or an address containing strided `VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV` values specifying the geometry index and flag for every triangle in the cluster.
- `opacityMicromapArray` is either `0` or specifies the address of a valid opacity micromap array to reference from the cluster acceleration structure. If it is `0`, then opacity micromaps will be disabled for this cluster acceleration structure.
- `opacityMicromapIndexBuffer` is either `0` or specifies the address of a strided array with size equal to the number of triangles or indices into the opacity micromap array. If `opacityMicromapIndexBuffer` is `0` then the index used is the index of the triangle in the geometry.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- `triangleCount`, `vertexCount`, `positionTruncateBitCount`, `indexType` and `opacityMicromapIndexType` occupy the same memory as if a single `uint32_t` was specified in their place
 - `triangleCount` occupies the 9 least significant bits of that memory
 - `vertexCount` occupies the next 9 least significant bits of that memory
 - `positionTruncateBitCount` occupies the next 6 least significant bits of that memory
 - `indexType` occupies the next 4 least significant bits of that memory
 - `opacityMicromapIndexType` occupies the 4 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another

method to set values according to the correct bit pattern.

Valid Usage

- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-clusterID-10488
`clusterID` **must** not be 0xFFFFFFFF
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-triangleCount-10489
`triangleCount` **must** be less than or equal to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxTrianglesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexCount-10490
`vertexCount` **must** be less than or equal to `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxVerticesPerCluster`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexType-10491
`indexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapIndexType-10492
`opacityMicromapIndexType` **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-positionTruncateBitCount-10493
`positionTruncateBitCount` **must** be greater than or equal to `VkClusterAccelerationStructureTriangleClusterInputNV::minPositionTruncateBitCount` and less than or equal to 32
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexBufferStride-10494
`indexBufferStride` **must** be 0 or a multiple of `indexType`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexBufferStride-10495
`vertexBufferStride` **must** be 0 or a multiple of value specified in `VkClusterAccelerationStructureTriangleClusterInputNV::vertexFormat`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-baseGeometryIndex-10496
The maximum geometry index after using the values in `baseGeometryIndex` and `geometryIndexBuffer` **must** be less than `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxClusterGeometryIndex`
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapArray-10881
If `opacityMicromapArray` is not 0, then the cluster acceleration structure **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV` flag set in `VkClusterAccelerationStructureInputInfoNV::flags`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-clusterFlags-parameter **clusterFlags** **must** be a valid combination of [VkClusterAccelerationStructureClusterFlagBitsNV](#) values
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-indexBuffer-parameter **indexBuffer** **must** be a valid [VkDeviceAddress](#) value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-vertexBuffer-parameter **vertexBuffer** **must** be a valid [VkDeviceAddress](#) value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-geometryIndexAndFlagsBuffer-parameter
If **geometryIndexAndFlagsBuffer** is not 0, **geometryIndexAndFlagsBuffer** **must** be a valid [VkDeviceAddress](#) value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapArray-parameter
If **opacityMicromapArray** is not 0, **opacityMicromapArray** **must** be a valid [VkDeviceAddress](#) value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterInfoNV-opacityMicromapIndexBuffer-parameter
If **opacityMicromapIndexBuffer** is not 0, **opacityMicromapIndexBuffer** **must** be a valid [VkDeviceAddress](#) value

Bits that **can** be set in [VkClusterAccelerationStructureBuildTriangleClusterInfoNV::indexType](#), [VkClusterAccelerationStructureBuildTriangleClusterInfoNV::opacityMicromapIndexType](#), [VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::indexType](#) and [VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV::opacityMicromapIndexType](#) specifying the index type is one of:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef enum VkClusterAccelerationStructureIndexFormatFlagBitsNV {
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_8BIT_NV = 0x00000001,
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_16BIT_NV = 0x00000002,
    VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_32BIT_NV = 0x00000004,
} VkClusterAccelerationStructureIndexFormatFlagBitsNV;
```

- [VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_8BIT_NV](#) specifies that 8-bit indices will be used.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_16BIT_NV](#) specifies that 16-bit indices will be used.
- [VK_CLUSTER_ACCELERATION_STRUCTURE_INDEX_FORMAT_32BIT_NV](#) specifies that 32-bit indices will be used.

```
// Provided by VK_NV_cluster_acceleration_structure
typedef VkFlags VkClusterAccelerationStructureIndexFormatFlagsNV;
```

`VkClusterAccelerationStructureIndexFormatFlagsNV` is a bitmask type for setting a single `VkClusterAccelerationStructureIndexFormatFlagBitsNV`.

The `VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV` structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV {
    uint32_t                clusterID;
    VkClusterAccelerationStructureClusterFlagsNV clusterFlags;
    uint32_t                triangleCount:9;
    uint32_t                vertexCount:9;
    uint32_t                positionTruncateBitCount:6;
    uint32_t                indexType:4;
    uint32_t                opacityMicromapIndexType:4;
    VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV
    baseGeometryIndexAndGeometryFlags;
    uint16_t                indexBufferStride;
    uint16_t                vertexBufferStride;
    uint16_t                geometryIndexAndFlagsBufferStride;
    uint16_t                opacityMicromapIndexBufferStride;
    VkDeviceAddress          indexBuffer;
    VkDeviceAddress          vertexBuffer;
    VkDeviceAddress          geometryIndexAndFlagsBuffer;
    VkDeviceAddress          opacityMicromapArray;
    VkDeviceAddress          opacityMicromapIndexBuffer;
    instantiationBoundingBoxLimit;
} VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV;
```

- `clusterID` is a user specified identifier assigned to this cluster template.
- `clusterFlags` is a bitmask of `VkClusterAccelerationStructureClusterFlagBitsNV` values describing flags how the cluster template should be built.
- `triangleCount` is the number of triangles in this cluster.
- `vertexCount` is the number of unique vertices in this cluster.

- `positionTruncateBitCount` is the number of bits starting at the lowest bit (i.e. the LSBs of the mantissa), of each vertex position that will be truncated to zero to improve floating-point compression.
- `indexType` is a single `VkClusterAccelerationStructureIndexFormatFlagBitsNV` value specifying the index type in `indexBuffer`.
- `opacityMicromapIndexType` is a single `VkClusterAccelerationStructureIndexFormatFlagBitsNV` value specifying the index type in `opacityMicromapIndexBuffer`.
- `baseGeometryIndexAndGeometryFlags` is a `VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV` value specifying the base geometry index and flags for all triangles in the cluster template.
- `indexBufferStride` is the stride in bytes in `indexBuffer`.
- `vertexBufferStride` is the stride in bytes in `vertexBuffer`.
- `geometryIndexAndFlagsBufferStride` is the stride in bytes in `geometryIndexAndFlagsBuffer`.
- `opacityMicromapIndexBufferStride` is the stride in bytes in `opacityMicromapIndexBuffer`.
- `indexBuffer` contains the indices of vertices in the cluster and is of type `indexType`.
- `vertexBuffer` is either `0` or specifies the vertex data of the triangles in the cluster template with format specified in `VkClusterAccelerationStructureTriangleClusterInputNV::vertexFormat`.
- `geometryIndexAndFlagsBuffer` is either `0` or an address containing strided `VkClusterAccelerationStructureGeometryIndexAndGeometryFlagsNV` values specifying the geometry index and flag for every triangle in the cluster.
- `opacityMicromapArray` is either `0` or specifies the address of a valid opacity micromap array to reference from the cluster acceleration structure. If it is `0`, then opacity micromaps will be disabled for this cluster acceleration structure.
- `opacityMicromapIndexBuffer` is either `0` or specifies the address of a strided array with size equal to the number of triangles or indices into the opacity micromap array. If `opacityMicromapIndexBuffer` is `0` then the index used is the index of the triangle in the geometry.
- `instantiationBoundingBoxLimit` is either `0` or specifies the address of a bounding box within which all instantiated clusters **must** lie. The bounding box is specified by six 32-bit floating-point values in the order MinX, MinY, MinZ, MaxX, MaxY, MaxZ.

The C language specification does not define the ordering of bit-fields, but in practice, this structure produces the correct layout with existing compilers. The intended bit pattern is the following:

- `triangleCount`, `vertexCount`, `positionTruncateBitCount`, `indexType` and `opacityMicromapIndexType` occupy the same memory as if a single `uint32_t` was specified in their place
 - `triangleCount` occupies the 9 least significant bits of that memory
 - `vertexCount` occupies the next 9 least significant bits of that memory
 - `positionTruncateBitCount` occupies the next 6 least significant bits of that memory
 - `indexType` occupies the next 4 least significant bits of that memory
 - `opacityMicromapIndexType` occupies the 4 most significant bits of that memory

If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values according to the correct bit pattern.

Cluster templates cannot be directly used to build bottom level acceleration structures, instead, they **must** be instantiated into [CLAS objects](#).

Valid Usage

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-clusterID-10497
clusterID **must** not be 0xFFFFFFFF
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-triangleCount-10498
triangleCount **must** be less than or equal to [VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxTrianglesPerCluster](#)
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexCount-10499
vertexCount **must** be less than or equal to [VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxVerticesPerCluster](#)
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexType-10500
indexType **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapIndexType-10501
opacityMicromapIndexType **must** only have a single bit set
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-positionTruncateBitCount-10502
positionTruncateBitCount **must** be greater than or equal to [VkClusterAccelerationStructureTriangleClusterInputNV::minPositionTruncateBitCount](#) and less than or equal to 32
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexBufferStride-10503
indexBufferStride **must** be 0 or a multiple of **indexType**
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexBufferStride-10504
vertexBufferStride **must** be 0 or a multiple of value specified in [VkClusterAccelerationStructureTriangleClusterInputNV::vertexFormat](#)
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-instantiationBoundingBoxLimit-10505
instantiationBoundingBoxLimit **must** be aligned to [VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::clusterTemplateBoundsByteAlignment](#)
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-baseGeometryIndex-10506

The maximum geometry index after using the values in `baseGeometryIndex` and `geometryIndexBuffer` **must** be less than `VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxClusterGeometryIndex`

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapArray-10882

If `opacityMicromapArray` is not 0, then the template cluster acceleration structure **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_CLUSTER_OPACITY_MICROMAPS_BIT_NV` flag set in `VkClusterAccelerationStructureInputInfoNV::flags`

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-clusterFlags-parameter
`clusterFlags` **must** be a valid combination of `VkClusterAccelerationStructureClusterFlagBitsNV` values
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-indexBuffer-parameter
`indexBuffer` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-vertexBuffer-parameter
If `vertexBuffer` is not 0, `vertexBuffer` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-geometryIndexAndFlagsBuffer-parameter
If `geometryIndexAndFlagsBuffer` is not 0, `geometryIndexAndFlagsBuffer` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapArray-parameter
If `opacityMicromapArray` is not 0, `opacityMicromapArray` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-opacityMicromapIndexBuffer-parameter
If `opacityMicromapIndexBuffer` is not 0, `opacityMicromapIndexBuffer` **must** be a valid `VkDeviceAddress` value
- VUID-VkClusterAccelerationStructureBuildTriangleClusterTemplateInfoNV-instantiationBoundingBoxLimit-parameter
If `instantiationBoundingBoxLimit` is not 0, `instantiationBoundingBoxLimit` **must** be a valid `VkDeviceAddress` value

The `VkClusterAccelerationStructureInstantiateClusterInfoNV` structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureInstantiateClusterInfoNV {
    uint32_t          clusterIdOffset;
    uint32_t          geometryIndexOffset:24;
    uint32_t          reserved:8;
    VkDeviceAddress    clusterTemplateAddress;
    VkStridedDeviceAddressNV vertexBuffer;
} VkClusterAccelerationStructureInstantiateClusterInfoNV;
```

- **clusterIdOffset** is an unsigned offset applied to the **clusterID** value stored in the cluster template.
- **geometryIndexOffset** is a signed offset applied to the geometry index of each triangle.
- **reserved** is reserved for future use.
- **clusterTemplateAddress** is the address of a previously built cluster template.
- **vertexBuffer** is a **VkStridedDeviceAddressNV** structure containing the vertex data for the indexed triangles stored in the cluster template. If the address in **VkStridedDeviceAddressNV** is **0** the vertex data is sourced from the cluster template.

Valid Usage

- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-vertexBuffer-10507
vertexBuffer **must** not be **0** if the template was built without vertex data
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-vertexBuffer-10508
The format in **vertexBuffer** **must** match the original format specified in **VkClusterAccelerationStructureTriangleClusterInputNV**
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-reserved-10509
reserved **must** be **0**
- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-geometryIndexOffset-10510
The maximum geometry index after using the value in **geometryIndexOffset** **must** be less than **VkPhysicalDeviceClusterAccelerationStructurePropertiesNV::maxClusterGeometryIndex**

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureInstantiateClusterInfoNV-clusterTemplateAddress-parameter
clusterTemplateAddress **must** be a valid **VkDeviceAddress** value

The **VkClusterAccelerationStructureGetTemplateIndicesInfoNV** structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkClusterAccelerationStructureGetTemplateIndicesInfoNV {
    VkDeviceAddress    clusterTemplateAddress;
} VkClusterAccelerationStructureGetTemplateIndicesInfoNV;
```

- **clusterTemplateAddress** is the device address of the cluster template acceleration structure whose index data is being fetched.

Valid Usage

- VUID-VkClusterAccelerationStructureGetTemplateIndicesInfoNV-clusterTemplateAddress-10833
clusterTemplateAddress must be a [template cluster acceleration structure](#)

Valid Usage (Implicit)

- VUID-VkClusterAccelerationStructureGetTemplateIndicesInfoNV-clusterTemplateAddress-parameter
clusterTemplateAddress must be a valid [VkDeviceAddress](#) value

The [VkStridedDeviceAddressNV](#) structure is defined as:

```
// Provided by VK_NV_cluster_acceleration_structure
typedef struct VkStridedDeviceAddressNV {
    VkDeviceAddress    startAddress;
    VkDeviceSize        strideInBytes;
} VkStridedDeviceAddressNV;
```

- **startAddress** is the device address (as returned by the [vkGetBufferDeviceAddress](#) command) at which the region starts, or zero if the region is unused.
- **strideInBytes** is the byte stride between consecutive elements. Only the bottom 32 bits are used. The field is 64 bits to ensure consistent alignment across all containing structures.

Valid Usage (Implicit)

- VUID-VkStridedDeviceAddressNV-startAddress-parameter
startAddress must be a valid [VkDeviceAddress](#) value

42.3. Partitioned Top Level Acceleration Structures

Partitioned Top Level Acceleration Structures (PTLAS) allow efficient reuse of previously constructed sections of the top level acceleration structure by eliminating a full rebuild when only a

few instances are modified. This reduces build times and supports handling a higher number of instances, making it more suitable for large and complex scenes.

PTLAS organizes instances into partitions, enabling a two-stage build process: first, it constructs an acceleration structure for each partition by grouping the instances within it, and second, it combines these partition structures into a single acceleration structure, similar to the current top-level acceleration structure.

To maintain compatibility, PTLAS behaves identically to the current top-level acceleration structure from the perspective of ray tracing shaders and pipelines.

PTLAS includes a unique global partition that operates independently of other partitions. Instances **can** be assigned to this global partition just like they would to regular partitions. The global partition is well-suited for frequently updated instances, such as animated characters. During the build process, instances in the global partition are treated as if they belong to individual partitions, without increasing the maximum partition count. However, instances in the global partition may still impact build performance. Once these instances become stable, they should be moved to a spatially optimized, non-global partition to lower build costs and minimize trace performance issues.

To handle large worlds requiring more precision than 32-bit floating-point numbers offer, PTLAS offers efficient partition translation. Typically, applications maintain precision by placing the world center near the camera. Partition translation allows an additional translation of instances during construction without changing their stored transforms. This method stores instance transforms relative to partitions, applying a translation to achieve accurate world positions. Higher precision is maintained using smaller floating-point numbers until the structure is built. World space coordinates **can** also be updated efficiently without rebuilding the entire PTLAS. Partition translation requires extra memory for untranslated instance transforms and **must** be explicitly enabled with `VkPartitionedAccelerationStructureFlagsNV::enablePartitionTranslation` flag.

To determine the memory requirements for a PTAS, call:

```
// Provided by VK_NV_partitioned_acceleration_structure
void vkGetPartitionedAccelerationStructuresBuildSizesNV(
    VkDevice device,
    const VkPartitionedAccelerationStructureInstancesInputNV* pInfo,
    VkAccelerationStructureBuildSizesInfoKHR* pSizeInfo);
```

- `device` is the logical device that owns the acceleration structure.
- `pInfo` is a pointer to a `VkPartitionedAccelerationStructureInstancesInputNV` structure containing parameters required for the memory requirements query.
- `pSizeInfo` is a pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters. The size requirements for a scratch buffer **may** be zero.

Valid Usage

- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-partitionedAccelerationStructure-10534

The `VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV::partitionedAccelerationStructure` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-pInfo-parameter `pInfo` **must** be a valid pointer to a valid `VkPartitionedAccelerationStructureInstancesInputNV` structure
- VUID-vkGetPartitionedAccelerationStructuresBuildSizesNV-pSizeInfo-parameter `pSizeInfo` **must** be a valid pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure

The `VkPartitionedAccelerationStructureInstancesInputNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureInstancesInputNV {
    VkStructureType           sType;
    void*                     pNext;
    VkBuildAccelerationStructureFlagsKHR flags;
    uint32_t                  instanceCount;
    uint32_t                  maxInstancePerPartitionCount;
    uint32_t                  partitionCount;
    uint32_t                  maxInstanceInGlobalPartitionCount;
} VkPartitionedAccelerationStructureInstancesInputNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkBuildAccelerationStructureFlagsKHR` specifying flags for the PTLAS build operation.
- `instanceCount` is the number of instances in this PTLAS.
- `maxInstancePerPartitionCount` is the maximum number of instances per partition in the PTLAS.
- `partitionCount` is the number of partitions in the PTLAS.
- `maxInstanceInGlobalPartitionCount` is maximum number of instances in the [global partition](#).

If the `pNext` chain includes a `VkPartitionedAccelerationStructureFlagsNV` structure, then that structure specifies additional flags for the PTLAS.

Valid Usage

- VUID-VkPartitionedAccelerationStructureInstancesInputNV-partitionCount-10535
The sum of `partitionCount` and `maxInstanceInGlobalPartitionCount` **must** be less than or equal to `VkPhysicalDevicePartitionedAccelerationStructurePropertiesNV::maxPartitionCount`

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureInstancesInputNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCES_INPUT_NV`
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-pNext-pNext
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkPartitionedAccelerationStructureFlagsNV`
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkPartitionedAccelerationStructureInstancesInputNV-flags-parameter
`flags` **must** be a valid combination of `VkBuildAccelerationStructureFlagBitsKHR` values

The `VkPartitionedAccelerationStructureFlagsNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureFlagsNV {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           enablePartitionTranslation;
} VkPartitionedAccelerationStructureFlagsNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `enablePartitionTranslation` specifies if a `partition translation` **may** be applied with `VkPartitionedAccelerationStructureWritePartitionTranslationDataNV`.

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureFlagsNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_PARTITIONED_ACCELERATION_STRUCTURE_FLAGS_NV`

Structure Chaining

Extends the structure

- [VkPartitionedAccelerationStructureInstancesInputNV](#)

To build a partitioned top level acceleration structure, call:

```
// Provided by VK_NV_partitioned_acceleration_structure
void vkCmdBuildPartitionedAccelerationStructuresNV(
    VkCommandBuffer                      commandBuffer,
    const VkBuildPartitionedAccelerationStructureInfoNV* pBuildInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pBuildInfo` is a pointer to a [VkBuildPartitionedAccelerationStructureInfoNV](#) structure containing parameters required for building a PTLAS.

Accesses to the acceleration structure scratch memory as identified by the [VkBuildPartitionedAccelerationStructureInfoNV::scratchData](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an access type of [\(VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR | VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR\)](#).

Accesses to each [VkBuildPartitionedAccelerationStructureInfoNV::srcAccelerationStructureData](#) and [VkBuildPartitionedAccelerationStructureInfoNV::dstAccelerationStructureData](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an access type of [VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR](#) or [VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR](#), as appropriate.

Accesses to memory with input data as identified by any used values of [VkBuildPartitionedAccelerationStructureInfoNV::srcInfos](#) and [VkBuildPartitionedAccelerationStructureInfoNV::srcInfosCount](#) **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR](#) pipeline stage and an access type of [VK_ACCESS_INDIRECT_COMMAND_READ_BIT](#).

Valid Usage

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-partitionedAccelerationStructure-10536
The [VkPhysicalDevicePartitionedAccelerationStructureFeaturesNV::partitionedAccelerationStructure](#) feature **must** be enabled
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10537
The count specified in `pBuildInfo->input.instanceCount` for the build operation **must** not exceed the value provided in `pInfo->instanceCount` when calling [vkGetPartitionedAccelerationStructuresBuildSizesNV](#) to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10538

The count specified in `pBuildInfo->input.maxInstancePerPartitionCount` for the build operation **must** not exceed the value provided in `pInfo->maxInstancePerPartitionCount` when calling `vkGetPartitionedAccelerationStructuresBuildSizesNV` to determine the memory size

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10539
The count specified in `pBuildInfo->input.partitionCount` for the build operation **must** not exceed the value provided in `pInfo->partitionCount` when calling `vkGetPartitionedAccelerationStructuresBuildSizesNV` to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10540
The count specified in `pBuildInfo->input.maxInstanceInGlobalPartitionCount` for the build operation **must** not exceed the value provided in `pInfo->maxInstanceInGlobalPartitionCount` when calling `vkGetPartitionedAccelerationStructuresBuildSizesNV` to determine the memory size
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10541
The scratch memory for the partitioned acceleration structure build specified in `pBuildInfo->scratchData` **must** be larger than or equal to the scratch size queried with `vkGetPartitionedAccelerationStructuresBuildSizesNV`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10542
`pBuildInfo->scratchData` **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10543
The destination memory of the partitioned acceleration structure build specified in `pBuildInfo->dstAccelerationStructureData` **must** be larger than or equal to the size queried with `vkGetPartitionedAccelerationStructuresBuildSizesNV`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10544
`pBuildInfo->srcAccelerationStructureData` **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10545
`pBuildInfo->dstAccelerationStructureData` **must** be aligned to 256 bytes
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10546
The number of inputs specified in `pBuildInfo->srcInfos` **must** be greater than or equal to `pBuildInfo->srcInfosCount`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10547
The memory region containing the acceleration structure at address `pBuildInfo->srcAccelerationStructureData` **must** not overlap with scratch memory region at address `pBuildInfo->scratchData`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10548
The memory region containing the acceleration structure at address `pBuildInfo->dstAccelerationStructureData` **must** not overlap with scratch memory region at address `pBuildInfo->scratchData`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10549
If the source and destination acceleration structures are not the same, the memory regions containing the acceleration structures at addresses `pBuildInfo->srcAccelerationStructureData` and `pBuildInfo->dstAccelerationStructureData` **must** not overlap with each other

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10550
`pBuildInfo->scratchData` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10551
`pBuildInfo->srcInfos` and `pBuildInfo->srcInfosCount` **must** be device addresses allocated to the application from buffers created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` usage flag set
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-10552
`pBuildInfo->srcAccelerationStructureData` and `pBuildInfo->dstAccelerationStructureData` **must** be a device addresses allocated to the application from buffers created with the `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` usage flag set

Valid Usage (Implicit)

- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-pBuildInfo-parameter `pBuildInfo` **must** be a valid pointer to a valid `VkBuildPartitionedAccelerationStructureInfoNV` structure
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildPartitionedAccelerationStructuresNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdBuildPartitionedAccelerationStructuresNV is not affected by [conditional rendering](#)

The [VkBuildPartitionedAccelerationStructureInfoNV](#) structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkBuildPartitionedAccelerationStructureInfoNV {
    VkStructureType          sType;
    void*                    pNext;
    VkPartitionedAccelerationStructureInstancesInputNV input;
    VkDeviceAddress
srcAccelerationStructureData;
    VkDeviceAddress
dstAccelerationStructureData;
    VkDeviceAddress          scratchData;
    VkDeviceAddress          srcInfos;
    VkDeviceAddress          srcInfosCount;
} VkBuildPartitionedAccelerationStructureInfoNV;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **input** is a [VkPartitionedAccelerationStructureInstancesInputNV](#) structure describing the instance and partition count information in the PTLAS.
- **srcAccelerationStructureData** is **NULL** or an address of a previously built PTLAS. If non-**NULL**, the PTLAS stored at this address is used as a basis to create new PTLAS.
- **dstAccelerationStructureData** is the address to store the built PTLAS.
- **scratchData** is the device address of scratch memory that will be used during PTLAS build.
- **srcInfos** is the device address of an array of [VkBuildPartitionedAccelerationStructureIndirectCommandNV](#) structures describing the type of operation to perform.
- **srcInfosCount** is a device address containing the size of **srcInfos** array.

Members **srcAccelerationStructureData** and **dstAccelerationStructureData** **may** be the same or different. If they are the same, the update happens in-place. Otherwise, the destination acceleration

structure is updated and the source is not modified.

Valid Usage

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-scratchData-10558
If the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetPartitionedAccelerationStructuresBuildSizesNV` is not 0, then `scratchData` **must** be a valid `VkDeviceAddress`
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-scratchData-10559
Memory at `scratchData` **must** be equal or larger than the `VkAccelerationStructureBuildSizesInfoKHR::buildScratchSize` value returned from `vkGetPartitionedAccelerationStructuresBuildSizesNV` with the same build parameters
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcAccelerationStructureData-10560
If `srcAccelerationStructureData` is not `NULL`, it **must** have previously been built as a PTLAS
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-dstAccelerationStructureData-10562
Memory at `dstAccelerationStructureData` **must** be equal or larger than the `VkAccelerationStructureBuildSizesInfoKHR::accelerationStructureSize` value returned from `vkGetPartitionedAccelerationStructuresBuildSizesNV` with the same build parameters
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfosCount-10563
`srcInfosCount` **must** be 4-byte aligned
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfos-10564
Each element of `srcInfos` array **must** have a unique `VkBuildPartitionedAccelerationStructureIndirectCommandNV::opType`

Valid Usage (Implicit)

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BUILD_PARTITIONED_ACCELERATION_STRUCTURE_INFO_NV`
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-input-parameter
`input` **must** be a valid `VkPartitionedAccelerationStructureInstancesInputNV` structure
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcAccelerationStructureData-parameter
If `srcAccelerationStructureData` is not 0, `srcAccelerationStructureData` **must** be a valid `VkDeviceAddress` value
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-dstAccelerationStructureData-parameter
`dstAccelerationStructureData` **must** be a valid `VkDeviceAddress` value

- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfos-parameter **srcInfos** **must** be a valid [VkDeviceAddress](#) value
- VUID-VkBuildPartitionedAccelerationStructureInfoNV-srcInfosCount-parameter **srcInfosCount** **must** be a valid [VkDeviceAddress](#) value

The [VkBuildPartitionedAccelerationStructureIndirectCommandNV](#) structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkBuildPartitionedAccelerationStructureIndirectCommandNV {
    VkPartitionedAccelerationStructureOpTypeNV    opType;
    uint32_t                                       argCount;
    VkStridedDeviceAddressNV                      argData;
} VkBuildPartitionedAccelerationStructureIndirectCommandNV;
```

- **opType** is a [VkPartitionedAccelerationStructureOpTypeNV](#) describing the type of operation.
- **argCount** the number of structures in **argData** array.
- **argData** is an array of [VkStridedDeviceAddressNV](#) structures containing the write or update data for instances and partitions in the PTLAS. The structure is dependent on **opType** as shown in the table below.

opType	Format of argData
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV	VkPartitionedAccelerationStructureWriteInstanceDataNV
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV	VkPartitionedAccelerationStructureUpdateInstanceDataNV
VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV	VkPartitionedAccelerationStructureWritePartitionTranslationDataNV

Valid Usage

- VUID-VkBuildPartitionedAccelerationStructureIndirectCommandNV-argData-10565
An instance index **must** not be referenced by more than one structure in **argData**

Valid Usage (Implicit)

- VUID-VkBuildPartitionedAccelerationStructureIndirectCommandNV-opType-parameter **opType** **must** be a valid [VkPartitionedAccelerationStructureOpTypeNV](#) value

Values which **can** be set in [VkPartitionedAccelerationStructureOpTypeNV](#) are:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef enum VkPartitionedAccelerationStructureOpTypeNV {
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV = 0,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV = 1,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV = 2,
} VkPartitionedAccelerationStructureOpTypeNV;
```

- [VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_INSTANCE_NV](#) is used to assign a transformed bottom level acceleration structure to an instance and partition. This is similar to [VkAccelerationStructureInstanceKHR](#) that defines the properties and transformations for a single instance in non-partitioned TLAS. Any partition that contains at least one of the affected instances will have their internal acceleration structure rebuilt.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_UPDATE_INSTANCE_NV](#) specifies that an instance will be updated with a new bottom level acceleration structure.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_OP_TYPE_WRITE_PARTITION_TRANSLATION_NV](#) specifies that a partition will be assigned a [translation vector](#).

The [VkPartitionedAccelerationStructureWriteInstanceDataNV](#) structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureWriteInstanceDataNV {
    VkTransformMatrixKHR          transform;
    float                         explicitAABB[6];
    uint32_t                      instanceID;
    uint32_t                      instanceMask;
    uint32_t
instanceContributionToHitGroupIndex;
    VkPartitionedAccelerationStructureInstanceFlagsNV instanceFlags;
    uint32_t                      instanceIndex;
    uint32_t                      partitionIndex;
    VkDeviceAddress               accelerationStructure;
} VkPartitionedAccelerationStructureWriteInstanceDataNV;
```

- **transform** is a [VkTransformMatrixKHR](#) structure describing the transformation to be applied to the instance in PTLAS.
- **explicitAABB** specifies an axis aligned bounding box representing the maximum extent of any vertex within the used acceleration structure after applying the instance-to-world transformation. The [partition translation](#) is not applied to the bounding box.
- **instanceID** is a user specified constant assigned to an instance in the PTLAS.
- **instanceMask** is a 8-bit mask assigned to the instance that **may** be used to include or reject group of instances.
- **instanceContributionToHitGroupIndex** is a 24-bit per application specified instance value added in the indexing into the shader binding table to fetch the hit group to use.
- **instanceFlags** is a bitmask of [VkPartitionedAccelerationStructureInstanceFlagsNV](#) specifying

flags an instance in the PTLAS.

- `instanceIndex` is the index of the instance within the PTLAS.
- `partitionIndex` is the index of the partition to which this instance belongs. [Global partitions](#) are referred to by `VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV`.
- `accelerationStructure` is the device address of the bottom level acceleration structure or a clustered bottom level acceleration structure that is being instanced. This instance is disabled if the device address is `0`.

Valid Usage

- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceMask-10566
The most significant 24 bits of `instanceMask` **must** be `0`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceContributionToHitGroupIndex-10567
The most significant 8 bits of `instanceContributionToHitGroupIndex` **must** be `0`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceIndex-10568
`instanceIndex` **must** be less than `VkBuildPartitionedAccelerationStructureInfoNV::input.instanceCount`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-partitionIndex-10569
`partitionIndex` **must** be less than `VkBuildPartitionedAccelerationStructureInfoNV::input.partitionCount`
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-explicitAABB-10570
`explicitAABB` **must** be a valid bounding box if instance was created with flag `VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV` set

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-instanceFlags-parameter
`instanceFlags` **must** be a valid combination of `VkPartitionedAccelerationStructureInstanceFlagBitsNV` values
- VUID-VkPartitionedAccelerationStructureWriteInstanceDataNV-accelerationStructure-parameter
`accelerationStructure` **must** be a valid `VkDeviceAddress` value

`VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV` is a special constant value used for partitioned acceleration structures to specify global partitions.

```
#define VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV (~0U)
```

The `VkPartitionedAccelerationStructureUpdateInstanceDataNV` structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureUpdateInstanceDataNV {
    uint32_t      instanceIndex;
    uint32_t      instanceContributionToHitGroupIndex;
    VkDeviceAddress accelerationStructure;
} VkPartitionedAccelerationStructureUpdateInstanceDataNV;
```

- **instanceIndex** is the index of the instance being updated.
- **instanceContributionToHitGroupIndex** is a 24-bit per instance value added in the indexing into the shader binding table to fetch the hit group to use.
- **accelerationStructure** is the device address of the bottom level acceleration structure or a clustered bottom level acceleration structure whose instance is being updated. The instance is disabled if the device address is 0.

If the instance was originally disabled by specifying a 0 in `VkPartitionedAccelerationStructureWriteInstanceDataNV::accelerationStructure`, it can not be updated to a new acceleration structure as the instance **may** have been permanently disabled by the implementation.

To avoid a refit, the new acceleration structure **must** be within the bounding box specified by `VkPartitionedAccelerationStructureWriteInstanceDataNV::explicitAABB` when the instance was first created.

Valid Usage

- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-instanceContributionToHitGroupIndex-10571
The most significant 8 bits of **instanceContributionToHitGroupIndex** **must** be 0
- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-None-10572
The instance **must** have either been created with flag `VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV` or did not have an acceleration structure assigned with `VkPartitionedAccelerationStructureWriteInstanceDataNV`
- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-instanceIndex-10573
instanceIndex **must** be less than `VkBuildPartitionedAccelerationStructureInfoNV::input.instanceCount`

Valid Usage (Implicit)

- VUID-VkPartitionedAccelerationStructureUpdateInstanceDataNV-accelerationStructure-parameter
accelerationStructure **must** be a valid `VkDeviceAddress` value

Bits which **can** be set in `VkPartitionedAccelerationStructureWriteInstanceDataNV::instanceFlags`,

specifying flags for instances, are:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef enum VkPartitionedAccelerationStructureInstanceFlagBitsNV {

VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FACING_CULL_DISABLE_BIT_NV
V = 0x00000001,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FLIP_FACING_BIT_NV =
0x00000002,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_OPAQUE_BIT_NV =
0x00000004,
    VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_NO_OPAQUE_BIT_NV =
0x00000008,

VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV =
0x00000010,
} VkPartitionedAccelerationStructureInstanceFlagBitsNV;
```

- [VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FACING_CULL_DISABLE_BIT_NV](#) disables face culling for this instance.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_TRIANGLE_FLIP_FACING_BIT_NV](#) specifies that the [facing determination](#) for geometry in this instance is inverted.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_OPAQUE_BIT_NV](#) causes this instance to act as though [VK_GEOMETRY_OPAQUE_BIT_KHR](#) were specified on all geometries referenced by this instance.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_FORCE_NO_OPAQUE_BIT_NV](#) causes this instance to act as though [VK_GEOMETRY_OPAQUE_BIT_KHR](#) were not specified on all geometries referenced by this instance.
- [VK_PARTITIONED_ACCELERATION_STRUCTURE_INSTANCE_FLAG_ENABLE_EXPLICIT_BOUNDING_BOX_NV](#) enables use of an explicit bounding box for this instance.

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef VkFlags VkPartitionedAccelerationStructureInstanceFlagsNV;
```

[VkPartitionedAccelerationStructureInstanceFlagsNV](#) is a bitmask type for setting a mask of zero or more [VkPartitionedAccelerationStructureInstanceFlagBitsNV](#).

The [VkPartitionedAccelerationStructureWritePartitionTranslationDataNV](#) structure is defined as:

```
// Provided by VK_NV_partitioned_acceleration_structure
typedef struct VkPartitionedAccelerationStructureWritePartitionTranslationDataNV {
    uint32_t    partitionIndex;
    float       partitionTranslation[3];
} VkPartitionedAccelerationStructureWritePartitionTranslationDataNV;
```

- `partitionIndex` is the index of partition to write. `Global partition` is referred to by `VK_PARTITIONED_ACCELERATION_STRUCTURE_PARTITION_INDEX_GLOBAL_NV`.
- `partitionTranslation` sets the `translation vector` for this partition. When tracing this partition, the contained instances will behave as if the partition translation was added to the translation component of the instance transform. This translation vector is also added to the instances in the partition that had their bounding box specified.

Valid Usage

- VUID-VkPartitionedAccelerationStructureWritePartitionTranslationDataNV-partitionIndex-10574
`partitionIndex` **must** be less than `VkBuildPartitionedAccelerationStructureInfoNV::input.partitionCount`
- VUID-VkPartitionedAccelerationStructureWritePartitionTranslationDataNV-enablePartitionTranslation-10575
The partitioned acceleration structure **must** have the `VkPartitionedAccelerationStructureFlagsNV::enablePartitionTranslation` flag set

42.4. Host Acceleration Structure Operations

Implementations are also required to provide host implementations of the acceleration structure operations if the `accelerationStructureHostCommands` feature is enabled:

- `vkBuildAccelerationStructuresKHR` corresponding to `vkCmdBuildAccelerationStructuresKHR`
- `vkCopyAccelerationStructureKHR` corresponding to `vkCmdCopyAccelerationStructureKHR`
- `vkCopyAccelerationStructureToMemoryKHR` corresponding to `vkCmdCopyAccelerationStructureToMemoryKHR`
- `vkCopyMemoryToAccelerationStructureKHR` corresponding to `vkCmdCopyMemoryToAccelerationStructureKHR`
- `vkWriteAccelerationStructuresPropertiesKHR` corresponding to `vkCmdWriteAccelerationStructuresPropertiesKHR`

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All acceleration structures used by the host commands **must** be bound to host-visible memory, and all input data for acceleration structure builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map acceleration structure memory when using the host commands.

NOTE

The `vkBuildAccelerationStructuresKHR` and `vkCmdBuildAccelerationStructuresKHR` **may** use different algorithms, and thus are not required to produce identical structures. The structures produced by these two commands **may** exhibit different memory footprints or traversal performance, but should strive to be similar where possible.

Apart from these details, the host and device operations are interchangeable. For example, an application **can** use `vkBuildAccelerationStructuresKHR` to build a structure, compact it on the device using `vkCmdCopyAccelerationStructureKHR`, and serialize the result using `vkCopyAccelerationStructureToMemoryKHR`.

The exception to this are acceleration structures that are created with the `VkAccelerationStructureCreateInfo2KHR` command as they are backed by a `VkDeviceAddress` and therefore are not valid to be used with host commands.

NOTE

For efficient execution, acceleration structures manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build acceleration structures on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkBuildAccelerationStructuresKHR(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    uint32_t                infoCount,
    const VkAccelerationStructureBuildGeometryInfoKHR* pInfos,
    const VkAccelerationStructureBuildRangeInfoKHR* const* ppBuildRangeInfos);
```

- `device` is the `VkDevice` for which the acceleration structures are being built.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `infoCount` is the number of acceleration structures to build. It specifies the number of the `pInfos` structures and `ppBuildRangeInfos` pointers that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkAccelerationStructureBuildGeometryInfoKHR` structures defining the geometry used to build each acceleration structure.
- `ppBuildRangeInfos` is a pointer to an array of `infoCount` pointers to arrays of `VkAccelerationStructureBuildRangeInfoKHR` structures. Each `ppBuildRangeInfos[i]` is a pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures defining dynamic offsets to the addresses where geometry data is stored, as defined by `pInfos[i]`.

This command fulfills the same task as `vkCmdBuildAccelerationStructuresKHR` but is executed by the host.

The `vkBuildAccelerationStructuresKHR` command provides the ability to initiate multiple acceleration structures builds, however there is no ordering or synchronization implied between any of the individual acceleration structure builds.

NOTE

This means that an application **cannot** build a top-level acceleration structure in the same `vkBuildAccelerationStructuresKHR` call as the associated bottom-level or instance acceleration structures are being built. There also **cannot** be any memory aliasing between any acceleration structure memories or scratch memories being

used by any of the builds.

Valid Usage

- VUID-vkBuildAccelerationStructuresKHR-accelerationStructureHostCommands-03581
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkBuildAccelerationStructuresKHR-mode-04628
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildAccelerationStructureModeKHR` value
- VUID-vkBuildAccelerationStructuresKHR-srcAccelerationStructure-04629
If the `srcAccelerationStructure` member of any element of `pInfos` is not `VK_NULL_HANDLE`, the `srcAccelerationStructure` member **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-04630
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** not be `VK_NULL_HANDLE`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03403
The `srcAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03698
The `dstAccelerationStructure` member of any element of `pInfos` **must** not be the same acceleration structure as the `dstAccelerationStructure` member of any other element of `pInfos`
- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03800
The `dstAccelerationStructure` member of any element of `pInfos` **must** be a valid `VkAccelerationStructureKHR` handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03699
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03700
For each element of `pInfos`, if its `type` member is `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR`, its `dstAccelerationStructure` member **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::type` equal to either `VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR` or `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03663

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, inactive primitives in its `srcAccelerationStructure` member **must** not be made active

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03664

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, active primitives in its `srcAccelerationStructure` member **must** not be made inactive

- VUID-vkBuildAccelerationStructuresKHR-None-03407

The `dstAccelerationStructure` member of any element of `pInfos` **must** not be referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`

- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03701

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any other element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03702

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstAccelerationStructure` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03703

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-scratchData-03704

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-scratchData-03705

The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `srcAccelerationStructure` member of any element of `pInfos` with a `mode` equal to `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` (including the same element), which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-dstAccelerationStructure-03706

The range of memory backing the `dstAccelerationStructure` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing any acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` in any other element of `pInfos`, which is accessed by this command

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03667
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have previously been constructed with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR` set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` in the build
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03668
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` and `dstAccelerationStructure` members **must** either be the same `VkAccelerationStructureKHR`, or not have any `memory aliasing`
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03758
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `geometryCount` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03759
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03760
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `type` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03761
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `geometryType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03762
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, its `flags` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03763
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.vertexFormat` member **must** have the same value which was specified when `srcAccelerationStructure` was last built
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03764
For each element of `pInfos`, if its `mode` member is

`VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.maxVertex` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03765

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, its `geometry.triangles.indexType` member **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03766

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was `NULL` when `srcAccelerationStructure` was last built, then it **must** be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03767

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if its `geometry.triangles.transformData` address was not `NULL` when `srcAccelerationStructure` was last built, then it **must** not be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10898

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numTriangles` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10899

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `numVertices` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10900

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxPrimitiveIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10901

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `maxGeometryIndex` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10902

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `format` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10903

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, the `dataSize` member of the `VkAccelerationStructureDenseGeometryFormatTrianglesDataAMD` structure in the `pNext` chain **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03768

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, if `geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, and `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then the value of each index referenced **must** be the same as the corresponding index value when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-primitiveCount-03769

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, then for each `VkAccelerationStructureGeometryKHR` structure referred to by its `pGeometries` or `ppGeometries` members, the `primitiveCount` member of its corresponding `VkAccelerationStructureBuildRangeInfoKHR` structure **must** have the same value which was specified when `srcAccelerationStructure` was last built

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03801

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, the corresponding `ppBuildRangeInfos[i][j].primitiveCount` **must** be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10126

For each `pInfos[i]`, `dstAccelerationStructure` **must** have been created with a value of `VkAccelerationStructureCreateInfoKHR::size` greater than or equal to either:

- the memory size required by the build operation, as returned by `vkGetAccelerationStructureBuildSizesKHR` with `pBuildInfo = pInfos[i]` and with each element of the `pMaxPrimitiveCounts` array greater than or equal to the equivalent `ppBuildRangeInfos[i][j].primitiveCount` values for `j` in `[0,pInfos[i].geometryCount)` or,
- the result of querying the corresponding `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, if updating a compacted acceleration structure

- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-03676

Each element of `ppBuildRangeInfos[i]` **must** be a valid pointer to an array of `pInfos[i].geometryCount` `VkAccelerationStructureBuildRangeInfoKHR` structures, or `NULL`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-10906

For each element of `pInfos[i]` whose `pGeometries` or `ppGeometries` members have a `geometryType` of `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`, `ppBuildRangeInfos[i]` **must** be `NULL`

- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-03678

Any previous deferred operation that was associated with `deferredOperation` **must** be complete

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11703

For each element of `pInfos`, its `dstAccelerationStructure` member **must** have been created with `vkCreateAccelerationStructureKHR`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03722

For each element of `pInfos`, its `dstAccelerationStructure` member **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11706

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, its `srcAccelerationStructure` member **must** have been created with `vkCreateAccelerationStructureKHR`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03723

For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11704

For each element of `pInfos`, the acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** have been created with `vkCreateAccelerationStructureKHR`

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03724

For each element of `pInfos`, each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to host-visible device memory

- VUID-vkBuildAccelerationStructuresKHR-pInfos-12244

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where `N` is given by the `buildScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkBuildAccelerationStructuresKHR-pInfos-12245

If `pInfos[i].mode` is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR`, and `N` is not `0`, all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where `N` is given by the `updateScratchSize` member of the `VkAccelerationStructureBuildSizesInfoKHR` structure returned from a call to `vkGetAccelerationStructureBuildSizesKHR` with an identical `VkAccelerationStructureBuildGeometryInfoKHR` structure and primitive count

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03771

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, `geometry.triangles.vertexData.hostAddress` **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03772

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.indexType` is not `VK_INDEX_TYPE_NONE_KHR`, `geometry.triangles.indexData.hostAddress` **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03773

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if `geometry.triangles.transformData.hostAddress` is not `0`, it **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03774

For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR`, `geometry.aabbs.data.hostAddress` **must** be a valid host address

- VUID-vkBuildAccelerationStructuresKHR-pInfos-03775
For each element of `pInfos`, its `dstAccelerationStructure` member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03776
For each element of `pInfos`, if its `mode` member is `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` the `buffer` used to create its `srcAccelerationStructure` member **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03777
For each element of `pInfos`, each acceleration structure referenced by the `geometry.instances.data` member of any element of `pGeometries` or `ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03778
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, `geometry.instances.data.hostAddress` **must** be a valid host address
- VUID-vkBuildAccelerationStructuresKHR-pInfos-03779
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `VkAccelerationStructureInstanceKHR::accelerationStructureReference` value in `geometry.instances.data.hostAddress` **must** be a valid `VkAccelerationStructureKHR` object
- VUID-vkBuildAccelerationStructuresKHR-pInfos-04930
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR` with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` set, each `accelerationStructureReference` in any structure in `VkAccelerationStructureMotionInstanceNV` value in `geometry.instances.data.hostAddress` **must** be a valid `VkAccelerationStructureKHR` object
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11820
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureGeometryMotionTrianglesDataNV` in the `geometry.triangles.pNext` chain, then its `vertexData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10892
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexBuffer.hostAddress` **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11821
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if there is an instance of `VkAccelerationStructureTrianglesOpacityMicromapEXT` in the `geometry.triangles.pNext` chain, and its `indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its

`indexBuffer.hostAddress` **must** not be 0

- VUID-vkBuildAccelerationStructuresKHR-pInfos-11822
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.hostAddress` **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11823
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11824
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::vertexData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11825
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_SPHERES_NV`, `VkAccelerationStructureGeometrySpheresDataNV::radiusData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11826
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV`, `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType` is `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.hostAddress` **must** be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11827
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV`, `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::indexType` is not `VK_INDEX_TYPE_NONE_KHR`, then its `indexData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11828
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV`, `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::vertexData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-11829
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries` with a `geometryType` of `VK_GEOMETRY_TYPE_LINEAR_SWEPT_SPHERES_NV`, `VkAccelerationStructureGeometryLinearSweptSpheresDataNV::radiusData.hostAddress` **must** not be 0
- VUID-vkBuildAccelerationStructuresKHR-pInfos-10893
For each element of `pInfos[i].pGeometries` or `pInfos[i].ppGeometries`, `geometryType` **must** not be `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD`

Valid Usage (Implicit)

- VUID-vkBuildAccelerationStructuresKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parameter
If **deferredOperation** is not [VK_NULL_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkBuildAccelerationStructuresKHR-pInfos-parameter
pInfos **must** be a valid pointer to an array of **infoCount** valid [VkAccelerationStructureBuildGeometryInfoKHR](#) structures
- VUID-vkBuildAccelerationStructuresKHR-ppBuildRangeInfos-parameter
ppBuildRangeInfos **must** be a valid pointer to an array of **infoCount** [VkAccelerationStructureBuildRangeInfoKHR](#) structures
- VUID-vkBuildAccelerationStructuresKHR-infoCount-arraylength
infoCount **must** be greater than 0
- VUID-vkBuildAccelerationStructuresKHR-deferredOperation-parent
If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To copy or compact an acceleration structure on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureInfoKHR* pInfo);
```

- **device** is the device which owns the acceleration structures.

- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyAccelerationStructureInfoKHR` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyAccelerationStructureKHR` but is executed by the host.

Valid Usage

- VUID-vkCopyAccelerationStructureKHR-accelerationStructureHostCommands-03582
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyAccelerationStructureKHR-buffer-03727
`pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03728
`pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureKHR-buffer-03780
`pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyAccelerationStructureKHR-buffer-03781
`pInfo->dst` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyAccelerationStructureKHR-src-11588
`pInfo->src` **must** have been created with `vkCreateAccelerationStructureKHR`
- VUID-vkCopyAccelerationStructureKHR-dst-11589
`pInfo->dst` **must** have been created with `vkCreateAccelerationStructureKHR`

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyAccelerationStructureInfoKHR` structure
- VUID-vkCopyAccelerationStructureKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To copy host accessible memory to an acceleration structure, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyMemoryToAccelerationStructureKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyMemoryToAccelerationStructureInfoKHR* pInfo);
```

- **device** is the device which owns **pInfo->dst**.
- **deferredOperation** is an optional [VkDeferredOperationKHR](#) to [request deferral](#) for this command.
- **pInfo** is a pointer to a [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure defining the copy operation.

This command fulfills the same task as [vkCmdCopyMemoryToAccelerationStructureKHR](#) but is executed by the host.

This command can accept acceleration structures produced by either [vkCmdCopyAccelerationStructureToMemoryKHR](#) or [vkCopyAccelerationStructureToMemoryKHR](#).

Valid Usage

- VUID-vkCopyMemoryToAccelerationStructureKHR-accelerationStructureHostCommands-03583
The [VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands](#) feature **must** be enabled
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-03678
Any previous deferred operation that was associated with **deferredOperation** **must** be complete

- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03729
`pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-03750
`pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03730
`pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToAccelerationStructureKHR-buffer-03782
`pInfo->dst` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMemoryToAccelerationStructureKHR-dst-11677
`pInfo->dst` **must** have been created with [vkCreateAccelerationStructureKHR](#)

Valid Usage (Implicit)

- VUID-vkCopyMemoryToAccelerationStructureKHR-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parameter
If `deferredOperation` is not [VK_NULL_HANDLE](#), `deferredOperation` **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyMemoryToAccelerationStructureKHR-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid [VkCopyMemoryToAccelerationStructureInfoKHR](#) structure
- VUID-vkCopyMemoryToAccelerationStructureKHR-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To copy an acceleration structure to host accessible memory, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkCopyAccelerationStructureToMemoryKHR(
    VkDevice device,
    VkDeferredOperationKHR deferredOperation,
    const VkCopyAccelerationStructureToMemoryInfoKHR* pInfo);
```

- **device** is the device which owns **pInfo->src**.
- **deferredOperation** is an optional **VkDeferredOperationKHR** to **request deferral** for this command.
- **pInfo** is a pointer to a **VkCopyAccelerationStructureToMemoryInfoKHR** structure defining the copy operation.

This command fulfills the same task as **vkCmdCopyAccelerationStructureToMemoryKHR** but is executed by the host.

This command produces the same results as **vkCmdCopyAccelerationStructureToMemoryKHR**, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either **vkCmdCopyMemoryToAccelerationStructureKHR** or **vkCopyMemoryToAccelerationStructureKHR**.

Valid Usage

- VUID-vkCopyAccelerationStructureToMemoryKHR-accelerationStructureHostCommands-03584
The **VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands** feature **must** be enabled
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-03678
Any previous deferred operation that was associated with **deferredOperation** **must** be complete
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03731
pInfo->src **must** be bound to host-visible device memory
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03732
pInfo->dst.hostAddress **must** be a valid host pointer
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-03751
pInfo->dst.hostAddress **must** be aligned to 16 bytes
- VUID-vkCopyAccelerationStructureToMemoryKHR-buffer-03783
pInfo->src **must** not be bound to memory that was allocated with multiple instances
- VUID-vkCopyAccelerationStructureToMemoryKHR-src-11678
pInfo->src **must** have been created with **vkCreateAccelerationStructureKHR**

Valid Usage (Implicit)

- VUID-vkCopyAccelerationStructureToMemoryKHR-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parameter
If **deferredOperation** is not [VK_NULL_HANDLE](#), **deferredOperation** **must** be a valid [VkDeferredOperationKHR](#) handle
- VUID-vkCopyAccelerationStructureToMemoryKHR-pInfo-parameter
pInfo **must** be a valid pointer to a valid [VkCopyAccelerationStructureToMemoryInfoKHR](#) structure
- VUID-vkCopyAccelerationStructureToMemoryKHR-deferredOperation-parent
If **deferredOperation** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_OPERATION_DEFERRED_KHR](#)
- [VK_OPERATION_NOT_DEFERRED_KHR](#)
- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query acceleration structure size parameters on the host, call:

```
// Provided by VK_KHR_acceleration_structure
VkResult vkWriteAccelerationStructuresPropertiesKHR(
    VkDevice          device,
    uint32_t          accelerationStructureCount,
    const VkAccelerationStructureKHR* pAccelerationStructures,
    VkQueryType        queryType,
    size_t             dataSize,
    void*              pData,
    size_t             stride);
```

- **device** is the device which owns the acceleration structures in **pAccelerationStructures**.
- **accelerationStructureCount** is the count of acceleration structures for which to query the property.

- `pAccelerationStructures` is a pointer to an array of existing previously built acceleration structures.
- `queryType` is a `VkQueryType` value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as `vkCmdWriteAccelerationStructuresPropertiesKHR` but is executed by the host.

Valid Usage

- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureHostCommands-03585
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureHostCommands` feature **must** be enabled
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-04964
All acceleration structures in `pAccelerationStructures` **must** have been built prior to the execution of this command
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructures-03431
All acceleration structures in `pAccelerationStructures` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR` if `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06742
`queryType` **must** be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03448
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03449
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03450
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-03451
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`, then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06731
If `queryType` is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, then `stride` **must** be a multiple of the size of `VkDeviceSize`

- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06732
If **queryType** is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`, then **pData** **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06733
If **queryType** is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, then **stride** **must** be a multiple of the size of `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-06734
If **queryType** is `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`, then **pData** **must** point to a `VkDeviceSize`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-03452
dataSize **must** be greater than or equal to `accelerationStructureCount*stride`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03733
Each element of **pAccelerationStructures** **must** be bound to host-visible device memory
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-11592
Each acceleration structure in **pAccelerationStructures** **must** have been created with `vkCreateAccelerationStructureKHR`
- VUID-vkWriteAccelerationStructuresPropertiesKHR-buffer-03784
Each element of **pAccelerationStructures** **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkWriteAccelerationStructuresPropertiesKHR-device-parameter
device **must** be a valid `VkDevice` handle
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parameter
pAccelerationStructures **must** be a valid pointer to an array of `accelerationStructureCount` valid `VkAccelerationStructureKHR` handles
- VUID-vkWriteAccelerationStructuresPropertiesKHR-queryType-parameter
queryType **must** be a valid `VkQueryType` value
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pData-parameter
pData **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkWriteAccelerationStructuresPropertiesKHR-accelerationStructureCount-arraylength
accelerationStructureCount **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-dataSize-arraylength
dataSize **must** be greater than 0
- VUID-vkWriteAccelerationStructuresPropertiesKHR-pAccelerationStructures-parent
Each element of **pAccelerationStructures** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

Chapter 43. Compressed triangle data

43.1. Dense Geometry Format Version 1 (DGF1)

The provisional [VK_AMDX_dense_geometry_format](#) extension provides a way for applications to build acceleration structures from pre-compressed Dense Geometry Format (DGF) triangle geometry data, enabling improved build times and reducing both the storage required on disk and the memory footprint of acceleration structures.

The dense geometry format consists of an array of 128B blocks that encode triangle data. Each block holds a maximum of 64 triangles and 64 vertices.

It is expected that applications will construct DGF content by partitioning meshes into small, spatially localized triangle sets, and attempting to pack each set into a minimal number of DGF blocks. An SAH-aware clustering strategy is crucial for good ray tracing performance. Pre-clustering the geometry in this manner greatly accelerates the acceleration structure build since the implementation receives an efficient spatial partitioning, and does not need to construct one from the original, larger triangle set.

DGF compressors rely on the ability to reorder triangles within a mesh, and rotate triangle vertices in a winding-preserving way. The application must post-process any sideband data which depends on these (shader-visible index buffers, per-triangle attributes).

43.1.1. Block Layout

The 128B DGF block is organized into sections as shown below:

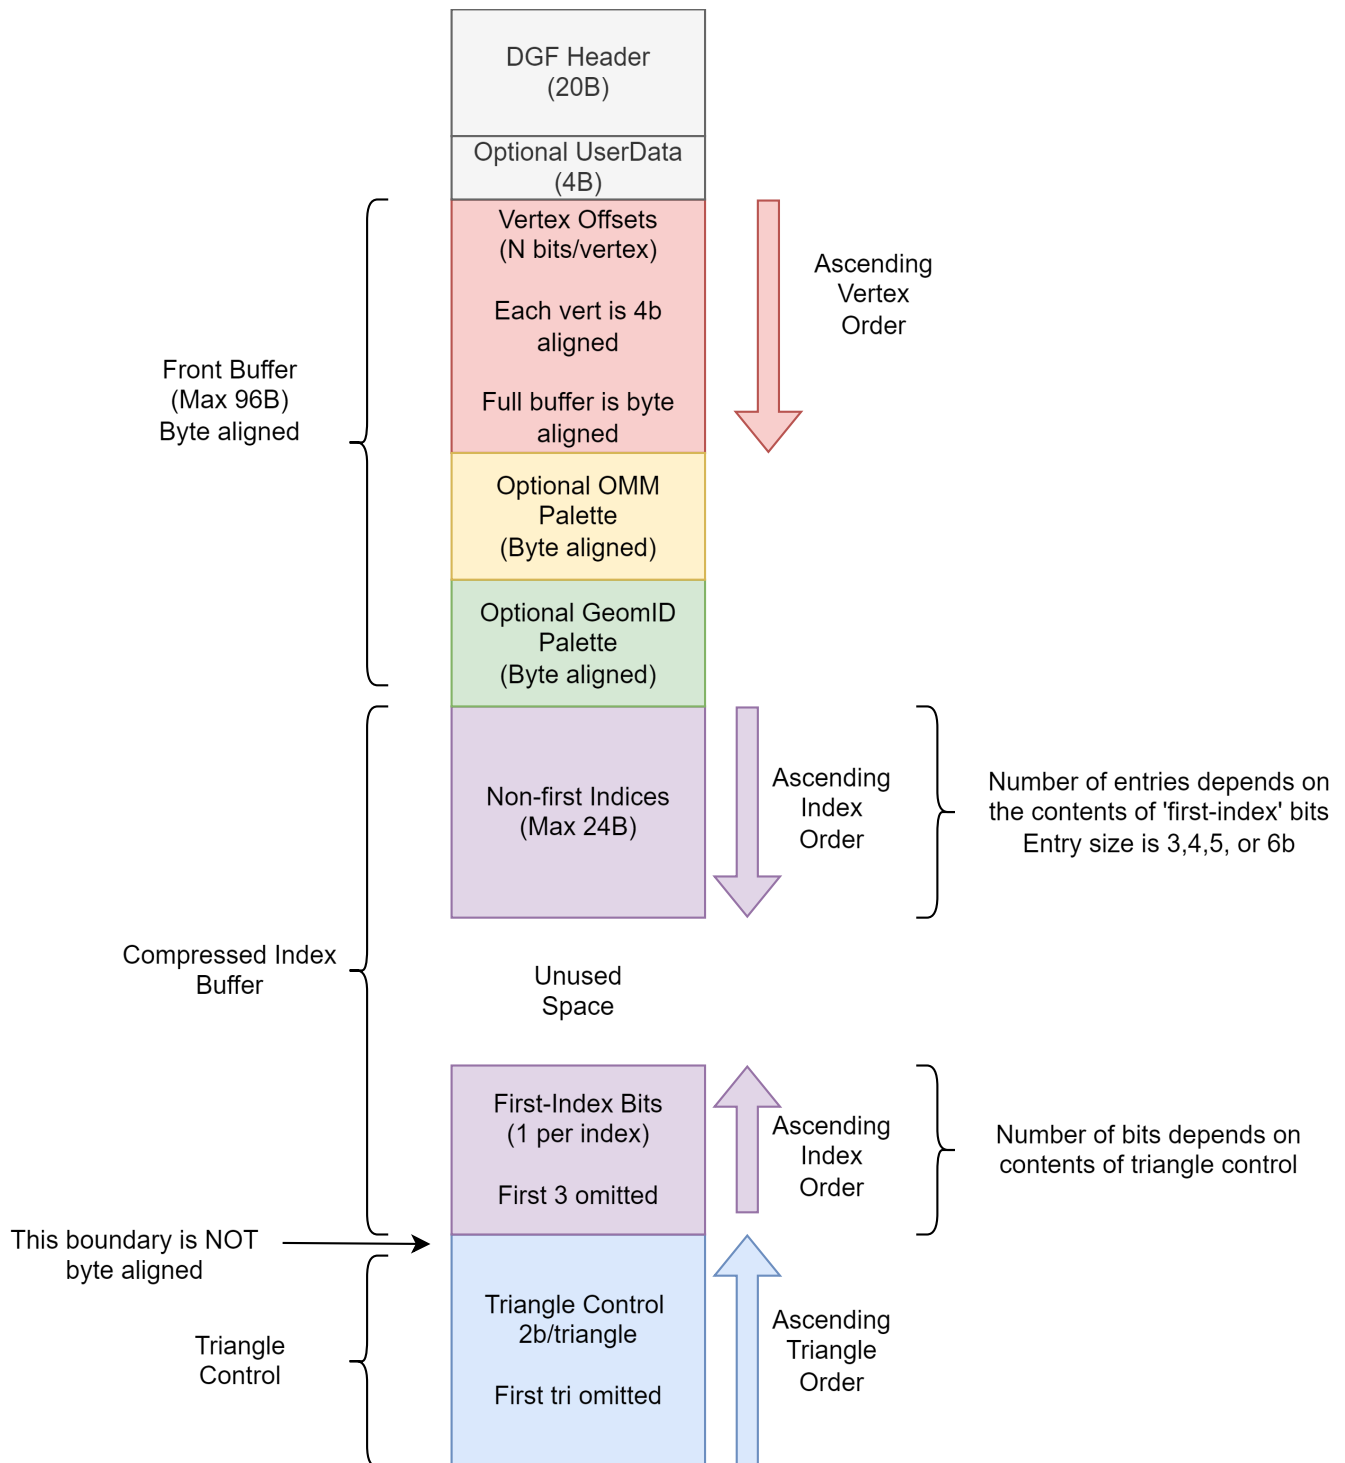

Figure 33. DGF block layout

The first 5 DWORDs of a DGF block consist of a fixed header, whose structure is shown below. All bit fields are ordered from LSB to MSB, bytes are 8 bits, and multi-byte fields are little endian.

```
struct DGFHeader
{
    // DWORD 0
    uint32_t magic           : 8; // must be 0x6
    uint32_t bits_per_index  : 2; // Encodes 3,4,5,6
    uint32_t num_vertices    : 6; // Number of vertices (1-64)
    uint32_t num_triangles   : 6; // Number of triangles (1-64)
    uint32_t geom_id_meta    : 10;
```

```

// DWORD 1
uint32_t exponent          : 8; // Float32 scale (exponent-only) with bias
127. Values 1-232 are supported.
int32_t x_anchor           : 24; // 24-bit signed two's complement (0x800000
represents -8,388,608)

// DWORD 2
uint32_t x_bits            : 4; // 1-16 (add 1 when decoding)
uint32_t y_bits            : 4; // 1-16 (add 1 when decoding)
int32_t y_anchor           : 24; // 24-bit signed two's complement

// DWORD 3
uint32_t z_bits            : 4; // 1-16 (add 1 when decoding)
uint32_t omm_descriptor_count : 3; // 0-7
uint32_t geom_id_mode      : 1; // 0 = Constant Mode 1= Palette Mode
int32_t z_anchor           : 24; // 24-bit signed two's complement

// DWORD 4
uint32_t prim_id_base      : 29;
uint32_t have_user_data    : 1; // if set, a UserData DWORD is present between
the header and the front buffer
uint32_t unused            : 2; // must be 0

// 108B of variable-length data segments follow.
};

```

The per-vertex offsets are tightly packed in the DGF node immediately following the header, in ascending order. The size of each vertex must be 4b-aligned. The size of the vertex data section is byte-aligned. Pad bits are inserted as required, and all pad bits must be zero. The optional OMM palette (if present) starts on the next byte boundary. The optional GeomID palette (if present), starts on the next byte boundary following the vertex data and OMM palette.

The region containing the vertex data, geomID palette, and OMM palette is referred to as the “front buffer”. It is byte-aligned, and its total size may not exceed 96B.

The optional UserData DWORD, if present, is little-endian, and located immediately after the header. If UserData is present, the front buffer starts at byte 24. If UserData is not present, the front buffer starts at byte 20.

43.1.2. Vertex Position Encoding

DGF vertices are defined on a signed 24-bit quantization grid. Each block stores the following:

- a 24b-per-coordinate signed anchor position,
- a variable-width (1-16b) unsigned offset for each vertex component (relative to the anchor position),
- a power-of-2 scale factor which is used to map from the quantization grid to floating-point world coordinates (stored as an IEEE biased exponent).

An equivalent fixed-point encoding scheme is used by Epic's "Nanite" system.

The decoded floating-point vertex position is computed as follows:

```
float3 dgf_decode(int24_t Anchor[3], uint16_t Offset[3], uint8_t Exponent)
{
    int x = Anchor[0] + Offset[0]; // 24b + 16b add.. 25b result
    int y = Anchor[1] + Offset[1];
    int z = Anchor[2] + Offset[2];

    float fx = (float)(x); // convert results to floating-point
    float fy = (float)(y);
    float fz = (float)(z);

    // apply a pow2 scale factor
    float scale = ldexp(1.0f, Exponent - 127);
    return float3(fx, fy, fz) * scale;
}
```

With this encoding scheme the maximum representable value is:

$$(0x7fffff + 0xffff) * 2^{127} = 8,454,142 * 2^{127} \text{ (roughly } 1.438e+45\text{)}$$

The minimum is:

$$(0x800000 * 2^{127}) = -8,388,608 * 2^{127} \text{ (roughly } -1.427e+45\text{)}$$

This is a larger theoretical dynamic range than IEEE floating-point, and there is no reason for implementations to support all of it.

The minimum and maximum IEEE floats which DGF can encode occur for exponent 232 and integer positions 0x800001 and 0x7fffff (Decimal values -8388607 and 8388607). These values are:

-340282326356119256160033759537265639424.000000 and
+340282326356119256160033759537265639424.000000

For context, the range of finite IEEE floats is slightly larger than these:

-340282346638528859811704183484516925440.000000 to
+340282346638528859811704183484516925440.000000

For these reasons, DGF only supports exponent values from 1 through 232. This implies that denormals, NaNs, and infinities cannot be represented. If a block encodes an exponent value outside the supported range, all ray-triangle intersection tests against this block will have undefined results.

For exponent values of 232, it is possible to encode a value which overflows the IEEE single-precision range. Results are undefined in this case.

An application can ensure crack-free results across blocks by selecting matching quantization factors for any two neighboring blocks. A simple way to ensure this is to pick a uniform quantization factor for an entire mesh.

43.1.3. Handling Corner Cases

The anchor+offset encoding scheme can be problematic for meshes containing very large triangles. A poor choice of quantization factor can cause the 16b per-vertex offsets or the 24b per-block anchors to overflow. This problem can be worked around in several ways:

- Choosing a coarser quantization factor (trading off precision),
- Subdividing large, problematic triangles (whether automatically or manually),
- Reverting to uncompressed geometry for problematic assets.

The use of a common quantization factor for X,Y, and Z can be problematic for geometry which has a large extent on one coordinate axis but not the others (for example, a freight train with individually modeled cars). In this situation, a coarse quantization factor must be selected to enclose the large coordinate range on the long axis, resulting in inadequate precision on the other two axes. The solution to this problem is to partition the object into multiple parts, each authored in a local coordinate system, and positioned using instance transforms.

43.1.4. Topology Encoding

Topology Sections

DGF represents mesh topology using a form of generalized triangle strip. The order of the stored vertices is used to minimize the size of the topology encoding. The topology encoding consists of an array of triangle control values, and a compressed index buffer.

- Two control bits per triangle indicating its position relative to the previous two triangles
 - The first triangle always uses RESTART, so this is not stored.
 - Ordered back to front (earlier triangles occupy higher bit positions).
- A compressed index buffer whose length is determined by the contents of the control bits.
 - The index buffer is organized into two sections:
 - An array of “is-first” bits
 - One bit per index indicating whether it is the first reference to a given vertex.
 - The first reference to a given vertex is computed by incrementing a counter.
 - The first three indices are always “first”, so their “is-first” bits are not stored.
 - Ordered back to front (earlier indices occupy higher bit positions).
 - A “reuse buffer” containing the indices of reused vertices
 - There is one index for each zero bit in the “is-first” bit vector.

- The number of bits per index is stored in the header. Valid values are 0,1,2,3, encoding 3,4,5, and 6 bits, respectively.
- Ordered front to back (earlier indices occupy lower bit positions).
- Total size may not exceed 24B.

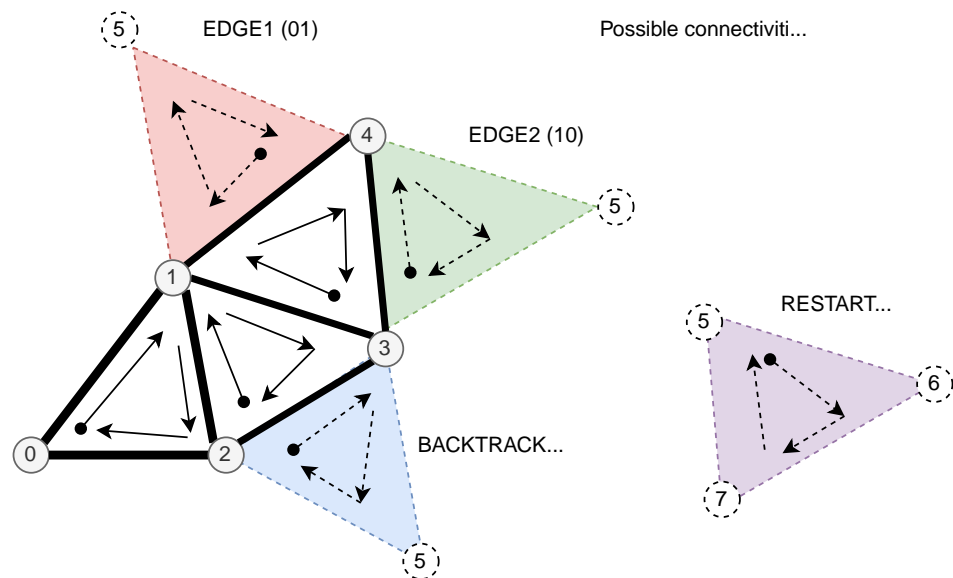

The reuse buffer is located immediately adjacent to the front buffer. The triangle control bits are located at the end of the block, and the "is-first" bits are immediately in front of them.

There are four possible triangle control values:

Enum	Value	Meaning
RESTART	0	Start a new strip, specifying 3 vertex indices for the triangle
EDGE1	1	The second edge of the predecessor triangle is reused as the first edge
EDGE2	2	The third edge of the predecessor triangle is reused as the first edge
BACKTRACK	3	The opposite edge of the predecessor's predecessor is reused. "Opposite edge" means EDGE1 if the predecessor used EDGE2, or EDGE2 if the predecessor used EDGE1. BACKTRACK is not allowed unless the predecessor used EDGE1 or EDGE2. A BACKTRACK triangle may not occur after a RESTART or another BACKTRACK

The behavior of the triangle control values is illustrated in the diagram below:

RESTART(00...

Text is not SVG - cannot display

Figure 34. DGF control value behavior

In the diagram above, the vertex orders for the 3 predecessor triangles are:

- RESTART: 0,1,2
- EDGE1: 2,1,3 (reuse the 1 → 2 edge)
- EDGE1: 3,1,4 (reuse the 1 → 3 edge)

The four possible vertex orders for the next triangle depend on its control value, and are:

- RESTART: 5,6,7
- EDGE1: 4,1,5 (reuse the 1 → 4 edge)
- EDGE2: 3,4,5 (reuse the 4 → 3 edge)
- BACKTRACK: 2,3,5 (reuse the 3 → 2 edge)

Note that whenever an edge is reused, its vertices are reversed so that triangle winding is correct. Meshes with mixed winding can be encoded by restarting the strip on each winding change.

The control values for the triangles correspond to an index buffer containing three indices for each RESTART triangle, and one index for each non-RESTART triangle. This index buffer is compressed by re-ordering the vertices by first use and omitting the first reference to every vertex (since this index can be computed by incrementing a counter). A single bit per index is used to indicate whether it is the first reference to its corresponding vertex. The reused indices are then directly stored in a tightly-packed buffer (i.e., not interleaved with the single-bit index-is-first flags).

The example below illustrates the index buffer encoding:

Triangle Control Value

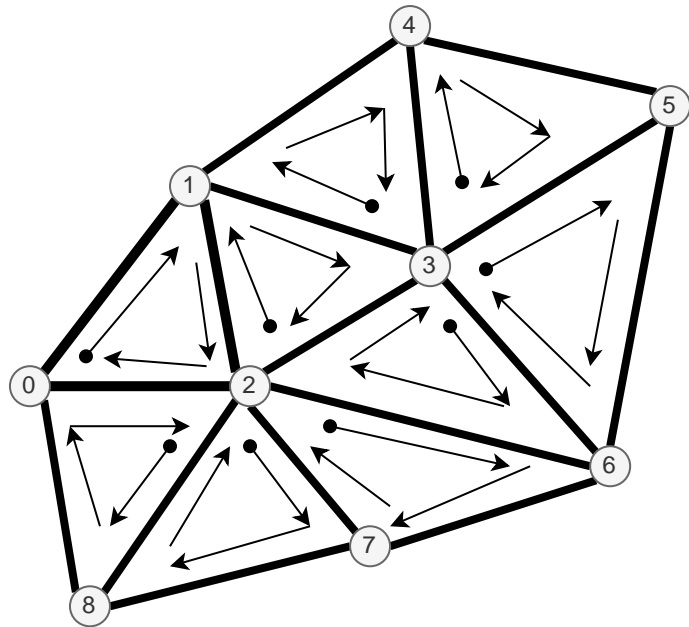

RESTART (0,1,2)...

The diagram shows a triangular mesh with 9 nodes labeled 0 through 8. Nodes 0, 1, and 2 are highlighted with thick black borders. The mesh is composed of several triangles. Arrows indicate a flow or control value across the mesh, with some arrows pointing towards the highlighted nodes. A text label 'Triangle Control Value' is at the top left, and 'RESTART (0,1,2)...' is below it.

Triangle Control Value

RESTART (0,1,2)...

The diagram shows a triangular mesh with 9 nodes labeled 0 through 8. Nodes 0, 1, and 2 are highlighted with thick black borders. The mesh is composed of several triangles. Arrows indicate a flow or control value across the mesh, with some arrows pointing towards the highlighted nodes. A text label 'Triangle Control Value' is at the top left, and 'RESTART (0,1,2)...' is below it.

Strip Index Buffer: 0,1,2,3,4,5,6,2,7,8,0

Index Is First (9b): 1111110110

Non-first indices 2,0

Figure 35. DGF Index buffer example

A triangle's position in the index buffer can be computed by taking the triangle index and adding 2 for each RESTART triangle at the same or earlier positions. This gives the index buffer position for the triangle's third vertex. The remaining two vertices are inferred from the previous two triangles based on the control values.

An index from the compressed index buffer is extracted as follows:

```
uint get_index(uint indexPosition, uint64_t isFirst, uint nonFirstIndices[])
{
    // count number of "first" vertex refs which precede this one
    // NOTE that an efficient implementation would use a popcount() here
    int numFirst = 0;
    for (int i = 0; i < indexPosition; i++)
    {
        if (isFirst & (1ull << i))
            numFirst++;
    }

    // the first reference to each vertex is implicit
    // reused indices are read
    if (isFirst & (1ull << indexPosition))
        return numFirst;
    else
        return nonFirstIndices[indexPosition - numFirst]; // NOTE: Bounds check
} // omitted for brevity
```

```
}
```

43.1.5. Primitive Index

The primitive index for a DGF triangle is inferred from its position in the strip, which removes the need to directly store it. A 29b primitive index base is stored in the block and added to the triangle's position in the block to produce a per-triangle primitive index.

```
PrimitiveIndex = header.prim_id_base + triangle_index_in_block;
```

The result must fit in 29b. Any overflow results in undefined behavior.

43.1.6. Geometry Index and Opaque Flag

DGF supports specifying a 24b geometry index and a 1b opaque flag on a per-triangle basis. These are combined into a 25b value with the opaque flag in the least significant bit.

There are two supported modes:

- Constant mode: A 9b geometry index and 1b opaque flag is applied to all triangles,
- Palette mode: An array of up to 32 25b values is stored in the block, in compressed form, and a per-triangle index is used to select a value from the array.

If palette mode is in use, there is no requirement that the “opaque” flags are consistent for triangles with the same geometry index.

The palette mode is useful in the following circumstances:

- When the triangles in the block have different geometry index or opacity values
- When the triangles have the same geometry index, but it is larger than the 9b limit for palette mode.
- When the number of triangles per geo is small, and constant mode would create under-utilized blocks.

GeomID Palette

There are two supported modes for specifying geometry indices and opaque flags. The mode is selected based on the `geom_id_mode` field in the header:

Enum	Value	Encoding System
Constant Mode	0	A 9b geomID and a 1b opaque flag are applied to all triangles
Palette Mode	1	An array of up to 32 25b values is stored in compressed form; each triangle stores an index into the array

In constant mode, bit 0 of `geom_id_meta` contains an opaque flag, and bits 1-9 store a geometry index. These values are used for all triangles. In this mode, no additional data are stored in the block, and more space is available for vertex data.

In palette mode, the `geom_id_meta` field is interpreted as follows:

- LSBs (4:0) encode a GeomID prefix size in bits (5b, 0-25)
- MSBs (9:5) encode a GeomID count (5b, 1-32 (add 1 when decoding)).

In palette mode, a GeomID palette structure is inserted in the block. The position and size of the palette structure are aligned to byte boundaries. Pad bits are appended as required, and all pad bits must be zero.

The GeomID palette consists of the following structures in this order:

- A prefix value whose bit length is given in the 5 LSBs of `geom_id_meta`.
- A per-triangle index buffer identifying the payload to use for each triangle.
 - The size of each index is `ceil(log2(GeomID count))`.
- An array of N-bit payloads, where N is `25 - prefixSize`. The LSB of each payload contains an opaque flag.

The 25b geomID and opaque flag for a given triangle are decoded by selecting a payload from the payload buffer, and concatenating it with the prefix value. The following pseudocode illustrates this process:

```
// Helper function to extract a bit field from the DGF block
uint ReadBits(uint bitPos, uint numBits);

uint get_id_and_opacity(uint geom_id_meta, uint triIndex, uint triCount);
{
    uint prefixSize = geom_id_meta & 0x1f;
    uint payloadSize = 25 - prefixSize;
    uint geomIDCount = ((geom_id_meta >> 5) & 0x1f) + 1;
    uint indexSize = 32 - lzcount(geomIDCount - 1);

    uint paletteBitPos = ComputePaletteBitPosition();
    uint prefix = ReadBits(paletteBitPos, prefixSize);

    uint indexBufferPos = paletteBitPos + prefixSize;
    uint index = ReadBits(indexBufferPos + triIndex * indexSize, indexSize);

    uint payloadBufferPos = indexBufferPos + triCount * indexSize;
    uint payload = ReadBits(payloadBufferPos, index, payloadSize);

    return (prefix << payloadSize) | payload;
}
```

43.1.7. OMM Support

DGF provides a degree of OMM support by allowing the triangles within a DGF block to collectively reference a limited number of OMMs. The OMM support in DGF is best suited for scenarios in which a small set of OMMs is repeated many times over a large mesh (e.g. tree leaves). For intricate alpha cutouts applied to high-poly models, it is potentially more efficient to tessellate the geometry and “bake in” the alpha cutout.

Because OMMs are constructed independently of acceleration structure content, the encoder must reserve space for a set of implementation-defined “OMM descriptors” which may be injected into the block at runtime. A DGF block can hold a maximum of 7 descriptors, with each descriptor either encoding an OMM special index or referencing an OMM array entry. The application must know the triangle-to-OMM mapping when the DGF block is encoded, and the encoder must assign triangles to blocks such that the descriptor limit is not exceeded, and ideally such that the number of OMMs per block is minimized.

The mapping of triangles to OMMs is illustrated by the following pseudo-code:

```
//
//  The number of unique return values from "get_omm_index" in a given block must not
//    exceed the number of descriptors allocated in the block
//
uint get_omm_index( uint primIDBase, uint triangleIndexInBlock )
{
    // reconstruct primitive index
    uint primIndex = primIDBase + triangleIndexInBlock;

    // map primitive index to the index of an OMM in the OMM array
    if( indexed_omms )
        return OMMIndexBuffer[primIndex];
    else
        return primIndex;
}
```

If an OMM index buffer is used to select OMMs, then each distinct index value (including “special indices”) counts as one descriptor. If there is no OMM index buffer, then a simple linear mapping is used instead. This implies that the number of OMM descriptors equals the number of triangles, and that neither number may exceed 7.

DGF blocks with OMM still encode a per-triangle opaque flag. This opaque flag is used whenever OMMs are disabled via ray/instance flags.

Opacity Micromap Palette

If `omm_descriptor_count` is non-zero, then an “OMM palette” is present. The OMM palette, if present, is byte-aligned. Pad bits are inserted as required. All pad bits must be zero.

The OMM palette consists of a “hot-patched” section, and a “pre-computed” section. The “hot-patched” section is so named because it is expected to be patched at runtime with OMM

information when an acceleration structure is constructed. The “pre-computed” section is computed by the application at DGF encoding time. The size and position of the hot-patched section are exposed to applications through the API, but its precise contents are not.

When encoding a DGF block that is expected to be used with OMMs, the encoder must reserve space for the hot-patched section, and place the pre-computed section immediately after it.

- The “hot-patched” section contains 8 bytes, plus 4 bytes for each OMM descriptor. The application must initialize this space with zeros.
- The “pre-computed” section contains a per-triangle index indicating which OMM descriptor to use.
 - Triangles are ordered from front to back in ascending order
 - The number of bits per index is derived from the `omm_descriptor_count` field in the header.
 - The pre-computed section is padded out to the next byte boundary, and all pad bits must be zero.

The following table shows the OMM palette configuration for each value of `omm_descriptor_count`:

<code>omm_descriptor_count</code>	Hot-patch Section Size (Bytes)	Precomputed Section (Bits per Triangle)
0	0	0
1	12	0
2	16	1
3	20	2
4	24	2
5	28	3
6	32	3
7	36	3

The following pseudo-code computes the size, in bits, of an OMM palette:

```
int compute_palette_size( uint numDescriptors, uint numTriangles )
{
    if( numDescriptors == 0 )
        return 0;

    uint hotPatchSize    = 64 + 32*numTriangles;
    uint bitsPerIndex    = ceil( log2(numDescriptors) );
    uint precomputedSize = bitsPerIndex*numTriangles;
    precomputedSize = (precomputedSize + 7) & ~7; // byte align

    return hotPatchSize + precomputedSize;
}
```

The following pseudo-code illustrates how an encoder could construct the pre-computed section of the OMM palette:

```
//
// Calculates the descriptor indices in the 'pre-computed' section of an OMM palette.
// The return value is the number of OMM descriptors used.
//
// A return value of -1 indicates that the triangles contain too many unique OMMs and
must be split into multiple blocks.
//
int build_omm_palette( uint descriptorIndices[], uint numTriangles, const int*
ommIndices, uint spaceAvailable )
{
    int ommDescriptors[MAX_DESCRIPTOR];
    int numDescriptors=0;

    for( uint triangleIndex = 0; triangleIndex < numTriangles; triangleIndex++ )
    {
        // determine the OMM index assigned to this triangle
        int ommIndex = ommIndices[triangleIndex];

        // search for an existing descriptor for this OMM or special-index
value
        uint descriptorIndex=0;

        while(descriptorIndex < numDescriptors )
        {
            if( ommPalette[descriptorIndex] == ommIndex )
                break;

            descriptorIndex++;
        }

        // if an existing descriptor was not found, attempt to allocate one
        // if unsuccessful, the encoder must split the triangles into
multiple blocks
        if( descriptorIndex == numDescriptors )
        {
            if( numDescriptors == MAX_DESCRIPTOR )
                return -1; // block must be split
            else
                ommPalette[numDescriptors++] = ommIndex;
        }

        descriptorIndices[triangleIndex] = descriptorIndex;
    }

    // split the triangles if the resulting palette cannot fit in the block
    if( compute_palette_size(numTriangles,numDescriptors) > spaceAvailable )
        return -1;
}
```

```
}    return numDescriptors;
```

43.1.8. Optional UserData

The DGF block can optionally embed one DWORD of user-defined data, which is useful for locating vertex attributes.

Applications which use UserData must set the corresponding field in the DGF header and populate the corresponding bits.

Chapter 44. Micromap

44.1. Micromaps

Acceleration structures store and organize geometry for ray tracing, but in some cases it is beneficial to include some information within the geometry, particularly for triangles. A *micromap* organizes this data around a map of values corresponding to subdivided microtriangles which can be added to a triangle geometry when building a *bottom level acceleration structure*.

An *opacity micromap* is a type of micromap which stores information to control intersection opacity as described in [Ray Opacity Micromap](#).

A *displacement micromap* is a type of micromap which stores information to displace sub-triangle vertices as described in [Displacement Micromap](#).

A micromap is considered to be constructed if a [micromap build command](#) or [copy command](#) has been executed with the given acceleration structure as the destination.

44.1.1. Building Micromaps

To build micromaps call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdBuildMicromapsEXT(
    VkCommandBuffer          commandBuffer,
    uint32_t                 infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `infoCount` is the number of micromaps to build. It specifies the number of the `pInfos` structures that **must** be provided.
- `pInfos` is a pointer to an array of `infoCount` `VkMicromapBuildInfoEXT` structures defining the data used to build each micromap.

The `vkCmdBuildMicromapsEXT` command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

Accesses to the micromap scratch buffers as identified by the `VkMicromapBuildInfoEXT::scratchData` buffer device addresses **must** be [synchronized](#) with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an [access type](#) of (`VK_ACCESS_2_MICROMAP_READ_BIT_EXT` | `VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT`). Accesses to `VkMicromapBuildInfoEXT::dstMicromap` **must** be [synchronized](#) with the

VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT.

Accesses to other input buffers as identified by any used values of `VkMicromapBuildInfoEXT::data` or `VkMicromapBuildInfoEXT::triangleArray` **must** be **synchronized** with the VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT pipeline stage and an access type of VK_ACCESS_SHADER_READ_BIT.

Valid Usage

- VUID-vkCmdBuildMicromapsEXT-pInfos-07461
For each `pInfos[i]`, `dstMicromap` **must** have been created with a value of `VkMicromapCreateInfoEXT::size` greater than or equal to the memory size required by the build operation, as returned by `vkGetMicromapBuildSizesEXT` with `pBuildInfo = pInfos[i]`
- VUID-vkCmdBuildMicromapsEXT-mode-07462
The `mode` member of each element of `pInfos` **must** be a valid `VkBuildMicromapModeEXT` value
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07463
The `dstMicromap` member of any element of `pInfos` **must** be a valid `VkMicromapEXT` handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-07464
For each element of `pInfos` its `type` member **must** match the value of `VkMicromapCreateInfoEXT::type` when its `dstMicromap` was created
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07465
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-dstMicromap-07466
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-scratchData-07467
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkCmdBuildMicromapsEXT-pInfos-07508
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to device memory
- VUID-vkCmdBuildMicromapsEXT-pInfos-07509
If `pInfos[i].mode` is `VK_BUILD_MICROMAP_MODE_BUILD_EXT`, all addresses between `pInfos[i].scratchData.deviceAddress` and `pInfos[i].scratchData.deviceAddress + N - 1` **must** be in the buffer device address range of the same buffer, where N is given by the

`buildScratchSize` member of the `VkMicromapBuildSizesInfoEXT` structure returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure and primitive count

- VUID-vkCmdBuildMicromapsEXT-data-07510
The buffers from which the buffer device addresses for all of the `data` and `triangleArray` members of all `pInfos[i]` are queried **must** have been created with the `VK_BUFFER_USAGE_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT` usage flag set
- VUID-vkCmdBuildMicromapsEXT-pInfos-07511
For each element of `pInfos[i]` the buffer from which the buffer device address `pInfos[i].scratchData.deviceAddress` is queried **must** have been created with the `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` usage flag set
- VUID-vkCmdBuildMicromapsEXT-pInfos-07512
For each element of `pInfos`, if the value of `VkMicromapBuildSizesInfoEXT::buildScratchSize`, returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure, is not 0, `scratchData.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildMicromapsEXT-pInfos-10896
For each element of `pInfos`, `data.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildMicromapsEXT-pInfos-10897
For each element of `pInfos`, `triangleArray.deviceAddress` **must** be a valid `VkDeviceAddress`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07514
For each element of `pInfos`, its `scratchData.deviceAddress` member **must** be a multiple of `VkPhysicalDeviceAccelerationStructurePropertiesKHR::minAccelerationStructureScratchOffsetAlignment`
- VUID-vkCmdBuildMicromapsEXT-pInfos-07515
For each element of `pInfos`, its `triangleArray.deviceAddress` and `data.deviceAddress` members **must** be a multiple of 256

Valid Usage (Implicit)

- VUID-vkCmdBuildMicromapsEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBuildMicromapsEXT-pInfos-parameter
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkMicromapBuildInfoEXT` structures
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBuildMicromapsEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdBuildMicromapsEXT-renderpass
This command **must** only be called outside of a render pass instance

- VUID-vkCmdBuildMicromapsEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBuildMicromapsEXT-vidcoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBuildMicromapsEXT-infoCount-arraylength
`infoCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdBuildMicromapsEXT` is not affected by conditional rendering

Formats which **can** be set in `VkMicromapUsageEXT::format` and `VkMicromapTriangleEXT::format` for micromap builds, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkOpacityMicromapFormatEXT {
    VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT = 1,
    VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT = 2,
} VkOpacityMicromapFormatEXT;
```

- `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` specifies that the given micromap format has one bit per subtriangle encoding either fully opaque or fully transparent.
- `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT` specifies that the given micromap format has two bits per subtriangle encoding four modes which can be interpreted as described in [ray traversal](#).

NOTE For compactness, these values are stored as 16-bit in some structures.

Formats which **can** be set in `VkMicromapUsageEXT::format` and `VkMicromapTriangleEXT::format` for micromap builds, are:

```
// Provided by VK_NV_displacement_micromap
typedef enum VkDisplacementMicromapFormatNV {
    VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV = 1,
    VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV = 2,
    VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV = 3,
} VkDisplacementMicromapFormatNV;
```

- `VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV` specifies that the given micromap format encodes 64 micro-triangles worth of displacements in 64 bytes as described in [Displacement Micromap Encoding](#).
- `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` specifies that the given micromap format encodes 256 micro-triangles worth of displacements in 128 bytes as described in [Displacement Micromap Encoding](#).
- `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV` specifies that the given micromap format encodes 1024 micro-triangles worth of displacements in 128 bytes as described in [Displacement Micromap Encoding](#).

NOTE For compactness, these values are stored as 16-bit in some structures.

The `VkMicromapBuildInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildInfoEXT {
    VkStructureType          sType;
    const void*              pNext;
    VkMicromapTypeEXT        type;
    VkBuildMicromapFlagsEXT  flags;
    VkBuildMicromapModeEXT   mode;
    VkMicromapEXT            dstMicromap;
    uint32_t                 usageCountsCount;
    const VkMicromapUsageEXT* pUsageCounts;
    const VkMicromapUsageEXT* const* ppUsageCounts;
    VkDeviceOrHostAddressConstKHR data;
    VkDeviceOrHostAddressKHR    scratchData;
    VkDeviceOrHostAddressConstKHR triangleArray;
    VkDeviceSize                triangleArrayStride;
} VkMicromapBuildInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is a `VkMicromapTypeEXT` value specifying the type of micromap being built.
- `flags` is a bitmask of `VkBuildMicromapFlagBitsEXT` specifying additional parameters of the

micromap.

- **mode** is a [VkBuildMicromapModeEXT](#) value specifying the type of operation to perform.
- **dstMicromap** is a pointer to the target micromap for the build.
- **usageCountsCount** specifies the number of usage counts structures that will be used to determine the size of this micromap.
- **pUsageCounts** is a pointer to an array of [VkMicromapUsageEXT](#) structures.
- **ppUsageCounts** is a pointer to an array of pointers to [VkMicromapUsageEXT](#) structures.
- **data** is the device or host address of memory which contains the data for the micromap.
- **scratchData** is the device or host address of memory that will be used as scratch memory for the build.
- **triangleArray** is the device or host address of memory containing the [VkMicromapTriangleEXT](#) data
- **triangleArrayStride** is the stride in bytes between each element of **triangleArray**

Only one of **pUsageCounts** or **ppUsageCounts** **can** be a valid pointer, the other **must** be **NULL**. The elements of the non-**NULL** array describe the total counts used to build each micromap. Each element contains a **count** which is the number of micromap triangles of that **format** and **subdivisionLevel** contained in the micromap. Multiple elements with the same **format** and **subdivisionLevel** are allowed and the total count for that **format** and **subdivisionLevel** is the sum of the **count** for each element.

Each micromap triangle refers to one element in **triangleArray** which contains the **format** and **subdivisionLevel** for that particular triangle as well as a **dataOffset** in bytes which is the location relative to **data** where that triangle's micromap data begins. The data at **triangleArray** is laid out as a 4 byte unsigned integer for the **dataOffset** followed by a 2 byte unsigned integer for the subdivision level then a 2 byte unsigned integer for the format. In practice, compilers compile [VkMicromapTriangleEXT](#) to match this pattern.

For opacity micromaps, the data at **data** is packed as either one bit per element for [VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT](#) or two bits per element for [VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT](#) and is packed from LSB to MSB in each byte. The data at each index in those bytes is interpreted as discussed in [Ray Opacity Micromap](#).

For displacement micromaps, the data at **data** is interpreted as discussed in [Displacement Micromap Encoding](#).

Valid Usage

- VUID-VkMicromapBuildInfoEXT-pUsageCounts-07516
Only one of **pUsageCounts** or **ppUsageCounts** **can** be a valid pointer, the other **must** be **NULL**
- VUID-VkMicromapBuildInfoEXT-type-07517
If **type** is [VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT](#) the **format** member of [VkMicromapUsageEXT](#) **must** be a valid value from [VkOpacityMicromapFormatEXT](#)
- VUID-VkMicromapBuildInfoEXT-type-07518

If **type** is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` the **format** member of `VkMicromapTriangleEXT` **must** be a valid value from `VkOpacityMicromapFormatEXT`

- VUID-VkMicromapBuildInfoEXT-type-08704

If **type** is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` the **format** member of `VkMicromapUsageEXT` **must** be a valid value from `VkDisplacementMicromapFormatNV`

- VUID-VkMicromapBuildInfoEXT-type-08705

If **type** is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` the **format** member of `VkMicromapTriangleEXT` **must** be a valid value from `VkDisplacementMicromapFormatNV`

Valid Usage (Implicit)

- VUID-VkMicromapBuildInfoEXT-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_MICROMAP_BUILD_INFO_EXT`

- VUID-VkMicromapBuildInfoEXT-pNext-pNext

pNext **must** be `NULL`

- VUID-VkMicromapBuildInfoEXT-type-parameter

type **must** be a valid `VkMicromapTypeEXT` value

- VUID-VkMicromapBuildInfoEXT-flags-parameter

flags **must** be a valid combination of `VkBuildMicromapFlagBitsEXT` values

- VUID-VkMicromapBuildInfoEXT-pUsageCounts-parameter

If **usageCountsCount** is not `0`, and **pUsageCounts** is not `NULL`, **pUsageCounts** **must** be a valid pointer to an array of **usageCountsCount** `VkMicromapUsageEXT` structures

- VUID-VkMicromapBuildInfoEXT-ppUsageCounts-parameter

If **usageCountsCount** is not `0`, and **ppUsageCounts** is not `NULL`, **ppUsageCounts** **must** be a valid pointer to an array of **usageCountsCount** valid pointers to `VkMicromapUsageEXT` structures

The `VkBuildMicromapModeEXT` enumeration is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkBuildMicromapModeEXT {
    VK_BUILD_MICROMAP_MODE_BUILD_EXT = 0,
} VkBuildMicromapModeEXT;
```

- `VK_BUILD_MICROMAP_MODE_BUILD_EXT` specifies that the destination micromap will be built using the specified data.

The `VkMicromapUsageEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapUsageEXT {
    uint32_t    count;
    uint32_t    subdivisionLevel;
    uint32_t    format;
} VkMicromapUsageEXT;
```

- **count** is the number of triangles in the usage format defined by the **subdivisionLevel** and **format** below in the micromap
- **subdivisionLevel** is the subdivision level of this usage format
- **format** is the format of this usage format

Valid Usage

- VUID-VkMicromapUsageEXT-format-07519
If the **VkMicromapTypeEXT** of the micromap is **VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT** then **format** **must** be **VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT** or **VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT**
- VUID-VkMicromapUsageEXT-format-07520
If the **VkMicromapTypeEXT** of the micromap is **VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT** and **format** is **VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT** then **subdivisionLevel** **must** be less than or equal to **VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel**
- VUID-VkMicromapUsageEXT-format-07521
If the **VkMicromapTypeEXT** of the micromap is **VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT** and **format** is **VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT** then **subdivisionLevel** **must** be less than or equal to **VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel**
- VUID-VkMicromapUsageEXT-format-08706
If the **VkMicromapTypeEXT** of the micromap is **VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV** then **format** **must** be **VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV**, **VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV** or **VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV**
- VUID-VkMicromapUsageEXT-subdivisionLevel-08707
If the **VkMicromapTypeEXT** of the micromap is **VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV** then **subdivisionLevel** **must** be less than or equal to **VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel**

The **format** is interpreted based on the **type** of the micromap using it.

The `VkMicromapTriangleEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapTriangleEXT {
    uint32_t    dataOffset;
    uint16_t    subdivisionLevel;
    uint16_t    format;
} VkMicromapTriangleEXT;
```

- `dataOffset` is the offset in bytes of the start of the data for this triangle. This is a byte aligned value.
- `subdivisionLevel` is the subdivision level of this triangle
- `format` is the format of this triangle

Valid Usage

- VUID-VkMicromapTriangleEXT-format-07522

If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` then `format` must be `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` or `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT`

- VUID-VkMicromapTriangleEXT-format-07523

If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT` then `subdivisionLevel` must be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity2StateSubdivisionLevel`

- VUID-VkMicromapTriangleEXT-format-07524

If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT` and `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT` then `subdivisionLevel` must be less than or equal to `VkPhysicalDeviceOpacityMicromapPropertiesEXT::maxOpacity4StateSubdivisionLevel`

- VUID-VkMicromapTriangleEXT-format-08708

If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `format` must be `VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV`, `VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV` or `VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV`

- VUID-VkMicromapTriangleEXT-subdivisionLevel-08709

If the `VkMicromapTypeEXT` of the micromap is `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV` then `subdivisionLevel` must be less than or equal to `VkPhysicalDeviceDisplacementMicromapPropertiesNV::maxDisplacementMicromapSubdivisionLevel`

The **format** is interpreted based on the **type** of the micromap using it.

44.1.2. Copying Micromaps

An additional command exists for copying micromaps without updating their contents. Before copying, an application **must** query the size of the resulting micromap.

To query micromap size parameters call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdWriteMicromapsPropertiesEXT(
    VkCommandBuffer                commandBuffer,
    uint32_t                       micromapCount,
    const VkMicromapEXT*           pMicromaps,
    VkQueryType                    queryType,
    VkQueryPool                   queryPool,
    uint32_t                       firstQuery);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **micromapCount** is the count of micromaps for which to query the property.
- **pMicromaps** is a pointer to an array of existing previously built micromaps.
- **queryType** is a **VkQueryType** value specifying the type of queries managed by the pool.
- **queryPool** is the query pool that will manage the results of the query.
- **firstQuery** is the first query index within the query pool that will contain the **micromapCount** number of results.

Accesses to any of the micromaps listed in **pMicromaps** **must** be **synchronized** with the **VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT** pipeline stage and an **access type** of **VK_ACCESS_2_MICROMAP_READ_BIT_EXT**.

- If **queryType** is **VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT**, then the value written out is the number of bytes required by a serialized micromap.
- If **queryType** is **VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT**, then the value written out is the number of bytes required by a compacted micromap.

Valid Usage

- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07525
queryPool **must** have been created with a **queryType** matching **queryType**
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-07526
The queries identified by **queryPool** and **firstQuery** **must** be *unavailable*
- VUID-vkCmdWriteMicromapsPropertiesEXT-buffer-07527
The **buffer** used to create each micromap in **pMicromaps** **must** be bound to device memory
- VUID-vkCmdWriteMicromapsPropertiesEXT-query-07528

The sum of `query` plus `micromapCount` **must** be less than or equal to the number of queries in `queryPool`

- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07501
All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-07502
All micromaps in `pMicromaps` **must** have been constructed with `VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT` if `queryType` is `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT`
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-07503
`queryType` **must** be `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT`

Valid Usage (Implicit)

- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-pMicromaps-parameter
`pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid `VkMicromapEXT` handles
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkCmdWriteMicromapsPropertiesEXT-queryPool-parameter
`queryPool` **must** be a valid `VkQueryPool` handle
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdWriteMicromapsPropertiesEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdWriteMicromapsPropertiesEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdWriteMicromapsPropertiesEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdWriteMicromapsPropertiesEXT-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdWriteMicromapsPropertiesEXT-micromapCount-arraylength
`micromapCount` **must** be greater than 0
- VUID-vkCmdWriteMicromapsPropertiesEXT-commonparent
Each of `commandBuffer`, `queryPool`, and the elements of `pMicromaps` **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdWriteMicromapsPropertiesEXT` is not affected by [conditional rendering](#)

To copy a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapEXT(
    VkCommandBuffer                commandBuffer,
    const VkCopyMicromapInfoEXT*   pInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInfo` is a pointer to a `VkCopyMicromapInfoEXT` structure defining the copy operation.

This command copies the `pInfo->src` micromap to the `pInfo->dst` micromap in the manner specified by `pInfo->mode`.

Accesses to `pInfo->src` and `pInfo->dst` **must** be [synchronized](#) with the `VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT` pipeline stage and an access type of `VK_ACCESS_2_MICROMAP_READ_BIT_EXT` or `VK_ACCESS_2_MICROMAP_WRITE_BIT_EXT` as appropriate.

Valid Usage

- VUID-vkCmdCopyMicromapEXT-buffer-07529
The `buffer` used to create `pInfo->src` **must** be bound to device memory
- VUID-vkCmdCopyMicromapEXT-buffer-07530
The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapInfoEXT` structure
- VUID-vkCmdCopyMicromapEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMicromapEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyMicromapEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdCopyMicromapEXT` is not affected by `conditional rendering`

The `VkCopyMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapEXT        src;
    VkMicromapEXT        dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the source micromap for the copy.
- **dst** is the target micromap for the copy.
- **mode** is a [VkCopyMicromapModeEXT](#) value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapInfoEXT-mode-07531
mode must be [VK_COPY_MICROMAP_MODE_COMPACT_EXT](#) or [VK_COPY_MICROMAP_MODE_CLONE_EXT](#)
- VUID-VkCopyMicromapInfoEXT-src-07532
The source acceleration structure **src must** have been constructed prior to the execution of this command
- VUID-VkCopyMicromapInfoEXT-mode-07533
If **mode** is [VK_COPY_MICROMAP_MODE_COMPACT_EXT](#), **src must** have been constructed with [VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT](#) in the build
- VUID-VkCopyMicromapInfoEXT-buffer-07534
The **buffer** used to create **src must** be bound to device memory
- VUID-VkCopyMicromapInfoEXT-buffer-07535
The **buffer** used to create **dst must** be bound to device memory

Valid Usage (Implicit)

- VUID-VkCopyMicromapInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_COPY_MICROMAP_INFO_EXT](#)
- VUID-VkCopyMicromapInfoEXT-pNext-pNext
pNext must be **NULL**
- VUID-VkCopyMicromapInfoEXT-src-parameter
src must be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapInfoEXT-dst-parameter

dst **must** be a valid [VkMicromapEXT](#) handle

- VUID-VkCopyMicromapInfoEXT-mode-parameter

mode **must** be a valid [VkCopyMicromapModeEXT](#) value

- VUID-VkCopyMicromapInfoEXT-commonparent

Both of **dst**, and **src** **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Possible values of **mode** specifying additional operations to perform during the copy, are:

```
// Provided by VK_EXT_opacity_micromap
typedef enum VkCopyMicromapModeEXT {
    VK_COPY_MICROMAP_MODE_CLONE_EXT = 0,
    VK_COPY_MICROMAP_MODE_SERIALIZE_EXT = 1,
    VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT = 2,
    VK_COPY_MICROMAP_MODE_COMPACT_EXT = 3,
} VkCopyMicromapModeEXT;
```

- [VK_COPY_MICROMAP_MODE_CLONE_EXT](#) creates a direct copy of the micromap specified in **src** into the one specified by **dst**. The **dst** micromap **must** have been created with the same parameters as **src**.
- [VK_COPY_MICROMAP_MODE_SERIALIZE_EXT](#) serializes the micromap to a semi-opaque format which can be reloaded on a compatible implementation.
- [VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT](#) deserializes the semi-opaque serialization format in the buffer to the micromap.
- [VK_COPY_MICROMAP_MODE_COMPACT_EXT](#) creates a more compact version of a micromap **src** into **dst**. The micromap **dst** **must** have been created with a size at least as large as that returned by [vkCmdWriteMicromapsPropertiesEXT](#) after the build of the micromap specified by **src**.

To copy a micromap to device memory call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMicromapToMemoryEXT(
    VkCommandBuffer                      commandBuffer,
    const VkCopyMicromapToMemoryInfoEXT* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is an a pointer to a [VkCopyMicromapToMemoryInfoEXT](#) structure defining the copy operation.

Accesses to **pInfo->src** **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an [access type](#) of [VK_ACCESS_2_MICROMAP_READ_BIT_EXT](#). Accesses to the buffer indicated by **pInfo->dst.deviceAddress** **must** be [synchronized](#) with the

[VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an access type of [VK_ACCESS_TRANSFER_WRITE_BIT](#).

This command produces the same results as [vkCopyMicromapToMemoryEXT](#), but writes its result to a device address, and is executed on the device rather than the host. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either [vkCmdCopyMemoryToMicromapEXT](#) or [vkCopyMemoryToMicromapEXT](#).

The defined header structure for the serialized data consists of:

- [VK_UUID_SIZE](#) bytes of data matching `VkPhysicalDeviceIDProperties::driverUUID`
- [VK_UUID_SIZE](#) bytes of data identifying the compatibility for comparison using [vkGetDeviceMicromapCompatibilityEXT](#) The serialized data is written to the buffer (or read from the buffer) according to the host endianness.

Valid Usage

- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07536
`pInfo->dst.deviceAddress` **must** be a valid [VkDeviceAddress](#)
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07537
`pInfo->dst.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-07538
If the buffer pointed to by `pInfo->dst.deviceAddress` is non-sparse then it **must** be bound completely and contiguously to a single [VkDeviceMemory](#) object
- VUID-vkCmdCopyMicromapToMemoryEXT-buffer-07539
The `buffer` used to create `pInfo->src` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdCopyMicromapToMemoryEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid [VkCopyMicromapToMemoryInfoEXT](#) structure
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdCopyMicromapToMemoryEXT-commandBuffer-cmdpool
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#) operations
- VUID-vkCmdCopyMicromapToMemoryEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMicromapToMemoryEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMicromapToMemoryEXT-vidcoding

This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdCopyMicromapToMemoryEXT is not affected by [conditional rendering](#)

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMicromapToMemoryInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkMicromapEXT        src;
    VkDeviceOrHostAddressKHR dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMicromapToMemoryInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **src** is the source micromap for the copy
- **dst** is the device or host address of memory which is the target for the copy
- **mode** is a **VkCopyMicromapModeEXT** value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMicromapToMemoryInfoEXT-src-07540
The source micromap **src** **must** have been constructed prior to the execution of this command

- VUID-VkCopyMicromapToMemoryInfoEXT-dst-07541
The memory pointed to by **dst** must be at least as large as the serialization size of **src**, as reported by [vkWriteMicromapsPropertiesEXT](#) or [vkCmdWriteMicromapsPropertiesEXT](#) with a query type of [VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT](#)
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-07542
mode must be [VK_COPY_MICROMAP_MODE_SERIALIZE_EXT](#)

Valid Usage (Implicit)

- VUID-VkCopyMicromapToMemoryInfoEXT-sType-sType
sType must be [VK_STRUCTURE_TYPE_COPY_MICROMAP_TO_MEMORY_INFO_EXT](#)
- VUID-VkCopyMicromapToMemoryInfoEXT-pNext-pNext
pNext must be `NULL`
- VUID-VkCopyMicromapToMemoryInfoEXT-src-parameter
src must be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMicromapToMemoryInfoEXT-mode-parameter
mode must be a valid [VkCopyMicromapModeEXT](#) value

To copy device memory to a micromap call:

```
// Provided by VK_EXT_opacity_micromap
void vkCmdCopyMemoryToMicromapEXT(
    VkCommandBuffer                commandBuffer,
    const VkCopyMemoryToMicromapInfoEXT* pInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pInfo** is a pointer to a [VkCopyMemoryToMicromapInfoEXT](#) structure defining the copy operation.

Accesses to **pInfo->dst** must be [synchronized](#) with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an [access type](#) of [VK_ACCESS_2_MICROMAP_READ_BIT_EXT](#). Accesses to the buffer indicated by **pInfo->src.deviceAddress** must be [synchronized](#) with the [VK_PIPELINE_STAGE_2_MICROMAP_BUILD_BIT_EXT](#) pipeline stage and an [access type](#) of [VK_ACCESS_TRANSFER_READ_BIT](#).

This command can accept micromaps produced by either [vkCmdCopyMicromapToMemoryEXT](#) or [vkCopyMicromapToMemoryEXT](#).

Valid Usage

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07543
pInfo->src.deviceAddress must be a valid [VkDeviceAddress](#)

- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07544
`pInfo->src.deviceAddress` **must** be aligned to 256 bytes
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-07545
If the buffer pointed to by `pInfo->src.deviceAddress` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdCopyMemoryToMicromapEXT-buffer-07546
The `buffer` used to create `pInfo->dst` **must** be bound to device memory

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdCopyMemoryToMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdCopyMemoryToMicromapEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdCopyMemoryToMicromapEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdCopyMemoryToMicromapEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdCopyMemoryToMicromapEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdCopyMemoryToMicromapEXT` is not affected by [conditional rendering](#)

The `VkCopyMemoryToMicromapInfoEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkCopyMemoryToMicromapInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkDeviceOrHostAddressConstKHR src;
    VkMicromapEXT        dst;
    VkCopyMicromapModeEXT mode;
} VkCopyMemoryToMicromapInfoEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `src` is the device or host address of memory containing the source data for the copy.
- `dst` is the target micromap for the copy.
- `mode` is a [VkCopyMicromapModeEXT](#) value specifying additional operations to perform during the copy.

Valid Usage

- VUID-VkCopyMemoryToMicromapInfoEXT-src-07547
The source memory pointed to by `src` **must** contain data previously serialized using [vkCmdCopyMicromapToMemoryEXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-07548
`mode` **must** be [VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-src-07549
The data in `src` **must** have a format compatible with the destination physical device as returned by [vkGetDeviceMicromapCompatibilityEXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-dst-07550
`dst` **must** have been created with a `size` greater than or equal to that used to serialize the data in `src`

Valid Usage (Implicit)

- VUID-VkCopyMemoryToMicromapInfoEXT-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_COPY_MEMORY_TO_MICROMAP_INFO_EXT](#)
- VUID-VkCopyMemoryToMicromapInfoEXT-pNext-pNext
`pNext` **must** be `NULL`

- VUID-VkCopyMemoryToMicromapInfoEXT-dst-parameter
dst **must** be a valid [VkMicromapEXT](#) handle
- VUID-VkCopyMemoryToMicromapInfoEXT-mode-parameter
mode **must** be a valid [VkCopyMicromapModeEXT](#) value

To check if a serialized micromap is compatible with the current device call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetDeviceMicromapCompatibilityEXT(
    VkDevice device,
    const VkMicromapVersionInfoEXT* pVersionInfo,
    VkAccelerationStructureCompatibilityKHR* pCompatibility);
```

- **device** is the device to check the version against.
- **pVersionInfo** is a pointer to a [VkMicromapVersionInfoEXT](#) structure specifying version information to check against the device.
- **pCompatibility** is a pointer to a [VkAccelerationStructureCompatibilityKHR](#) value in which compatibility information is returned.

Valid Usage

- VUID-vkGetDeviceMicromapCompatibilityEXT-micromap-07551
The **micromap** feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkGetDeviceMicromapCompatibilityEXT-device-parameter
device **must** be a valid [VkDevice](#) handle
- VUID-vkGetDeviceMicromapCompatibilityEXT-pVersionInfo-parameter
pVersionInfo **must** be a valid pointer to a valid [VkMicromapVersionInfoEXT](#) structure
- VUID-vkGetDeviceMicromapCompatibilityEXT-pCompatibility-parameter
pCompatibility **must** be a valid pointer to a [VkAccelerationStructureCompatibilityKHR](#) value

The [VkMicromapVersionInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapVersionInfoEXT {
    VkStructureType sType;
    const void* pNext;
    const uint8_t* pVersionData;
} VkMicromapVersionInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVersionData` is a pointer to the version header of a micromap as defined in `vkCmdCopyMicromapToMemoryEXT`

NOTE

`pVersionData` is a *pointer* to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values instead of two `VK_UUID_SIZE` arrays as the expected use case for this member is to be pointed at the header of a previously serialized micromap (via `vkCmdCopyMicromapToMemoryEXT` or `vkCopyMicromapToMemoryEXT`) that is loaded in memory. Using arrays would necessitate extra memory copies of the UUIDs.

Valid Usage (Implicit)

- VUID-VkMicromapVersionInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_MICROMAP_VERSION_INFO_EXT`
- VUID-VkMicromapVersionInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkMicromapVersionInfoEXT-pVersionData-parameter
`pVersionData` **must** be a valid pointer to an array of $2 \times \text{VK_UUID_SIZE}$ `uint8_t` values

44.2. Host Micromap Operations

Implementations are also required to provide host implementations of the micromap operations if the `micromapHostCommands` feature is enabled:

- `vkBuildMicromapsEXT` corresponding to `vkCmdBuildMicromapsEXT`
- `vkCopyMicromapEXT` corresponding to `vkCmdCopyMicromapEXT`
- `vkCopyMicromapToMemoryEXT` corresponding to `vkCmdCopyMicromapToMemoryEXT`
- `vkCopyMemoryToMicromapEXT` corresponding to `vkCmdCopyMemoryToMicromapEXT`
- `vkWriteMicromapsPropertiesEXT` corresponding to `vkCmdWriteMicromapsPropertiesEXT`

These commands are functionally equivalent to their device counterparts, except that they are executed on the host timeline, rather than being enqueued into command buffers.

All micromaps used by the host commands **must** be bound to host-visible memory, and all input data for micromap builds **must** be referenced using host addresses instead of device addresses. Applications are not required to map micromap memory when using the host commands.

NOTE

The `vkBuildMicromapsEXT` and `vkCmdBuildMicromapsEXT` **may** use different algorithms, and thus are not required to produce identical structures.

Apart from these details, the host and device operations are interchangeable.

NOTE

For efficient execution, micromaps manipulated using these commands should always be bound to host cached memory, as the implementation may need to repeatedly read and write this memory during the execution of the command.

To build micromaps on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkBuildMicromapsEXT(
    VkDevice                device,
    VkDeferredOperationKHR  deferredOperation,
    uint32_t                infoCount,
    const VkMicromapBuildInfoEXT* pInfos);
```

- **device** is the **VkDevice** for which the micromaps are being built.
- **deferredOperation** is an optional **VkDeferredOperationKHR** to **request deferral** for this command.
- **infoCount** is the number of micromaps to build. It specifies the number of the **pInfos** that **must** be provided.
- **pInfos** is a pointer to an array of **infoCount** **VkMicromapBuildInfoEXT** structures defining the geometry used to build each micromap.

This command fulfills the same task as **vkCmdBuildMicromapsEXT** but is executed by the host.

The **vkBuildMicromapsEXT** command provides the ability to initiate multiple micromaps builds, however there is no ordering or synchronization implied between any of the individual micromap builds.

NOTE

This means that there **cannot** be any memory aliasing between any micromap memories or scratch memories being used by any of the builds.

Valid Usage

- VUID-vkBuildMicromapsEXT-pInfos-07461
For each **pInfos[i]**, **dstMicromap** **must** have been created with a value of **VkMicromapCreateInfoEXT::size** greater than or equal to the memory size required by the build operation, as returned by **vkGetMicromapBuildSizesEXT** with **pBuildInfo = pInfos[i]**
- VUID-vkBuildMicromapsEXT-mode-07462
The **mode** member of each element of **pInfos** **must** be a valid **VkBuildMicromapModeEXT** value
- VUID-vkBuildMicromapsEXT-dstMicromap-07463
The **dstMicromap** member of any element of **pInfos** **must** be a valid **VkMicromapEXT** handle
- VUID-vkBuildMicromapsEXT-pInfos-07464

For each element of `pInfos` its `type` member **must** match the value of `VkMicromapCreateInfoEXT::type` when its `dstMicromap` was created

- VUID-vkBuildMicromapsEXT-dstMicromap-07465
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `dstMicromap` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildMicromapsEXT-dstMicromap-07466
The range of memory backing the `dstMicromap` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any element of `pInfos` (including the same element), which is accessed by this command
- VUID-vkBuildMicromapsEXT-scratchData-07467
The range of memory backing the `scratchData` member of any element of `pInfos` that is accessed by this command **must** not overlap the memory backing the `scratchData` member of any other element of `pInfos`, which is accessed by this command
- VUID-vkBuildMicromapsEXT-pInfos-07552
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to host-visible device memory
- VUID-vkBuildMicromapsEXT-pInfos-07553
For each element of `pInfos`, all referenced addresses of `pInfos[i].data.hostAddress` **must** be valid host memory
- VUID-vkBuildMicromapsEXT-pInfos-07554
For each element of `pInfos`, all referenced addresses of `pInfos[i].triangleArray.hostAddress` **must** be valid host memory
- VUID-vkBuildMicromapsEXT-micromapHostCommands-07555
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkBuildMicromapsEXT-pInfos-07556
If `pInfos[i].mode` is `VK_BUILD_MICROMAP_MODE_BUILD_EXT`, and `N` is not `0`, then all addresses between `pInfos[i].scratchData.hostAddress` and `pInfos[i].scratchData.hostAddress + N - 1` **must** be valid host memory, where `N` is given by the value of `VkMicromapBuildSizesInfoEXT::buildScratchSize` returned from a call to `vkGetMicromapBuildSizesEXT` with an identical `VkMicromapBuildInfoEXT` structure
- VUID-vkBuildMicromapsEXT-pInfos-07557
For each element of `pInfos`, the `buffer` used to create its `dstMicromap` member **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkBuildMicromapsEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkBuildMicromapsEXT-deferredOperation-parameter

If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle

- VUID-vkBuildMicromapsEXT-pInfos-parameter
`pInfos` **must** be a valid pointer to an array of `infoCount` valid `VkMicromapBuildInfoEXT` structures
- VUID-vkBuildMicromapsEXT-infoCount-arraylength
`infoCount` **must** be greater than 0
- VUID-vkBuildMicromapsEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To copy or compact a micromap on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMicromapInfoEXT*            pInfo);
```

- `device` is the device which owns the micromaps.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to `request deferral` for this command.
- `pInfo` is a pointer to a `VkCopyMicromapInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMicromapEXT` but is executed by the host.

Valid Usage

- VUID-vkCopyMicromapEXT-deferredOperation-03678

Any previous deferred operation that was associated with `deferredOperation` **must** be complete

- VUID-vkCopyMicromapEXT-buffer-07558
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-buffer-07559
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapEXT-micromapHostCommands-07560
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapEXT-buffer-07561
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances
- VUID-vkCopyMicromapEXT-buffer-07562
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMicromapEXT-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapInfoEXT` structure
- VUID-vkCopyMicromapEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To copy host accessible memory to a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMemoryToMicromapEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMemoryToMicromapInfoEXT*    pInfo);
```

- `device` is the device which owns `pInfo->dst`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to request deferral for this command.
- `pInfo` is a pointer to a `VkCopyMemoryToMicromapInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMemoryToMicromapEXT` but is executed by the host.

This command can accept micromaps produced by either `vkCmdCopyMicromapToMemoryEXT` or `vkCopyMicromapToMemoryEXT`.

Valid Usage

- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07563
`pInfo->src.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMemoryToMicromapEXT-pInfo-07564
`pInfo->src.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMemoryToMicromapEXT-buffer-07565
The `buffer` used to create `pInfo->dst` **must** be bound to host-visible device memory
- VUID-vkCopyMemoryToMicromapEXT-micromapHostCommands-07566
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMemoryToMicromapEXT-buffer-07567
The `buffer` used to create `pInfo->dst` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMemoryToMicromapEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parameter

If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle

- VUID-vkCopyMemoryToMicromapEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMemoryToMicromapInfoEXT` structure
- VUID-vkCopyMemoryToMicromapEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

To copy a micromap to host accessible memory, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkCopyMicromapToMemoryEXT(
    VkDevice                                device,
    VkDeferredOperationKHR                  deferredOperation,
    const VkCopyMicromapToMemoryInfoEXT*    pInfo);
```

- `device` is the device which owns `pInfo->src`.
- `deferredOperation` is an optional `VkDeferredOperationKHR` to **request deferral** for this command.
- `pInfo` is a pointer to a `VkCopyMicromapToMemoryInfoEXT` structure defining the copy operation.

This command fulfills the same task as `vkCmdCopyMicromapToMemoryEXT` but is executed by the host.

This command produces the same results as `vkCmdCopyMicromapToMemoryEXT`, but writes its result directly to a host pointer, and is executed on the host rather than the device. The output **may** not necessarily be bit-for-bit identical, but it can be equally used by either `vkCmdCopyMemoryToMicromapEXT` or `vkCopyMemoryToMicromapEXT`.

Valid Usage

- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-03678
Any previous deferred operation that was associated with `deferredOperation` **must** be complete
- VUID-vkCopyMicromapToMemoryEXT-buffer-07568
The `buffer` used to create `pInfo->src` **must** be bound to host-visible device memory
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07569
`pInfo->dst.hostAddress` **must** be a valid host pointer
- VUID-vkCopyMicromapToMemoryEXT-pInfo-07570
`pInfo->dst.hostAddress` **must** be aligned to 16 bytes
- VUID-vkCopyMicromapToMemoryEXT-micromapHostCommands-07571
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkCopyMicromapToMemoryEXT-buffer-07572
The `buffer` used to create `pInfo->src` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkCopyMicromapToMemoryEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parameter
If `deferredOperation` is not `VK_NULL_HANDLE`, `deferredOperation` **must** be a valid `VkDeferredOperationKHR` handle
- VUID-vkCopyMicromapToMemoryEXT-pInfo-parameter
`pInfo` **must** be a valid pointer to a valid `VkCopyMicromapToMemoryInfoEXT` structure
- VUID-vkCopyMicromapToMemoryEXT-deferredOperation-parent
If `deferredOperation` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_OPERATION_DEFERRED_KHR`
- `VK_OPERATION_NOT_DEFERRED_KHR`
- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

To query micromap size parameters on the host, call:

```
// Provided by VK_EXT_opacity_micromap
VkResult vkWriteMicromapsPropertiesEXT(
    VkDevice          device,
    uint32_t          micromapCount,
    const VkMicromapEXT* pMicromaps,
    VkQueryType        queryType,
    size_t             dataSize,
    void*              pData,
    size_t             stride);
```

- `device` is the device which owns the micromaps in `pMicromaps`.
- `micromapCount` is the count of micromaps for which to query the property.
- `pMicromaps` is a pointer to an array of existing previously built micromaps.
- `queryType` is a [VkQueryType](#) value specifying the property to be queried.
- `dataSize` is the size in bytes of the buffer pointed to by `pData`.
- `pData` is a pointer to an application-allocated buffer where the results will be written.
- `stride` is the stride in bytes between results for individual queries within `pData`.

This command fulfills the same task as [vkCmdWriteMicromapsPropertiesEXT](#) but is executed by the host.

Valid Usage

- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07501
All micromaps in `pMicromaps` **must** have been constructed prior to the execution of this command
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-07502
All micromaps in `pMicromaps` **must** have been constructed with [VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT](#) if `queryType` is [VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT](#)
- VUID-vkWriteMicromapsPropertiesEXT-queryType-07503
`queryType` **must** be [VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT](#) or [VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT](#)
- VUID-vkWriteMicromapsPropertiesEXT-queryType-10071
If `queryType` is [VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT](#) or [VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT](#) then `stride` **must** be a multiple of the size of `VkDeviceSize`

- VUID-vkWriteMicromapsPropertiesEXT-queryType-10072
If `queryType` is `VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT` or `VK_QUERY_TYPE_MICROMAP_COMPACTED_SIZE_EXT` then `pData` **must** point to a `VkDeviceSize`
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-07576
`dataSize` **must** be greater than or equal to `micromapCount*stride`
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07577
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to host-visible device memory
- VUID-vkWriteMicromapsPropertiesEXT-micromapHostCommands-07578
The `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapHostCommands` feature **must** be enabled
- VUID-vkWriteMicromapsPropertiesEXT-buffer-07579
The `buffer` used to create each micromap in `pMicromaps` **must** be bound to memory that was not allocated with multiple instances

Valid Usage (Implicit)

- VUID-vkWriteMicromapsPropertiesEXT-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parameter
`pMicromaps` **must** be a valid pointer to an array of `micromapCount` valid `VkMicromapEXT` handles
- VUID-vkWriteMicromapsPropertiesEXT-queryType-parameter
`queryType` **must** be a valid `VkQueryType` value
- VUID-vkWriteMicromapsPropertiesEXT-pData-parameter
`pData` **must** be a valid pointer to an array of `dataSize` bytes
- VUID-vkWriteMicromapsPropertiesEXT-micromapCount-arraylength
`micromapCount` **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-dataSize-arraylength
`dataSize` **must** be greater than 0
- VUID-vkWriteMicromapsPropertiesEXT-pMicromaps-parent
Each element of `pMicromaps` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

44.2.1. Displacement Micromap

A displacement micromap in an acceleration structure includes information in the [VkAccelerationStructureTrianglesDisplacementMicromapNV](#) to define a base triangle and displacement directions then uses displacement information encoded in the micromap to apply to those values to generate the final position.

Displacement Base Triangle

If [displacementBiasAndScaleBuffer](#) is provided the bias and scale are fetched from that buffer. If [displacementBiasAndScaleBuffer](#) is zero the bias and scale are assumed to be 0.0 and 1.0, respectively.

Given an input position from the geometry, the base position and displacement vector used by the displacement are computed by:

$$\text{basePosition} = \text{inputPosition} + \text{displacementVector} \times \text{bias}$$

$$\text{baseDisplacementVector} = \text{displacementVector} \times \text{scale}$$

The parameters of each micro-vertex are derived from a combination of the base triangle parameters extracted from the bottom-level acceleration structure, the barycentrics of that micro-vertex, and the displacement value fetched from the displacement micromap corresponding to that micro-vertex.

$$\text{microVertexBasePosition} = \text{lerp}(\text{basePositions}, \text{microVertexBarycentrics})$$

$$\text{microVertexDisplacementVector} = \text{lerp}(\text{displacementVectors}, \text{microVertexBarycentrics})$$

$$\text{microVertexDisplacedPosition} = \text{microVertexBasePosition} + \text{microVertexDisplacementVector} \times \text{micromapDisplacementValue}$$

Displacement Micromap Encoding

Displacement amounts are stored in displacement blocks, each covering a triangular region of microvertices. Depending on the subdivision level and encoding format, one or more displacement blocks combine to store all displacement values for a given displacement micromap.

Displacement blocks are organized along a space filling curve within a displacement micromap if more than one block is required, then micro-vertices are organized along the same space filling curve within a displacement micromap.

The space-filling curve is purely hierarchical with recursive splitting, similar to that for opacity micromaps but operating on vertices instead of triangles. To maintain that the hierarchical ordering is contiguous while keeping continuous winding, some triangles are flipped and wound

differently.

The [VK_DISPLACEMENT_MICROMAP_FORMAT_64_TRIANGLES_64_BYTES_NV](#) format is an uncompressed, packed format which covers 64 microtriangles (subdivision level 3) in a block. The block contains 45 displacement values encoded as 11 bit unorm values and stored tightly packed in the vertex order described above, occupying 495 bits. This is followed by 15 unused bits then 2 reserved bits which **must** be 0. If this block is used to store displacement for a subdivision level below 3 the later unused values are ignored.

Section	Field	Entries	Bits per entry	Starting bit offset
Displacement amounts	Vertex 0 - 44	45	11	0
Unused		1	15	495
Reserved	Must be 0	1	2	510

The [VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV](#) and [VK_DISPLACEMENT_MICROMAP_FORMAT_1024_TRIANGLES_128_BYTES_NV](#) formats store displacements in a compressed form to save space. Both formats use the same compression algorithm, differing in the number of bits used in the different fields.

The compression algorithm works by starting with fully specified anchor vertices, then for each level, predicting the value for the displacement and encoding the correction for that value, using fewer bits for each level of subdivision.

When adding a vertex in the recursive subdivision process between two adjacent displacement values, the predicted value is given by the rounded average of the two adjacent values as integers:

$$\text{prediction} = (A + B + 1) / 2$$

The decoded value after applying the correction is given by:

$$\text{decoded} = \text{prediction} + (\text{SignExtend}(\text{correction}) \ll \text{shift})$$

where correction is given by the corrections field for a given level and micro vertex and shift is given by the shifts field indexed from the level then by 4 values, selected from interior or the 3 edges in vertex order in that order.

The bit encoding for [VK_DISPLACEMENT_MICROMAP_FORMAT_256_TRIANGLES_128_BYTES_NV](#)

Section	Field	Entries	Bits per entry	Starting bit offset

Reserved	Must be 0	1	2	1022

Chapter 45. Ray Traversal

The ray traversal process identifies and handles intersections between a ray and geometries in an acceleration structure.

Ray traversal cannot be started by a Vulkan API command directly - a shader **must** execute `OpRayQueryProceedKHR` or a `pipeline trace ray` instruction. When the `rayTracingPipeline` feature is enabled, `OpTraceRayKHR` **can** be used for `ray tracing` in a `ray tracing pipeline`. When the `rayQuery` feature is enabled, `OpRayQueryProceedKHR` **can** be used in any shader stage.

45.1. Ray Intersection Candidate Determination

Once tracing begins, rays are first tested against instances in a top-level acceleration structure. A ray that intersects an instance will be transformed into the space of the instance to continue traversal within that instance; therefore the transform matrix stored in the instance **must** be invertible.

In case multiple instances are intersected by a ray, the ray transformation into the space of the instance is invariant under the order in which these instances are encountered in the top-level acceleration structure.

NOTE

Applying multiple forward and reverse transforms to a ray to transition from one instance to another could result in accumulated errors. Thus an implementation should behave as if the ray is transformed from the origin for each instance independently.

Next, rays are tested against geometries in a bottom-level acceleration structure to determine if a hit occurred between them, initially based only on their geometric properties (i.e. their vertices). The implementation performs similar operations to that of rasterization, but with the effective viewport determined by the parameters of the ray, and the geometry transformed into a space determined by that viewport.

The vertices of each primitive are transformed from acceleration structure space \mathbf{as} to ray space \mathbf{r} according to the ray origin and direction as follows:

$$\begin{pmatrix} x_r \\ y_r \\ z_r \end{pmatrix} = \begin{pmatrix} a_x^2(1-c) + c & a_x a_y(1-c) - s a_z & a_x a_z(1-c) + s a_y \\ a_x a_y(1-c) + s a_z & a_y^2(1-c) + c & a_y a_z(1-c) - s a_x \\ a_x a_z(1-c) - s a_y & a_y a_z(1-c) + s a_x & a_z^2(1-c) + c \end{pmatrix} \begin{pmatrix} x_{as} - o_x \\ y_{as} - o_y \\ z_{as} - o_z \end{pmatrix}$$

\mathbf{a} is the axis of rotation from the unnormalized ray direction vector \mathbf{d} to the axis vector \mathbf{k} :

$$\mathbf{a} = \begin{cases} \frac{\mathbf{d} \times \mathbf{k}}{\|\mathbf{d} \times \mathbf{k}\|} & \text{if } \|\mathbf{d} \times \mathbf{k}\| \neq 0 \\ \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix} & \text{if } \|\mathbf{d} \times \mathbf{k}\| = 0 \end{cases}$$

s and c are the sine and cosine of the angle of rotation about \mathbf{a} from \mathbf{d} to \mathbf{k} :

$$c = \frac{\mathbf{d} \cdot \mathbf{k}}{\|\mathbf{d}\|}$$

$$s = \sqrt{1 - c^2}$$

\mathbf{k} is the unit vector:

$$\mathbf{k} = \begin{pmatrix} 0 \\ 0 \\ -1 \end{pmatrix}$$

\mathbf{o} and \mathbf{d} are the ray origin and unnormalized direction, respectively; the vector described by x_{as} , y_{as} , and z_{as} is any position in acceleration structure space; and the vector described by x_r , y_r , and z_r is the same position in ray space.

An *intersection candidate* is a unique point of intersection between a ray and a geometric primitive. For any primitive that has within its bounds a position $\mathbf{x}_y \mathbf{z}_{as}$ such that

$$\begin{aligned} x_r &= 0 \\ y_r &= 0 \\ t_{min} &< -\frac{z_r}{\|\mathbf{d}\|} < t_{max} \quad \text{if the primitive is a triangle,} \\ t_{min} &\leq -\frac{z_r}{\|\mathbf{d}\|} \leq t_{max} \quad \text{otherwise} \end{aligned}$$

(where $t = -\frac{z_r}{\|\mathbf{d}\|}$), an intersection candidate exists.

Triangle primitive bounds consist of all points on the plane formed by the three vertices and within the bounds of the edges between the vertices, subject to the watertightness constraints below. AABB primitive bounds consist of all points within an implementation-defined bound which includes the specified box.

NOTE

The bounds of the AABB including all points internal to the bound implies that a ray started within the AABB will hit that AABB.

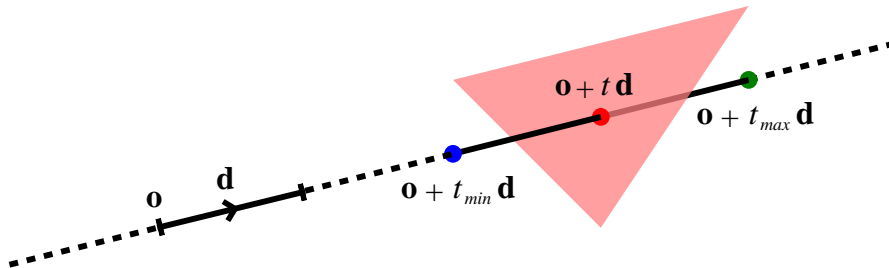

Figure 36. Ray intersection candidate

The determination of this condition is performed in an implementation specific manner, and **may** be performed with floating-point operations. Due to the complexity and number of operations involved, inaccuracies are expected, particularly as the scale of values involved begins to diverge.

Implementations **should** take efforts to maintain as much precision as possible.

NOTE

One very common case is when geometries are close to each other at some distance from the origin in acceleration structure space, where an effect similar to “z-fighting” is likely to be observed. Applications can mitigate this by ensuring their detailed geometries remain close to the origin.

Another likely case is when the origin of a ray is set to a position on a previously intersected surface, and its t_{\min} is zero or near zero; an intersection may be detected on the emitting surface. This case can usually be mitigated by offsetting t_{\min} slightly.

For a motion primitive or a motion instance, the positions for intersection are evaluated at the time specified in the **time** parameter to **OpTraceRayMotionNV** by interpolating between the two endpoints as specified for the given motion type. If a motion acceleration structure is traced with **OpTraceRayKHR**, it behaves as a **OpTraceRayMotionNV** with **time** of 0.0.

In the case of AABB geometries, implementations **may** increase their size in an acceleration structure in order to mitigate precision issues. This **may** result in false positive intersections being reported to the application.

For triangle intersection candidates, the b and c **barycentric coordinates** on the triangle where the above condition is met are made available to future shading. If the ray was traced with a **pipeline trace ray** instruction, these values are available as a vector of 2 32-bit floating-point values in the **HitAttributeKHR** storage class.

For linear swept sphere intersection candidate, the ray t value along with a single u parameter suffice to identify the hit. The u value specifies the position of the hit along the LSS midsection, within the range $[0, 1]$. If the u value is exactly **0** or **1**, then the intersection occurred on the respective endcap **0**, or endcap **1**. For pure sphere primitives, u is always set to 0. LSS primitives may be self-enclosing if one of the endcap spheres is completely enclosed within the other, and both endcaps are enabled. In these instances, only the outer of the two endcaps is intersection tested, and u will be returned as **0** or **1** accordingly. For rays that originate inside a LSS or sphere primitive, or enter through an absent endcap, no intersections will be reported.

Once an intersection candidate is determined, it proceeds through the following operations, in order:

1. **Ray Intersection Culling**
2. **Ray Intersection Confirmation**
3. **Ray Closest Hit Determination**
4. **Ray Result Determination**

The sections below describe the exact details of these tests. There is no ordering guarantee between operations performed on different intersection candidates.

45.1.1. Watertightness

For a set of triangles with identical transforms, within a single instance:

- Any set of two or more triangles where all triangles have one vertex with an identical position value, that vertex is a *shared vertex*.
- Any set of two triangles with two shared vertices that were specified in the same [winding order](#) in each triangle have a *shared edge* defined by those vertices.

A *closed fan* is a set of three or more triangles where:

- All triangles in the set have the same shared vertex as one of their vertices.
- All edges that include the above vertex are shared edges.
- All above shared edges are shared by exactly two triangles from the set.
- No two triangles in the set intersect, except at shared edges.
- Every triangle in the set is joined to every other triangle in the set by a series of the above shared edges.

Implementations **should** not double-hit or miss when a ray intersects a shared edge, or a shared vertex of a closed fan.

NOTE

Because of the complexity of a definition of watertightness the language above does not list a **must** requirement but it is expected and tested that implementations will perform watertight intersection tests.

For LSS primitives, connected LSS might overlap not only at the shared vertex endcap but also along their midsections. This applies even if an LSS disables the shared endcap. As such, there is no clear equivalent edge or vertex that could deterministically map a hit to just one of the LSS. So, unlike the ray-triangle intersection, the ray-LSS intersection provides no single-hit guarantee for LSS, including those that share a vertex causing the LSS to overlap. However, as with triangles, LSS intersection still returns the closest hit.

45.2. Ray Intersection Culling

Candidate intersections go through several phases of culling before confirmation as an actual hit. There is no particular ordering dependency between the different culling operations.

45.2.1. Ray Primitive Culling

If the `rayTraversalPrimitiveCulling` or `rayQuery` features are enabled, the `SkipTrianglesKHR` and `SkipAABBsKHR` ray flags **can** be specified when tracing a ray. `SkipTrianglesKHR` and `SkipAABBsKHR` are mutually exclusive. `SkipTrianglesKHR` is also mutually exclusive with `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR`.

If `SkipTrianglesKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the intersection is with a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipTrianglesKHR` was included in their `Ray Flags` operand.

If `SkipAABBsKHR` was included in the `Ray Flags` operand of the ray trace instruction, and the

intersection is with an AABB primitive, the intersection is dropped, and no further processing of this intersection occurs. If `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` was included in the pipeline, traversal with `pipeline trace ray` instructions will all behave as if `SkipAABBsKHR` was included in their `Ray Flags` operand.

45.2.2. Ray Mask Culling

Instances **can** be made invisible to particular rays based on the value of `VkAccelerationStructureInstanceKHR::mask` used to add that instance to a top-level acceleration structure, and the `Cull Mask` parameter used to trace the ray.

For the instance which is intersected, if `mask & Cull Mask == 0`, the intersection is dropped, and no further processing occurs.

45.2.3. Ray Face Culling

As in `polygon rasterization`, one of the stages of ray traversal is to determine if a triangle primitive is back- or front-facing, and primitives **can** be culled based on that facing.

If the intersection candidate is with an AABB primitive, this operation is skipped.

Determination

When a ray intersects a triangle primitive, the order that vertices are specified for the polygon affects whether the ray intersects the front or back face. Front or back facing is determined in the same way as they are for `rasterization`, based on the sign of the polygon's area but using the ray space coordinates instead of framebuffer coordinates. One way to compute this area is:

$$a = -\frac{1}{2} \sum_{i=0}^{n-1} x_r^i y_r^{i \oplus 1} - x_r^{i \oplus 1} y_r^i$$

where x_r^i and y_r^i are the x and y `ray space coordinates` of the i th vertex of the n -vertex polygon (vertices are numbered starting at zero for the purposes of this computation) and $i \oplus 1$ is $(i + 1) \bmod n$.

By default, if a is negative then the intersection is with the front face of the triangle, otherwise it is with the back face. If `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` is included in `VkAccelerationStructureInstanceKHR::flags` for the instance containing the intersected triangle, this determination is reversed. Additionally, if a is 0, the intersection candidate is treated as not intersecting with any face, irrespective of the sign.

NOTE

In a left-handed coordinate system, an intersection will be with the front face of a triangle if the vertices of the triangle, as defined in index order, appear from the ray's perspective in a clockwise rotation order. `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` was previously annotated as `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` because of this.

If the ray was traced with a `pipeline trace ray` instruction, the `HitKindKHR` built-in is set to

`HitKindFrontFacingTriangleKHR` if the intersection is with front-facing geometry, and `HitKindBackFacingTriangleKHR` if the intersection is with back-facing geometry, for shader stages considering this intersection. For LSS or sphere intersections, the `HitKindKHR` built-in is set to `HitKindLssPrimitiveNV` or `HitKindSpherePrimitiveNV` respectively.

If the ray was traced with `OpRayQueryProceedKHR`, `OpRayQueryGetIntersectionFrontFaceKHR` will return true for intersection candidates with front faces, or false for back faces.

Culling

If `CullBackFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the back face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

If `CullFrontFacingTrianglesKHR` was included in the `Ray Flags` parameter of the ray trace instruction, and the intersection is determined as with the front face of a triangle primitive, the intersection is dropped, and no further processing of this intersection occurs.

This culling is disabled if `VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR` was included in `VkAccelerationStructureInstanceKHR::flags` for the instance which the intersected geometry belongs to.

Intersection candidates that have not intersected with any face (`a == 0`) are unconditionally culled, irrespective of ray flags and geometry instance flags.

The `CullBackFacingTrianglesKHR` and `CullFrontFacingTrianglesKHR` `Ray Flags` are mutually exclusive.

45.2.4. Ray Opacity Culling

Each geometry in the acceleration structure **may** be considered either opaque or not. Opaque geometries continue through traversal as normal, whereas non-opaque geometries need to be either confirmed or discarded by shader code. Intersection candidates **can** also be culled based on their opacity.

Determination

Each individual intersection candidate is initially determined as opaque if `VK_GEOMETRY_OPAQUE_BIT_KHR` was included in the `VkGeometryNV::flags` or `VkAccelerationStructureGeometryKHR::flags` when the geometry it intersected with was built, otherwise it is considered non-opaque.

If the geometry includes an opacity micromap, the opacity of the intersection at this point is instead derived as described in [Ray Opacity Micromap](#).

If the intersection candidate was generated by an [intersection shader](#), the intersection is initially considered to have opacity matching the AABB candidate that it was generated from.

However, this opacity can be overridden when it is built into an instance. Setting `VK_GEOMETRY_INSTANCE_FORCE_OPAQUE_BIT_KHR` in `VkAccelerationStructureInstanceKHR::flags` will force all geometries in the instance to be considered opaque. Similarly, setting `VK_GEOMETRY_INSTANCE_FORCE_NO_OPAQUE_BIT_KHR` will force all geometries in the instance to be considered non-opaque.

This can again be overridden by including `OpaqueKHR` or `NoOpaqueKHR` in the `Ray Flags` parameter when tracing a ray. `OpaqueKHR` forces all geometries to behave as if they are opaque, regardless of their build parameters. Similarly, `NoOpaqueKHR` forces all geometries to behave as if they are non-opaque.

If the ray was traced with `OpRayQueryProceedKHR`, to determine the opacity of AABB intersection candidates, `OpRayQueryGetIntersectionCandidateAABBOpaqueKHR` can be used. This instruction will return `true` for opaque intersection candidates, and `false` for non-opaque intersection candidates.

Culling

If `CullOpaqueKHR` is included in the `Ray Flags` parameter when tracing a ray, an intersection with a geometry that is considered opaque is dropped, and no further processing occurs.

If `CullNoOpaqueKHR` is included in the `Ray Flags` parameter when tracing a ray, an intersection with a geometry that is considered non-opaque is dropped, and no further processing occurs.

The `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR` `Ray Flags` are mutually exclusive.

45.2.5. Ray Opacity Micromap

A `VK_GEOMETRY_TYPE_TRIANGLES_KHR` or `VK_GEOMETRY_TYPE_DENSE_GEOMETRY_FORMAT_TRIANGLES_AMD` geometry in the acceleration structure may have an opacity micromap associated with it to give finer-grained opacity information.

If the intersection candidate is with a geometry with an associated opacity micromap and `VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_BIT_EXT` is not set in its instance then the micromap is used to determine geometry opacity instead of the `VK_GEOMETRY_OPAQUE_BIT_KHR` flag in the geometry.

The opacity information in the micromap object is accessed using the candidate intersection `u` and `v` coordinates. The integer `u` and `v` are computed from $\lceil u \rceil + \lceil v \rceil$, clamping $\lceil u \rceil$ as needed to keep the sum less than or equal to $1 \ll \text{subdivisionlevel}$. These values are mapped into a linear index with a space filling curve which is defined recursively by traversing into the sub-triangle nearest vertex 0, then the middle triangle with ordering flipped, then nearest vertex 1, then nearest vertex 2 with ordering flipped.

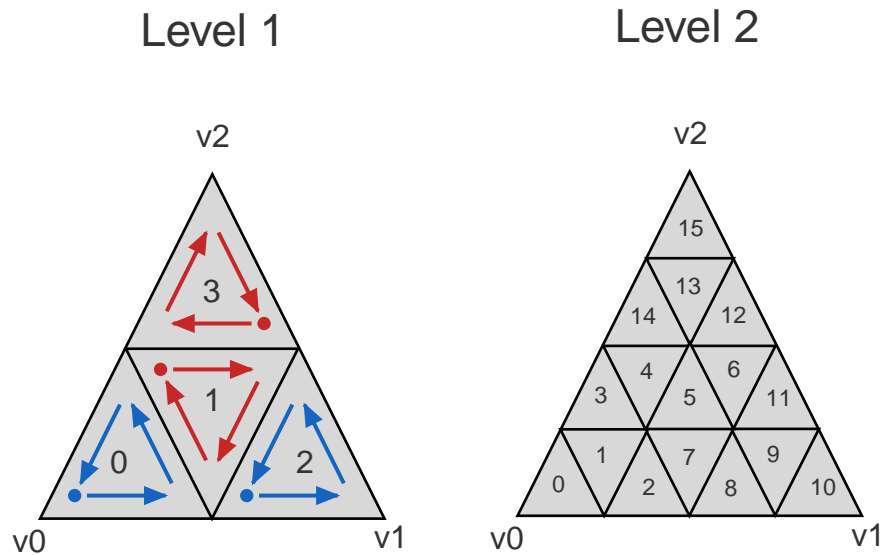

Figure 37. Example ordering for micromap data

Caption

In the [ordering for micromap data](#) diagram, the dot in each sub-triangle indicates the entry point of the curve and the arrows show the traversal order through its children at the next subdivision level.

NOTE

This encoding is spatially coherent, purely hierarchical, and allows a bit-parallel conversion between barycentric address and index values.

See the [Reference Code](#) implementing this mapping.

The result of the opacity micromap lookup and operations is to treat the intersection as opaque, non-opaque, or ignored. The interpretation of the values depends on [VK_GEOMETRY_INSTANCE_FORCE_OPACITY_MICROMAP_2_STATE_BIT_EXT](#) in the instance of the candidate intersection or [ForceOpacityMicromap2StateEXT](#) ray flags on the ray. If either is set, the opacity micromap information is interpreted in 2 state override mode. If the result of the micromap lookup is to treat the intersection candidate as ignored, no further processing of that candidate is done.

If the associated opacity micromap has format [VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT](#), each element of the micromap is represented by a single bit at the index derived above.

If the associated opacity micromap has format [VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT](#), each element is represented by a two bit value at the index derived above.

4 State value	2 State value	Special index value	2 State override	Result
0	0	VK_OPACITY_MICROMAP_SPECIAL_INDEX_FULLY_TRANSPARENT_EXT	Y	Ignored

4 State value	2 State value	Special index value	2 State override	Result
0	0	VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_TRANSPARENT_EXT	N	Ignored
1	1	VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_OPAQUE_EXT	Y	Opaque
1	1	VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_OPAQUE_EXT	N	Opaque
2		VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_UNKNOWN_TRANSPARENT_EXT	Y	Ignored
2		VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_UNKNOWN_TRANSPARENT_EXT	N	Non-opaque
3		VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_UNKNOWN_OPAQUE_EXT	Y	Opaque
3		VK_OPACITY_MIC ROMAP_SPECIAL_I NDEX_FULLY_UNKNOWN_OPAQUE_EXT	N	Non-opaque

45.3. Ray Intersection Confirmation

Depending on the opacity of intersected geometry and whether it is a triangle or an AABB, candidate intersections are further processed to determine the eventual hit result. Candidates generated from AABB intersections run through the same confirmation process as triangle hits.

45.3.1. AABB Intersection Candidates

For an intersection candidate with an AABB geometry generated by [Ray Intersection Candidate](#)

Determination, shader code is executed to determine whether any hits should be reported to the traversal infrastructure; no further processing of this intersection candidate occurs. The occurrence of an AABB intersection candidate does not guarantee the ray intersects the application-provided AABBS. To avoid propagating false intersections the application **should** verify the intersection candidate before reporting any hits and only report intersections within the bounds of the desired geometry. Reporting an intersection outside the AABBS either through the implementation giving a conservative bound or reporting a t out of range is legal but **may** result in unpredictable closest hit results.

If the ray was traced with a **pipeline trace ray** instruction, an **intersection shader** is invoked from the **Shader Binding Table** according to the **specified indexing** for the intersected geometry. If this shader calls **OpReportIntersectionKHR**, a new intersection candidate is generated as described **below**. If the intersection shader is **VK_SHADER_UNUSED_KHR** (which is only allowed for a zero shader group) then no further processing of the intersection candidate occurs.

Each new candidate generated as a result of this processing is a generated intersection candidate from the intersection with AABBS geometry, with a t value equal to the **Hit** parameter of the **OpReportIntersectionKHR** instruction. The new generated candidate is then independently run through **Ray Intersection Confirmation** as a **generated intersection**.

If the ray was traced with **OpRayQueryProceedKHR**, control is returned to the shader which executed **OpRayQueryProceedKHR**, returning **true**. The resulting ray query has a candidate intersection type of **RayQueryCandidateIntersectionAABBKHR**. **OpRayQueryGenerateIntersectionKHR** **can** be called to commit a new intersection candidate with committed intersection type of **RayQueryCommittedIntersectionGeneratedKHR**. Further ray query processing **can** be continued by executing **OpRayQueryProceedKHR** with the same ray query, or intersection **can** be terminated with **OpRayQueryTerminateKHR**. Unlike rays traced with a **pipeline trace ray** instruction, candidates generated in this way skip generated intersection candidate confirmation; applications **should** make this determination before generating the intersection.

This operation **may** be executed multiple times for the same intersection candidate.

45.3.2. Triangle and Generated Intersection Candidates

For triangle and **generated intersection candidates**, additional shader code **may** be executed based on the intersection's opacity.

If the intersection is opaque, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

For non-opaque intersection candidates, shader code is executed to determine whether a hit occurred or not.

If the ray was traced with a **pipeline trace ray** instruction, an **any-hit shader** is invoked from the **Shader Binding Table** according to the **specified indexing**. If this shader calls **OpIgnoreIntersectionKHR**, the candidate is dropped and no further processing of the candidate occurs. If the **any-hit shader** identified is **VK_SHADER_UNUSED_KHR**, the candidate is immediately confirmed as a valid hit and passes to the next stage of processing.

If the ray was traced with **OpRayQueryProceedKHR**, control is returned to the shader which executed

`OpRayQueryProceedKHR`, returning `true`. As only triangle candidates participate in this operation with ray queries, the resulting candidate intersection type is always `RayQueryCandidateIntersectionTriangleKHR`. `OpRayQueryConfirmIntersectionKHR` **can** be called on the ray query to confirm the candidate as a hit with committed intersection type of `RayQueryCommittedIntersectionTriangleKHR`. Further ray query processing **can** be continued by executing `OpRayQueryProceedKHR` with the same ray query, or intersection **can** be terminated with `OpRayQueryTerminateKHR`. If `OpRayQueryConfirmIntersectionKHR` has not been executed, the candidate is dropped and no further processing of the candidate occurs.

This operation **may** be executed multiple times for the same intersection candidate unless `VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR` was specified for the intersected geometry.

45.4. Ray Closest Hit Determination

Unless the ray was traced with the `TerminateOnFirstHitKHR` ray flag, the implementation **must** track the closest confirmed hit until all geometries have been tested and either confirmed or dropped.

After an intersection candidate is confirmed, its t value is compared to t_{\max} to determine which intersection is closer, where t is the parametric distance along the ray at which the intersection occurred.

- If $t < t_{\max}$, t_{\max} is set to t and the candidate is set as the current closest hit.
- If $t > t_{\max}$, the candidate is dropped and no further processing of that candidate occurs.
- If $t = t_{\max}$, the candidate **may** be set as the current closest hit or dropped.

If `TerminateOnFirstHitKHR` was included in the `Ray Flags` used to trace the ray, once the first hit is confirmed, the ray trace is terminated.

45.5. Ray Result Determination

Once all candidates have finished processing the prior stages, or if the ray is forcibly terminated, the final result of the ray trace is determined.

If a closest hit result was identified by [Ray Closest Hit Determination](#), a closest hit has occurred, otherwise the final result is a miss.

For rays traced with `pipeline trace ray` instructions which **can** invoke a closest hit shader, if a closest hit result was identified, a `closest hit shader` is invoked from the `Shader Binding Table` according to the `specified indexing` for the intersected geometry. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if either the ray flags included `SkipClosestHitShaderKHR`, or if the `closest hit shader` identified is `VK_SHADER_UNUSED_KHR`.

For rays traced with a `pipeline trace ray` instruction where no hit result was identified, the `miss shader` identified by the `Miss Index` parameter of the instruction is invoked. Control returns to the shader that executed the `pipeline trace ray` instruction once this shader returns. This shader is skipped if the miss shader identified is `VK_SHADER_UNUSED_KHR`.

If the ray was traced with `OpRayQueryProceedKHR`, control is returned to the shader which executed `OpRayQueryProceedKHR`, returning `false`. If a closest hit was identified by `Ray Closest Hit Determination`, the ray query will now have a committed intersection type of `RayQueryCommittedIntersectionGeneratedKHR` or `RayQueryCommittedIntersectionTriangleKHR`. If no closest hit was identified, the committed intersection type will be `RayQueryCommittedIntersectionNoneKHR`.

No further processing of a ray query occurs after this result is determined.

Chapter 46. Ray Tracing

Ray tracing uses a separate rendering pipeline from both the graphics and compute pipelines (see [Ray Tracing Pipeline](#)).

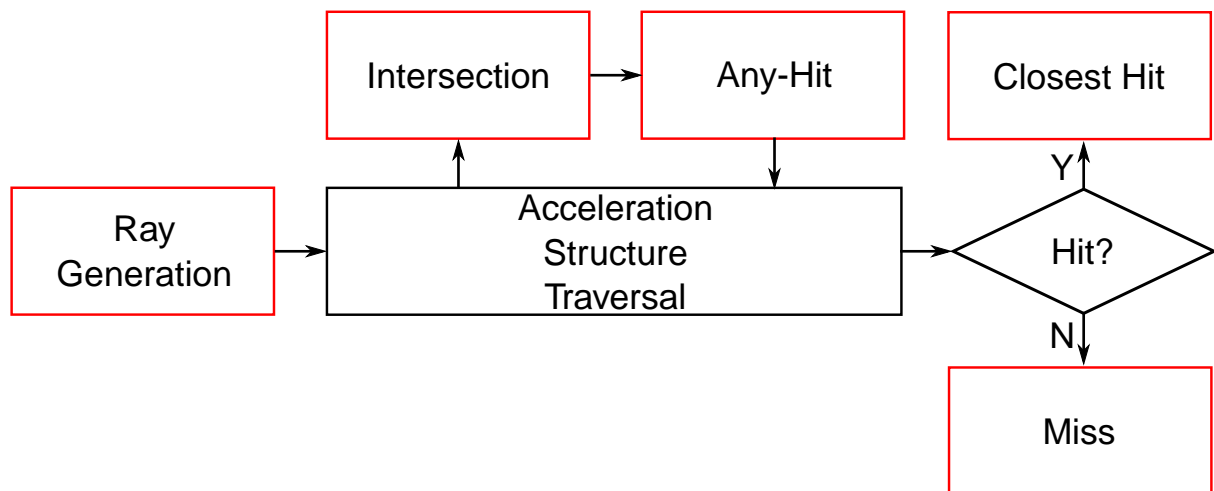

Figure 38. Ray tracing pipeline execution

Caption

Interaction between the different shader stages in the ray tracing pipeline

Within the ray tracing pipeline, a [pipeline trace ray](#) instruction **can** be called to perform a [ray traversal](#) that invokes the various ray tracing shader stages during its execution. The relationship between the ray tracing pipeline object and the geometries present in the acceleration structure traversed is passed into the ray tracing command in a [VkBuffer](#) object known as a *shader binding table*. [OpExecuteCallableKHR](#) can also be used in ray tracing pipelines to invoke a [callable shader](#).

During execution, control alternates between scheduling and other operations. The scheduling functionality is implementation-specific and is responsible for workload execution. The shader stages are programmable. [Traversal](#), which refers to the process of traversing acceleration structures to find potential intersections of rays with geometry, is fixed function.

The programmable portions of the pipeline are exposed in a single-ray programming model, with each invocation handling one ray at a time. Memory operations **can** be synchronized using standard memory barriers. The [Workgroup](#) scope and variables with a storage class of [Workgroup](#) **must** not be used in the ray tracing pipeline.

46.1. Shader Call Instructions

A *shader call* is an instruction which **may** cause execution to continue elsewhere by creating one or more invocations that execute a different shader stage.

The following table lists all shader call instructions and which stages each one **can** directly call.

Instruction	Intersection	Any-Hit	Closest Hit	Miss	Callable
OpTraceRayKHR	X	X	X	X	
OpTraceRayMotionNV	X	X	X	X	
OpReportIntersectionKHR		X			
OpExecuteCallableKHR					X
OpHitObjectTraceRayNV	X	X			
OpHitObjectTraceRayMotionNV	X	X			
OpHitObjectExecuteShaderNV			X	X	
OpHitObjectExecuteShaderEXT			X	X	
OpHitObjectTraceRayEXT	X	X			
OpHitObjectReorderExecuteShaderEXT			X	X	
OpHitObjectTraceRayReorderExecuteEXT	X	X	X	X	
OpHitObjectTraceRayMotionEXT	X	X			
OpHitObjectTraceRayMotionReorderExecuteEXT	X	X	X	X	

The invocations created by shader call instructions are grouped into subgroups by the implementation. Those subgroups **may** be unrelated to the subgroup of the parent invocation.

Pipeline trace ray instructions **can** be used recursively; invoked shaders **can** themselves execute pipeline trace ray instructions, to a maximum depth defined by the `maxRecursionDepth` or `maxRayRecursionDepth` limit.

Shaders directly invoked from the API always have a recursion depth of 0; each shader executed by a pipeline trace ray instruction has a recursion depth one higher than the recursion depth of the shader which invoked it. Applications **must** not invoke a shader with a recursion depth greater than the value of `maxRecursionDepth` or `maxPipelineRayRecursionDepth` specified in the pipeline.

There is no explicit recursion limit for other shader call instructions which may recurse (e.g. `OpExecuteCallableKHR`) but there is an upper bound determined by the [stack size](#).

An *invocation repack instruction* is a ray tracing instruction where the implementation **may** change the set of invocations that are executing. When a repack instruction is encountered, the invocation is suspended and a new invocation begins and executes the instruction. After executing the repack

instruction (which **may** result in other ray tracing shader stages executing) the new invocation ends and the original invocation is resumed, but it **may** be resumed in a different subgroup or at a different `SubgroupLocalInvocationId` within the same subgroup. When a subset of invocations in a subgroup execute the invocation repack instruction, those that do not execute it remain in the same subgroup at the same `SubgroupLocalInvocationId`.

The `OpTraceRayKHR`, `OpTraceRayMotionNV`, `OpReorderThreadWithHintNV`, `OpReorderThreadWithHitObjectNV`, `OpReorderThreadWithHintEXT`, `OpReorderThreadWithHitObjectEXT`, `OpHitObjectTraceRayEXT`, `OpHitObjectReorderExecuteShaderEXT`, `OpHitObjectTraceReorderExecuteEXT`, `OpHitObjectTraceRayMotionEXT`, `OpHitObjectTraceMotionReorderExecuteEXT`, `OpReportIntersectionKHR`, and `OpExecuteCallableKHR` instructions are invocation repack instructions.

The invocations that are executing before a shader call instruction, after the instruction, or are created by the instruction, are [shader-call-related](#).

If the implementation changes the composition of subgroups, the values of `SubgroupSize`, `SubgroupLocalInvocationId`, `SMIDNV`, `WarpIDNV`, and builtin variables that are derived from them (`SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, `SubgroupLtMask`) **must** be changed accordingly by the invocation repack instruction. The application **must** use [Volatile semantics](#) on these [Builtin](#) variables when used in the ray generation, closest hit, miss, intersection, and callable shaders. Similarly, the application **must** use [Volatile](#) semantics on any `RayTmaxKHR` decorated [Builtin](#) used in an intersection shader.

[Subgroup operations](#) are permitted in the programmable ray tracing shader stages. However, shader call instructions place a bound on where results of subgroup instructions or subgroup-scoped instructions that execute the dynamic instance of that instruction are potentially valid. For example, care **must** be taken when using the result of a ballot operation that was computed before an invocation repack instruction, after that repack instruction. The ballot **may** be incorrect as the set of invocations could have changed.

NOTE While the `SubgroupSize` built-in is required to be declared [Volatile](#), its value will never change unless `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` is set on pipeline creation, as without that bit set, its value is required to match that of `VkPhysicalDeviceSubgroupProperties::subgroupSize`.

For clock operations, the value of a `Subgroup` scoped `OpReadClockKHR` read before the dynamic instance of a repack instruction **should** not be compared to the result of that clock instruction after the repack instruction.

When a ray tracing shader executes a dynamic instance of an invocation repack instruction which results in another ray tracing shader being invoked, their instructions are related by [shader-call-order](#).

For ray tracing invocations that are [shader-call-related](#):

- [memory operations](#) on `StorageBuffer`, `Image`, and `ShaderRecordBufferKHR` storage classes **can** be synchronized using the `ShaderCallKHR` scope.

- the `CallableDataKHR`, `IncomingCallableDataKHR`, `RayPayloadKHR`, `HitAttributeKHR`, and `IncomingRayPayloadKHR` storage classes are [system-synchronized](#) and no application availability and visibility operations are required.
- memory operations within a single invocation before and after the shader call instruction are ordered by [program-order](#) and do not require explicit synchronization.

46.2. Ray Tracing Commands

Ray tracing commands provoke work in the ray tracing pipeline. Ray tracing commands are recorded into a command buffer and when executed by a queue will produce work that executes according to the bound ray tracing pipeline. A ray tracing pipeline **must** be bound to a command buffer before any ray tracing commands are recorded in that command buffer.

To dispatch ray tracing use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysKHR(
    VkCommandBuffer                commandBuffer,
    const VkStridedDeviceAddressRegionKHR* pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pCallableShaderBindingTable,
    uint32_t                        width,
    uint32_t                        height,
    uint32_t                        depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a [VkStridedDeviceAddressRegionKHR](#) that holds the shader binding table data for the ray generation shader stage.
- `pMissShaderBindingTable` is a [VkStridedDeviceAddressRegionKHR](#) that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a [VkStridedDeviceAddressRegionKHR](#) that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a [VkStridedDeviceAddressRegionKHR](#) that holds the shader binding table data for the callable shader stage.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

When the command is executed, a ray generation group of `width × height × depth` rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysKHR-magFilter-04553

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysKHR-magFilter-09598

If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysKHR-mipmapMode-04770

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdTraceRaysKHR-mipmapMode-09599

If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`

- VUID-vkCmdTraceRaysKHR-unnormalizedCoordinates-09635

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdTraceRaysKHR-None-08609

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdTraceRaysKHR-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdTraceRaysKHR-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdTraceRaysKHR-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdTraceRaysKHR-None-02691
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-07888
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysKHR-None-02692
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysKHR-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysKHR-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysKHR-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysKHR-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdTraceRaysKHR-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdTraceRaysKHR-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdTraceRaysKHR-flags-02696
Any [VkImage](#) created with a [VkImageCreateInfo::flags](#) containing [VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV](#) sampled as a result of this command **must** only be sampled using a [VkSamplerAddressMode](#) of [VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE](#)
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07027
For any [VkImageView](#) being written as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07028
For any [VkImageView](#) being read as a storage image where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07029
For any [VkBufferView](#) being written as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#), the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdTraceRaysKHR-OpTypeImage-07030
Any [VkBufferView](#) being read as a storage texel buffer where the image format field of the [OpTypeImage](#) is [Unknown](#) then the view's [buffer features](#) **must** contain [VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT](#)
- VUID-vkCmdTraceRaysKHR-None-08600
If a [a bound shader](#) was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysKHR-None-08601
If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader
- VUID-vkCmdTraceRaysKHR-None-10068
For each array of resources that is used by a [a bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command
- VUID-vkCmdTraceRaysKHR-None-08114
Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysKHR-imageLayout-00344
If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdTraceRaysKHR-None-08115
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysKHR-None-08116
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysKHR-None-08604
Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysKHR-None-08117
If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)
- VUID-vkCmdTraceRaysKHR-None-08119
If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysKHR-None-08605
If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident
- VUID-vkCmdTraceRaysKHR-None-08606
If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysKHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysKHR-uniformBuffers-06935
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysKHR-None-08612

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-storageBuffers-06936

If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2** for **storageBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-None-08613

If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysKHR-commandBuffer-02707

If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, any resource accessed by **bound shaders** **must** not be a protected resource

- VUID-vkCmdTraceRaysKHR-viewType-07752

If a **VkImageView** is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysKHR-format-07753

If a **VkImageView** or **VkBufferView** is accessed as a result of this command, then the **numeric type** of the view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08795

If a **VkImageView** created with a format other than **VK_FORMAT_A8_UNORM** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysKHR-OpImageWrite-08796

If a **VkImageView** created with the format **VK_FORMAT_A8_UNORM** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysKHR-OpImageWrite-04469

If a **VkBufferView** is accessed using **OpImageWrite** as a result of this command, then the **Type** of the **Texel** operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysKHR-SampledType-04470

If a **VkImageView** with a **VkFormat** that has a 64-bit component width is accessed as a result of this command, the **SampledType** of the **OpTypeImage** operand of that instruction **must** have a **Width** of 64

- VUID-vkCmdTraceRaysKHR-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysKHR-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysKHR-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04474
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdTraceRaysKHR-sparseImageInt64Atomics-04475
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06971
If [OpImageSampleWeightedQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06972
If [OpImageSampleWeightedQCOM](#) uses a [VkImageView](#) as a sample weight image as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBoxFilterQCOM-06973
If [OpImageBoxFilterQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSSDQCOM-06974
If [OpImageBlockMatchSSDQCOM](#) is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-06975
If [OpImageBlockMatchSADQCOM](#) is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchSADQCOM-06976
If [OpImageBlockMatchSADQCOM](#) or [OpImageBlockMatchSSDQCOM](#) is used to read from a

reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)

- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06977
If [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatchWindowSSDQCOM](#), [OpImageBlockMatchWindowSADQCOM](#), [OpImageBlockMatchGatherSSDQCOM](#), [OpImageBlockMatchGatherSADQCOM](#), [OpImageBlockMatchSSDQCOM](#), or [OpImageBlockMatchSADQCOM](#) uses a [VkSampler](#) as a result of this command, then the sampler **must** have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageSampleWeightedQCOM-06978
If any command other than [OpImageSampleWeightedQCOM](#), [OpImageBoxFilterQCOM](#), [OpImageBlockMatchWindowSSDQCOM](#), [OpImageBlockMatchWindowSADQCOM](#), [OpImageBlockMatchGatherSSDQCOM](#), [OpImageBlockMatchGatherSADQCOM](#), [OpImageBlockMatchSSDQCOM](#), or [OpImageBlockMatchSADQCOM](#) uses a [VkSampler](#) as a result of this command, then the sampler **must** not have been created with [VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09215
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM](#)
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09216
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) instruction is used to read from an [VkImageView](#) as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysKHR-OpImageBlockMatchWindow-09217
If a [OpImageBlockMatchWindow*QCOM](#) or [OpImageBlockMatchGather*QCOM](#) read from a reference image as result of this command, then the specified reference coordinates **must** not fail [integer texel coordinate validation](#)
- VUID-vkCmdTraceRaysKHR-None-07288
Any shader invocation executed by this command **must** [terminate](#)
- VUID-vkCmdTraceRaysKHR-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysKHR-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdTraceRaysKHR-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages

corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-vkCmdTraceRaysKHR-None-10679

If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout

- VUID-vkCmdTraceRaysKHR-pDescription-09900

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set

- VUID-vkCmdTraceRaysKHR-dimensionCount-09905

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdTraceRaysKHR-OpTypeTensorARM-09906

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdTraceRaysKHR-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader

accesses an `OpTypeSampler` or `OpTypeSampledImage` using that mapping, the calculated offset for the sampler heap **must** be a multiple of `samplerDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeTensorARM` using that mapping, the calculated offset for the resource heap **must** be a multiple of `tensorDescriptorAlignment`

- VUID-vkCmdTraceRaysKHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysKHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysKHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysKHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysKHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysKHR-None-11306
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)
- VUID-vkCmdTraceRaysKHR-None-11308
For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound
- VUID-vkCmdTraceRaysKHR-None-11309
If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands
- VUID-vkCmdTraceRaysKHR-None-11372
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written
- VUID-vkCmdTraceRaysKHR-None-11373
If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written
- VUID-vkCmdTraceRaysKHR-None-11374
If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written
- VUID-vkCmdTraceRaysKHR-pBindInfo-11375
If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)
- VUID-vkCmdTraceRaysKHR-None-11376
If a [bound shader](#) was created as a [VkShaderEXT](#) with the

VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT flag or as part of a pipeline with the VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT flag, and that shader statically uses a push constant value, that value **must** have been set by vkCmdPushDataEXT

- VUID-vkCmdTraceRaysKHR-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdTraceRaysKHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdTraceRaysKHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT usage flag set

- VUID-vkCmdTraceRaysKHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysKHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT, VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the

[VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysKHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysKHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdTraceRaysKHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysKHR-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdTraceRaysKHR-protectedNoFault-11456

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), the address of the indirect memory **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdTraceRaysKHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-None-09458

If the bound ray tracing pipeline state was created with the [VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR](#) dynamic state enabled then [vkCmdSetRayTracingPipelineStackSizeKHR](#) **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysKHR-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysKHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a [recursion depth](#) greater than the value of [maxPipelineRayRecursionDepth](#) used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysKHR-commandBuffer-03635

[commandBuffer](#) **must** not be a protected command buffer

- VUID-vkCmdTraceRaysKHR-size-04023

The [size](#) member of [pRayGenShaderBindingTable](#) **must** be equal to its [stride](#) member

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03681

[pRayGenShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the application from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) usage flag set

- VUID-vkCmdTraceRaysKHR-pRayGenShaderBindingTable-03682

[pRayGenShaderBindingTable->deviceAddress](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment](#)

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03684

[pMissShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the application from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) usage flag set

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-03685

[pMissShaderBindingTable->deviceAddress](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment](#)

- VUID-vkCmdTraceRaysKHR-stride-03686

[pMissShaderBindingTable->stride](#) **must** be a multiple of [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment](#)

- VUID-vkCmdTraceRaysKHR-stride-04029

[pMissShaderBindingTable->stride](#) **must** be less than or equal to [VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride](#)

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03688

[pHitShaderBindingTable->deviceAddress](#) **must** be a device address allocated to the

application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-03689
`pHitShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysKHR-stride-03690
`pHitShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysKHR-stride-04035
`pHitShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03692
`pCallableShaderBindingTable->deviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-03693
`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysKHR-stride-03694
`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysKHR-stride-04041
`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysKHR-flags-03511
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`, the entries in the table identified by `pMissShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03512
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03513
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero
- VUID-vkCmdTraceRaysKHR-flags-03514
If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a

result of this command in order to execute an intersection shader **must** not be zero

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysKHR-width-03638

`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`

- VUID-vkCmdTraceRaysKHR-height-03639

`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`

- VUID-vkCmdTraceRaysKHR-depth-03640

`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`

- VUID-vkCmdTraceRaysKHR-width-03641

`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

- VUID-vkCmdTraceRaysKHR-allowClusterAccelerationStructure-10578

If the traced geometry contains a cluster acceleration structure, then `VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV::allowClusterAccelerationStructure` **must** have been set for that pipeline

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysKHR-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdTraceRaysKHR-pRaygenShaderBindingTable-parameter

`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pMissShaderBindingTable-parameter

`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pHitShaderBindingTable-parameter

`pHitShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-pCallableShaderBindingTable-parameter

`pCallableShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure

- VUID-vkCmdTraceRaysKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdTraceRaysKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

`vkCmdTraceRaysKHR` is not affected by `conditional rendering`

When invocation mask image usage is enabled in the bound ray tracing pipeline, the pipeline uses an invocation mask image specified by the command:

```
// Provided by VK_HUAWEI_invocation_mask
void vkCmdBindInvocationMaskHUAWEI(
    VkCommandBuffer          commandBuffer,
    VkImageView              imageView,
    VkImageLayout            imageLayout);
```

- `commandBuffer` is the command buffer into which the command will be recorded
- `imageView` is an image view handle specifying the invocation mask image `imageView` **may** be `VK_NULL_HANDLE`, which is equivalent to specifying a view of an image filled with ones value.
- `imageLayout` is the layout that the image subresources accessible from `imageView` will be in when the invocation mask image is accessed

Valid Usage

- VUID-vkCmdBindInvocationMaskHUAWEI-None-04976
The `invocationMask` feature **must** be enabled
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04977
If `imageView` is not `VK_NULL_HANDLE`, it **must** be a valid `VkImageView` handle of type `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04978
If `imageView` is not `VK_NULL_HANDLE`, it **must** have a format of `VK_FORMAT_R8_UINT`
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04979
If `imageView` is not `VK_NULL_HANDLE`, it **must** have been created with the `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI` usage flag set
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-04980
If `imageView` is not `VK_NULL_HANDLE`, `imageLayout` **must** be `VK_IMAGE_LAYOUT_GENERAL`
- VUID-vkCmdBindInvocationMaskHUAWEI-width-04981
Thread mask image resolution **must** match the `width` and `height` in `vkCmdTraceRaysKHR`
- VUID-vkCmdBindInvocationMaskHUAWEI-None-04982
Each element in the invocation mask image **must** have the value `0` or `1`. The value `1` means the invocation is active
- VUID-vkCmdBindInvocationMaskHUAWEI-depth-04983
`depth` in `vkCmdTraceRaysKHR` **must** be `1`

Valid Usage (Implicit)

- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBindInvocationMaskHUAWEI-imageView-parameter
If `imageView` is not `VK_NULL_HANDLE`, `imageView` **must** be a valid `VkImageView` handle
- VUID-vkCmdBindInvocationMaskHUAWEI-imageLayout-parameter
`imageLayout` **must** be a valid `VkImageLayout` value
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdBindInvocationMaskHUAWEI-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support

[VK_QUEUE_COMPUTE_BIT](#) operations

- `VUID-vkCmdBindInvocationMaskHUAWEI-renderpass`
This command **must** only be called outside of a render pass instance
- `VUID-vkCmdBindInvocationMaskHUAWEI-videocoding`
This command **must** only be called outside of a video coding scope
- `VUID-vkCmdBindInvocationMaskHUAWEI-commonparent`
Both of `commandBuffer`, and `imageView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	State

Conditional Rendering

`vkCmdBindInvocationMaskHUAWEI` is not affected by [conditional rendering](#)

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirectKHR(
    VkCommandBuffer                commandBuffer,
    const VkStridedDeviceAddressRegionKHR* pRaygenShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pMissShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pHitShaderBindingTable,
    const VkStridedDeviceAddressRegionKHR* pCallableShaderBindingTable,
    VkDeviceAddress                 indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pRaygenShaderBindingTable` is a [VkStridedDeviceAddressRegionKHR](#) that holds the shader binding table data for the ray generation shader stage.

- `pMissShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the miss shader stage.
- `pHitShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the hit shader stage.
- `pCallableShaderBindingTable` is a `VkStridedDeviceAddressRegionKHR` that holds the shader binding table data for the callable shader stage.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a `VkTraceRaysIndirectCommandKHR` structure containing the trace ray parameters.

`vkCmdTraceRaysIndirectKHR` behaves similarly to `vkCmdTraceRaysKHR` except that the ray trace query dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirectKHR-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-unnormalizedCoordinates-09635
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1
- VUID-vkCmdTraceRaysIndirectKHR-None-08609
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample

a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`

- VUID-vkCmdTraceRaysIndirectKHR-None-08610

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name

- VUID-vkCmdTraceRaysIndirectKHR-None-08611

If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values

- VUID-vkCmdTraceRaysIndirectKHR-None-06479

If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02691

If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-07888

If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02692

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- VUID-vkCmdTraceRaysIndirectKHR-None-02693

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`

- VUID-vkCmdTraceRaysIndirectKHR-filterCubic-02694

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysIndirectKHR-filterCubicMinmax-02695

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`

- VUID-vkCmdTraceRaysIndirectKHR-cubicRangeClamp-09212
If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`
- VUID-vkCmdTraceRaysIndirectKHR-reductionMode-09213
Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`
- VUID-vkCmdTraceRaysIndirectKHR-selectableCubicWeights-09214
If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`
- VUID-vkCmdTraceRaysIndirectKHR-flags-02696
Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07027
For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07028
For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07029
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeImage-07030
Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`
- VUID-vkCmdTraceRaysIndirectKHR-None-08600
If a `bound shader` was created with a pipeline layout and statically uses a set `n`, a descriptor set **must** have been bound to `n` at the same pipeline bind point, with layouts compatible for set `n` with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-08601
If a `bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same

pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdTraceRaysIndirectKHR-None-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirectKHR-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysIndirectKHR-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirectKHR-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirectKHR-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline

bind point used by this command

- VUID-vkCmdTraceRaysIndirectKHR-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdTraceRaysIndirectKHR-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported, any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdTraceRaysIndirectKHR-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#) **must** match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysIndirectKHR-format-07753

If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the [numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must** match

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08795

If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-08796

If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components

- VUID-vkCmdTraceRaysIndirectKHR-OpImageWrite-04469

If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04470

If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04471

If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04472

If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64

- VUID-vkCmdTraceRaysIndirectKHR-SampledType-04473

If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04474

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdTraceRaysIndirectKHR-sparseImageInt64Atomics-04475

If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command

- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06971

If [OpImageSampleWeightedQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#)

- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06972

If [OpImageSampleWeightedQCOM](#) uses a [VkImageView](#) as a sample weight image as a result of this command, then the image view's [format features](#) **must** contain

VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBoxFilterQCOM-06973

If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSSDQCOM-06974

If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-06975

If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchSADQCOM-06976

If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06977

If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageSampleWeightedQCOM-06978

If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09215

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09216

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format` **must** be a single-component format

- VUID-vkCmdTraceRaysIndirectKHR-OpImageBlockMatchWindow-09217

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`

- VUID-vkCmdTraceRaysIndirectKHR-None-07288

Any shader invocation executed by this command **must** `terminate`

- VUID-vkCmdTraceRaysIndirectKHR-None-09600
If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-10746
The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-10678
If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-10679
If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout
- VUID-vkCmdTraceRaysIndirectKHR-pDescription-09900
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-dimensionCount-09905
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object
- VUID-vkCmdTraceRaysIndirectKHR-OpTypeTensorARM-09906
If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access
- VUID-vkCmdTraceRaysIndirectKHR-None-11297
If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)
- VUID-vkCmdTraceRaysIndirectKHR-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirectKHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirectKHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push

data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysIndirectKHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirectKHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysIndirectKHR-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdTraceRaysIndirectKHR-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#)

feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirectKHR-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of [pBindInfo->reservedRangeSize](#) set for [vkCmdBindSamplerHeapEXT](#) **must** be greater than or equal to [minSamplerHeapReservedRangeWithEmbedded](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11376

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, and that shader statically uses a push constant value, that value **must** have been set by [vkCmdPushDataEXT](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirectKHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdTraceRaysIndirectKHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using

VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT,
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, or
VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT, the address that the
resource is mapped to **must** have been queried from a buffer created without the
VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdTraceRaysIndirectKHR-protectedNoFault-11456

If **protectedNoFault** is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using
VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT or
VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT, the
address of the indirect memory **must** have been queried from a buffer created without the
VK_BUFFER_CREATE_PROTECTED_BIT create flag set

- VUID-vkCmdTraceRaysIndirectKHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirectKHR-None-09458

If the bound ray tracing pipeline state was created with the
VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR dynamic state enabled then **vkCmdSetRayTracingPipelineStackSizeKHR** **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysIndirectKHR-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a **descriptor mapping** using
VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT, the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysIndirectKHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a **recursion depth** greater than the value of **maxPipelineRayRecursionDepth** used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-03635

commandBuffer **must** not be a protected command buffer

- VUID-vkCmdTraceRaysIndirectKHR-size-04023

The **size** member of **pRayGenShaderBindingTable** **must** be equal to its **stride** member

- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03681

pRayGenShaderBindingTable->deviceAddress **must** be a device address allocated to the application from a buffer created with the
VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-pRayGenShaderBindingTable-03682

pRayGenShaderBindingTable->deviceAddress **must** be a multiple of
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment

- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03684

pMissShaderBindingTable->deviceAddress **must** be a device address allocated to the

application from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-03685
`pMissShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03686
`pMissShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04029
`pMissShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03688
`pHitShaderBindingTable->deviceAddress` **must** be a device address allocated to the application from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-03689
`pHitShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03690
`pHitShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04035
`pHitShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03692
`pCallableShaderBindingTable->deviceAddress` **must** be a device address allocated to the application from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#) usage flag set
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-03693
`pCallableShaderBindingTable->deviceAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-03694
`pCallableShaderBindingTable->stride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-vkCmdTraceRaysIndirectKHR-stride-04041
`pCallableShaderBindingTable->stride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-vkCmdTraceRaysIndirectKHR-flags-03511
If the bound ray tracing pipeline was created with `flags` that included [VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR](#), the entries in the table identified by `pMissShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a miss shader **must** not be zero
- VUID-vkCmdTraceRaysIndirectKHR-flags-03512

If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an any-hit shader **must** not be zero

- VUID-vkCmdTraceRaysIndirectKHR-flags-03513

If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute a closest hit shader **must** not be zero

- VUID-vkCmdTraceRaysIndirectKHR-flags-03514

If the bound ray tracing pipeline was created with `flags` that included `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`, entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed as a result of this command in order to execute an intersection shader **must** not be zero

- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04735

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-04736

Any non-zero hit shader group entries in the table identified by `pHitShaderBindingTable->deviceAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03633

`indirectDeviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03634

`indirectDeviceAddress` **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-03636

All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommandKHR) - 1` **must** be in the buffer device address range of the same buffer

- VUID-vkCmdTraceRaysIndirectKHR-rayTracingPipelineTraceRaysIndirect-03637

The `rayTracingPipelineTraceRaysIndirect` feature **must** be enabled

- VUID-vkCmdTraceRaysIndirectKHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951

If the bound ray tracing pipeline was created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV::rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysIndirectKHR-pRaygenShaderBindingTable-parameter
`pRaygenShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pMissShaderBindingTable-parameter
`pMissShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pHitShaderBindingTable-parameter
`pHitShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-pCallableShaderBindingTable-parameter
`pCallableShaderBindingTable` **must** be a valid pointer to a valid `VkStridedDeviceAddressRegionKHR` structure
- VUID-vkCmdTraceRaysIndirectKHR-indirectDeviceAddress-parameter
`indirectDeviceAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysIndirectKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysIndirectKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirectKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirectKHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysIndirectKHR is not affected by [conditional rendering](#)

The `VkTraceRaysIndirectCommandKHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommandKHR {
    uint32_t    width;
    uint32_t    height;
    uint32_t    depth;
} VkTraceRaysIndirectCommandKHR;
```

- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommandKHR` have the same meaning as the similarly named parameters of [vkCmdTraceRaysKHR](#).

Valid Usage

- VUID-VkTraceRaysIndirectCommandKHR-width-03638
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`
- VUID-VkTraceRaysIndirectCommandKHR-height-03639
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`
- VUID-VkTraceRaysIndirectCommandKHR-depth-03640
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`
- VUID-VkTraceRaysIndirectCommandKHR-width-03641
`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

To dispatch ray tracing, with some parameters sourced on the device, use:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
void vkCmdTraceRaysIndirect2KHR(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          indirectDeviceAddress);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectDeviceAddress` is a buffer device address which is a pointer to a `VkTraceRaysIndirectCommand2KHR` structure containing the trace ray parameters.

`vkCmdTraceRaysIndirect2KHR` behaves similarly to `vkCmdTraceRaysIndirectKHR` except that shader binding table parameters as well as dispatch dimensions are read by the device from `indirectDeviceAddress` during execution.

Valid Usage

- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-04553
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-magFilter-09598
If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-04770
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR`, `reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-mipmapMode-09599
If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `reductionMode` equal to either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-unnormalizedCoordinates-09635
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `levelCount` and `layerCount` **must** be 1

- VUID-vkCmdTraceRaysIndirect2KHR-None-08609
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the image view's `viewType` **must** be `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`
- VUID-vkCmdTraceRaysIndirect2KHR-None-08610
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name
- VUID-vkCmdTraceRaysIndirect2KHR-None-08611
If a `VkSampler` created with `unnormalizedCoordinates` equal to `VK_TRUE` is used to sample a `VkImageView` as a result of this command, then the sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values
- VUID-vkCmdTraceRaysIndirect2KHR-None-06479
If a `VkImageView` is sampled with `depth comparison`, the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02691
If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-07888
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's `format features` **must** contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02692
If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- VUID-vkCmdTraceRaysIndirect2KHR-None-02693
If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it **must** not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubic-02694
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`
- VUID-vkCmdTraceRaysIndirect2KHR-filterCubicMinmax-02695
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by

VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdTraceRaysIndirect2KHR-cubicRangeClamp-09212
If the **cubicRangeClamp** feature is not enabled, then any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command **must** not have a **VkSamplerReductionModeCreateInfo::reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM**
- VUID-vkCmdTraceRaysIndirect2KHR-reductionMode-09213
Any **VkImageView** being sampled with a **VkSamplerReductionModeCreateInfo::reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM** as a result of this command **must** sample with **VK_FILTER_CUBIC_EXT**
- VUID-vkCmdTraceRaysIndirect2KHR-selectableCubicWeights-09214
If the **selectableCubicWeights** feature is not enabled, then any **VkImageView** being sampled with **VK_FILTER_CUBIC_EXT** as a result of this command **must** have **VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights** equal to **VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM**
- VUID-vkCmdTraceRaysIndirect2KHR-flags-02696
Any **VkImage** created with a **VkImageCreateInfo::flags** containing **VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV** sampled as a result of this command **must** only be sampled using a **VkSamplerAddressMode** of **VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE**
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07027
For any **VkImageView** being written as a storage image where the image format field of the **OpTypeImage** is **Unknown**, the view's **format features** **must** contain **VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT**
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07028
For any **VkImageView** being read as a storage image where the image format field of the **OpTypeImage** is **Unknown**, the view's **format features** **must** contain **VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT**
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07029
For any **VkBufferView** being written as a storage texel buffer where the image format field of the **OpTypeImage** is **Unknown**, the view's **buffer features** **must** contain **VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT**
- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeImage-07030
Any **VkBufferView** being read as a storage texel buffer where the image format field of the **OpTypeImage** is **Unknown** then the view's **buffer features** **must** contain **VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT**
- VUID-vkCmdTraceRaysIndirect2KHR-None-08600
If a **bound shader** was created with a pipeline layout and statically uses a set *n*, a descriptor set **must** have been bound to *n* at the same pipeline bind point, with layouts compatible for set *n* with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)
- VUID-vkCmdTraceRaysIndirect2KHR-None-08601

If a [a bound shader](#) was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are [compatible](#) with the push constant range used to create the shader

- VUID-vkCmdTraceRaysIndirect2KHR-None-10068

For each array of resources that is used by a [bound shader](#), the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysIndirect2KHR-None-08114

Descriptors in each bound descriptor set, specified via [vkCmdBindDescriptorSets](#), **must** be valid if they are accessed as described by [descriptor validity](#) by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysIndirect2KHR-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirect2KHR-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysIndirect2KHR-None-08606
If the **shaderObject** feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command
- VUID-vkCmdTraceRaysIndirect2KHR-None-08608
If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the **VkPipeline** object bound to the pipeline bind point used by this command, since that pipeline was bound
- VUID-vkCmdTraceRaysIndirect2KHR-uniformBuffers-06935
If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2** for **uniformBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-None-08612
If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-storageBuffers-06936
If any stage of the **VkPipeline** object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS** or **VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2** for **storageBuffers**, and the **robustBufferAccess** feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-None-08613
If the **robustBufferAccess** feature is not enabled, and any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-02707
If **commandBuffer** is an unprotected command buffer and **protectedNoFault** is not supported, any resource accessed by **bound shaders** **must** not be a protected resource
- VUID-vkCmdTraceRaysIndirect2KHR-viewType-07752
If a **VkImageView** is accessed as a result of this command, then the image view's **viewType** **must** match the **Dim** operand of the **OpTypeImage** as described in **Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types**
- VUID-vkCmdTraceRaysIndirect2KHR-format-07753
If a **VkImageView** or **VkBufferView** is accessed as a result of this command, then the **numeric type** of the view's **format** and the **Sampled Type** operand of the **OpTypeImage** **must** match

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08795
If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the image view's format
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-08796
If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have four components
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageWrite-04469
If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that instruction **must** have at least as many components as the buffer view's format
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04470
If a [VkImageView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04471
If a [VkImageView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04472
If a [VkBufferView](#) with a [VkFormat](#) that has a 64-bit component width is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 64
- VUID-vkCmdTraceRaysIndirect2KHR-SampledType-04473
If a [VkBufferView](#) with a [VkFormat](#) that has a component width less than 64-bit is accessed as a result of this command, the [SampledType](#) of the [OpTypeImage](#) operand of that instruction **must** have a [Width](#) of 32
- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04474
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkImage](#) objects created with the [VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdTraceRaysIndirect2KHR-sparseImageInt64Atomics-04475
If the [sparseImageInt64Atomics](#) feature is not enabled, [VkBuffer](#) objects created with the [VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT](#) flag **must** not be accessed by atomic instructions through an [OpTypeImage](#) with a [SampledType](#) with a [Width](#) of 64 by this command
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06971
If [OpImageSampleWeightedQCOM](#) is used to sample a [VkImageView](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM](#)
- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06972
If [OpImageSampleWeightedQCOM](#) uses a [VkImageView](#) as a sample weight image as a result of

this command, then the image view's **format features must** contain **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBoxFilterQCOM-06973

If **OpImageBoxFilterQCOM** is used to sample a **VkImageView** as a result of this command, then the image view's **format features must** contain **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSSDQCOM-06974

If **OpImageBlockMatchSSDQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-06975

If **OpImageBlockMatchSADQCOM** is used to read from an **VkImageView** as a result of this command, then the image view's **format features must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchSADQCOM-06976

If **OpImageBlockMatchSADQCOM** or **OpImageBlockMatchSSDQCOM** is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06977

If **OpImageSampleWeightedQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM** uses a **VkSampler** as a result of this command, then the sampler **must** have been created with **VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageSampleWeightedQCOM-06978

If any command other than **OpImageSampleWeightedQCOM**, **OpImageBoxFilterQCOM**, **OpImageBlockMatchWindowSSDQCOM**, **OpImageBlockMatchWindowSADQCOM**, **OpImageBlockMatchGatherSSDQCOM**, **OpImageBlockMatchGatherSADQCOM**, **OpImageBlockMatchSSDQCOM**, or **OpImageBlockMatchSADQCOM** uses a **VkSampler** as a result of this command, then the sampler **must** not have been created with **VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09215

If a **OpImageBlockMatchWindow*QCOM** or **OpImageBlockMatchGather*QCOM** instruction is used to read from an **VkImageView** as a result of this command, then the image view's **format features must** contain **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM**

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09216

If a **OpImageBlockMatchWindow*QCOM** or **OpImageBlockMatchGather*QCOM** instruction is used to read from an **VkImageView** as a result of this command, then the image view's format **must** be a single-component format

- VUID-vkCmdTraceRaysIndirect2KHR-OpImageBlockMatchWindow-09217

If a **OpImageBlockMatchWindow*QCOM** or **OpImageBlockMatchGather*QCOM** read from a reference image as result of this command, then the specified reference coordinates **must** not fail **integer texel coordinate validation**

- VUID-vkCmdTraceRaysIndirect2KHR-None-07288

Any shader invocation executed by this command **must** [terminate](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-09600

If a descriptor with type equal to any of [VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM](#), [VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE](#), [VK_DESCRIPTOR_TYPE_STORAGE_IMAGE](#), or [VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT](#) is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-10746

The [VkDeviceMemory](#) object allocated from a [VkMemoryHeap](#) with the [VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM](#) property that is bound to a resource accessed as a result of this command **must** be the active bound [bound tile memory object](#) in [commandBuffer](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-10678

If this command is recorded inside a [tile shading render pass](#) instance, the stages corresponding to the pipeline bind point used by this command **must** only include [VK_SHADER_STAGE_VERTEX_BIT](#), [VK_SHADER_STAGE_FRAGMENT_BIT](#), and/or [VK_SHADER_STAGE_COMPUTE_BIT](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-10679

If this command is recorded where [per-tile execution model](#) is enabled, there **must** be no access to any image while the image was be transitioned to the [VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT](#) layout

- VUID-vkCmdTraceRaysIndirect2KHR-pDescription-09900

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the underlying [VkTensorARM](#) object **must** have been created with the [VK_TENSOR_USAGE_SHADER_BIT_ARM](#) usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-dimensionCount-09905

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the [Rank](#) of the [OpTypeTensorARM](#) of the tensor resource variable **must** be equal to the [dimensionCount](#) provided via [VkTensorCreateInfoARM::pDescription](#) when creating the underlying [VkTensorARM](#) object

- VUID-vkCmdTraceRaysIndirect2KHR-OpTypeTensorARM-09906

If a [VK_DESCRIPTOR_TYPE_TENSOR_ARM](#) descriptor is accessed as a result of this command, then the element type of the [OpTypeTensorARM](#) of the tensor resource variable **must** be [compatible](#) with the [VkFormat](#) of the [VkTensorViewARM](#) used for the access

- VUID-vkCmdTraceRaysIndirect2KHR-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a [OpTypeStruct](#) decorated with [Block](#) or [BufferBlock](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [bufferDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeImage](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [imageDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirect2KHR-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirect2KHR-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a

resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysIndirect2KHR-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysIndirect2KHR-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysIndirect2KHR-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdTraceRaysIndirect2KHR-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for

`storageBuffers`, the `robustBufferAccess2` feature is not enabled, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-None-11374

If the `robustBufferAccess2` feature is not enabled, the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by `VkDeviceAddressRangeKHR` when the descriptor was written

- VUID-vkCmdTraceRaysIndirect2KHR-pBindInfo-11375

If any `bound shader` uses an embedded sampler via a `descriptor mapping`, the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11376

If a `bound shader` was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11398

If a `bound shader` was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be `out of bounds`

- VUID-vkCmdTraceRaysIndirect2KHR-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to [minUniformBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysIndirect2KHR-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdTraceRaysIndirect2KHR-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was

created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, the address that the resource is mapped to **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdTraceRaysIndirect2KHR-protectedNoFault-11456

If `protectedNoFault` is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdTraceRaysIndirect2KHR-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirect2KHR-None-09458

If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysIndirect2KHR-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysIndirect2KHR-maxPipelineRayRecursionDepth-03679

This command **must** not cause a shader call instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxPipelineRayRecursionDepth` used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-03635

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03633

`indirectDeviceAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03634

`indirectDeviceAddress` **must** be a multiple of 4

- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-03636

All device addresses between `indirectDeviceAddress` and `indirectDeviceAddress + sizeof(VkTraceRaysIndirectCommand2KHR) - 1` **must** be in the buffer device address range of the same buffer

- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingPipelineTraceRaysIndirect2-03637

The `rayTracingPipelineTraceRaysIndirect2` feature **must** be enabled

- VUID-vkCmdTraceRaysIndirect2KHR-rayTracingMotionBlurPipelineTraceRaysIndirect-04951

If the bound ray tracing pipeline was created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV`

`VkPhysicalDeviceRayTracingMotionBlurFeaturesNV::rayTracingMotionBlurPipelineTraceRaysIndirect` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysIndirect2KHR-indirectDeviceAddress-parameter
`indirectDeviceAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysIndirect2KHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysIndirect2KHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysIndirect2KHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysIndirect2KHR-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysIndirect2KHR is not affected by [conditional rendering](#)

The `VkTraceRaysIndirectCommand2KHR` structure is defined as:

```
// Provided by VK_KHR_ray_tracing_maintenance1 with VK_KHR_ray_tracing_pipeline
typedef struct VkTraceRaysIndirectCommand2KHR {
    VkDeviceAddress    raygenShaderRecordAddress;
    VkDeviceSize       raygenShaderRecordSize;
    VkDeviceAddress    missShaderBindingTableAddress;
    VkDeviceSize       missShaderBindingTableSize;
    VkDeviceSize       missShaderBindingTableStride;
    VkDeviceAddress    hitShaderBindingTableAddress;
    VkDeviceSize       hitShaderBindingTableSize;
    VkDeviceSize       hitShaderBindingTableStride;
    VkDeviceAddress    callableShaderBindingTableAddress;
    VkDeviceSize       callableShaderBindingTableSize;
    VkDeviceSize       callableShaderBindingTableStride;
    uint32_t           width;
    uint32_t           height;
    uint32_t           depth;
} VkTraceRaysIndirectCommand2KHR;
```

- `raygenShaderRecordAddress` is a [VkDeviceAddress](#) of the ray generation shader binding table record used by this command.
- `raygenShaderRecordSize` is a [VkDeviceSize](#) number of bytes corresponding to the ray generation shader binding table record at base address `raygenShaderRecordAddress`.
- `missShaderBindingTableAddress` is a [VkDeviceAddress](#) of the first record in the miss shader binding table used by this command.
- `missShaderBindingTableSize` is a [VkDeviceSize](#) number of bytes corresponding to the total size of the miss shader binding table at `missShaderBindingTableAddress` that may be accessed by this command.
- `missShaderBindingTableStride` is a [VkDeviceSize](#) number of bytes between records of the miss shader binding table.
- `hitShaderBindingTableAddress` is a [VkDeviceAddress](#) of the first record in the hit shader binding table used by this command.
- `hitShaderBindingTableSize` is a [VkDeviceSize](#) number of bytes corresponding to the total size of the hit shader binding table at `hitShaderBindingTableAddress` that may be accessed by this command.
- `hitShaderBindingTableStride` is a [VkDeviceSize](#) number of bytes between records of the hit shader binding table.
- `callableShaderBindingTableAddress` is a [VkDeviceAddress](#) of the first record in the callable shader binding table used by this command.

- `callableShaderBindingTableSize` is a `VkDeviceSize` number of bytes corresponding to the total size of the callable shader binding table at `callableShaderBindingTableAddress` that may be accessed by this command.
- `callableShaderBindingTableStride` is a `VkDeviceSize` number of bytes between records of the callable shader binding table.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.
- `depth` is depth of the ray trace query dimensions.

The members of `VkTraceRaysIndirectCommand2KHR` have the same meaning as the similarly named parameters of `vkCmdTraceRaysKHR`.

Indirect shader binding table buffer parameters **must** satisfy the same memory alignment and binding requirements as their counterparts in `vkCmdTraceRaysIndirectKHR` and `vkCmdTraceRaysKHR`.

Valid Usage

- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03681
`raygenShaderRecordAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pRayGenShaderBindingTable-03682
`raygenShaderRecordAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03684
`missShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pMissShaderBindingTable-03685
`missShaderBindingTableAddress` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03686
`missShaderBindingTableStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment`
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04029
`missShaderBindingTableStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride`
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03688
`hitShaderBindingTableAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-03689
`hitShaderBindingTableAddress` **must** be a multiple of

VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment

- VUID-VkTraceRaysIndirectCommand2KHR-stride-03690
hitShaderBindingTableStride **must** be a multiple of
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04035
hitShaderBindingTableStride **must** be less than or equal to
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03692
callableShaderBindingTableAddress **must** be a device address allocated to the application
from a buffer created with the [VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR](#)
usage flag set
- VUID-VkTraceRaysIndirectCommand2KHR-pCallableShaderBindingTable-03693
callableShaderBindingTableAddress **must** be a multiple of
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupBaseAlignment
- VUID-VkTraceRaysIndirectCommand2KHR-stride-03694
callableShaderBindingTableStride **must** be a multiple of
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::shaderGroupHandleAlignment
- VUID-VkTraceRaysIndirectCommand2KHR-stride-04041
callableShaderBindingTableStride **must** be less than or equal to
VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxShaderGroupStride
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03511
If the bound ray tracing pipeline was created with flags that included
[VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR](#), the entries in
the table identified by missShaderBindingTableAddress accessed as a result of this
command in order to execute a miss shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03512
If the bound ray tracing pipeline was created with flags that included
[VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR](#), entries in
the table identified by hitShaderBindingTableAddress accessed as a result of this command
in order to execute an any-hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03513
If the bound ray tracing pipeline was created with flags that included
[VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR](#),
entries in the table identified by hitShaderBindingTableAddress accessed as a result of this
command in order to execute a closest hit shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-flags-03514
If the bound ray tracing pipeline was created with flags that included
[VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR](#),
entries in the table identified by hitShaderBindingTableAddress accessed as a result of this
command in order to execute an intersection shader **must** not be zero
- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04735
Any non-zero hit shader group entries in the table identified by
hitShaderBindingTableAddress accessed by this call from a geometry with a geometryType of

`VK_GEOMETRY_TYPE_TRIANGLES_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_TRIANGLES_HIT_GROUP_KHR`

- VUID-VkTraceRaysIndirectCommand2KHR-pHitShaderBindingTable-04736
Any non-zero hit shader group entries in the table identified by `hitShaderBindingTableAddress` accessed by this call from a geometry with a `geometryType` of `VK_GEOMETRY_TYPE_AABBS_KHR` **must** have been created with `VK_RAY_TRACING_SHADER_GROUP_TYPE_PROCEDURAL_HIT_GROUP_KHR`
- VUID-VkTraceRaysIndirectCommand2KHR-width-03638
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`
- VUID-VkTraceRaysIndirectCommand2KHR-height-03639
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`
- VUID-VkTraceRaysIndirectCommand2KHR-depth-03640
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2] × VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`
- VUID-VkTraceRaysIndirectCommand2KHR-width-03641
`width × height × depth` **must** be less than or equal to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR::maxRayDispatchInvocationCount`

Valid Usage (Implicit)

- VUID-VkTraceRaysIndirectCommand2KHR-raygenShaderRecordAddress-parameter
`raygenShaderRecordAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-missShaderBindingTableAddress-parameter
`missShaderBindingTableAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-hitShaderBindingTableAddress-parameter
`hitShaderBindingTableAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkTraceRaysIndirectCommand2KHR-callableShaderBindingTableAddress-parameter
`callableShaderBindingTableAddress` **must** be a valid `VkDeviceAddress` value

To dispatch ray tracing for the `VK_NV_ray_tracing` extension use:

```
// Provided by VK_NV_ray_tracing
void vkCmdTraceRaysNV(
    VkCommandBuffer          commandBuffer,
    VkBuffer                 raygenShaderBindingTableBuffer,
    VkDeviceSize             raygenShaderBindingOffset,
    VkBuffer                 missShaderBindingTableBuffer,
    VkDeviceSize             missShaderBindingOffset,
    VkDeviceSize             missShaderBindingStride,
    VkBuffer                 hitShaderBindingTableBuffer,
    VkDeviceSize             hitShaderBindingOffset,
    VkDeviceSize             hitShaderBindingStride,
    VkBuffer                 callableShaderBindingTableBuffer,
    VkDeviceSize             callableShaderBindingOffset,
    VkDeviceSize             callableShaderBindingStride,
    uint32_t                 width,
    uint32_t                 height,
    uint32_t                 depth);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `raygenShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the ray generation shader stage.
- `raygenShaderBindingOffset` is the offset in bytes (relative to `raygenShaderBindingTableBuffer`) of the ray generation shader being used for the trace.
- `missShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the miss shader stage.
- `missShaderBindingOffset` is the offset in bytes (relative to `missShaderBindingTableBuffer`) of the miss shader being used for the trace.
- `missShaderBindingStride` is the size in bytes of each shader binding table record in `missShaderBindingTableBuffer`.
- `hitShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the hit shader stages.
- `hitShaderBindingOffset` is the offset in bytes (relative to `hitShaderBindingTableBuffer`) of the hit shader group being used for the trace.
- `hitShaderBindingStride` is the size in bytes of each shader binding table record in `hitShaderBindingTableBuffer`.
- `callableShaderBindingTableBuffer` is the buffer object that holds the shader binding table data for the callable shader stage.
- `callableShaderBindingOffset` is the offset in bytes (relative to `callableShaderBindingTableBuffer`) of the callable shader being used for the trace.
- `callableShaderBindingStride` is the size in bytes of each shader binding table record in `callableShaderBindingTableBuffer`.
- `width` is the width of the ray trace query dimensions.
- `height` is height of the ray trace query dimensions.

- **depth** is depth of the ray trace query dimensions.

When the command is executed, a ray generation group of **width** × **height** × **depth** rays is assembled.

Valid Usage

- VUID-vkCmdTraceRaysNV-magFilter-04553
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdTraceRaysNV-magFilter-09598
If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**
- VUID-vkCmdTraceRaysNV-mipmapMode-04770
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR**, **reductionMode** equal to **VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE**, and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**
- VUID-vkCmdTraceRaysNV-mipmapMode-09599
If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR** and **reductionMode** equal to either **VK_SAMPLER_REDUCTION_MODE_MIN** or **VK_SAMPLER_REDUCTION_MODE_MAX** is used to sample a **VkImageView** as a result of this command, then the image view's **format features** **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT**
- VUID-vkCmdTraceRaysNV-unnormalizedCoordinates-09635
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **levelCount** and **layerCount** **must** be 1
- VUID-vkCmdTraceRaysNV-None-08609
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the image view's **viewType** **must** be **VK_IMAGE_VIEW_TYPE_1D** or **VK_IMAGE_VIEW_TYPE_2D**
- VUID-vkCmdTraceRaysNV-None-08610
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample a **VkImageView** as a result of this command, then the sampler **must** not be used with any of the SPIR-V **OpImageSample*** or **OpImageSparseSample*** instructions with **ImplicitLod**, **Dref** or **Proj** in their name
- VUID-vkCmdTraceRaysNV-None-08611
If a **VkSampler** created with **unnormalizedCoordinates** equal to **VK_TRUE** is used to sample

a [VkImageView](#) as a result of this command, then the sampler **must** not be used with any of the SPIR-V [OpImageSample*](#) or [OpImageSparseSample*](#) instructions that includes a LOD bias or any offset values

- VUID-vkCmdTraceRaysNV-None-06479

If a [VkImageView](#) is sampled with [depth comparison](#), the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT](#)

- VUID-vkCmdTraceRaysNV-None-02691

If a [VkImageView](#) is accessed using atomic operations as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT](#)

- VUID-vkCmdTraceRaysNV-None-07888

If a [VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER](#) descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's [format features](#) **must** contain [VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT](#)

- VUID-vkCmdTraceRaysNV-None-02692

If a [VkImageView](#) is sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command, then the image view's [format features](#) **must** contain [VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT](#)

- VUID-vkCmdTraceRaysNV-None-02693

If the [VK_EXT_filter_cubic](#) extension is not enabled and any [VkImageView](#) is sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command, it **must** not have a [VkImageViewType](#) of [VK_IMAGE_VIEW_TYPE_3D](#), [VK_IMAGE_VIEW_TYPE_CUBE](#), or [VK_IMAGE_VIEW_TYPE_CUBE_ARRAY](#)

- VUID-vkCmdTraceRaysNV-filterCubic-02694

Any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** have a [VkImageViewType](#) and format that supports cubic filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdTraceRaysNV-filterCubicMinmax-02695

Any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) with a reduction mode of either [VK_SAMPLER_REDUCTION_MODE_MIN](#) or [VK_SAMPLER_REDUCTION_MODE_MAX](#) as a result of this command **must** have a [VkImageViewType](#) and format that supports cubic filtering together with minmax filtering, as specified by [VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax](#) returned by [vkGetPhysicalDeviceImageFormatProperties2](#)

- VUID-vkCmdTraceRaysNV-cubicRangeClamp-09212

If the [cubicRangeClamp](#) feature is not enabled, then any [VkImageView](#) being sampled with [VK_FILTER_CUBIC_EXT](#) as a result of this command **must** not have a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#)

- VUID-vkCmdTraceRaysNV-reductionMode-09213

Any [VkImageView](#) being sampled with a [VkSamplerReductionModeCreateInfo::reductionMode](#) equal to [VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM](#) as a

result of this command **must** sample with `VK_FILTER_CUBIC_EXT`

- VUID-vkCmdTraceRaysNV-selectableCubicWeights-09214

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`

- VUID-vkCmdTraceRaysNV-flags-02696

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07027

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07028

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07029

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-OpTypeImage-07030

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`

- VUID-vkCmdTraceRaysNV-None-08600

If a `a bound shader` was created with a pipeline layout and statically uses a set n , a descriptor set **must** have been bound to n at the same pipeline bind point, with layouts compatible for set n with the layout(s) used to create the shader, as described in [Pipeline Layout Compatibility](#)

- VUID-vkCmdTraceRaysNV-None-08601

If a `a bound shader` was created with a pipeline layout or specified push constant ranges and statically uses a push constant value, that value **must** have been set for the same pipeline bind point, with push constant ranges that are `compatible` with the push constant range used to create the shader

- VUID-vkCmdTraceRaysNV-None-10068

For each array of resources that is used by a `a bound shader`, the indices used to access members of the array **must** be less than the descriptor count for the identified binding in the descriptor sets used by this command

- VUID-vkCmdTraceRaysNV-None-08114

Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, **must** be valid if they are accessed as described by `descriptor validity` by the `VkPipeline` bound to

the pipeline bind point used by this command and the bound [VkPipeline](#) was not created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysNV-imageLayout-00344

If an image descriptor is accessed by a shader, the [VkImageLayout](#) **must** match the subresource accessible from the [VkImageView](#) as defined by the [image layout matching rules](#)

- VUID-vkCmdTraceRaysNV-None-08115

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdBindDescriptorSets](#), the bound [VkPipeline](#) **must** have been created without [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysNV-None-08116

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by the [VkPipeline](#) bound to the pipeline bind point used by this command and the bound [VkPipeline](#) was created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysNV-None-08604

Descriptors in bound descriptor buffers, specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), **must** be valid if they are dynamically used by any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysNV-None-08117

If the descriptors used by the [VkPipeline](#) bound to the pipeline bind point were specified via [vkCmdSetDescriptorBufferOffsetsEXT](#), the bound [VkPipeline](#) **must** have been created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#)

- VUID-vkCmdTraceRaysNV-None-08119

If a descriptor is dynamically used with a [VkPipeline](#) created with [VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysNV-None-08605

If a descriptor is dynamically used with a [VkShaderEXT](#) created with a [VkDescriptorSetLayout](#) that was created with [VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT](#), the descriptor memory **must** be resident

- VUID-vkCmdTraceRaysNV-None-08606

If the [shaderObject](#) feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- VUID-vkCmdTraceRaysNV-None-08608

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state specified statically in the [VkPipeline](#) object bound to the pipeline bind point used by this command, since that pipeline was bound

- VUID-vkCmdTraceRaysNV-uniformBuffers-06935

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either

[VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or
[VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for
[uniformBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not
access values outside of the range of the buffer as specified in the descriptor set bound to
the same pipeline bind point

- VUID-vkCmdTraceRaysNV-None-08612

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage
corresponding to the pipeline bind point used by this command accesses a uniform
buffer, it **must** not access values outside of the range of the buffer as specified in the
descriptor set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-storageBuffers-06936

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this
command accesses a storage buffer, and that stage was created without enabling either
[VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or
[VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for
[storageBuffers](#), and the [robustBufferAccess](#) feature is not enabled, that stage **must** not
access values outside of the range of the buffer as specified in the descriptor set bound to
the same pipeline bind point

- VUID-vkCmdTraceRaysNV-None-08613

If the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage
corresponding to the pipeline bind point used by this command accesses a storage buffer,
it **must** not access values outside of the range of the buffer as specified in the descriptor
set bound to the same pipeline bind point

- VUID-vkCmdTraceRaysNV-commandBuffer-02707

If [commandBuffer](#) is an unprotected command buffer and [protectedNoFault](#) is not supported,
any resource accessed by [bound shaders](#) **must** not be a protected resource

- VUID-vkCmdTraceRaysNV-viewType-07752

If a [VkImageView](#) is accessed as a result of this command, then the image view's [viewType](#)
must match the [Dim](#) operand of the [OpTypeImage](#) as described in [Compatibility Between
SPIR-V Image Dimensions and Vulkan ImageView Types](#)

- VUID-vkCmdTraceRaysNV-format-07753

If a [VkImageView](#) or [VkBufferView](#) is accessed as a result of this command, then the
[numeric type](#) of the view's [format](#) and the [Sampled Type](#) operand of the [OpTypeImage](#) **must**
match

- VUID-vkCmdTraceRaysNV-OpImageWrite-08795

If a [VkImageView](#) created with a format other than [VK_FORMAT_A8_UNORM](#) is accessed
using [OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that
instruction **must** have at least as many components as the image view's format

- VUID-vkCmdTraceRaysNV-OpImageWrite-08796

If a [VkImageView](#) created with the format [VK_FORMAT_A8_UNORM](#) is accessed using
[OpImageWrite](#) as a result of this command, then the [Type](#) of the [Texel](#) operand of that
instruction **must** have four components

- VUID-vkCmdTraceRaysNV-OpImageWrite-04469

If a [VkBufferView](#) is accessed using [OpImageWrite](#) as a result of this command, then the

Type of the `Texel` operand of that instruction **must** have at least as many components as the buffer view's format

- VUID-vkCmdTraceRaysNV-SampledType-04470
If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysNV-SampledType-04471
If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysNV-SampledType-04472
If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 64
- VUID-vkCmdTraceRaysNV-SampledType-04473
If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction **must** have a `Width` of 32
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04474
If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysNV-sparseImageInt64Atomics-04475
If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag **must** not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06971
If `OpImageSampleWeightedQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06972
If `OpImageSampleWeightedQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageBoxFilterQCOM-06973
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSSDQCOM-06974
If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-06975
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchSADQCOM-06976
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06977
If `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, or `OpImageBlockMatchSSDQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageSampleWeightedQCOM-06978
If any command other than `OpImageSampleWeightedQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09215
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's `format features` **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09216
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format **must** be a single-component format
- VUID-vkCmdTraceRaysNV-OpImageBlockMatchWindow-09217
If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail `integer texel coordinate validation`
- VUID-vkCmdTraceRaysNV-None-07288
Any shader invocation executed by this command **must** `terminate`
- VUID-vkCmdTraceRaysNV-None-09600
If a descriptor with type equal to any of `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` is accessed as a result of this command, all image subresources identified by that descriptor **must** be in the image layout identified when the descriptor was written
- VUID-vkCmdTraceRaysNV-commandBuffer-10746

The `VkDeviceMemory` object allocated from a `VkMemoryHeap` with the `VK_MEMORY_HEAP_TILE_MEMORY_BIT_QCOM` property that is bound to a resource accessed as a result of this command **must** be the active bound `bound tile memory object` in `commandBuffer`

- VUID-vkCmdTraceRaysNV-None-10678

If this command is recorded inside a `tile shading render pass` instance, the stages corresponding to the pipeline bind point used by this command **must** only include `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, and/or `VK_SHADER_STAGE_COMPUTE_BIT`

- VUID-vkCmdTraceRaysNV-None-10679

If this command is recorded where `per-tile execution model` is enabled, there **must** be no access to any image while the image was be transitioned to the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` layout

- VUID-vkCmdTraceRaysNV-pDescription-09900

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the underlying `VkTensorARM` object **must** have been created with the `VK_TENSOR_USAGE_SHADER_BIT_ARM` usage flag set

- VUID-vkCmdTraceRaysNV-dimensionCount-09905

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the `Rank` of the `OpTypeTensorARM` of the tensor resource variable **must** be equal to the `dimensionCount` provided via `VkTensorCreateInfoARM::pDescription` when creating the underlying `VkTensorARM` object

- VUID-vkCmdTraceRaysNV-OpTypeTensorARM-09906

If a `VK_DESCRIPTOR_TYPE_TENSOR_ARM` descriptor is accessed as a result of this command, then the element type of the `OpTypeTensorARM` of the tensor resource variable **must** be `compatible` with the `VkFormat` of the `VkTensorViewARM` used for the access

- VUID-vkCmdTraceRaysNV-None-11297

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses a `OpTypeStruct` decorated with `Block` or `BufferBlock` using that mapping, the calculated offset for the resource heap **must** be a multiple of `bufferDescriptorAlignment`

- VUID-vkCmdTraceRaysNV-None-11298

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a `descriptor mapping` using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, and a shader accesses an `OpTypeImage` or `OpTypeSampledImage` using that mapping, the calculated offset for the resource heap **must** be a multiple of `imageDescriptorAlignment`

- VUID-vkCmdTraceRaysNV-None-11299

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeSampler](#) or [OpTypeSampledImage](#) using that mapping, the calculated offset for the sampler heap **must** be a multiple of [samplerDescriptorAlignment](#)

- VUID-vkCmdTraceRaysNV-None-11397

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_PUSH_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_SHADER_RECORD_INDEX_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses an [OpTypeTensorARM](#) using that mapping, the calculated offset for the resource heap **must** be a multiple of [tensorDescriptorAlignment](#)

- VUID-vkCmdTraceRaysNV-None-11300

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 4

- VUID-vkCmdTraceRaysNV-None-11301

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT](#) or [VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysNV-None-11302

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysNV-None-11304

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a multiple of 8

- VUID-vkCmdTraceRaysNV-None-11305

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address at the expected location in push data **must** be a valid [VkDeviceAddress](#) backed by physical memory at every offset specified by each mapping

- VUID-vkCmdTraceRaysNV-None-11306

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a resource using that mapping, the value of the address pointed to by the address in push data **must** be a valid [VkDeviceAddress](#)

- VUID-vkCmdTraceRaysNV-None-11308

For each [descriptor heap](#) that is statically used by a [bound shader](#), either directly or via a [descriptor mapping](#), a valid descriptor heap **must** be bound

- VUID-vkCmdTraceRaysNV-None-11309

If a [bound shader](#) was created as a [VkShaderEXT](#) with the [VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT](#) flag or as part of a pipeline with the [VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT](#) flag, execution of this command **must** not result in any descriptor read accessing data outside of the user range of the respective heap bound by [vkCmdBind*HeapEXT](#) commands

- VUID-vkCmdTraceRaysNV-None-11372

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a uniform buffer or uniform texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [uniformBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified via [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysNV-None-11373

If any stage of the [VkPipeline](#) object bound to the pipeline bind point used by this command accesses a storage buffer or storage texel buffer through a descriptor in the bound resource heap, that stage was created without enabling either [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS](#) or [VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2](#) for [storageBuffers](#), the [robustBufferAccess2](#) feature is not enabled, and the [robustBufferAccess](#) feature is not enabled, that stage **must** not access values outside of the range of the descriptor specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysNV-None-11374

If the [robustBufferAccess2](#) feature is not enabled, the [robustBufferAccess](#) feature is not enabled, and any [VkShaderEXT](#) bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, uniform texel buffer, storage buffer, or storage texel buffer, that shader **must** not access values outside of the range of the buffer as specified by [VkDeviceAddressRangeKHR](#) when the descriptor was written

- VUID-vkCmdTraceRaysNV-pBindInfo-11375

If any [bound shader](#) uses an embedded sampler via a [descriptor mapping](#), the value of `pBindInfo->reservedRangeSize` set for `vkCmdBindSamplerHeapEXT` **must** be greater than or equal to `minSamplerHeapReservedRangeWithEmbedded`

- VUID-vkCmdTraceRaysNV-None-11376

If a [bound shader](#) was created as a `VkShaderEXT` with the `VK_SHADER_CREATE_DESCRIPTOR_HEAP_BIT_EXT` flag or as part of a pipeline with the `VK_PIPELINE_CREATE_2_DESCRIPTOR_HEAP_BIT_EXT` flag, and that shader statically uses a push constant value, that value **must** have been set by `vkCmdPushDataEXT`

- VUID-vkCmdTraceRaysNV-None-11398

If a [bound shader](#) was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the access **must** not be [out of bounds](#)

- VUID-vkCmdTraceRaysNV-None-11437

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a resource using that mapping, the buffer from which the address in push data was queried **must** have been created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysNV-None-11438

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** have been queried from a buffer created with the `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT` usage flag set

- VUID-vkCmdTraceRaysNV-None-11441

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, and a shader accesses a uniform buffer using that mapping, the address that the uniform buffer is mapped to **must** be aligned to `minUniformBufferOffsetAlignment`

- VUID-vkCmdTraceRaysNV-None-11439

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** have been queried from a buffer created with the [VK_BUFFER_USAGE_STORAGE_BUFFER_BIT](#) usage flag set

- VUID-vkCmdTraceRaysNV-None-11442

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses a storage buffer using that mapping, the address that the storage buffer is mapped to **must** be aligned to [minStorageBufferOffsetAlignment](#)

- VUID-vkCmdTraceRaysNV-None-11485

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), and a shader accesses an acceleration structure using that mapping, the address that the acceleration structure is mapped to **must** be an acceleration structure address retrieved from a [VkAccelerationStructureKHR](#) object via [vkGetAccelerationStructureDeviceAddressKHR](#) or handle retrieved from a [VkAccelerationStructureNV](#) object via [vkGetAccelerationStructureHandleNV](#)

- VUID-vkCmdTraceRaysNV-index-11450

If a shader uses a sampler descriptor to sample an image as a result of this command, and that sampler descriptor uses a custom border color with an index defined by [VkSamplerCustomBorderColorIndexCreateInfoEXT](#), the value of [VkSamplerCustomBorderColorIndexCreateInfoEXT::index](#) **must** have been registered before this command was recorded, and still be registered during the sampling operation, with an identically defined color

- VUID-vkCmdTraceRaysNV-protectedNoFault-11455

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was created with a [descriptor mapping](#) using [VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT](#), [VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT](#), or [VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT](#), the address that the resource is mapped to **must** have been queried from a buffer created without the [VK_BUFFER_CREATE_PROTECTED_BIT](#) create flag set

- VUID-vkCmdTraceRaysNV-protectedNoFault-11456

If [protectedNoFault](#) is not supported, a pipeline is bound to the pipeline bind point used by this command, or a shader is bound to a shader stage used by this command, and it was

created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_EXT` or `VK_DESCRIPTOR_MAPPING_SOURCE_HEAP_WITH_INDIRECT_INDEX_ARRAY_EXT`, the address of the indirect memory **must** have been queried from a buffer created without the `VK_BUFFER_CREATE_PROTECTED_BIT` create flag set

- VUID-vkCmdTraceRaysNV-None-03429

Any shader group handle referenced by this call **must** have been queried from the bound ray tracing pipeline

- VUID-vkCmdTraceRaysNV-None-09458

If the bound ray tracing pipeline state was created with the `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state enabled then `vkCmdSetRayTracingPipelineStackSizeKHR` **must** have been called in the current command buffer prior to this trace command

- VUID-vkCmdTraceRaysNV-None-11319

If a pipeline is bound to the pipeline bind point used by this command, or shader is bound to a shader stage used by this command, and it was created with a descriptor mapping using `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, the value of the address at the expected location in shader record data **must** be a valid address

- VUID-vkCmdTraceRaysNV-commandBuffer-04624

`commandBuffer` **must** not be a protected command buffer

- VUID-vkCmdTraceRaysNV-maxRecursionDepth-03625

This command **must** not cause a pipeline trace ray instruction to be executed from a shader invocation with a `recursion depth` greater than the value of `maxRecursionDepth` used to create the bound ray tracing pipeline

- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-04042

If `raygenShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02455

`raygenShaderBindingOffset` **must** be less than the size of `raygenShaderBindingTableBuffer`

- VUID-vkCmdTraceRaysNV-raygenShaderBindingOffset-02456

`raygenShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-04043

If `missShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02457

`missShaderBindingOffset` **must** be less than the size of `missShaderBindingTableBuffer`

- VUID-vkCmdTraceRaysNV-missShaderBindingOffset-02458

`missShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`

- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-04044

If `hitShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02459
`hitShaderBindingOffset` **must** be less than the size of `hitShaderBindingTableBuffer`
- VUID-vkCmdTraceRaysNV-hitShaderBindingOffset-02460
`hitShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-04045
If `callableShaderBindingTableBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02461
`callableShaderBindingOffset` **must** be less than the size of `callableShaderBindingTableBuffer`
- VUID-vkCmdTraceRaysNV-callableShaderBindingOffset-02462
`callableShaderBindingOffset` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupBaseAlignment`
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02463
`missShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02464
`hitShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02465
`callableShaderBindingStride` **must** be a multiple of `VkPhysicalDeviceRayTracingPropertiesNV::shaderGroupHandleSize`
- VUID-vkCmdTraceRaysNV-missShaderBindingStride-02466
`missShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-hitShaderBindingStride-02467
`hitShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-callableShaderBindingStride-02468
`callableShaderBindingStride` **must** be less than or equal to `VkPhysicalDeviceRayTracingPropertiesNV::maxShaderGroupStride`
- VUID-vkCmdTraceRaysNV-width-02469
`width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[0]`
- VUID-vkCmdTraceRaysNV-height-02470
`height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[1]`
- VUID-vkCmdTraceRaysNV-depth-02471
`depth` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupCount[2]`
- VUID-vkCmdTraceRaysNV-allowClusterAccelerationStructure-10577
If the traced geometry contains a cluster acceleration structure, then `VkRayTracingPipelineClusterAccelerationStructureCreateInfoNV::allowClusterAccelerationStructure` **must** have been set for that pipeline

Valid Usage (Implicit)

- VUID-vkCmdTraceRaysNV-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdTraceRaysNV-raygenShaderBindingTableBuffer-parameter
`raygenShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-missShaderBindingTableBuffer-parameter
If `missShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `missShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-hitShaderBindingTableBuffer-parameter
If `hitShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `hitShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-callableShaderBindingTableBuffer-parameter
If `callableShaderBindingTableBuffer` is not `VK_NULL_HANDLE`, `callableShaderBindingTableBuffer` **must** be a valid `VkBuffer` handle
- VUID-vkCmdTraceRaysNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdTraceRaysNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT` operations
- VUID-vkCmdTraceRaysNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdTraceRaysNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdTraceRaysNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdTraceRaysNV-commonparent
Each of `callableShaderBindingTableBuffer`, `commandBuffer`, `hitShaderBindingTableBuffer`, `missShaderBindingTableBuffer`, and `raygenShaderBindingTableBuffer` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT	Action

Conditional Rendering

vkCmdTraceRaysNV is not affected by [conditional rendering](#)

46.3. Shader Binding Table

A *shader binding table* is a resource which establishes the relationship between the ray tracing pipeline and the acceleration structures that were built for the ray tracing pipeline. It indicates the shaders that operate on each geometry in an acceleration structure. In addition, it contains the resources accessed by each shader, including indices of textures, buffer device addresses, and constants. The application allocates and manages *shader binding tables* as [VkBuffer](#) objects.

Each entry in the shader binding table consists of [shaderGroupHandleSize](#) bytes of data, either as queried by [vkGetRayTracingShaderGroupHandlesKHR](#) to refer to those specified shaders, or all zeros to refer to a zero shader group. A zero shader group behaves as though it is a shader group consisting entirely of [VK_SHADER_UNUSED_KHR](#). The remainder of the data specified by the stride is application-visible data that can be referenced by a [ShaderRecordBufferKHR](#) block in the shader.

The shader binding tables to use in a ray tracing pipeline are passed to the [vkCmdTraceRaysNV](#), [vkCmdTraceRaysKHR](#), or [vkCmdTraceRaysIndirectKHR](#) commands. Shader binding tables are read-only in shaders that are executing on the ray tracing pipeline.

Shader variables identified with the [ShaderRecordBufferKHR](#) storage class are used to access the provided shader binding table. Such variables **must** be:

- typed as [OpTypeStruct](#), or an array of this type,
- identified with a [Block](#) decoration, and
- laid out explicitly using the [Offset](#), [ArrayStride](#), and [MatrixStride](#) decorations as specified in [Offset and Stride Assignment](#).

The [Offset](#) decoration for any member of a [Block](#)-decorated variable in the [ShaderRecordBufferKHR](#) storage class **must** not cause the space required for that variable to extend outside the range [0, [maxStorageBufferRange](#)).

Accesses to the shader binding table from ray tracing pipelines **must** be [synchronized](#) with the [VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR](#) pipeline stage and an access type of [VK_ACCESS_SHADER_READ_BIT](#).

NOTE

Because different shader record buffers can be associated with the same shader, a shader variable with `ShaderRecordBufferKHR` storage class will not be dynamically uniform if different invocations of the same shader can reference different data in the shader record buffer, such as if the same shader occurs twice in the shader binding table with a different shader record buffer. In this case, if the `DescriptorHeapEXT` capability is not declared, when indexing resources based on values in the `ShaderRecordBufferKHR` storage class, the index should be decorated as `NonUniform`.

46.3.1. Indexing Rules

In order to execute the correct shaders and access the correct resources during a ray tracing dispatch, the implementation **must** be able to locate shader binding table entries at various stages of execution. This is accomplished by defining a set of indexing rules that compute shader binding table record positions relative to the buffer's base address in memory. The application **must** organize the contents of the shader binding table's memory in a way that application of the indexing rules will lead to correct records.

Ray Generation Shaders

Only one ray generation shader is executed per ray tracing dispatch.

For `vkCmdTraceRaysKHR`, the location of the ray generation shader is specified by the `pRaygenShaderBindingTable->deviceAddress` parameter—there is no indexing. All data accessed **must** be less than `pRaygenShaderBindingTable->size` bytes from `deviceAddress`. `pRaygenShaderBindingTable->stride` is unused, and **must** be equal to `pRaygenShaderBindingTable->size`.

For `vkCmdTraceRaysNV`, the location of the ray generation shader is specified by the `raygenShaderBindingTableBuffer` and `raygenShaderBindingOffset` parameters—there is no indexing.

Hit Shaders

The base for the computation of intersection, any-hit, and closest hit shader locations is the `instanceShaderBindingTableRecordOffset` value stored with each instance of a top-level acceleration structure (`VkAccelerationStructureInstanceKHR`). This value determines the beginning of the shader binding table records for a given instance.

In the following rule, `geometryIndex` refers to the `geometry index` of the intersected geometry within the instance.

The `sbtRecordOffset` and `sbtRecordStride` values are passed in as parameters to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, these correspond to the `SBTOffset` and `SBTStride` parameters to the `pipeline trace ray` instructions.

The result of this computation is then added to `pHitShaderBindingTable->deviceAddress`, a device address passed to `vkCmdTraceRaysKHR`, or `hitShaderBindingOffset`, a base offset passed to `vkCmdTraceRaysNV`.

For `vkCmdTraceRaysKHR`, the complete rule to compute a hit shader binding table record address in the `pHitShaderBindingTable` is:

$$\text{pHitShaderBindingTable->deviceAddress} + \text{pHitShaderBindingTable->stride} \times (\text{instanceShaderBindingTableRecordOffset} + \text{geometryIndex} \times \text{sbtRecordStride} + \text{sbtRecordOffset})$$

All data accessed **must** be less than `pHitShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a hit shader binding table record address in the `hitShaderBindingTableBuffer` is:

$$\text{hitShaderBindingOffset} + \text{hitShaderBindingStride} \times (\text{instanceShaderBindingTableRecordOffset} + \text{geometryIndex} \times \text{sbtRecordStride} + \text{sbtRecordOffset})$$

Miss Shaders

A miss shader is executed whenever a ray query fails to find an intersection for the given scene geometry. Multiple miss shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of miss shader locations is `pMissShaderBindingTable->deviceAddress`, a device address passed into `vkCmdTraceRaysKHR`, or `missShaderBindingOffset`, a base offset passed into `vkCmdTraceRaysNV`.

The `missIndex` value is passed in as a parameter to `traceNV()` or `traceRayEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `MissIndex` parameter to the `pipeline trace ray` instructions.

For `vkCmdTraceRaysKHR`, the complete rule to compute a miss shader binding table record address in the `pMissShaderBindingTable` is:

$$\text{pMissShaderBindingTable->deviceAddress} + \text{pMissShaderBindingTable->stride} \times \text{missIndex}$$

All data accessed **must** be less than `pMissShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a miss shader binding table record address in the `missShaderBindingTableBuffer` is:

$$\text{missShaderBindingOffset} + \text{missShaderBindingStride} \times \text{missIndex}$$

Callable Shaders

A callable shader is executed when requested by a ray tracing shader. Multiple callable shaders **may** be executed throughout a ray tracing dispatch.

The base for the computation of callable shader locations is `pCallableShaderBindingTable-`

>deviceAddress, a device address passed into `vkCmdTraceRaysKHR`, or `callableShaderBindingOffset`, a base offset passed into `vkCmdTraceRaysNV`.

The `sbtRecordIndex` value is passed in as a parameter to `executeCallableNV()` or `executeCallableEXT()` calls made in the shaders. See Section 8.19 (Ray Tracing Functions) of the OpenGL Shading Language Specification for more details. In SPIR-V, this corresponds to the `SBTIndex` parameter to the `OpExecuteCallableNV` or `OpExecuteCallableKHR` instruction.

For `vkCmdTraceRaysKHR`, the complete rule to compute a callable shader binding table record address in the `pCallableShaderBindingTable` is:

$$\text{pCallableShaderBindingTable->deviceAddress} + \text{pCallableShaderBindingTable->stride} \times \text{sbtRecordIndex}$$

All data accessed **must** be less than `pCallableShaderBindingTable->size` bytes from the base address.

For `vkCmdTraceRaysNV`, the offset and stride come from direct parameters, so the full rule to compute a callable shader binding table record address in the `callableShaderBindingTableBuffer` is:

$$\text{callableShaderBindingOffset} + \text{callableShaderBindingStride} \times \text{sbtRecordIndex}$$

46.4. Ray Tracing Pipeline Stack

Ray tracing pipelines have a potentially large set of shaders which **may** be invoked in various call chain combinations to perform ray tracing. To store parameters for a given shader execution, an implementation **may** use a stack of data in memory. This stack **must** be sized to the sum of the stack sizes of all shaders in any call chain executed by the application.

If the stack size is not set explicitly, the stack size for a pipeline is:

$$\text{rayGenStackMax} + \min(1, \text{maxPipelineRayRecursionDepth}) \times \max(\text{closestHitStackMax}, \text{missStackMax}, \text{intersectionStackMax} + \text{anyHitStackMax}) + \max(0, \text{maxPipelineRayRecursionDepth} - 1) \times \max(\text{closestHitStackMax}, \text{missStackMax}) + 2 \times \text{callableStackMax}$$

where `rayGenStackMax`, `closestHitStackMax`, `missStackMax`, `anyHitStackMax`, `intersectionStackMax`, and `callableStackMax` are the maximum stack values queried by the respective shader stages for any shaders in any shader groups defined by the pipeline.

This stack size is potentially significant, so an application **may** want to provide a more accurate stack size after pipeline compilation. The value that the application provides is the maximum value of the sum of all shaders in a call chain across all possible call chains, taking into account any application specific knowledge about the properties of the call chains.

NOTE

For example, if an application has two types of closest hit and miss shaders that it can use but the first level of rays will only use the first kind (possibly reflection) and the second level will only use the second kind (occlusion or shadow ray, for

example) then the application can compute the stack size by something similar to:

```
rayGenStack + max(closestHit1Stack, miss1Stack) + max(closestHit2Stack, miss2Stack)
```

This is guaranteed to be no larger than the default stack size computation which assumes that both call levels may be the larger of the two.

46.5. Ray Tracing Capture Replay

In a similar way to [bufferDeviceAddressCaptureReplay](#), the [rayTracingPipelineShaderGroupHandleCaptureReplay](#) feature allows the querying of opaque data which **can** be used in a future replay.

During the capture phase, capture/replay tools are expected to query opaque data for shader group handle replay using [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#).

Providing the opaque data during replay, using [VkRayTracingShaderGroupCreateInfoKHR::pShaderGroupCaptureReplayHandle](#) at pipeline creation time, causes the implementation to generate identical shader group handles to those in the capture phase, allowing capture/replay tools to reuse previously recorded shader binding table buffer contents or to obtain the same handles by calling [vkGetRayTracingCaptureReplayShaderGroupHandlesKHR](#) again.

46.6. Ray Tracing Validation

Ray tracing validation **can** help root cause application issues and improve performance. Unlike existing validation layers, ray tracing validation performs checks at an implementation level, which helps identify potential problems that **may** not be caught by the layer.

By enabling the [ray tracing validation](#) feature, warnings and errors **can** be delivered straight from a ray tracing implementation to the application through a [messenger callback](#) registered with the implementation, where they **can** be processed through existing application-side debugging or logging systems.

Chapter 47. Memory Decompression

Commands that **can** be used to decompress memory between one or more memory regions are [vkCmdDecompressMemoryEXT](#), [vkCmdDecompressMemoryNV](#), [vkCmdDecompressMemoryIndirectCountNV](#), and [vkCmdDecompressMemoryIndirectCountEXT](#).

To decompress memory containing compressed data, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryEXT(
    VkCommandBuffer                      commandBuffer,
    const VkDecompressMemoryInfoEXT*    pDecompressMemoryInfoEXT);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pDecompressMemoryInfoEXT` is a pointer to a [VkDecompressMemoryInfoEXT](#) structure describing the decompression parameters.

Valid Usage

- VUID-vkCmdDecompressMemoryEXT-memoryDecompression-11761
The `memoryDecompression` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdDecompressMemoryEXT-pDecompressMemoryInfoEXT-parameter
`pDecompressMemoryInfoEXT` **must** be a valid pointer to a valid [VkDecompressMemoryInfoEXT](#) structure
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-recording
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdDecompressMemoryEXT-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support [VK_QUEUE_COMPUTE_BIT](#), or [VK_QUEUE_GRAPHICS_BIT](#) operations
- VUID-vkCmdDecompressMemoryEXT-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryEXT-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryEXT-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT VK_QUEUE_VIDEO_DECODE_BIT	Action

Conditional Rendering

`vkCmdDecompressMemoryEXT` is not affected by [conditional rendering](#)

The `VkDecompressMemoryInfoEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkMemoryDecompressionMethodFlagsEXT decompressionMethod;
    uint32_t                    regionCount;
    const VkDecompressMemoryRegionEXT* pRegions;
} VkDecompressMemoryInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsEXT` with a single bit set specifying the method used to decompress data.
- `regionCount` is the number of regions to decompress.
- `pRegions` is a pointer to an array of `VkDecompressMemoryRegionEXT` structures specifying the regions to decompress.

Each memory region specified in `pRegions` is decompressed from the source to the destination address based on the decompression method specified in `decompressionMethod`. If any of the specified source and destination regions overlap in memory, then the results of decompression are

undefined.

Valid Usage

- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-07690
The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11762
If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT`, then for each element of `pRegions`, `decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-11763
`decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods`

Valid Usage (Implicit)

- VUID-VkDecompressMemoryInfoEXT-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_DECOMPRESS_MEMORY_INFO_EXT`
- VUID-VkDecompressMemoryInfoEXT-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-parameter
`decompressionMethod` **must** be a valid combination of `VkMemoryDecompressionMethodFlagBitsEXT` values
- VUID-VkDecompressMemoryInfoEXT-decompressionMethod-requiredbitmask
`decompressionMethod` **must** not be `0`
- VUID-VkDecompressMemoryInfoEXT-pRegions-parameter
`pRegions` **must** be a valid pointer to an array of `regionCount` `VkDecompressMemoryRegionEXT` structures
- VUID-VkDecompressMemoryInfoEXT-regionCount-arraylength
`regionCount` **must** be greater than `0`

The `VkDecompressMemoryRegionEXT` structure is defined as:

```
// Provided by VK_EXT_memory_decompression
typedef struct VkDecompressMemoryRegionEXT {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       compressedSize;
    VkDeviceSize       decompressedSize;
} VkDecompressMemoryRegionEXT;
```

- `srcAddress` is the address where compressed data is stored.

- **dstAddress** is the destination address where decompressed data will be written.
- **compressedSize** is the size of compressed data in bytes.
- **decompressedSize** is the size of decompressed data in bytes.

Accesses to compressed and decompressed data specified in **srcAddress** and **dstAddress** **must** be **synchronized** with the **VK_PIPELINE_STAGE_2_MEMORY_DECOMPRESSION_BIT_EXT** pipeline stage with **access** type of **VK_ACCESS_2_MEMORY_DECOMPRESSION_READ_BIT_EXT** or **VK_ACCESS_2_MEMORY_DECOMPRESSION_WRITE_BIT_EXT**.

Valid Usage

- VUID-VkDecompressMemoryRegionEXT-srcAddress-07685
srcAddress **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07686
The memory range defined by **srcAddress** and **compressedSize** **must** be contained within the size of the buffer bound to **srcAddress**, minus the offset of **srcAddress** from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07687
dstAddress **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionEXT-dstAddress-07688
The memory range defined by **dstAddress** and **decompressedSize** **must** be contained within the size of the buffer bound to **dstAddress**, minus the offset of **dstAddress** from the base address of that buffer
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-07689
decompressedSize **must** be large enough to hold the decompressed data based on the **decompressionMethod**
- VUID-VkDecompressMemoryRegionEXT-compressedSize-11795
compressedSize **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-decompressedSize-11796
decompressedSize **must** not be zero
- VUID-VkDecompressMemoryRegionEXT-srcAddress-07691
The memory range defined by **srcAddress** and **compressedSize** **must** not overlap the memory range defined by **dstAddress** and **decompressedSize**
- VUID-VkDecompressMemoryRegionEXT-srcAddress-11764
srcAddress **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT** usage flag set
- VUID-VkDecompressMemoryRegionEXT-dstAddress-11765
dstAddress **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_2_MEMORY_DECOMPRESSION_BIT_EXT** usage flag set

Valid Usage (Implicit)

- VUID-VkDecompressMemoryRegionEXT-srcAddress-parameter `srcAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkDecompressMemoryRegionEXT-dstAddress-parameter `dstAddress` **must** be a valid `VkDeviceAddress` value

To decompress memory containing compressed data, call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryNV(
    VkCommandBuffer          commandBuffer,
    uint32_t                 decompressRegionCount,
    const VkDecompressMemoryRegionNV* pDecompressMemoryRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `decompressRegionCount` is the number of memory regions to decompress.
- `pDecompressMemoryRegions` is a pointer to an array of `decompressRegionCount` `VkDecompressMemoryRegionNV` structures specifying decompression parameters.

Each region specified in `pDecompressMemoryRegions` is decompressed from the compressed to decompressed region based on the decompression method specified in `VkDecompressMemoryRegionNV::decompressionMethod`. If the regions containing compressed and decompressed data overlap, the decompression behavior is undefined.

Valid Usage

- VUID-vkCmdDecompressMemoryNV-None-07684
The `memoryDecompression` feature **must** be enabled

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryNV-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecompressMemoryNV-pDecompressMemoryRegions-parameter `pDecompressMemoryRegions` **must** be a valid pointer to an array of `decompressRegionCount` valid `VkDecompressMemoryRegionNV` structures
- VUID-vkCmdDecompressMemoryNV-commandBuffer-recording `commandBuffer` **must** be in the `recording state`
- VUID-vkCmdDecompressMemoryNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations

- VUID-vkCmdDecompressMemoryNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryNV-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdDecompressMemoryNV-decompressRegionCount-arraylength
`decompressRegionCount` **must** be greater than 0

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT HICS_BIT	Action

Conditional Rendering

`vkCmdDecompressMemoryNV` is not affected by [conditional rendering](#)

The `VkDecompressMemoryRegionNV` structure is defined as:

```
// Provided by VK_NV_memory_decompression
typedef struct VkDecompressMemoryRegionNV {
    VkDeviceAddress    srcAddress;
    VkDeviceAddress    dstAddress;
    VkDeviceSize       compressedSize;
    VkDeviceSize       decompressedSize;
    VkMemoryDecompressionMethodFlagsEXT decompressionMethod;
} VkDecompressMemoryRegionNV;
```

- `srcAddress` is the address where compressed data is stored.
- `dstAddress` is the destination address where decompressed data will be written.

- `compressedSize` is the size of compressed data in bytes.
- `decompressedSize` is the size of decompressed data in bytes.
- `decompressionMethod` is a bitmask of `VkMemoryDecompressionMethodFlagBitsNV` with a single bit set specifying the method used to decompress data.

Valid Usage

- VUID-VkDecompressMemoryRegionNV-decompressionMethod-07690
The `decompressionMethod` **must** have a single bit set
- VUID-VkDecompressMemoryRegionNV-srcAddress-07685
`srcAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-srcAddress-07686
The memory range defined by `srcAddress` and `compressedSize` **must** be contained within the size of the buffer bound to `srcAddress`, minus the offset of `srcAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionNV-dstAddress-07687
`dstAddress` **must** be 4 byte aligned
- VUID-VkDecompressMemoryRegionNV-dstAddress-07688
The memory range defined by `dstAddress` and `decompressedSize` **must** be contained within the size of the buffer bound to `dstAddress`, minus the offset of `dstAddress` from the base address of that buffer
- VUID-VkDecompressMemoryRegionNV-decompressedSize-07689
`decompressedSize` **must** be large enough to hold the decompressed data based on the `decompressionMethod`
- VUID-VkDecompressMemoryRegionNV-compressedSize-11795
`compressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionNV-decompressedSize-11796
`decompressedSize` **must** not be zero
- VUID-VkDecompressMemoryRegionNV-srcAddress-07691
The memory range defined by `srcAddress` and `compressedSize` **must** not overlap the memory range defined by `dstAddress` and `decompressedSize`
- VUID-VkDecompressMemoryRegionNV-decompressionMethod-09395
If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT`, then `decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-vkCmdDecompressMemoryNV-memoryDecompression-11766
The `memoryDecompression` feature **must** be enabled

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_EXT_memory_decompression
void vkCmdDecompressMemoryIndirectCountEXT(
    VkCommandBuffer                commandBuffer,
    VkMemoryDecompressionMethodFlagsEXT decompressionMethod,
    VkDeviceAddress                indirectCommandsAddress,
    VkDeviceAddress                indirectCommandsCountAddress,
    uint32_t                       maxDecompressionCount,
    uint32_t                       stride);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **decompressionMethod** is a bitmask of **VkMemoryDecompressionMethodFlagBitsEXT** with a single bit set specifying the method used to decompress data.
- **indirectCommandsAddress** is the device address containing decompression parameters laid out as an array of **VkDecompressMemoryRegionEXT** structures.
- **indirectCommandsCountAddress** is the device address containing a 32-bit integer value specifying the decompression count.
- **maxDecompressionCount** is maximum number of decompressions that will be executed. The actual number of executed decompressions is the minimum of the count specified in **indirectCommandsCountAddress** and **maxDecompressionCount**.
- **stride** is the byte stride between successive sets of decompression parameters located starting from **indirectCommandsAddress**.

Each region specified in **indirectCommandsAddress** is decompressed from the source to destination region based on the specified **decompressionMethod**.

Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountEXT-None-07692
The **memoryDecompression** feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07694
indirectCommandsAddress **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT** usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-07695
indirectCommandsAddress **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07697
indirectCommandsCountAddress **must** be a device address allocated to the application from a buffer created with the **VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT** usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07698
indirectCommandsCountAddress **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-07699

The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::maxDecompressionIndirectCount`

- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-11794
All device addresses between `indirectCommandsAddress` and `indirectCommandsAddress + (stride × (count stored in indirectCommandsCountAddress)) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-07690
The `decompressionMethod` **must** have a single bit set
- VUID-vkCmdDecompressMemoryIndirectCountEXT-stride-11767
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkDecompressMemoryRegionEXT)`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-maxDecompressionCount-11768
`maxDecompressionCount` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11769
If `decompressionMethod` is `VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT`, then all values in `VkDecompressMemoryRegionEXT::decompressedSize` **must** be less than or equal to 65536 bytes
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-11810
`decompressionMethod` **must** be a valid bit specified in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods`

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-parameter
`decompressionMethod` **must** be a valid combination of `VkMemoryDecompressionMethodFlagBitsEXT` values
- VUID-vkCmdDecompressMemoryIndirectCountEXT-decompressionMethod-requiredbitmask
`decompressionMethod` **must** not be 0
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsAddress-parameter
`indirectCommandsAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-indirectCommandsCountAddress-parameter
`indirectCommandsCountAddress` **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdDecompressMemoryIndirectCountEXT-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations

- `VUID-vkCmdDecompressMemoryIndirectCountEXT-renderpass`
This command **must** only be called outside of a render pass instance
- `VUID-vkCmdDecompressMemoryIndirectCountEXT-suspended`
This command **must** not be called between suspended render pass instances
- `VUID-vkCmdDecompressMemoryIndirectCountEXT-videocoding`
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	<code>VK_QUEUE_COMPUTE_BIT</code> <code>VK_QUEUE_GRAPHICS_BIT</code>	Action

Conditional Rendering

`vkCmdDecompressMemoryIndirectCountEXT` is not affected by [conditional rendering](#)

To decompress data between one or more memory regions by specifying decompression parameters indirectly in a buffer, call:

```
// Provided by VK_NV_memory_decompression
void vkCmdDecompressMemoryIndirectCountNV(
    VkCommandBuffer          commandBuffer,
    VkDeviceAddress          indirectCommandsAddress,
    VkDeviceAddress          indirectCommandsCountAddress,
    uint32_t                 stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `indirectCommandsAddress` is the device address containing decompression parameters laid out as an array of `VkDecompressMemoryRegionNV` structures.

- `indirectCommandsCountAddress` is the device address containing a 32-bit integer value specifying the decompression count.
- `stride` is the byte stride between successive sets of decompression parameters located starting from `indirectCommandsAddress`.

Each region specified in `indirectCommandsAddress` is decompressed from the source to destination region based on the specified `decompressionMethod`.

Valid Usage

- VUID-vkCmdDecompressMemoryIndirectCountNV-None-07692
The `memoryDecompression` feature **must** be enabled
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07694
`indirectCommandsAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-07695
`indirectCommandsAddress` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07697
`indirectCommandsCountAddress` **must** be a device address allocated to the application from a buffer created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` usage flag set
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07698
`indirectCommandsCountAddress` **must** be a multiple of 4
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-07699
The count stored in `indirectCommandsCountAddress` **must** be less than or equal to `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::maxDecompressionIndirectCount`
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-11794
All device addresses between `indirectCommandsAddress` and `indirectCommandsAddress + (stride × (count stored in indirectCommandsCountAddress)) - 1` **must** be in the buffer device address range of the same buffer
- VUID-vkCmdDecompressMemoryIndirectCountNV-stride-11770
`stride` **must** be a multiple of 4 and **must** be greater than or equal to `sizeof(VkDecompressMemoryRegionNV)`

Valid Usage (Implicit)

- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-parameter-commandBuffer **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsAddress-parameter-indirectCommandsAddress **must** be a valid `VkDeviceAddress` value
- VUID-vkCmdDecompressMemoryIndirectCountNV-indirectCommandsCountAddress-

parameter

`indirectCommandsCountAddress` **must** be a valid `VkDeviceAddress` value

- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdDecompressMemoryIndirectCountNV-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, or `VK_QUEUE_GRAPHICS_BIT` operations
- VUID-vkCmdDecompressMemoryIndirectCountNV-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdDecompressMemoryIndirectCountNV-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdDecompressMemoryIndirectCountNV-videocoding
This command **must** only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary Secondary	Outside	Outside	VK_QUEUE_COMPUTE_BIT VK_QUEUE_GRAPHICS_BIT	Action

Conditional Rendering

`vkCmdDecompressMemoryIndirectCountNV` is not affected by `conditional rendering`

Bits which **can** be set in `VkDecompressMemoryRegionEXT::decompressionMethod` or `VkDecompressMemoryRegionNV::decompressionMethod` specifying the decompression method to select, or returned in `VkPhysicalDeviceMemoryDecompressionPropertiesEXT::decompressionMethods` specifying the available decompression methods are:

```
// Provided by VK_EXT_memory_decompression
// Flag bits for VkMemoryDecompressionMethodFlagBitsEXT
typedef VkFlags64 VkMemoryDecompressionMethodFlagBitsEXT;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT = 0x00000001ULL;
static const VkMemoryDecompressionMethodFlagBitsEXT
VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_NV = 0x00000001ULL;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkMemoryDecompressionMethodFlagBitsEXT
typedef VkMemoryDecompressionMethodFlagBitsEXT VkMemoryDecompressionMethodFlagBitsNV;
```

- [VK_MEMORY_DECOMPRESSION_METHOD_GDEFLATE_1_0_BIT_EXT](#) specifies that the GDeflate 1.0 algorithm is used to decompress data.

```
// Provided by VK_EXT_memory_decompression
typedef VkFlags64 VkMemoryDecompressionMethodFlagsEXT;
```

```
// Provided by VK_NV_memory_decompression
// Equivalent to VkMemoryDecompressionMethodFlagsEXT
typedef VkMemoryDecompressionMethodFlagsEXT VkMemoryDecompressionMethodFlagsNV;
```

[VkMemoryDecompressionMethodFlagsEXT](#) is a bitmask type for specifying a mask of one or more [VkMemoryDecompressionMethodFlagBitsEXT](#).

Chapter 48. Video Coding

Vulkan implementations **may** expose one or more queue families supporting video coding operations. These operations are performed by recording them into a command buffer within a [video coding scope](#), and submitting them to queues with compatible video coding capabilities.

The Vulkan video functionalities are designed to be made available through a set of APIs built on top of each other, consisting of:

- A core API providing common video coding functionalities,
- APIs providing codec-independent video decode and video encode related functionalities, respectively,
- Additional codec-specific APIs built on top of those.

This chapter details the fundamental components and operations of these.

48.1. Video Picture Resources

In the context of video coding, multidimensional arrays of image data that **can** be used as the source or target of video coding operations are referred to as *video picture resources*. They **may** store additional metadata that includes implementation-private information used during the execution of video coding operations, as discussed later.

Video picture resources are backed by [VkImage](#) objects. Individual subregions of [VkImageView](#) objects created from such resources **can** be used as [decode output pictures](#), [encode input pictures](#), [reconstructed pictures](#), and/or [reference pictures](#).

The parameters of a video picture resource are specified using a [VkVideoPictureResourceInfoKHR](#) structure.

The [VkVideoPictureResourceInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoPictureResourceInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkOffset2D          codedOffset;
    VkExtent2D          codedExtent;
    uint32_t            baseArrayLayer;
    VkImageView          imageViewBinding;
} VkVideoPictureResourceInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [codedOffset](#) is the offset in texels of the image subregion to use.
- [codedExtent](#) is the size in pixels of the coded image data.

- `baseArrayLayer` is the array layer of the image view specified in `imageViewBinding` to use as the video picture resource.
- `imageViewBinding` is an image view representing the video picture resource.

The image subresource referred to by such a structure is defined as the image array layer index specified in `baseArrayLayer` relative to the image subresource range the image view specified in `imageViewBinding` was created with.

The meaning of the `codedOffset` and `codedExtent` depends on the command and context the video picture resource is used in, as well as on the used `video profile` and corresponding codec-specific semantics, as described later.

A video picture resource is uniquely defined by the image subresource referred to by an instance of this structure, together with the `codedOffset` and `codedExtent` members that identify the image subregion within the image subresource referenced corresponding to the video picture resource according to the particular codec-specific semantics.

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used `video profile`. As a result, given an effective image subregion corresponding to a video picture resource, the actual image subregion accessed **may** be larger than that as it **may** include additional padding texels due to the picture access granularity. Any writes performed by video coding operations to such padding texels will result in undefined texel values.

Two video picture resources match if they refer to the same image subresource and they specify identical `codedOffset` and `codedExtent` values.

Valid Usage

- VUID-VkVideoPictureResourceInfoKHR-baseArrayLayer-07175
`baseArrayLayer` **must** be less than the `VkImageViewCreateInfo::subresourceRange.layerCount` specified when the image view `imageViewBinding` was created

Valid Usage (Implicit)

- VUID-VkVideoPictureResourceInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR`
- VUID-VkVideoPictureResourceInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkVideoPictureResourceInfoKHR-imageViewBinding-parameter
`imageViewBinding` **must** be a valid `VkImageView` handle

48.2. Decoded Picture Buffer

An integral part of video coding pipelines is the reconstruction of pictures from a compressed video bitstream. A *reconstructed picture* is a [video picture resource](#) resulting from this process.

Such reconstructed pictures **can** be used as *reference pictures* in subsequent video coding operations to provide predictions of the values of samples of subsequently decoded or encoded pictures. The correct use of such reconstructed pictures as reference pictures is driven by the video compression standard, the implementation, and the application-specific use cases.

The list of reference pictures used to provide such predictions within a single video coding operation is referred to as the list of *active reference pictures*.

The *decoded picture buffer (DPB)* is an indexed data structure that maintains the set of reference pictures available to be used in video coding operations. Individual indexed entries of the DPB are referred to as the *decoded picture buffer (DPB) slots*. The range of valid DPB slot indices is between zero and $N-1$, where N is the capacity of the DPB. Each DPB slot **can** refer to a reference picture containing a *video frame* or **can** refer to up to two reference pictures containing the top and/or bottom *fields* that, when both present, together represent a full *video frame*.

In Vulkan, the state and the backing store of the DPB is separated as follows:

- The state of individual DPB slots is maintained by [video session](#) objects.
- The backing store of DPB slots is provided by subregions of [VkImage](#) objects used as [video picture resources](#).

In addition, the implementation **may** also maintain opaque metadata associated with DPB slots, including:

- *Reference picture metadata* corresponding to the video picture resource associated with the DPB slot.

Such metadata **may** be stored by the implementation as part of the DPB slot state maintained by the video session, or as part of the video picture resource backing the DPB slot.

Any metadata stored in the video picture resources backing DPB slots are independent of the video session used to store it, hence such video picture resources **can** be shared with other video sessions. Correspondingly, any metadata that is dependent on the video session will always be stored as part of the DPB slot state maintained by that video session.

The responsibility of managing the DPB is split between the application and the implementation as follows:

- The application maintains the association between [DPB slot](#) indices and corresponding [video picture resources](#).
- The implementation maintains global and per-slot opaque [reference picture metadata](#).

In addition, the application is also responsible for managing the mapping between the codec-specific picture IDs and DPB slots, and any other codec-specific states unless otherwise specified.

48.2.1. DPB Slot States

At a given time, each DPB slot is either in *active* or *inactive* state. Initially, all DPB slots managed by a [video session](#) are in *inactive* state.

A DPB slot **can** be *activated* by using it as the target of picture reconstruction in a video coding operation with the reconstructed picture requested to be set up as a reference picture, according to the codec-specific semantics, changing its state to *active* and associating it with a *picture reference* to the [reconstructed pictures](#).

Some video coding standards allow multiple picture references to be associated with a single DPB slot. In this case the state of the individual picture references **can** be independently updated.

NOTE

As an example, H.264 decoding allows associating a separate top field and bottom field picture with the same DPB slot.

As part of reference picture setup, the implementation **may** also generate [reference picture metadata](#). Such reference picture metadata is specific to each picture reference associated with the DPB slot.

If such a video coding operation completes successfully, the activated DPB slot will have a *valid picture reference* and the [reconstructed picture](#) is associated with the DPB slot. This is true even if the DPB slot is used as the target of a picture reconstruction that only sets up a top field or bottom field reference picture and thus does not yet refer to a complete frame. However, if any data provided as input to such a video coding operation is not compliant with the video compression standard used, that video coding operation **may** complete unsuccessfully, in which case the activated DPB slot will have an *invalid picture reference*. This is true even if the DPB slot previously had a valid picture reference to a top field or bottom field reference picture, but the reconstruction of the other field corresponding to the DPB slot failed.

The application **can** use [queries](#) to get feedback about the outcome of video coding operations and use the resulting [VkQueryResultStatusKHR](#) value to determine whether the video coding operation completed successfully (result status is positive) or unsuccessfully (result status is negative).

Using a [reference picture](#) associated with a DPB slot that has an *invalid picture reference* as an [active reference picture](#) in subsequent video coding operations is legal, however, the contents of the outputs of such operations are undefined, and any DPB slots activated by such video coding operations will also have an *invalid picture reference*. This is true even if such video coding operations **may** otherwise complete successfully.

A DPB slot **can** also be *deactivated* by the application, changing its state to *inactive* and invalidating any picture references and [reference picture metadata](#) associated with the DPB slot.

If an already active DPB slot is used as the target of picture reconstruction in a video coding operation, but the decoded picture is not requested to be set up as a reference picture, according to the codec-specific semantics, no reference picture setup happens and the corresponding picture reference and [reference picture metadata](#) is invalidated within the DPB slot. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

If an already active DPB slot is used as the target of picture reconstruction when decoding a field picture that is not marked as reference, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then the DPB slot is deactivated.
- If the DPB slot is not currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the decoded picture is a bottom field picture, then the other field picture association of the DPB slot, if any, is not disturbed.
- If the DPB slot is currently associated with a top field picture and the decoded picture is a top field picture, or if the DPB slot is currently associated with a bottom field picture and the decoded picture is a bottom field picture, then that picture association is invalidated, without disturbing the other field picture association, if any. If the DPB slot no longer has any associated picture references after such an operation, the DPB slot is implicitly deactivated.

A DPB slot **can** be activated with a new frame even if it is already active. In this case all previous associations of the DPB slots with [reference pictures](#) are replaced with an association with the [reconstructed picture](#) used to activate it.

If an already active DPB slot is activated with a reconstructed field picture, then the behavior is as follows:

- If the DPB slot is currently associated with a frame, then that association is replaced with an association with the reconstructed field picture used to activate it.
- If the DPB slot is not currently associated with a top field picture and the DPB slot is activated with a top field picture, or if the DPB slot is not currently associated with a bottom field picture and the DPB slot is activated with a bottom field picture, then the DPB slot is associated with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.
- If the DPB slot is currently associated with a top field picture and the DPB slot is activated with a new top field picture, or if the DPB slot is currently associated with a bottom field picture and the DPB slot is activated with a new bottom field picture, then that association is replaced with an association with the reconstructed field picture used to activate it, without disturbing the other field picture association, if any.

48.3. Video Profiles

The `VkVideoProfileInfoKHR` structure is defined as follows:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoCodecOperationFlagBitsKHR videoCodecOperation;
    VkVideoChromaSubsamplingFlagsKHR chromaSubsampling;
    VkVideoComponentBitDepthFlagsKHR lumaBitDepth;
    VkVideoComponentBitDepthFlagsKHR chromaBitDepth;
} VkVideoProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoCodecOperation` is a `VkVideoCodecOperationFlagBitsKHR` value specifying a video codec operation.
- `chromaSubsampling` is a bitmask of `VkVideoChromaSubsamplingFlagBitsKHR` specifying video chroma subsampling information.
- `lumaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video luma bit depth information.
- `chromaBitDepth` is a bitmask of `VkVideoComponentBitDepthFlagBitsKHR` specifying video chroma bit depth information.

Video profiles are provided as input to video capability queries such as `vkGetPhysicalDeviceVideoCapabilitiesKHR` or `vkGetPhysicalDeviceVideoFormatPropertiesKHR`, as well as when creating resources to be used by video coding operations such as images, buffers, query pools, and video sessions.

The full description of a video profile is specified by an instance of this structure, and the codec-specific and auxiliary structures provided in its `pNext` chain.

When this structure is specified as an input parameter to `vkGetPhysicalDeviceVideoCapabilitiesKHR`, or through the `pProfiles` member of a `VkVideoProfileListInfoKHR` structure in the `pNext` chain of the input parameter of a query command such as `vkGetPhysicalDeviceVideoFormatPropertiesKHR` or `vkGetPhysicalDeviceImageFormatProperties2`, the following error codes indicate specific causes of the failure of the query operation:

- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR` specifies that the requested video picture layout (e.g. through the `pictureLayout` member of a `VkVideoDecodeH264ProfileInfoKHR` structure included in the `pNext` chain of `VkVideoProfileInfoKHR`) is not supported.
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR` specifies that a video profile operation specified by `videoCodecOperation` is not supported.
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR` specifies that video format parameters specified by `chromaSubsampling`, `lumaBitDepth`, or `chromaBitDepth` are not supported.
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR` specifies that the codec-specific parameters corresponding to the video codec operation are not supported.

Valid Usage

- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07013
`chromaSubsampling` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-07014
`lumaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-07015
If `chromaSubsampling` is not `VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR`, then `chromaBitDepth` **must** have a single bit set
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07179
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07180
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10791
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeVP9ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-09256
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07181
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH264ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-07182
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeH265ProfileInfoKHR` structure
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-10262
If `videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeAV1ProfileInfoKHR` structure

Valid Usage (Implicit)

- VUID-VkVideoProfileInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR`
- VUID-VkVideoProfileInfoKHR-videoCodecOperation-parameter
`videoCodecOperation` **must** be a valid `VkVideoCodecOperationFlagBitsKHR` value
- VUID-VkVideoProfileInfoKHR-chromaSubsampling-parameter
`chromaSubsampling` **must** be a valid combination of `VkVideoChromaSubsamplingFlagBitsKHR` values

- VUID-VkVideoProfileInfoKHR-chromaSubsampling-requiredbitmask
chromaSubsampling **must** not be 0
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-parameter
lumaBitDepth **must** be a valid combination of [VkVideoComponentBitDepthFlagBitsKHR](#) values
- VUID-VkVideoProfileInfoKHR-lumaBitDepth-requiredbitmask
lumaBitDepth **must** not be 0
- VUID-VkVideoProfileInfoKHR-chromaBitDepth-parameter
chromaBitDepth **must** be a valid combination of [VkVideoComponentBitDepthFlagBitsKHR](#) values

Structure Chaining

Extends the structure

- [VkQueryPoolCreateInfo](#)

Possible values of [VkVideoProfileInfoKHR::videoCodecOperation](#), specifying the type of video coding operation and video compression standard used by a video profile, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodecOperationFlagBitsKHR {
    VK_VIDEO_CODEC_OPERATION_NONE_KHR = 0,
    // Provided by VK_KHR_video_encode_h264
    VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR = 0x00010000,
    // Provided by VK_KHR_video_encode_h265
    VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR = 0x00020000,
    // Provided by VK_KHR_video_decode_h264
    VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_decode_h265
    VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_decode_av1
    VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_av1
    VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR = 0x00040000,
    // Provided by VK_KHR_video_decode_vp9
    VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR = 0x00000008,
} VkVideoCodecOperationFlagBitsKHR;
```

- [VK_VIDEO_CODEC_OPERATION_NONE_KHR](#) specifies that no video codec operations are supported.
- [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#) specifies support for [H.264](#) decode operations.
- [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#) specifies support for [H.265](#) decode operations.

- [VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR](#) specifies support for [VP9](#) decode operations.
- [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) specifies support for [AV1](#) decode operations.
- [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#) specifies support for [H.264](#) encode operations.
- [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) specifies support for [H.265](#) encode operations.
- [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#) specifies support for [AV1](#) encode operations.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodecOperationFlagsKHR;
```

[VkVideoCodecOperationFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoCodecOperationFlagBitsKHR](#).

The video format chroma subsampling is defined with the following enums:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoChromaSubsamplingFlagBitsKHR {
    VK_VIDEO_CHROMA_SUBSAMPLING_INVALID_KHR = 0,
    VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR = 0x00000001,
    VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR = 0x00000002,
    VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR = 0x00000004,
    VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR = 0x00000008,
} VkVideoChromaSubsamplingFlagBitsKHR;
```

- [VK_VIDEO_CHROMA_SUBSAMPLING_MONOCHROME_BIT_KHR](#) specifies that the format is monochrome.
- [VK_VIDEO_CHROMA_SUBSAMPLING_420_BIT_KHR](#) specified that the format is 4:2:0 chroma subsampled, i.e. the two chroma components are sampled horizontally and vertically at half the sample rate of the luma component.
- [VK_VIDEO_CHROMA_SUBSAMPLING_422_BIT_KHR](#) - the format is 4:2:2 chroma subsampled, i.e. the two chroma components are sampled horizontally at half the sample rate of luma component.
- [VK_VIDEO_CHROMA_SUBSAMPLING_444_BIT_KHR](#) - the format is 4:4:4 chroma sampled, i.e. all three components of the $Y'C_B C_R$ format are sampled at the same rate, thus there is no chroma subsampling.

Chroma subsampling is described in more detail in the [Chroma Reconstruction](#) section.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoChromaSubsamplingFlagsKHR;
```

[VkVideoChromaSubsamplingFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoChromaSubsamplingFlagBitsKHR](#).

Possible values for the video format component bit depth are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoComponentBitDepthFlagBitsKHR {
    VK_VIDEO_COMPONENT_BIT_DEPTH_INVALID_KHR = 0,
    VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR = 0x00000001,
    VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR = 0x00000004,
    VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR = 0x00000010,
} VkVideoComponentBitDepthFlagBitsKHR;
```

- [VK_VIDEO_COMPONENT_BIT_DEPTH_8_BIT_KHR](#) specifies a component bit depth of 8 bits.
- [VK_VIDEO_COMPONENT_BIT_DEPTH_10_BIT_KHR](#) specifies a component bit depth of 10 bits.
- [VK_VIDEO_COMPONENT_BIT_DEPTH_12_BIT_KHR](#) specifies a component bit depth of 12 bits.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoComponentBitDepthFlagsKHR;
```

[VkVideoComponentBitDepthFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoComponentBitDepthFlagBitsKHR](#).

Additional information about the video decode use case **can** be provided by adding a [VkVideoDecodeUsageInfoKHR](#) structure to the `pNext` chain of [VkVideoProfileInfoKHR](#).

The [VkVideoDecodeUsageInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeUsageInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoDecodeUsageFlagsKHR videoUsageHints;
} VkVideoDecodeUsageInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of [VkVideoDecodeUsageFlagBitsKHR](#) specifying hints about the intended use of the video decode profile.

Valid Usage (Implicit)

- VUID-VkVideoDecodeUsageInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_USAGE_INFO_KHR`
- VUID-VkVideoDecodeUsageInfoKHR-videoUsageHints-parameter
`videoUsageHints` **must** be a valid combination of `VkVideoDecodeUsageFlagBitsKHR` values

Structure Chaining

Extends the structures

- `VkQueryPoolCreateInfo`
- `VkVideoProfileInfoKHR`

The following bits **can** be specified in `VkVideoDecodeUsageInfoKHR::videoUsageHints` as a hint about the video decode use case:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeUsageFlagBitsKHR {
    VK_VIDEO_DECODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR = 0x00000002,
    VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR = 0x00000004,
} VkVideoDecodeUsageFlagBitsKHR;
```

- `VK_VIDEO_DECODE_USAGE_TRANSCODING_BIT_KHR` specifies that video decoding is intended to be used in conjunction with video encoding to transcode a video bitstream with the same and/or different codecs.
- `VK_VIDEO_DECODE_USAGE_OFFLINE_BIT_KHR` specifies that video decoding is intended to be used to consume a local video bitstream.
- `VK_VIDEO_DECODE_USAGE_STREAMING_BIT_KHR` specifies that video decoding is intended to be used to consume a video bitstream received as a continuous flow over network.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeUsageFlagsKHR;
```

`VkVideoDecodeUsageFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoDecodeUsageFlagBitsKHR`.

Additional information about the video encode use case **can** be provided by adding a `VkVideoEncodeUsageInfoKHR` structure to the `pNext` chain of `VkVideoProfileInfoKHR`.

The `VkVideoEncodeUsageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeUsageInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEncodeUsageFlagsKHR    videoUsageHints;
    VkVideoEncodeContentFlagsKHR  videoContentHints;
    VkVideoEncodeTuningModeKHR    tuningMode;
} VkVideoEncodeUsageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `videoUsageHints` is a bitmask of `VkVideoEncodeUsageFlagBitsKHR` specifying hints about the intended use of the video encode profile.
- `videoContentHints` is a bitmask of `VkVideoEncodeContentFlagBitsKHR` specifying hints about the content to be encoded using the video encode profile.
- `tuningMode` is a `VkVideoEncodeTuningModeKHR` value specifying the tuning mode to use when encoding with the video profile.

Valid Usage (Implicit)

- VUID-VkVideoEncodeUsageInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_USAGE_INFO_KHR`
- VUID-VkVideoEncodeUsageInfoKHR-videoUsageHints-parameter
`videoUsageHints` **must** be a valid combination of `VkVideoEncodeUsageFlagBitsKHR` values
- VUID-VkVideoEncodeUsageInfoKHR-videoContentHints-parameter
`videoContentHints` **must** be a valid combination of `VkVideoEncodeContentFlagBitsKHR` values
- VUID-VkVideoEncodeUsageInfoKHR-tuningMode-parameter
If `tuningMode` is not `0`, `tuningMode` **must** be a valid `VkVideoEncodeTuningModeKHR` value

Structure Chaining

Extends the structures

- `VkQueryPoolCreateInfo`
- `VkVideoProfileInfoKHR`

The following bits **can** be specified in `VkVideoEncodeUsageInfoKHR::videoUsageHints` as a hint

about the video encode use case:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeUsageFlagBitsKHR {
    VK_VIDEO_ENCODE_USAGE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR = 0x00000004,
    VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR = 0x00000008,
} VkVideoEncodeUsageFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_USAGE_TRANSCODING_BIT_KHR](#) specifies that video encoding is intended to be used in conjunction with video decoding to transcode a video bitstream with the same and/or different codecs.
- [VK_VIDEO_ENCODE_USAGE_STREAMING_BIT_KHR](#) specifies that video encoding is intended to be used to produce a video bitstream that is expected to be sent as a continuous flow over network.
- [VK_VIDEO_ENCODE_USAGE_RECORDING_BIT_KHR](#) specifies that video encoding is intended to be used for real-time recording for offline consumption.
- [VK_VIDEO_ENCODE_USAGE_CONFERENCING_BIT_KHR](#) specifies that video encoding is intended to be used in a video conferencing scenario.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular use case.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeUsageFlagsKHR;
```

[VkVideoEncodeUsageFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeUsageFlagBitsKHR](#).

The following bits **can** be specified in [VkVideoEncodeUsageInfoKHR::videoContentHints](#) as a hint about the encoded video content:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeContentFlagBitsKHR {
    VK_VIDEO_ENCODE_CONTENT_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR = 0x00000004,
} VkVideoEncodeContentFlagBitsKHR;
```

- [VK_VIDEO_ENCODE_CONTENT_CAMERA_BIT_KHR](#) specifies that video encoding is intended to

be used to encode camera content.

- [VK_VIDEO_ENCODE_CONTENT_DESKTOP_BIT_KHR](#) specifies that video encoding is intended to be used to encode desktop content.
- [VK_VIDEO_ENCODE_CONTENT_RENDERED_BIT_KHR](#) specified that video encoding is intended to be used to encode rendered (e.g. game) content.

NOTE

There are no restrictions on the combination of bits that **can** be specified by the application. However, applications **should** use reasonable combinations in order for the implementation to be able to select the most appropriate mode of operation for the particular content type.

```
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeContentFlagsKHR;
```

[VkVideoEncodeContentFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoEncodeContentFlagBitsKHR](#).

Possible video encode tuning mode values are as follows:

```
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeTuningModeKHR {
    VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR = 1,
    VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR = 2,
    VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR = 3,
    VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR = 4,
} VkVideoEncodeTuningModeKHR;
```

- [VK_VIDEO_ENCODE_TUNING_MODE_DEFAULT_KHR](#) specifies the default tuning mode.
- [VK_VIDEO_ENCODE_TUNING_MODE_HIGH_QUALITY_KHR](#) specifies that video encoding is tuned for high quality. When using this tuning mode, the implementation **may** compromise the latency of video encoding operations to improve quality.
- [VK_VIDEO_ENCODE_TUNING_MODE_LOW_LATENCY_KHR](#) specifies that video encoding is tuned for low latency. When using this tuning mode, the implementation **may** compromise quality to increase the performance and lower the latency of video encode operations.
- [VK_VIDEO_ENCODE_TUNING_MODE_ULTRA_LOW_LATENCY_KHR](#) specifies that video encoding is tuned for ultra-low latency. When using this tuning mode, the implementation **may** compromise quality to maximize the performance and minimize the latency of video encoding operations.
- [VK_VIDEO_ENCODE_TUNING_MODE_LOSSLESS_KHR](#) specifies that video encoding is tuned for lossless encoding. When using this tuning mode, video encode operations produce lossless output.

The [VkVideoProfileListInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoProfileListInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             profileCount;
    const VkVideoProfileInfoKHR* pProfiles;
} VkVideoProfileListInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **profileCount** is the number of elements in the **pProfiles** array.
- **pProfiles** is a pointer to an array of [VkVideoProfileInfoKHR](#) structures.

NOTE

Video transcoding is an example of a use case that necessitates the specification of multiple profiles in various contexts.

When the application provides a video decode profile and one or more video encode profiles in the profile list, the implementation ensures that any capabilities returned or resources created are suitable for the video transcoding use cases without the need for manual data transformations.

Valid Usage

- VUID-VkVideoProfileListInfoKHR-pProfiles-06813
pProfiles **must** not contain more than one element whose **videoCodecOperation** member specifies a decode operation

Valid Usage (Implicit)

- VUID-VkVideoProfileListInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_PROFILE_LIST_INFO_KHR](#)
- VUID-VkVideoProfileListInfoKHR-pProfiles-parameter
If **profileCount** is not 0, **pProfiles** **must** be a valid pointer to an array of **profileCount** valid [VkVideoProfileInfoKHR](#) structures

Structure Chaining

Extends the structures

- [VkBufferCreateInfo](#)
- [VkImageCreateInfo](#)
- [VkPhysicalDeviceImageFormatInfo2](#)
- [VkPhysicalDeviceVideoFormatInfoKHR](#)

48.4. Video Capabilities

48.4.1. Video Coding Capabilities

To query video coding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoCapabilitiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkVideoProfileInfoKHR* pVideoProfile,
    VkVideoCapabilitiesKHR*    pCapabilities);
```

- **physicalDevice** is the physical device from which to query the video decode or encode capabilities.
- **pVideoProfile** is a pointer to a [VkVideoProfileInfoKHR](#) structure.
- **pCapabilities** is a pointer to a [VkVideoCapabilitiesKHR](#) structure in which the capabilities are returned.

If the [video profile](#) described by **pVideoProfile** is supported by the implementation, then this command returns [VK_SUCCESS](#) and **pCapabilities** is filled with the capabilities supported with the specified video profile. Otherwise, one of the [video-profile-specific error codes](#) are returned.

Valid Usage

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07183
If **pVideoProfile->videoCodecOperation** specifies a decode operation, then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeCapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07184
If **pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH264CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07185
If **pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeH265CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10792
If **pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeVP9CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-09257
If **pVideoProfile->videoCodecOperation** is [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then the **pNext** chain of **pCapabilities** **must** include a [VkVideoDecodeAV1CapabilitiesKHR](#) structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07186

If `pVideoProfile->videoCodecOperation` specifies an encode operation, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeCapabilitiesKHR` structure

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07187
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeH264CapabilitiesKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-07188
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeH265CapabilitiesKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-10263
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain of `pCapabilities` **must** include a `VkVideoEncodeAV1CapabilitiesKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pNext-10921
If the `pNext` chain of `pVideoProfile` includes a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure, then the `videoEncodeRgbConversion` feature **must** be supported

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pVideoProfile-parameter `pVideoProfile` **must** be a valid pointer to a valid `VkVideoProfileInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoCapabilitiesKHR-pCapabilities-parameter `pCapabilities` **must** be a valid pointer to a `VkVideoCapabilitiesKHR` structure

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`

- [VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR](#)

The `VkVideoCapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkVideoCapabilityFlagsKHR flags;
    VkDeviceSize        minBitstreamBufferOffsetAlignment;
    VkDeviceSize        minBitstreamBufferSizeAlignment;
    VkExtent2D          pictureAccessGranularity;
    VkExtent2D          minCodedExtent;
    VkExtent2D          maxCodedExtent;
    uint32_t            maxDpbSlots;
    uint32_t            maxActiveReferencePictures;
    VkExtensionProperties stdHeaderVersion;
} VkVideoCapabilitiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of [VkVideoCapabilityFlagBitsKHR](#) specifying capability flags.
- `minBitstreamBufferOffsetAlignment` is the minimum alignment for bitstream buffer offsets.
- `minBitstreamBufferSizeAlignment` is the minimum alignment for bitstream buffer range sizes.
- `pictureAccessGranularity` is the granularity at which image access to video picture resources happen.
- `minCodedExtent` is the minimum width and height of the coded frames.
- `maxCodedExtent` is the maximum width and height of the coded frames.
- `maxDpbSlots` is the maximum number of [DPB slots](#) supported by a single video session.
- `maxActiveReferencePictures` is the maximum number of [active reference pictures](#) a single video coding operation **can** use.
- `stdHeaderVersion` is a [VkExtensionProperties](#) structure reporting the Video Std header name and version supported for the video profile.

NOTE

It is common for video compression standards to allow using all reference pictures associated with active DPB slots as active reference pictures, hence for video decode profiles the values returned in `maxDpbSlots` and `maxActiveReferencePictures` are often equal. Similarly, in case of video decode profiles supporting field pictures the value of `maxActiveReferencePictures` often equals `maxDpbSlots × 2`.

Valid Usage (Implicit)

- VUID-VkVideoCapabilitiesKHR-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_VIDEO_CAPABILITIES_KHR`

- `VUID-VkVideoCapabilitiesKHR-pNext-pNext`

Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of `VkVideoDecodeAV1CapabilitiesKHR`, `VkVideoDecodeCapabilitiesKHR`, `VkVideoDecodeH264CapabilitiesKHR`, `VkVideoDecodeH265CapabilitiesKHR`, `VkVideoDecodeVP9CapabilitiesKHR`, `VkVideoEncodeAV1CapabilitiesKHR`, `VkVideoEncodeAV1QuantizationMapCapabilitiesKHR`, `VkVideoEncodeCapabilitiesKHR`, `VkVideoEncodeH264CapabilitiesKHR`, `VkVideoEncodeH264QuantizationMapCapabilitiesKHR`, `VkVideoEncodeH265CapabilitiesKHR`, `VkVideoEncodeH265QuantizationMapCapabilitiesKHR`, `VkVideoEncodeIntraRefreshCapabilitiesKHR`, `VkVideoEncodeQuantizationMapCapabilitiesKHR`, or `VkVideoEncodeRgbConversionCapabilitiesKHR`.

- `VUID-VkVideoCapabilitiesKHR-sType-unique`

The **sType** value of each structure in the **pNext** chain **must** be unique

Bits which **can** be set in `VkVideoCapabilitiesKHR::flags` are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCapabilityFlagBitsKHR {
    VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR = 0x00000002,
} VkVideoCapabilityFlagBitsKHR;
```

- `VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR` specifies that video sessions support producing and consuming protected content.
- `VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR` indicates that the **video picture resources** associated with the **DPB slots** of a video session **can** be backed by separate **VkImage** objects. If this capability flag is not present, then all DPB slots of a video session **must** be associated with video picture resources backed by the same **VkImage** object (e.g. using different layers of the same image).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCapabilityFlagsKHR;
```

`VkVideoCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoCapabilityFlagBitsKHR`.

48.4.2. Video Format Capabilities

To enumerate the supported video formats and corresponding capabilities for a specific video profile, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetPhysicalDeviceVideoFormatPropertiesKHR(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceVideoFormatInfoKHR* pVideoFormatInfo,
    uint32_t*                       pVideoFormatPropertyCount,
    VkVideoFormatPropertiesKHR*      pVideoFormatProperties);
```

- `physicalDevice` is the physical device from which to query the video format properties.
- `pVideoFormatInfo` is a pointer to a `VkPhysicalDeviceVideoFormatInfoKHR` structure specifying the usage and video profiles for which supported image formats and capabilities are returned.
- `pVideoFormatPropertyCount` is a pointer to an integer related to the number of video format properties available or queried, as described below.
- `pVideoFormatProperties` is a pointer to an array of `VkVideoFormatPropertiesKHR` structures in which supported image formats and capabilities are returned.

If `pVideoFormatProperties` is `NULL`, then the number of video format properties supported for the given `physicalDevice` is returned in `pVideoFormatPropertyCount`. Otherwise, `pVideoFormatPropertyCount` **must** point to a variable set by the application to the number of elements in the `pVideoFormatProperties` array, and on return the variable is overwritten with the number of values actually written to `pVideoFormatProperties`. If the value of `pVideoFormatPropertyCount` is less than the number of video format properties supported, at most `pVideoFormatPropertyCount` values will be written to `pVideoFormatProperties`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available values were returned.

Video format properties are always queried with respect to a specific set of video profiles. These are specified by chaining the `VkVideoProfileListInfoKHR` structure to `pVideoFormatInfo`.

For most use cases, the images are used by a single video session and a single video profile is provided. For a use case such as video transcoding, where a decode session output image **can** be used as encode input in one or more encode sessions, multiple video profiles corresponding to the video sessions that will share the image **must** be provided.

If any of the `video profiles` specified via `VkVideoProfileListInfoKHR::pProfiles` are not supported, then this command returns one of the `video-profile-specific error codes`. Furthermore, if `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` includes any image usage flags not supported by the specified video profiles, then this command returns `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

If the decode capability flags include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, then querying video format properties that support both decode DPB and output usage **can** be done by including both `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` and `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` in `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage`. However, even in this case, querying video format properties with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` including only `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` or `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` will also return formats supporting both.

NOTE

This enables application to be able to query all formats supporting [VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR](#) and/or [VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR](#) by just including one of the flags, respectively, regardless of whether the implementation supports [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#), [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR](#), or both. This makes enumerating decode DPB and output formats simpler and unified.

The [imageUsage](#) member of the [VkPhysicalDeviceVideoFormatInfoKHR](#) structure specifies the expected video usage flags that the returned video formats **must** support. Correspondingly, the [imageUsageFlags](#) member of each [VkVideoFormatPropertiesKHR](#) structure returned will contain at least the same set of image usage flags.

If the implementation supports using images of a particular format in operations other than video decode/encode then the [imageUsageFlags](#) member of the corresponding [VkVideoFormatPropertiesKHR](#) structure returned will include additional image usage flags indicating that.

NOTE

For most use cases, only decode or encode related usage flags are going to be specified. For a use case such as transcode, if the image were to be shared between decode and encode session(s), then both decode and encode related usage flags **can** be set.

Multiple [VkVideoFormatPropertiesKHR](#) entries **may** be returned with the same [format](#) member with different [componentMapping](#), [imageType](#), or [imageTiling](#) values, as described later.

If [VkPhysicalDeviceVideoFormatInfoKHR::imageUsage](#) includes [VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) or [VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#), multiple [VkVideoFormatPropertiesKHR](#) entries **may** be returned with the same [format](#), [componentMapping](#), [imageType](#), and [imageTiling](#) member values, but different [quantizationMapTexelSize](#) returned in the [VkVideoFormatQuantizationMapPropertiesKHR](#) structure, if one is included in the [VkVideoFormatPropertiesKHR::pNext](#) chain, when the queried [quantization map type](#) supports multiple distinct [quantization map texel sizes](#).

In addition, a different set of [VkVideoFormatPropertiesKHR](#) entries **may** be returned depending on the [imageUsage](#) member of the [VkPhysicalDeviceVideoFormatInfoKHR](#) structure, even for the same set of video profiles, for example, based on whether encode input, encode DPB, decode output, and/or decode DPB usage is requested.

The application **can** select the parameters returned in the [VkVideoFormatPropertiesKHR](#) entries and use compatible parameters when creating the input, output, and DPB images. The implementation will report all image creation and usage flags that are valid for images used with the requested video profiles but applications **should** create images only with those that are necessary for the particular use case.

Before creating an image, the application **can** obtain the complete set of supported image format features by calling [vkGetPhysicalDeviceImageFormatProperties2](#) using parameters derived from

the members of one of the reported `VkVideoFormatPropertiesKHR` entries and adding the same `VkVideoProfileListInfoKHR` structure to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

The following applies to all `VkVideoFormatPropertiesKHR` entries returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR`:

- `vkGetPhysicalDeviceFormatProperties2` **must** succeed when called with `VkVideoFormatPropertiesKHR::format`
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_OPTIMAL`, then the `optimalTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#) section.
- If `VkVideoFormatPropertiesKHR::imageTiling` is `VK_IMAGE_TILING_LINEAR`, then the `linearTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties2` **must** include all format features required by the image usage flags reported in `VkVideoFormatPropertiesKHR::imageUsageFlags` for the format, as indicated in the [Format Feature Dependent Usage Flags](#) section.
- `vkGetPhysicalDeviceImageFormatProperties2` **must** succeed when called with a `VkPhysicalDeviceImageFormatInfo2` structure containing the following information:
 - The `pNext` chain including the same `VkVideoProfileListInfoKHR` structure used to call `vkGetPhysicalDeviceVideoFormatPropertiesKHR`.
 - `format` set to the value of `VkVideoFormatPropertiesKHR::format`.
 - `type` set to the value of `VkVideoFormatPropertiesKHR::imageType`.
 - `tiling` set to the value of `VkVideoFormatPropertiesKHR::imageTiling`.
 - `usage` set to the value of `VkVideoFormatPropertiesKHR::imageUsageFlags`.
 - `flags` set to the value of `VkVideoFormatPropertiesKHR::imageCreateFlags`.

The `componentMapping` member of `VkVideoFormatPropertiesKHR` defines the ordering of the Y'C_BC_R color channels from the perspective of the video codec operations specified in `VkVideoProfileListInfoKHR`. For example, if the implementation produces video decode output with the format `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` where the blue and red chrominance channels are swapped then the `componentMapping` member of the corresponding `VkVideoFormatPropertiesKHR` structure will have the following member values:

```
components.r = VK_COMPONENT_SWIZZLE_B;      // Cb component
components.g = VK_COMPONENT_SWIZZLE_IDENTITY; // Y component
components.b = VK_COMPONENT_SWIZZLE_R;      // Cr component
components.a = VK_COMPONENT_SWIZZLE_IDENTITY; // unused, defaults to 1.0
```

Valid Usage

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-06812
The `pNext` chain of `pVideoFormatInfo` **must** include a `VkVideoProfileListInfoKHR` structure

with `profileCount` greater than 0

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pNext-10922

If the `pNext` chain of `pVideoFormatInfo` includes a `VkVideoEncodeProfileRgbConversionInfoVALVE` structure, then the `videoEncodeRgbConversion` feature **must** be supported

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatInfo-parameter `pVideoFormatInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceVideoFormatInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatPropertyCount-parameter `pVideoFormatPropertyCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceVideoFormatPropertiesKHR-pVideoFormatProperties-parameter
If the value referenced by `pVideoFormatPropertyCount` is not 0, and `pVideoFormatProperties` is not `NULL`, `pVideoFormatProperties` **must** be a valid pointer to an array of `pVideoFormatPropertyCount` `VkVideoFormatPropertiesKHR` structures

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceVideoFormatInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkPhysicalDeviceVideoFormatInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkImageUsageFlags  imageUsage;
} VkPhysicalDeviceVideoFormatInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **imageUsage** is a bitmask of [VkImageUsageFlagBits](#) specifying the intended usage of the video images.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_FORMAT_INFO_KHR](#)
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-pNext-pNext
pNext must be **NULL** or a pointer to a valid instance of [VkVideoProfileListInfoKHR](#)
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-parameter
imageUsage must be a valid combination of [VkImageUsageFlagBits](#) values
- VUID-VkPhysicalDeviceVideoFormatInfoKHR-imageUsage-requiredbitmask
imageUsage must not be 0

The [VkVideoFormatPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoFormatPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkFormat            format;
    VkComponentMapping  componentMapping;
    VkImageCreateFlags  imageCreateFlags;
    VkImageType         imageType;
    VkImageTiling        imageTiling;
    VkImageUsageFlags   imageUsageFlags;
} VkVideoFormatPropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **format** is a [VkFormat](#) that specifies the format that **can** be used with the specified video profiles and image usages.

- `componentMapping` defines the color channel order used for the format. `format` along with `componentMapping` describe how the color channels are ordered when producing video decoder output or are expected to be ordered in video encoder input, when applicable. If the `format` reported does not require component swizzling then all members of `componentMapping` will be set to `VK_COMPONENT_SWIZZLE_IDENTITY`.
- `imageCreateFlags` is a bitmask of `VkImageCreateFlagBits` specifying the supported image creation flags for the format.
- `imageType` is a `VkImageType` that specifies the image type the format **can** be used with.
- `imageTiling` is a `VkImageTiling` that specifies the image tiling the format **can** be used with.
- `imageUsageFlags` is a bitmask of `VkImageUsageFlagBits` specifying the supported image usage flags for the format.

Valid Usage (Implicit)

- VUID-VkVideoFormatPropertiesKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR`
- VUID-VkVideoFormatPropertiesKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoFormatAV1QuantizationMapPropertiesKHR`, `VkVideoFormatH265QuantizationMapPropertiesKHR`, or `VkVideoFormatQuantizationMapPropertiesKHR`
- VUID-VkVideoFormatPropertiesKHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique

The *list of supported video format properties* for a set of image usage flags with respect to a `video profile` is defined as the list of `VkVideoFormatPropertiesKHR` structures and any structures included in its `pNext` chain, obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `VkImageUsageFlags` in question and the `VkPhysicalDeviceVideoFormatInfoKHR::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing a single array element specifying the `VkVideoProfileInfoKHR` structure chain describing the video profile in question.

48.5. Video Sessions

Video sessions are objects that represent and maintain the state needed to perform video decode or encode operations using a specific video profile.

In case of video encode profiles this includes the current `rate control` configuration and the currently set `video encode quality level`.

Video sessions are represented by `VkVideoSessionKHR` handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionKHR)
```

48.5.1. Creating a Video Session

To create a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionKHR(
    VkDevice device,
    const VkVideoSessionCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkVideoSessionKHR* pVideoSession);
```

- **device** is the logical device that creates the video session.
- **pCreateInfo** is a pointer to a [VkVideoSessionCreateInfoKHR](#) structure containing parameters to be used to create the video session.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pVideoSession** is a pointer to a [VkVideoSessionKHR](#) handle in which the resulting video session object is returned.

The resulting video session object is said to be created with the video codec operation specified in **pCreateInfo->pVideoProfile->videoCodecOperation**.

The name and version of the codec-specific Video Std header to be used with the video session is specified by the [VkExtensionProperties](#) structure pointed to by **pCreateInfo->pStdHeaderVersion**. If a non-existent or unsupported Video Std header version is specified in **pCreateInfo->pStdHeaderVersion->specVersion**, then this command returns [VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR](#).

Video session objects are created in *uninitialized* state. In order to transition the video session into *initial* state, the application **must** issue a [vkCmdControlVideoCodingKHR](#) command with [VkVideoCodingControlInfoKHR::flags](#) including [VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR](#).

Video session objects also maintain the **state** of the DPB. The number of DPB slots usable with the created video session is specified in **pCreateInfo->maxDpbSlots**, and each slot is initially in the **inactive state**.

Each **DPB slot** maintained by the created video session **can** refer to a **reference picture** representing a video frame.

In addition, if the **videoCodecOperation** member of the [VkVideoProfileInfoKHR](#) structure pointed to by **pCreateInfo->pVideoProfile** is [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#) and the **pictureLayout** member of the [VkVideoDecodeH264ProfileInfoKHR](#) structure provided in the [VkVideoProfileInfoKHR::pNext](#) chain is not [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR](#), then the created video session

supports *interlaced* frames and each [DPB slot](#) maintained by the created video session **can** instead refer to separate top field and bottom field [reference pictures](#) that together **can** represent a full video frame. In this case, it is up to the application, driven by the video content, whether it associates any individual DPB slot with separate top and/or bottom field pictures or a single picture representing a full frame.

The created video session **can** be used to perform video coding operations using video frames up to the maximum size specified in `pCreateInfo->maxCodedExtent`. The minimum frame size allowed is implicitly derived from `VkVideoCapabilitiesKHR::minCodedExtent`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pCreateInfo->pVideoProfile`. Accordingly, the created video session is said to be created with a `minCodedExtent` equal to that.

In case of video session objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE

Applications **should** not rely on the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage (Implicit)

- VUID-vkCreateVideoSessionKHR-device-parameter
`device` **must** be a valid [VkDevice](#) handle
- VUID-vkCreateVideoSessionKHR-pCreateInfo-parameter
`pCreateInfo` **must** be a valid pointer to a valid [VkVideoSessionCreateInfoKHR](#) structure
- VUID-vkCreateVideoSessionKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateVideoSessionKHR-pVideoSession-parameter
`pVideoSession` **must** be a valid pointer to a [VkVideoSessionKHR](#) handle
- VUID-vkCreateVideoSessionKHR-device-queuecount
The device **must** have been created with at least `1` queue

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INITIALIZATION_FAILED](#)
- [VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)
- [VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR](#)

The [VkVideoSessionCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionCreateInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    uint32_t             queueFamilyIndex;
    VkVideoSessionCreateFlagsKHR flags;
    const VkVideoProfileInfoKHR* pVideoProfile;
    VkFormat             pictureFormat;
    VkExtent2D          maxCodedExtent;
    VkFormat             referencePictureFormat;
    uint32_t             maxDpbSlots;
    uint32_t             maxActiveReferencePictures;
    const VkExtensionProperties* pStdHeaderVersion;
} VkVideoSessionCreateInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueFamilyIndex` is the index of the queue family the created video session will be used with.
- `flags` is a bitmask of [VkVideoSessionCreateFlagBitsKHR](#) specifying creation flags.
- `pVideoProfile` is a pointer to a [VkVideoProfileInfoKHR](#) structure specifying the video profile the created video session will be used with.
- `pictureFormat` is the image format the created video session will be used with. If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` is the image format of [decode output pictures](#) usable with the created video session. If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` is the image format of [encode input pictures](#) usable with the created video session.
- `maxCodedExtent` is the maximum width and height of the coded frames the created video session will be used with.
- `referencePictureFormat` is the image format of [reference pictures](#) stored in the [DPB](#) the created video session will be used with.
- `maxDpbSlots` is the maximum number of [DPB Slots](#) that **can** be used with the created video

session.

- `maxActiveReferencePictures` is the maximum number of `active reference pictures` that **can** be used in a single video coding operation using the created video session.
- `pStdHeaderVersion` is a pointer to a `VkExtensionProperties` structure requesting the Video Std header version to use for the `videoCodecOperation` specified in `pVideoProfile`.

Valid Usage

- VUID-VkVideoSessionCreateInfoKHR-protectedMemory-07189

If the `protectedMemory` feature is not enabled or if `VkVideoCapabilitiesKHR::flags` does not include `VK_VIDEO_CAPABILITY_PROTECTED_CONTENT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR`

- VUID-VkVideoSessionCreateInfoKHR-flags-08371

If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then `videoMaintenance1` **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-flags-10398

If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, then `videoMaintenance2` **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-flags-10399

If `flags` includes `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, then `pVideoProfile->videoCodecOperation` **must** specify a decode operation

- VUID-VkVideoSessionCreateInfoKHR-flags-10264

If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`, then the `videoEncodeQuantizationMap` feature **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-flags-10265

If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`, then `pVideoProfile->videoCodecOperation` **must** specify an encode operation

- VUID-VkVideoSessionCreateInfoKHR-flags-10266

If `flags` includes `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`, then it **must** not also include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`

- VUID-VkVideoSessionCreateInfoKHR-flags-10267

If `VkVideoEncodeCapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_CAPABILITY_QUANTIZATION_DELTA_MAP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`

- VUID-VkVideoSessionCreateInfoKHR-flags-10268
If `VkVideoEncodeCapabilitiesKHR::flags` does not include `VK_VIDEO_ENCODE_CAPABILITY_EMPHASIS_MAP_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`, then `flags` **must** not include `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-11759
`pVideoProfile->videoCodecOperation` **must** be supported by the queue family index specified in `queueFamilyIndex`, as reported in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-04845
`pVideoProfile` **must** be a [supported video profile](#)
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04847
`maxDpbSlots` **must** be less than or equal to `VkVideoCapabilitiesKHR::maxDpbSlots`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxActiveReferencePictures-04849
`maxActiveReferencePictures` **must** be less than or equal to `VkVideoCapabilitiesKHR::maxActiveReferencePictures`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-maxDpbSlots-04850
If either `maxDpbSlots` or `maxActiveReferencePictures` is 0, then both **must** be 0
- VUID-VkVideoSessionCreateInfoKHR-maxCodedExtent-04851
`maxCodedExtent` **must** be between `VkVideoCapabilitiesKHR::minCodedExtent` and `VkVideoCapabilitiesKHR::maxCodedExtent`, inclusive, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-04852
If `pVideoProfile->videoCodecOperation` specifies a decode operation and `maxActiveReferencePictures` is greater than 0, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-06814
If `pVideoProfile->videoCodecOperation` specifies an encode operation and `maxActiveReferencePictures` is greater than 0, then `referencePictureFormat` **must** be one of the supported decode DPB formats, as returned by then `referencePictureFormat` **must** be one of the supported encode DPB formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04853
If `pVideoProfile->videoCodecOperation` specifies a decode operation, then `pictureFormat` **must** be one of the supported decode output formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-04854
If `pVideoProfile->videoCodecOperation` specifies an encode operation, then `pictureFormat` **must** be one of the supported encode input formats, as returned by `vkGetPhysicalDeviceVideoFormatPropertiesKHR` in `VkVideoFormatPropertiesKHR::format` when called with the `imageUsage` member of its `pVideoFormatInfo` parameter containing `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, and with a `VkVideoProfileListInfoKHR` structure specified in the `pNext` chain of its `pVideoFormatInfo` parameter whose `pProfiles` member contains an element matching `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10835
If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure, and its `intraRefreshMode` member is not `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`, then the `videoEncodeIntraRefresh` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10836
If `pVideoProfile->videoCodecOperation` specifies an encode operation, the `pNext` chain of this structure includes a `VkVideoEncodeSessionIntraRefreshCreateInfoKHR` structure, and its `intraRefreshMode` member is not `VK_VIDEO_ENCODE_INTRA_REFRESH_MODE_NONE_KHR`, then `intraRefreshMode` **must** specify one of the bits included in `VkVideoEncodeIntraRefreshCapabilitiesKHR::intraRefreshModes`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07190
`pStdHeaderVersion->extensionName` **must** match `VkVideoCapabilitiesKHR::stdHeaderVersion.extensionName`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-07191
`pStdHeaderVersion->specVersion` **must** be less than or equal to `VkVideoCapabilitiesKHR::stdHeaderVersion.specVersion`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile specified by `pVideoProfile`
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10793
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `videoDecodeVP9` feature **must** be enabled
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08251
If `pVideoProfile->videoCodecOperation` is `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of this

structure includes a [VkVideoEncodeH264SessionCreateInfoKHR](#) structure, then its `maxLevelIdc` member **must** be less than or equal to [VkVideoEncodeH264CapabilitiesKHR::maxLevelIdc](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile specified in `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-08252

If `pVideoProfile->videoCodecOperation` is [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) and the `pNext` chain of this structure includes a [VkVideoEncodeH265SessionCreateInfoKHR](#) structure, then its `maxLevelIdc` member **must** be less than or equal to [VkVideoEncodeH265CapabilitiesKHR::maxLevelIdc](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile specified in `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10269

If `pVideoProfile->videoCodecOperation` is [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then the `videoEncodeAV1` feature **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10270

If `pVideoProfile->videoCodecOperation` is [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#) and the `pNext` chain of this structure includes a [VkVideoEncodeAV1SessionCreateInfoKHR](#) structure, then its `maxLevel` member **must** be less than or equal to [VkVideoEncodeAV1CapabilitiesKHR::maxLevel](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile specified in `pVideoProfile`

- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-10923

If the `pVideoProfile->pNext` chain includes a [VkVideoEncodeProfileRgbConversionInfoVALVE](#) structure, then the `videoEncodeRgbConversion` feature **must** be enabled

- VUID-VkVideoSessionCreateInfoKHR-pNext-10924

If a [VkVideoEncodeProfileRgbConversionInfoVALVE](#) structure is included in the `pNext` chain of `pVideoProfile` and [VkVideoEncodeProfileRgbConversionInfoVALVE::performEncodeRgbConversion](#) is enabled, a [VkVideoEncodeSessionRgbConversionCreateInfoVALVE](#) structure **must** be included in the `pNext` chain of [VkVideoSessionCreateInfoKHR](#)

Valid Usage (Implicit)

- VUID-VkVideoSessionCreateInfoKHR-sType-sType

`sType` **must** be [VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR](#)

- VUID-VkVideoSessionCreateInfoKHR-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of [VkVideoEncodeAV1SessionCreateInfoKHR](#), [VkVideoEncodeH264SessionCreateInfoKHR](#), [VkVideoEncodeH265SessionCreateInfoKHR](#), [VkVideoEncodeSessionIntraRefreshCreateInfoKHR](#), or [VkVideoEncodeSessionRgbConversionCreateInfoVALVE](#)

- VUID-VkVideoSessionCreateInfoKHR-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkVideoSessionCreateInfoKHR-flags-parameter
flags **must** be a valid combination of **VkVideoSessionCreateFlagBitsKHR** values
- VUID-VkVideoSessionCreateInfoKHR-pVideoProfile-parameter
pVideoProfile **must** be a valid pointer to a valid **VkVideoProfileInfoKHR** structure
- VUID-VkVideoSessionCreateInfoKHR-pictureFormat-parameter
pictureFormat **must** be a valid **VkFormat** value
- VUID-VkVideoSessionCreateInfoKHR-referencePictureFormat-parameter
referencePictureFormat **must** be a valid **VkFormat** value
- VUID-VkVideoSessionCreateInfoKHR-pStdHeaderVersion-parameter
pStdHeaderVersion **must** be a valid pointer to a valid **VkExtensionProperties** structure

Bits which **can** be set in **VkVideoSessionCreateInfoKHR::flags** are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoSessionCreateFlagBitsKHR {
    VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_maintenance1
    VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR = 0x00000004,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR = 0x00000008,
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR = 0x00000010,
    // Provided by VK_KHR_video_decode_queue with VK_KHR_video_maintenance2
    VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR = 0x00000020,
} VkVideoSessionCreateFlagBitsKHR;
```

- **VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR** specifies that the video session uses protected video content.
- **VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR** specifies that the implementation is allowed to **override** video session parameters and other codec-specific encoding parameters to optimize video encode operations based on the use case information specified in the **video profile** and the used **video encode quality level**.

NOTE

Not specifying **VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR** does not guarantee that the implementation will not do any codec-specific parameter overrides, as certain overrides are necessary for the correct operation of the video encoder implementation due to limitations to the available encoding tools on that implementation. This flag, however, enables the implementation to apply further optimizing overrides.

- **VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR** specifies that queries within video

coding scopes using the created video session are [executed inline](#) with video coding operations.

- [VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#) specifies that the video session **can** be used to encode pictures with [quantization delta maps](#).
- [VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR](#) specifies that the video session **can** be used to encode pictures with [emphasis maps](#).
- [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#) specifies that the application **can** specify video session parameters inline with video decode operations instead of sourcing them from the bound [video session parameters](#) object.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionCreateFlagsKHR;
```

[VkVideoSessionCreateFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoSessionCreateFlagBitsKHR](#).

48.5.2. Destroying a Video Session

To destroy a video session, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    const VkAllocationCallbacks* pAllocator);
```

- [device](#) is the logical device that destroys the video session.
- [videoSession](#) is the video session to destroy.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyVideoSessionKHR-videoSession-07192
All submitted commands that refer to [videoSession](#) **must** have completed execution
- VUID-vkDestroyVideoSessionKHR-videoSession-07193
If [VkAllocationCallbacks](#) were provided when [videoSession](#) was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionKHR-videoSession-07194
If no [VkAllocationCallbacks](#) were provided when [videoSession](#) was created, [pAllocator](#) **must** be [NULL](#)

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyVideoSessionKHR-videoSession-parameter
If `videoSession` is not `VK_NULL_HANDLE`, `videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkDestroyVideoSessionKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyVideoSessionKHR-videoSession-parent
If `videoSession` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSession` **must** be externally synchronized

48.5.3. Video Session Memory Association

After creating a video session object, and before the object **can** be used to record video coding operations into command buffers using it, the application **must** allocate and bind device memory to the video session. Device memory is allocated separately (see [Device Memory](#)) and then associated with the video session.

Video sessions **may** have multiple memory bindings identified by unique unsigned integer values. Appropriate device memory **must** be bound to each such memory binding before using the video session to record command buffer commands with it.

To determine the memory requirements for a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkGetVideoSessionMemoryRequirementsKHR(
    VkDevice          device,
    VkVideoSessionKHR videoSession,
    uint32_t*         pMemoryRequirementsCount,
    VkVideoSessionMemoryRequirementsKHR* pMemoryRequirements);
```

- `device` is the logical device that owns the video session.
- `videoSession` is the video session to query.
- `pMemoryRequirementsCount` is a pointer to an integer related to the number of memory binding requirements available or queried, as described below.
- `pMemoryRequirements` is `NULL` or a pointer to an array of

`VkVideoSessionMemoryRequirementsKHR` structures in which the memory binding requirements of the video session are returned.

If `pMemoryRequirements` is `NULL`, then the number of memory bindings required for the video session is returned in `pMemoryRequirementsCount`. Otherwise, `pMemoryRequirementsCount` **must** point to a variable set by the application to the number of elements in the `pMemoryRequirements` array, and on return the variable is overwritten with the number of memory binding requirements actually written to `pMemoryRequirements`. If `pMemoryRequirementsCount` is less than the number of memory bindings required for the video session, then at most `pMemoryRequirementsCount` elements will be written to `pMemoryRequirements`, and `VK_INCOMPLETE` will be returned, instead of `VK_SUCCESS`, to indicate that not all required memory binding requirements were returned.

Valid Usage (Implicit)

- VUID-vkGetVideoSessionMemoryRequirementsKHR-device-parameter `device` **must** be a valid `VkDevice` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parameter `videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirementsCount-parameter `pMemoryRequirementsCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetVideoSessionMemoryRequirementsKHR-pMemoryRequirements-parameter
If the value referenced by `pMemoryRequirementsCount` is not `0`, and `pMemoryRequirements` is not `NULL`, `pMemoryRequirements` **must** be a valid pointer to an array of `pMemoryRequirementsCount` `VkVideoSessionMemoryRequirementsKHR` structures
- VUID-vkGetVideoSessionMemoryRequirementsKHR-videoSession-parent `videoSession` **must** have been created, allocated, or retrieved from `device`

Return Codes

Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

Failure

- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkVideoSessionMemoryRequirementsKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionMemoryRequirementsKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           memoryBindIndex;
    VkMemoryRequirements memoryRequirements;
} VkVideoSessionMemoryRequirementsKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryBindIndex** is the index of the memory binding.
- **memoryRequirements** is a [VkMemoryRequirements](#) structure in which the requested memory binding requirements for the binding index specified by **memoryBindIndex** are returned.

Valid Usage (Implicit)

- VUID-VkVideoSessionMemoryRequirementsKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR](#)
- VUID-VkVideoSessionMemoryRequirementsKHR-pNext-pNext
pNext must be **NULL**

To attach memory to a video session object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkBindVideoSessionMemoryKHR(
    VkDevice                device,
    VkVideoSessionKHR       videoSession,
    uint32_t                bindSessionMemoryInfoCount,
    const VkBindVideoSessionMemoryInfoKHR* pBindSessionMemoryInfos);
```

- **device** is the logical device that owns the video session.
- **videoSession** is the video session to be bound with device memory.
- **bindSessionMemoryInfoCount** is the number of elements in **pBindSessionMemoryInfos**.
- **pBindSessionMemoryInfos** is a pointer to an array of **bindSessionMemoryInfoCount** [VkBindVideoSessionMemoryInfoKHR](#) structures specifying memory regions to be bound to specific memory bindings of the video session.

The valid usage statements below refer to the [VkMemoryRequirements](#) structure corresponding to a specific element of **pBindSessionMemoryInfos**, which is defined as follows:

- If the **memoryBindIndex** member of the element of **pBindSessionMemoryInfos** in question matches the **memoryBindIndex** member of one of the elements returned in **pMemoryRequirements** when [vkGetVideoSessionMemoryRequirementsKHR](#) is called with the same **videoSession** and with

`pMemoryRequirementsCount` equal to `bindSessionMemoryInfoCount`, then the `memoryRequirements` member of that element of `pMemoryRequirements` is the `VkMemoryRequirements` structure corresponding to the element of `pBindSessionMemoryInfos` in question.

- Otherwise the element of `pBindSessionMemoryInfos` in question is said to not have a corresponding `VkMemoryRequirements` structure.

Valid Usage

- VUID-vkBindVideoSessionMemoryKHR-videoSession-07195
The memory binding of `videoSession` identified by the `memoryBindIndex` member of any element of `pBindSessionMemoryInfos` **must** not already be backed by a memory object
- VUID-vkBindVideoSessionMemoryKHR-memoryBindIndex-07196
The `memoryBindIndex` member of each element of `pBindSessionMemoryInfos` **must** be unique within `pBindSessionMemoryInfos`
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07197
Each element of `pBindSessionMemoryInfos` **must** have a corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07198
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memory` member of that element of `pBindSessionMemoryInfos` **must** have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07199
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memoryOffset` member of that element of `pBindSessionMemoryInfos` **must** be an integer multiple of the `alignment` member of the corresponding `VkMemoryRequirements` structure
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-07200
If an element of `pBindSessionMemoryInfos` has a corresponding `VkMemoryRequirements` structure, then the `memorySize` member of that element of `pBindSessionMemoryInfos` **must** equal the `size` member of the corresponding `VkMemoryRequirements` structure

Valid Usage (Implicit)

- VUID-vkBindVideoSessionMemoryKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkBindVideoSessionMemoryKHR-videoSession-parameter
`videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-vkBindVideoSessionMemoryKHR-pBindSessionMemoryInfos-parameter
`pBindSessionMemoryInfos` **must** be a valid pointer to an array of `bindSessionMemoryInfoCount` valid `VkBindVideoSessionMemoryInfoKHR` structures
- VUID-vkBindVideoSessionMemoryKHR-bindSessionMemoryInfoCount-arraylength
`bindSessionMemoryInfoCount` **must** be greater than 0

- VUID-vkBindVideoSessionMemoryKHR-videoSession-parent **videoSession** **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **videoSession** **must** be externally synchronized

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The **VkBindVideoSessionMemoryInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkBindVideoSessionMemoryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           memoryBindIndex;
    VkDeviceMemory      memory;
    VkDeviceSize        memoryOffset;
    VkDeviceSize        memorySize;
} VkBindVideoSessionMemoryInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **memoryBindIndex** is the memory binding index to bind memory to.
- **memory** is the allocated device memory to be bound to the video session's memory binding with index **memoryBindIndex**.
- **memoryOffset** is the start offset of the region of **memory** which is to be bound.
- **memorySize** is the size in bytes of the region of **memory**, starting from **memoryOffset** bytes, to be bound.

Valid Usage

- VUID-VkBindVideoSessionMemoryInfoKHR-memoryOffset-07201
`memoryOffset` **must** be less than the size of `memory`
- VUID-VkBindVideoSessionMemoryInfoKHR-memorySize-07202
`memorySize` **must** be less than or equal to the size of `memory` minus `memoryOffset`

Valid Usage (Implicit)

- VUID-VkBindVideoSessionMemoryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR`
- VUID-VkBindVideoSessionMemoryInfoKHR-pNext-pNext
`pNext` **must** be `NULL`
- VUID-VkBindVideoSessionMemoryInfoKHR-memory-parameter
`memory` **must** be a valid `VkDeviceMemory` handle

48.6. Video Profile Compatibility

Resources and query pools used with a particular video session **must** be compatible with the `video profile` the video session was created with.

A `VkBuffer` is compatible with a video profile if it was created with the `VkBufferCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkBufferCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`
- `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`

A `VkBuffer` is also compatible with a video profile if it was created with `VkBufferCreateInfo::flags` including `VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`.

A `VkImage` is compatible with a video profile if it was created with the `VkImageCreateInfo::pNext` chain including a `VkVideoProfileListInfoKHR` structure with its `pProfiles` member containing an element matching the `VkVideoProfileInfoKHR` structure chain describing the video profile, and `VkImageCreateInfo::usage` including at least one bit specific to video coding usage.

- `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`
- `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`

- [VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR](#)
- [VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR](#)
- [VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR](#)
- [VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR](#)

A [VkImage](#) is also compatible with a video profile if all of the following conditions are true for the [VkImageCreateInfo](#) structure the image was created with:

- [VkImageCreateInfo::flags](#) includes [VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#).
- The list of [VkVideoFormatPropertiesKHR](#) structures, obtained by calling [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#) with [VkPhysicalDeviceVideoFormatInfoKHR::imageUsage](#) equal to the [VkImageCreateInfo::usage](#) the image was created with and the [VkPhysicalDeviceVideoFormatInfoKHR::pNext](#) chain including a [VkVideoProfileListInfoKHR](#) structure with its [pProfiles](#) member containing a single array element specifying the [VkVideoProfileInfoKHR](#) structure chain describing the video profile in question, contains an element for which all of the following conditions are true with respect to the [VkImageCreateInfo](#) structure the image was created with:
 - [VkImageCreateInfo::format](#) equals [VkVideoFormatPropertiesKHR::format](#).
 - [VkImageCreateInfo::flags](#) only contains [VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#) and/or bits also set in [VkVideoFormatPropertiesKHR::imageCreateFlags](#).

NOTE

Specifying [VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#) when creating [decode output pictures](#) or [encode input pictures](#) is always supported when the [videoMaintenance1](#) feature is enabled, regardless of the supported [VkImageCreateFlags](#) reported in [VkVideoFormatPropertiesKHR::imageCreateFlags](#). Accordingly, implementations **should** not report [VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR](#) in [VkVideoFormatPropertiesKHR::imageCreateFlags](#) for any video format.

- [VkImageCreateInfo::imageType](#) equals [VkVideoFormatPropertiesKHR::imageType](#).
- [VkImageCreateInfo::tiling](#) equals [VkVideoFormatPropertiesKHR::imageTiling](#).
- [VkImageCreateInfo::usage](#) only contains bits also set in [VkVideoFormatPropertiesKHR::imageUsageFlags](#), or [VkImageCreateInfo::flags](#) includes [VK_IMAGE_CREATE_EXTENDED_USAGE_BIT](#).

NOTE

While some of these rules allow creating buffer or image resources that **may** be compatible with any video profile, applications **should** still prefer to include the specific video profiles the buffer or image resource is expected to be used with (through a [VkVideoProfileListInfoKHR](#) structure included in the [pNext](#) chain of the corresponding create info structure) whenever the information about the complete set of video profiles is available at resource creation time, to enable the implementation to optimize the created resource for the specific use case. In the absence of that information, the implementation **may** have to make conservative

decisions about the memory requirements or representation of the resource.

A [VkImageView](#) is compatible with a video profile if the [VkImage](#) it was created from is also compatible with that video profile.

A [VkQueryPool](#) is compatible with a video profile if it was created with the [VkQueryPoolCreateInfo::pNext](#) chain including a [VkVideoProfileInfoKHR](#) structure chain describing the same video profile, and [VkQueryPoolCreateInfo::queryType](#) having one of the following values:

- [VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR](#)
- [VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR](#)

48.7. Video Session Parameters

Video session parameters objects **can** store preprocessed codec-specific parameters used with a compatible video session, and enable reducing the number of parameters needed to be provided and processed by the implementation while recording video coding operations into command buffers.

Parameters stored in such objects are *immutable* to facilitate the concurrent use of the stored parameters in multiple threads. At the same time, new parameters **can** be added to existing objects using the [vkUpdateVideoSessionParametersKHR](#) command.

In order to support concurrent use of the stored immutable parameters while also allowing the video session parameters object to be extended with new parameters, each video session parameters object maintains an *update sequence counter* that is set to 0 at object creation time and **must** be incremented by each subsequent update operation.

Certain video sequences that adhere to particular video compression standards permit updating previously supplied parameters. If a parameter update is necessary, the application has the following options:

- Cache the set of parameters on the application side and create a new video session parameters object adding all the parameters with appropriate changes, as necessary; or
- Create a new video session parameters object providing only the updated parameters and the previously used object as the template, which ensures that parameters not specified at creation time will be copied unmodified from the template object.

The actual types of parameters that **can** be stored and the capacity for individual parameter types, and the methods of initializing, updating, and referring to individual parameters are specific to the video codec operation the video session parameters object was created with.

- For [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#) these are defined in the [H.264 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#) these are defined in the [H.265 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR](#) there are no defined parameter sets and therefore do not use video session parameters objects.

- For [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#) these are defined in the [AV1 Decode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#) these are defined in the [H.264 Encode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#) these are defined in the [H.265 Encode Parameter Sets](#) section.
- For [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#) these are defined in the [AV1 Encode Parameter Sets](#) section.

Video session parameters objects created with an encode operation are further specialized based on the [video encode quality level](#) the video session parameters are used with, as implementations **may** apply different sets of [parameter overrides](#) depending on the used quality level. This enables implementations to store the potentially optimized set of parameters in these objects, further limiting the necessary processing required while recording video encode operations into command buffers.

Video session parameters are represented by [VkVideoSessionParametersKHR](#) handles:

```
// Provided by VK_KHR_video_queue
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkVideoSessionParametersKHR)
```

48.7.1. Creating Video Session Parameters

To create a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
VkResult vkCreateVideoSessionParametersKHR(
    VkDevice device,
    const VkVideoSessionParametersCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkVideoSessionParametersKHR* pVideoSessionParameters);
```

- [device](#) is the logical device that creates the video session parameters object.
- [pCreateInfo](#) is a pointer to [VkVideoSessionParametersCreateInfoKHR](#) structure containing parameters to be used to create the video session parameters object.
- [pAllocator](#) controls host memory allocation as described in the [Memory Allocation](#) chapter.
- [pVideoSessionParameters](#) is a pointer to a [VkVideoSessionParametersKHR](#) handle in which the resulting video session parameters object is returned.

The resulting video session parameters object is said to be created with the video codec operation [pCreateInfo->videoSession](#) was created with.

Video session parameters objects created with an encode operation are always created with respect to a [video encode quality level](#). By default, the created video session parameters objects are created with quality level zero, unless otherwise specified by including a

VkVideoEncodeQualityLevelInfoKHR structure in the pCreateInfo->pNext chain, in which case the video session parameters object is created with the quality level specified in VkVideoEncodeQualityLevelInfoKHR::qualityLevel.

If pCreateInfo->videoSessionParametersTemplate is not VK_NULL_HANDLE, then it will be used as a template for constructing the new video session parameters object. This happens by first adding any parameters according to the additional creation parameters provided in the pCreateInfo->pNext chain, followed by adding any parameters from the template object that have a key that does not match the key of any of the already added parameters.

For video session parameters objects created with an encode operation, the template object specified in pCreateInfo->videoSessionParametersTemplate **must** have been created with the same video encode quality level as the newly created object.

NOTE

This means that codec-specific parameters stored in video session parameters objects **can** only be reused across different video encode quality levels by re-specifying them, as previously created video session parameters against other quality levels **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied parameter overrides) **may** no longer be available in them for the purposes of constructing the derived object.

Video session parameters objects are only compatible with quantization maps if they are created with pCreateInfo->flags including VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR.

Video session parameters objects created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR against a video session object that was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR or VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR are created with a specific compatible quantization map texel size specified in the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain of pCreateInfo.

NOTE

This means that the quantization map texel size that such a video session parameters object is compatible with is fixed for the lifetime of the object. Applications have to create separate video session parameters objects to use different quantization map texel sizes with a single video session object. This is necessary because the used quantization map texel size may affect the parameter overrides the implementation has to perform and thus the final values of the used codec-specific parameters.

For video session parameters objects created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, the template object specified in pCreateInfo->videoSessionParametersTemplate **must** also have been created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR and the

same compatible quantization map texel size specified in `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR::quantizationMapTexelSize`.

NOTE

This means that codec-specific parameters stored in video session parameters objects **can** only be reused with different quantization map texel sizes by re-specifying them, as previously created video session parameters against other quantization map texel sizes **cannot** be used as template because the original codec-specific parameters (before the implementation **may** have applied [parameter overrides](#)) **may** no longer be available in them for the purposes of constructing the derived object.

For video session parameters objects created without `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, the template object specified in `pCreateInfo->videoSessionParametersTemplate` **must** also have been created without `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing [H.264 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.
- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id` and `pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing [H.265 VPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the

`VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSS` are added first;

- If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing `H.265 SPS` entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSS` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing `H.265 PPS` entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSS` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the created video session parameters object will contain a single `AV1 sequence header` represented by a `StdVideoAV1SequenceHeader` structure specified through the `pStdSequenceHeader` member of the `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain. As such video session parameters objects **can** only contain a single `AV1 sequence header`, it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH264SequenceParameterSet` structures representing `H.264 SPS` entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSS` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each

`StdVideoH264SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id`.

- `StdVideoH264PictureParameterSet` structures representing [H.264 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `seq_parameter_set_id` and `pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the created video session parameters object will initially contain the following sets of parameter entries:

- `StdVideoH265VideoParameterSet` structures representing [H.265 VPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `vps_video_parameter_set_id`.
- `StdVideoH265SequenceParameterSet` structures representing [H.265 SPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id` and `sps_seq_parameter_set_id`.
- `StdVideoH265PictureParameterSet` structures representing [H.265 PPS](#) entries, as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added first;
 - If `pCreateInfo->videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it is copied to the created video session parameters object if the created object does not already contain such an entry with the same `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id`.

If `pCreateInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the created video session parameters object will contain a single `AV1 sequence header` specified through the members of the `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure provided in the `pCreateInfo->pNext` chain. As such video session parameters objects **can** only contain a single `AV1 sequence header`, it is not possible to use a previously created object as a template or subsequently update the created video session parameters object.

In case of video session parameters objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE	Applications should not rely on the <code>VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR</code> error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.
------	--

Valid Usage (Implicit)

- `VUID-vkCreateVideoSessionParametersKHR-device-parameter`
`device` **must** be a valid `VkDevice` handle
- `VUID-vkCreateVideoSessionParametersKHR-pCreateInfo-parameter`
`pCreateInfo` **must** be a valid pointer to a valid `VkVideoSessionParametersCreateInfoKHR` structure
- `VUID-vkCreateVideoSessionParametersKHR-pAllocator-parameter`
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- `VUID-vkCreateVideoSessionParametersKHR-pVideoSessionParameters-parameter`
`pVideoSessionParameters` **must** be a valid pointer to a `VkVideoSessionParametersKHR` handle
- `VUID-vkCreateVideoSessionParametersKHR-device-queuecount`
The device **must** have been created with at least `1` queue

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR`

- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkVideoSessionParametersCreateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    VkVideoSessionParametersCreateFlagsKHR flags;
    VkVideoSessionParametersKHR videoSessionParametersTemplate;
    VkVideoSessionKHR         videoSession;
} VkVideoSessionParametersCreateInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkVideoSessionParametersCreateFlagBitsKHR](#) specifying create flags.
- [videoSessionParametersTemplate](#) is [VK_NULL_HANDLE](#) or a valid handle to a [VkVideoSessionParametersKHR](#) object used as a template for constructing the new video session parameters object.
- [videoSession](#) is the video session object against which the video session parameters object is going to be created.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- If [videoSession](#) was created with the codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), then let [StdVideoH264SequenceParameterSet](#) [spsAddList\[\]](#) be the list of [H.264 SPS](#) entries to add to the created video session parameters object, defined as follows:
 - If the [pParametersAddInfo](#) member of the [VkVideoDecodeH264SessionParametersCreateInfoKHR](#) structure provided in the [pNext](#) chain is not [NULL](#), then the set of [StdVideoH264SequenceParameterSet](#) entries specified in [pParametersAddInfo->pStdSPSs](#) are added to [spsAddList](#);
 - If [videoSessionParametersTemplate](#) is not [VK_NULL_HANDLE](#), then each [StdVideoH264SequenceParameterSet](#) entry stored in it with [seq_parameter_set_id](#) not matching any of the entries already in [spsAddList](#) is added to [spsAddList](#).
- If [videoSession](#) was created with the codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), then let [StdVideoH264PictureParameterSet](#) [ppsAddList\[\]](#) be the list of [H.264 PPS](#) entries to add to the created video session parameters object, defined as follows:

- If the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
- If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it with `seq_parameter_set_id` or `pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265VideoParameterSet vpsAddList[]` be the list of `H.265 VPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added to `vpsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it with `vps_video_parameter_set_id` not matching any of the entries already in `vpsAddList` is added to `vpsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265SequenceParameterSet spsAddList[]` be the list of `H.265 SPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it with `sps_video_parameter_set_id` or `sps_seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then let `StdVideoH265PictureParameterSet ppsAddList[]` be the list of `H.265 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, or `pps_pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.

- If `videoSession` was created with an encode operation, then let `uint32_t qualityLevel` be the `video encode quality level` of the created video session parameters object, defined as follows:
 - If the `pNext` chain of this structure includes a `VkVideoEncodeQualityLevelInfoKHR` structure, then `qualityLevel` is equal to `VkVideoEncodeQualityLevelInfoKHR::qualityLevel`.
 - Otherwise `qualityLevel` is 0
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264SequenceParameterSet spsAddList[]` be the list of `H.264 SPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264SequenceParameterSet` entry stored in it with `seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then let `StdVideoH264PictureParameterSet ppsAddList[]` be the list of `H.264 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH264SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH264PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH264PictureParameterSet` entry stored in it with `seq_parameter_set_id` or `pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265VideoParameterSet vpsAddList[]` be the list of `H.265 VPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265VideoParameterSet` entries specified in `pParametersAddInfo->pStdVPSs` are added to `vpsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265VideoParameterSet` entry stored in it with `vps_video_parameter_set_id` not matching any of the entries already in `vpsAddList` is added to `vpsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265SequenceParameterSet spsAddList[]` be the list of `H.265 SPS` entries to add to the created video session parameters object, defined as follows:

- If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265SequenceParameterSet` entries specified in `pParametersAddInfo->pStdSPSs` are added to `spsAddList`;
- If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265SequenceParameterSet` entry stored in it with `sps_video_parameter_set_id` or `sps_seq_parameter_set_id` not matching any of the entries already in `spsAddList` is added to `spsAddList`.
- If `videoSession` was created with the codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then let `StdVideoH265PictureParameterSet ppsAddList[]` be the list of `H.265 PPS` entries to add to the created video session parameters object, defined as follows:
 - If the `pParametersAddInfo` member of the `VkVideoEncodeH265SessionParametersCreateInfoKHR` structure provided in the `pNext` chain is not `NULL`, then the set of `StdVideoH265PictureParameterSet` entries specified in `pParametersAddInfo->pStdPPSs` are added to `ppsAddList`;
 - If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, then each `StdVideoH265PictureParameterSet` entry stored in it with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, or `pps_pic_parameter_set_id` not matching any of the entries already in `ppsAddList` is added to `ppsAddList`.

Valid Usage

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-04855
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, it **must** have been created against `videoSession`
- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-08310
If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE` and `videoSession` was created with an encode operation, then `qualityLevel` **must** equal the `video encode quality` level `videoSessionParametersTemplate` was created with
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10271
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then `videoSession` **must** have been created with `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` or `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR`
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10272
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure
- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10273
If `flags` includes `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR`

R and videoSession was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR, then the list of video format properties supported for the image usage flag VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR **must** have an element for which VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize equals the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain

- VUID-VkVideoSessionParametersCreateInfoKHR-flags-10274

If flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR and videoSession was created with VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_EMPHASIS_MAP_BIT_KHR, then the list of video format properties supported for the image usage flag VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR **must** have an element for which VkVideoFormatQuantizationMapPropertiesKHR::quantizationMapTexelSize equals the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10275

If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created with VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10276

If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags includes VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created with the same quantization map texel size as the one specified in the quantizationMapTexelSize member of the VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR structure included in the pNext chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-10277

If videoSessionParametersTemplate is not VK_NULL_HANDLE and flags does not include VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR, then videoSessionParametersTemplate **must** have been created without VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07203

If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the pNext chain **must** include a VkVideoDecodeH264SessionParametersCreateInfoKHR structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07204

If videoSession was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then the number of elements of

`spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07205

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07206

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07207

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07208

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07209

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the `VkVideoDecodeH265SessionParametersCreateInfoKHR` structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10794

`videoSession` **must** not have been created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09258

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-09259

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoDecodeAV1SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07210

If `videoSession` was created with the video codec operation

[VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the `pNext` chain **must** include a [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04839

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04840

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the [VkVideoEncodeH264SessionParametersCreateInfoKHR](#) structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-07211

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the `pNext` chain **must** include a [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04841

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the number of elements of `vpsAddList` **must** be less than or equal to the `maxStdVPSCount` specified in the [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04842

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the number of elements of `spsAddList` **must** be less than or equal to the `maxStdSPSCount` specified in the [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-04843

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then the number of elements of `ppsAddList` **must** be less than or equal to the `maxStdPPSCount` specified in the [VkVideoEncodeH265SessionParametersCreateInfoKHR](#) structure included in the `pNext` chain

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08319

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then `num_tile_columns_minus1` **must** be less than [VkVideoEncodeH265CapabilitiesKHR::maxTiles.width](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the video profile `videoSession` was created with, for each element of `ppsAddList`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-08320

If `videoSession` was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then `num_tile_rows_minus1` **must**

be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, for each element of `ppsAddList`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10278

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then `videoSessionParametersTemplate` **must** be `VK_NULL_HANDLE`

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10279

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-10280

If `videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, then the `stdOperatingPointCount` member of the `VkVideoEncodeAV1SessionParametersCreateInfoKHR` structure included in the `pNext` chain **must** be less than or equal to `VkVideoEncodeAV1CapabilitiesKHR::maxOperatingPoints`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-sType

`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-pNext-pNext

Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoDecodeAV1SessionParametersCreateInfoKHR`, `VkVideoDecodeH264SessionParametersCreateInfoKHR`, `VkVideoDecodeH265SessionParametersCreateInfoKHR`, `VkVideoEncodeAV1SessionParametersCreateInfoKHR`, `VkVideoEncodeH264SessionParametersCreateInfoKHR`, `VkVideoEncodeH265SessionParametersCreateInfoKHR`, `VkVideoEncodeQualityLevelInfoKHR`, or `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR`

- VUID-VkVideoSessionParametersCreateInfoKHR-sType-unique

The `sType` value of each structure in the `pNext` chain **must** be unique

- VUID-VkVideoSessionParametersCreateInfoKHR-flags-parameter

`flags` **must** be a valid combination of `VkVideoSessionParametersCreateFlagBitsKHR` values

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSessionParametersTemplate-parameter

If `videoSessionParametersTemplate` is not `VK_NULL_HANDLE`, `videoSessionParametersTemplate` **must** be a valid `VkVideoSessionParametersKHR` handle

- VUID-VkVideoSessionParametersCreateInfoKHR-videoSession-parameter
`videoSession` **must** be a valid `VkVideoSessionKHR` handle
- VUID-VkVideoSessionParametersCreateInfoKHR-commonparent
Both of `videoSession`, and `videoSessionParametersTemplate` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

Bits which **can** be set in `VkVideoSessionParametersCreateInfoKHR::flags` are:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef enum VkVideoSessionParametersCreateFlagBitsKHR {
    // Provided by VK_KHR_video_encode_quantization_map
    VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR =
0x00000001,
} VkVideoSessionParametersCreateFlagBitsKHR;
```

- `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` specifies that the created video session parameters object **can** be used with `quantization maps`.

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoSessionParametersCreateFlagsKHR;
```

`VkVideoSessionParametersCreateFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoSessionParametersCreateFlagBitsKHR`.

The `VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_encode_quantization_map
typedef struct VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkExtent2D         quantizationMapTexelSize;
} VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `quantizationMapTexelSize` specifies the `quantization map texel size` a video session parameters object created with `VK_VIDEO_SESSION_PARAMETERS_CREATE_QUANTIZATION_MAP_COMPATIBLE_BIT_KHR` is compatible with.

Valid Usage (Implicit)

- VUID-VkVideoEncodeQuantizationMapSessionParametersCreateInfoKHR-sType-sType

`sType` **must** be
`VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUANTIZATION_MAP_SESSION_PARAMETERS_CREATE_INFO_KHR`

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

48.7.2. Destroying Video Session Parameters

To destroy a video session parameters object, call:

```
// Provided by VK_KHR_video_queue
void vkDestroyVideoSessionParametersKHR(
    VkDevice                device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the video session parameters object.
- `videoSessionParameters` is the video session parameters object to destroy.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

Valid Usage

- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07212
All submitted commands that refer to `videoSessionParameters` **must** have completed execution
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07213
If `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-07214
If no `VkAllocationCallbacks` were provided when `videoSessionParameters` was created, `pAllocator` **must** be `NULL`

Valid Usage (Implicit)

- VUID-vkDestroyVideoSessionParametersKHR-device-parameter
`device` **must** be a valid `VkDevice` handle
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parameter
If `videoSessionParameters` is not `VK_NULL_HANDLE`, `videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle

- VUID-vkDestroyVideoSessionParametersKHR-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyVideoSessionParametersKHR-videoSessionParameters-parent
If `videoSessionParameters` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

Host Synchronization

- Host access to `videoSessionParameters` **must** be externally synchronized

48.7.3. Updating Video Session Parameters

To update video session parameters object with new parameters, call:

```
// Provided by VK_KHR_video_queue
VkResult vkUpdateVideoSessionParametersKHR(
    VkDevice device,
    VkVideoSessionParametersKHR videoSessionParameters,
    const VkVideoSessionParametersUpdateInfoKHR* pUpdateInfo);
```

- `device` is the logical device that updates the video session parameters.
- `videoSessionParameters` is the video session parameters object to update.
- `pUpdateInfo` is a pointer to a `VkVideoSessionParametersUpdateInfoKHR` structure specifying the parameter update information.

After a successful call to this command, the `update sequence counter` of `videoSessionParameters` is changed to the value specified in `pUpdateInfo->updateSequenceCount`.

NOTE

As each update issued to a video session parameters object needs to specify the next available update sequence count value, concurrent updates of the same video session parameters object are inherently disallowed. However, recording video coding operations to command buffers referring to parameters previously added to the video session parameters object is allowed, even if there is a concurrent update in progress adding some new entries to the object.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The `H.264 SPS` entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`.
- The `H.264 PPS` entries specified in `VkVideoDecodeH264SessionParametersAddInfoKHR`

::pStdPPSs.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.265 VPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`.
- The H.265 SPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs`.
- The H.265 PPS entries specified in `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.264 SPS entries specified in `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs`.
- The H.264 PPS entries specified in `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs`.

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pUpdateInfo->pNext` chain includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then this command adds the following parameter entries to `videoSessionParameters`:

- The H.265 VPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs`.
- The H.265 SPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs`.
- The H.265 PPS entries specified in `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`.

In case of video session parameters objects created with a video encode operation, implementations **may** return the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error if any of the specified Video Std parameters do not adhere to the syntactic or semantic requirements of the used video compression standard, or if values derived from parameters according to the rules defined by the used video compression standard do not adhere to the capabilities of the video compression standard or the implementation.

NOTE

Applications **should** not rely on the `VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR` error being returned by any command as a means to verify Video Std parameters, as implementations are not required to report the error in any specific set of cases.

Valid Usage

- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-07215
`pUpdateInfo->updateSequenceCount` **must** equal the current `update sequence counter` of `videoSessionParameters` plus one
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07216
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdSPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07217
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07218
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoDecodeH264SessionParametersAddInfoKHR::pStdPPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07219
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH264SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07220
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdVPSs`
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07221
If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of

`StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdVPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07222

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07223

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07224

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of `VkVideoDecodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07225

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoDecodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoDecodeH265SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-09260

`videoSessionParameters` **must** not have been created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07226

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching any of the elements of

VkVideoEncodeH264SessionParametersAddInfoKHR::pStdSPSs

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06441

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07227

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH264SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH264PictureParameterSet` entry with both `seq_parameter_set_id` and `pic_parameter_set_id` matching any of the elements of `VkVideoEncodeH264SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06442

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, then the number of `StdVideoH264PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoEncodeH264SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH264SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07228

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdVPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06443

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265VideoParameterSet` entries already stored in it plus the value of the `stdVPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdVPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07229

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265SequenceParameterSet` entry with both `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching any

of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdSPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06444

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265SequenceParameterSet` entries already stored in it plus the value of the `stdSPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdSPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-07230

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `videoSessionParameters` **must** not already contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` all matching any of the elements of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-06445

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, then the number of `StdVideoH265PictureParameterSet` entries already stored in it plus the value of the `stdPPSCount` member of the `VkVideoEncodeH265SessionParametersAddInfoKHR` structure included in the `pUpdateInfo->pNext` chain **must** be less than or equal to the `VkVideoEncodeH265SessionParametersCreateInfoKHR::maxStdPPSCount` `videoSessionParameters` was created with

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08321

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `num_tile_columns_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.width`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSessionParameters` was created with, for each element of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-08322

If `videoSessionParameters` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR` and the `pNext` chain of `pUpdateInfo` includes a `VkVideoEncodeH265SessionParametersAddInfoKHR` structure, then `num_tile_rows_minus1` **must** be less than `VkVideoEncodeH265CapabilitiesKHR::maxTiles.height`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSessionParameters` was created with, for each element of `VkVideoEncodeH265SessionParametersAddInfoKHR::pStdPPSs`

- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-10281

`videoSessionParameters` **must** not have been created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkUpdateVideoSessionParametersKHR-device-parameter **device** **must** be a valid [VkDevice](#) handle
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parameter **videoSessionParameters** **must** be a valid [VkVideoSessionParametersKHR](#) handle
- VUID-vkUpdateVideoSessionParametersKHR-pUpdateInfo-parameter **pUpdateInfo** **must** be a valid pointer to a valid [VkVideoSessionParametersUpdateInfoKHR](#) structure
- VUID-vkUpdateVideoSessionParametersKHR-videoSessionParameters-parent **videoSessionParameters** **must** have been created, allocated, or retrieved from **device**

Return Codes

Success

- [VK_SUCCESS](#)

Failure

- [VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR](#)
- [VK_ERROR_OUT_OF_DEVICE_MEMORY](#)
- [VK_ERROR_OUT_OF_HOST_MEMORY](#)
- [VK_ERROR_UNKNOWN](#)
- [VK_ERROR_VALIDATION_FAILED](#)

The [VkVideoSessionParametersUpdateInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoSessionParametersUpdateInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           updateSequenceCount;
} VkVideoSessionParametersUpdateInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **updateSequenceCount** is the new [update sequence count](#) to set for the video session parameters object.

Valid Usage (Implicit)

- VUID-VkVideoSessionParametersUpdateInfoKHR-sType-sType

sType must be `VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR`

- `VOID-VkVideoSessionParametersUpdateInfoKHR-pNext-pNext`

Each **pNext** member of any structure (including this one) in the **pNext** chain must be either **NULL** or a pointer to a valid instance of `VkVideoDecodeH264SessionParametersAddInfoKHR`, `VkVideoDecodeH265SessionParametersAddInfoKHR`, `VkVideoEncodeH264SessionParametersAddInfoKHR`, or `VkVideoEncodeH265SessionParametersAddInfoKHR`

- `VOID-VkVideoSessionParametersUpdateInfoKHR-sType-unique`

The **sType** value of each structure in the **pNext** chain must be unique

48.8. Video Coding Scope

Applications **can** record video coding commands for a video session only within a video coding scope.

To begin a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdBeginVideoCodingKHR(
    VkCommandBuffer                commandBuffer,
    const VkVideoBeginCodingInfoKHR* pBeginInfo);
```

- **commandBuffer** is the command buffer in which to record the command.
- **pBeginInfo** is a pointer to a `VkVideoBeginCodingInfoKHR` structure specifying the parameters of the video coding scope, including the video session and video session parameters object to use.

After beginning a video coding scope, the video session object specified in **pBeginInfo->videoSession** is *bound* to the command buffer, and the command buffer is ready to record video coding operations. Similarly, if **pBeginInfo->videoSessionParameters** is not `VK_NULL_HANDLE`, it is also *bound* to the command buffer, and video coding operations **can** refer to the codec-specific parameters stored in it.

This command also establishes the set of *bound reference picture resources* that **can** be used as *reconstructed pictures* or *reference pictures* within the video coding scope. Each element of this set consists of a *video picture resource* and the *DPB slot* index associated with it, if there is one.

The set of bound reference picture resources is immutable within a video coding scope, however, the DPB slot index associated with any of the bound reference picture resources **can** change during the video coding scope in response to video coding operations.

The `VkVideoReferenceSlotInfoKHR` structures provided as the elements of **pBeginInfo->ReferenceSlots** are interpreted by this command as follows:

- If **slotIndex** is non-negative and **pPictureResource** is not **NULL**, then the *video picture resource* defined by the `VkVideoPictureResourceInfoKHR` structure pointed to by **pPictureResource** is

added to the set of bound reference picture resources and is associated with the DPB slot index specified in `slotIndex`.

- If `slotIndex` is non-negative and `pPictureResource` is `NULL`, then the DPB slot with index `slotIndex` is `deactivated` by this command.
- If `slotIndex` is negative and `pPictureResource` is not `NULL`, then the `video picture resource` defined by the `VkVideoPictureResourceInfoKHR` structure pointed to by `pPictureResource` is added to the set of bound reference picture resources without an associated DPB slot. Such a picture resource **can** be subsequently used as a `reconstructed picture` to associate it with a DPB slot.
- If `slotIndex` is negative and `pPictureResource` is `NULL`, then the element is ignored.

NOTE

It is possible for multiple bound reference picture resources to be associated with the same DPB slot index, or for a single bound reference picture to refer to multiple separate reference pictures. For example, in case of an `H.264 decode profile` with `interlaced frame support` a single DPB slot can refer to two separate pictures for the top and bottom fields. Depending on the picture layout used by the `H.264 decode profile`, the following special cases **may** arise:

- If the picture layout is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`, then the top and bottom field pictures are physically co-located in the same video picture resource with even scanlines corresponding to the top field and odd scanlines corresponding to the bottom field, respectively.
- If the picture layout is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`, then the top and bottom field pictures are stored in separate video picture resources (in separate subregions of the same image layer, in separate layers of the same image, or in entirely separate images), hence two elements of `VkVideoBeginCodingInfoKHR::pReferenceSlots` **can** contain the same `slotIndex` but specify different video picture resources in their `pPictureResource` members.

All non-negative `slotIndex` values specified in the elements of `pBeginInfo->pReferenceSlots` **must** identify DPB slots of the video session that are in the `active state` at the time this command is executed on the device.

NOTE

The application does not have to specify an entry in `pBeginInfo->pReferenceSlots` corresponding to all active DPB slots of the video session, but only for those which are intended to be used in the video coding scope. This way the application can avoid any potential runtime cost associated with binding the corresponding picture resources to the command buffer.

In case of a video encode session, the application is also responsible for providing information about the current `rate control state` configured for the video session by including an instance of the `VkVideoEncodeRateControlInfoKHR` structure in the `pNext` chain of `pBeginInfo`. If no `VkVideoEncodeRateControlInfoKHR` is included, then the presence of an empty `VkVideoEncodeRateControlInfoKHR` structure is implied which indicates that the current `rate control mode` is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`. The specified state

must **match** the effective rate control state configured for the video session at the time the recorded command is executed on the device.

NOTE

Including an instance of the [VkVideoEncodeRateControlInfoKHR](#) structure in the `pNext` chain of `pBeginInfo` does not change the rate control state configured for the video session, but only specifies the expected rate control state configured at the time the recorded command is executed on the device which allows the implementation to have information about the configured rate control state at command buffer recording time. In order to change the current rate control state of a video session, the application has to issue an appropriate [vkCmdControlVideoCodingKHR](#) command as described in the [Video Coding Control](#) and [Rate Control State](#) sections.

Valid Usage

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-11760
The [VkCommandPool](#) that `commandBuffer` was allocated from **must** have been created with the same queue family index that `pBeginInfo->videoSession` was created with
- VUID-vkCmdBeginVideoCodingKHR-None-07232
There **must** be no [active](#) queries
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07233
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pBeginInfo->videoSession` **must** not have been created with [VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR](#)
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07234
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pBeginInfo->videoSession` **must** have been created with [VK_VIDEO_SESSION_CREATE_PROTECTED_CONTENT_BIT_KHR](#)
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07235
If `commandBuffer` is an unprotected command buffer, `protectedNoFault` is not supported, and the `pPictureResource` member of any element of `pBeginInfo->pReferenceSlots` is not `NULL`, then `pPictureResource->imageViewBinding` for that element **must** not specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-07236
If `commandBuffer` is a protected command buffer `protectedNoFault` is not supported, and the `pPictureResource` member of any element of `pBeginInfo->pReferenceSlots` is not `NULL`, then `pPictureResource->imageViewBinding` for that element **must** specify an image view created from a protected image
- VUID-vkCmdBeginVideoCodingKHR-slotIndex-07239
If the `slotIndex` member of any element of `pBeginInfo->pReferenceSlots` is not negative, then it **must** specify the index of a DPB slot that is in the [active state](#) in `pBeginInfo->videoSession` at the time the command is executed on the device
- VUID-vkCmdBeginVideoCodingKHR-pPictureResource-07265
Each video picture resource specified by any non-`NULL` `pPictureResource` member specified

in the elements of `pBeginInfo->pReferenceSlots` for which `slotIndex` is not negative **must match** one of the video picture resources currently associated with the DPB slot index of `pBeginInfo->videoSession` specified by `slotIndex` at the time the command is executed on the device

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08253

If `pBeginInfo->videoSession` was created with a video encode operation and the `pNext` chain of `pBeginInfo` does not include an instance of the `VkVideoEncodeRateControlInfoKHR` structure, then the `rate control mode` configured for `pBeginInfo->videoSession` at the time the command is executed on the device **must** be `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08254

If `pBeginInfo->videoSession` was created with a video encode operation and the `pNext` chain of `pBeginInfo` includes an instance of the `VkVideoEncodeRateControlInfoKHR` structure, then it **must match** the rate control state configured for `pBeginInfo->videoSession` at the time the command is executed on the device

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08255

If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH264CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH264GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-08256

If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeH265CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeH265GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-10282

If `pBeginInfo->videoSession` was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR`, the current `rate control mode` is not `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`, and `VkVideoEncodeAV1CapabilitiesKHR::requiresGopRemainingFrames` is `VK_TRUE`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the `pBeginInfo->videoSession` was created with, then the `pNext` chain of `pBeginInfo` **must** include an instance of the `VkVideoEncodeAV1GopRemainingFrameInfoKHR` with its `useGopRemainingFrames` member set to `VK_TRUE`

Valid Usage (Implicit)

- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdBeginVideoCodingKHR-pBeginInfo-parameter
`pBeginInfo` **must** be a valid pointer to a valid `VkVideoBeginCodingInfoKHR` structure
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdBeginVideoCodingKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdBeginVideoCodingKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdBeginVideoCodingKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdBeginVideoCodingKHR-videocoding
This command **must** only be called outside of a video coding scope
- VUID-vkCmdBeginVideoCodingKHR-bufferlevel
`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Outside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

vkCmdBeginVideoCodingKHR is not affected by [conditional rendering](#)

The [VkVideoBeginCodingInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoBeginCodingInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    VkVideoBeginCodingFlagsKHR flags;
    VkVideoSessionKHR         videoSession;
    VkVideoSessionParametersKHR videoSessionParameters;
    uint32_t                  referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoBeginCodingInfoKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `videoSession` is the video session object to be bound for the processing of the video commands.
- `videoSessionParameters` is `VK_NULL_HANDLE` or a handle of a [VkVideoSessionParametersKHR](#) object to be used for the processing of the video commands. If `VK_NULL_HANDLE`, then no video session parameters object is bound for the duration of the video coding scope.
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is a pointer to an array of [VkVideoReferenceSlotInfoKHR](#) structures specifying the information used to determine the set of [bound reference picture resources](#) for the video coding scope and their initial association with [DPB slot](#) indices.

Limiting values are defined below that are referenced by the relevant valid usage statements of this structure.

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
 - If `videoSession` was created with an [H.264 decode profile](#) with a [VkVideoDecodeH264ProfileInfoKHR::pictureLayout](#) of `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`, then `codedOffsetGranularity` is equal to `VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity`, as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for that video profile.

Valid Usage

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07237
`videoSession` **must** have memory bound to all of its memory bindings returned by `vkGetVideoSessionMemoryRequirementsKHR` for `videoSession`
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-04856
Each non-negative `VkVideoReferenceSlotInfoKHR::slotIndex` specified in the elements of `pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when `videoSession` was created
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07238
Each video picture resource corresponding to any non-NULL `pPictureResource` member specified in the elements of `pReferenceSlots` **must** be `unique` within `pReferenceSlots`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07240
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** be `compatible` with the video profile `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07241
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then the format of the image view specified in `pPictureResource->imageViewBinding` for that element **must** match the `VkVideoSessionCreateInfoKHR::referencePictureFormat` `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07242
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedOffset` member **must** be an integer multiple of `codedOffsetGranularity`
- VUID-VkVideoBeginCodingInfoKHR-pPictureResource-07243
If the `pPictureResource` member of any element of `pReferenceSlots` is not `NULL`, then its `codedExtent` member **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, `videoSession` was created with
- VUID-VkVideoBeginCodingInfoKHR-flags-07244
If `VkVideoCapabilitiesKHR::flags` does not include `VK_VIDEO_CAPABILITY_SEPARATE_REFERENCE_IMAGES_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile `videoSession` was created with, then `pPictureResource->imageViewBinding` of all elements of `pReferenceSlots` with a non-NULL `pPictureResource` member **must** specify image views created from the same image
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07245
If `videoSession` was created with a decode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` usage flag set
- VUID-VkVideoBeginCodingInfoKHR-slotIndex-07246
If `videoSession` was created with an encode operation and the `slotIndex` member of any element of `pReferenceSlots` is not negative, then the image view specified in `pPictureResource->imageViewBinding` for that element **must** have been created with the

[VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR](#) usage flag set

- VUID-VkVideoBeginCodingInfoKHR-videoSession-07247
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#), unless the [videoMaintenance2](#) feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07248
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#), unless the [videoMaintenance2](#) feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-09261
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#), unless the [videoMaintenance2](#) feature is enabled
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07249
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#)
- VUID-VkVideoBeginCodingInfoKHR-videoSession-07250
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#)
- VUID-VkVideoBeginCodingInfoKHR-videoSession-10283
If [videoSession](#) was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_ENCODE_AV1_BIT_KHR](#), then [videoSessionParameters](#) **must** not be [VK_NULL_HANDLE](#)
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-04857
If [videoSessionParameters](#) is not [VK_NULL_HANDLE](#), it **must** have been created with [videoSession](#) specified in [VkVideoSessionParametersCreateInfoKHR::videoSession](#)

Valid Usage (Implicit)

- VUID-VkVideoBeginCodingInfoKHR-sType-sType
[sType](#) **must** be [VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR](#)
- VUID-VkVideoBeginCodingInfoKHR-pNext-pNext
Each [pNext](#) member of any structure (including this one) in the [pNext](#) chain **must** be either [NULL](#) or a pointer to a valid instance of [VkVideoEncodeAV1GopRemainingFrameInfoKHR](#), [VkVideoEncodeAV1RateControlInfoKHR](#), [VkVideoEncodeH264GopRemainingFrameInfoKHR](#), [VkVideoEncodeH264RateControlInfoKHR](#), [VkVideoEncodeH265GopRemainingFrameInfoKHR](#), [VkVideoEncodeH265RateControlInfoKHR](#), or [VkVideoEncodeRateControlInfoKHR](#)
- VUID-VkVideoBeginCodingInfoKHR-sType-unique
The [sType](#) value of each structure in the [pNext](#) chain **must** be unique

- VUID-VkVideoBeginCodingInfoKHR-flags-zero bitmask
flags **must** be 0
- VUID-VkVideoBeginCodingInfoKHR-videoSession-parameter
videoSession **must** be a valid [VkVideoSessionKHR](#) handle
- VUID-VkVideoBeginCodingInfoKHR-videoSessionParameters-parameter
If **videoSessionParameters** is not [VK_NULL_HANDLE](#), **videoSessionParameters** **must** be a valid [VkVideoSessionParametersKHR](#) handle
- VUID-VkVideoBeginCodingInfoKHR-pReferenceSlots-parameter
If **referenceSlotCount** is not 0, **pReferenceSlots** **must** be a valid pointer to an array of **referenceSlotCount** valid [VkVideoReferenceSlotInfoKHR](#) structures
- VUID-VkVideoBeginCodingInfoKHR-commonparent
Both of **videoSession**, and **videoSessionParameters** that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same [VkDevice](#)

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoBeginCodingFlagsKHR;
```

[VkVideoBeginCodingFlagsKHR](#) is a bitmask type for setting a mask, but is currently reserved for future use.

The [VkVideoReferenceSlotInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoReferenceSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    int32_t                  slotIndex;
    const VkVideoPictureResourceInfoKHR* pPictureResource;
} VkVideoReferenceSlotInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **slotIndex** is the index of the [DPB slot](#) or a negative integer value.
- **pPictureResource** is [NULL](#) or a pointer to a [VkVideoPictureResourceInfoKHR](#) structure describing the [video picture resource](#) associated with the DPB slot index specified by **slotIndex**.

Valid Usage (Implicit)

- VUID-VkVideoReferenceSlotInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR](#)
- VUID-VkVideoReferenceSlotInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either

`NULL` or a pointer to a valid instance of `VkVideoDecodeAV1DpbSlotInfoKHR`, `VkVideoDecodeH264DpbSlotInfoKHR`, `VkVideoDecodeH265DpbSlotInfoKHR`, `VkVideoEncodeAV1DpbSlotInfoKHR`, `VkVideoEncodeH264DpbSlotInfoKHR`, `VkVideoEncodeH265DpbSlotInfoKHR`, or `VkVideoReferenceIntraRefreshInfoKHR`

- VUID-VkVideoReferenceSlotInfoKHR-sType-unique
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkVideoReferenceSlotInfoKHR-pPictureResource-parameter
If `pPictureResource` is not `NULL`, `pPictureResource` **must** be a valid pointer to a valid `VkVideoPictureResourceInfoKHR` structure

To end a video coding scope, call:

```
// Provided by VK_KHR_video_queue
void vkCmdEndVideoCodingKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoEndCodingInfoKHR* pEndCodingInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pEndCodingInfo` is a pointer to a `VkVideoEndCodingInfoKHR` structure specifying the parameters for ending the video coding scope.

After ending a video coding scope, the video session object, the optional video session parameters object, and all `reference picture resources` previously bound by the corresponding `vkCmdBeginVideoCodingKHR` command are *unbound*.

Valid Usage

- VUID-vkCmdEndVideoCodingKHR-None-07251
There **must** be no `active` queries

Valid Usage (Implicit)

- VUID-vkCmdEndVideoCodingKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEndVideoCodingKHR-pEndCodingInfo-parameter
`pEndCodingInfo` **must** be a valid pointer to a valid `VkVideoEndCodingInfoKHR` structure
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdEndVideoCodingKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdEndVideoCodingKHR-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdEndVideoCodingKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdEndVideoCodingKHR-videocoding

This command **must** only be called inside of a video coding scope

- VUID-vkCmdEndVideoCodingKHR-bufferlevel

`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action State

Conditional Rendering

`vkCmdEndVideoCodingKHR` is not affected by [conditional rendering](#)

The `VkVideoEndCodingInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoEndCodingInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoEndCodingFlagsKHR flags;
} VkVideoEndCodingInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- **flags** is reserved for future use.

Valid Usage (Implicit)

- VUID-VkVideoEndCodingInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_END_CODING_INFO_KHR](#)
- VUID-VkVideoEndCodingInfoKHR-pNext-pNext
pNext **must** be `NULL`
- VUID-VkVideoEndCodingInfoKHR-flags-zero bitmask
flags **must** be `0`

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoEndCodingFlagsKHR;
```

VkVideoEndCodingFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

48.9. Video Coding Control

To apply dynamic controls to the bound video session object, call:

```
// Provided by VK_KHR_video_queue
void vkCmdControlVideoCodingKHR(
    VkCommandBuffer                commandBuffer,
    const VkVideoCodingControlInfoKHR* pCodingControlInfo);
```

- **commandBuffer** is the command buffer in which to record the command.
- **pCodingControlInfo** is a pointer to a [VkVideoCodingControlInfoKHR](#) structure specifying the control parameters.

The control parameters provided in this call are applied to the video session at the time the command executes on the device and are in effect until a subsequent call to this command with the same video session bound changes the corresponding control parameters.

A newly created video session **must** be reset before performing video coding operations using it by including [VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR](#) in **pCodingControlInfo->flags**. The reset operation also returns all DPB slots of the video session to the [inactive state](#). Correspondingly, any DPB slot index associated with the [bound reference picture resources](#) is removed.

For encode sessions, the reset operation returns [rate control](#) configuration to implementation default settings and sets the [video encode quality level](#) to zero.

After video coding operations are performed using a video session, the reset operation **can** be used to return the video session to the same *initial* state as after the reset of a newly created video session. This **can** be used, for example, when different video sequences are needed to be processed

with the same video session object.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the command replaces the `rate control` configuration maintained by the video session with the configuration specified in the `VkVideoEncodeRateControlInfoKHR` structure included in the `pCodingControlInfo->pNext` chain.

If `pCodingControlInfo->flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`, then the command changes the current `video encode quality level` to the value specified in the `qualityLevel` member of the `VkVideoEncodeQualityLevelInfoKHR` structure included in the `pCodingControlInfo->pNext` chain.

Valid Usage

- VUID-vkCmdControlVideoCodingKHR-flags-07017
If `pCodingControlInfo->flags` does not include `VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR`, then the bound video session **must** not be in `uninitialized` state at the time the command is executed on the device
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-08243
If the bound video session was not created with an encode operation, then `pCodingControlInfo->flags` **must** not include `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR` or `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR`

Valid Usage (Implicit)

- VUID-vkCmdControlVideoCodingKHR-commandBuffer-parameter
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdControlVideoCodingKHR-pCodingControlInfo-parameter
`pCodingControlInfo` **must** be a valid pointer to a valid `VkVideoCodingControlInfoKHR` structure
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-recording
`commandBuffer` **must** be in the `recording` state
- VUID-vkCmdControlVideoCodingKHR-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations
- VUID-vkCmdControlVideoCodingKHR-renderpass
This command **must** only be called outside of a render pass instance
- VUID-vkCmdControlVideoCodingKHR-suspended
This command **must** not be called between suspended render pass instances
- VUID-vkCmdControlVideoCodingKHR-videocoding
This command **must** only be called inside of a video coding scope
- VUID-vkCmdControlVideoCodingKHR-bufferlevel

`commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR VK_QUEUE_VIDEO_ENCODE_BIT_KHR	Action

Conditional Rendering

`vkCmdControlVideoCodingKHR` is not affected by [conditional rendering](#)

The `VkVideoCodingControlInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_queue
typedef struct VkVideoCodingControlInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkVideoCodingControlFlagsKHR flags;
} VkVideoCodingControlInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoCodingControlFlagsKHR` specifying control flags.

Valid Usage

- VUID-VkVideoCodingControlInfoKHR-flags-07018
If `flags` includes `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoEncodeRateControlInfoKHR` structure

- VUID-VkVideoCodingControlInfoKHR-flags-08349

If **flags** includes [VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR](#), then the **pNext** chain **must** include a [VkVideoEncodeQualityLevelInfoKHR](#) structure

Valid Usage (Implicit)

- VUID-VkVideoCodingControlInfoKHR-sType-sType
sType **must** be [VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR](#)
- VUID-VkVideoCodingControlInfoKHR-pNext-pNext
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either **NULL** or a pointer to a valid instance of [VkVideoEncodeAV1RateControlInfoKHR](#), [VkVideoEncodeH264RateControlInfoKHR](#), [VkVideoEncodeH265RateControlInfoKHR](#), [VkVideoEncodeQualityLevelInfoKHR](#), or [VkVideoEncodeRateControlInfoKHR](#)
- VUID-VkVideoCodingControlInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkVideoCodingControlInfoKHR-flags-parameter
flags **must** be a valid combination of [VkVideoCodingControlFlagBitsKHR](#) values
- VUID-VkVideoCodingControlInfoKHR-flags-requiredbitmask
flags **must** not be 0

Bits which **can** be set in [VkVideoCodingControlInfoKHR::flags](#), specifying the video coding control parameters to be modified, are:

```
// Provided by VK_KHR_video_queue
typedef enum VkVideoCodingControlFlagBitsKHR {
    VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR = 0x00000001,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_video_encode_queue
    VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR = 0x00000004,
} VkVideoCodingControlFlagBitsKHR;
```

- [VK_VIDEO_CODING_CONTROL_RESET_BIT_KHR](#) specifies a request for the bound video session to be reset before other coding control parameters are applied.
- [VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR](#) specifies that the coding control parameters include video encode rate control parameters (see [VkVideoEncodeRateControlInfoKHR](#)).
- [VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR](#) specifies that the coding control parameters include video encode quality level parameters (see [VkVideoEncodeQualityLevelInfoKHR](#)).

```
// Provided by VK_KHR_video_queue
typedef VkFlags VkVideoCodingControlFlagsKHR;
```

`VkVideoCodingControlFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoCodingControlFlagBitsKHR`.

48.10. Inline Queries

If a video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, beginning queries using commands such as `vkCmdBeginQuery` within a video coding scope is not allowed. Instead, queries are executed inline by including an instance of the `VkVideoInlineQueryInfoKHR` structure in the `pNext` chain of the parameters of one of the video coding commands, with its `queryPool` member set to a valid `VkQueryPool` handle.

The `VkVideoInlineQueryInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_maintenance1
typedef struct VkVideoInlineQueryInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    VkQueryPool         queryPool;
    uint32_t            firstQuery;
    uint32_t            queryCount;
} VkVideoInlineQueryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queryPool` is `VK_NULL_HANDLE` or a valid handle to a `VkQueryPool` object that will manage the results of the queries.
- `firstQuery` is the query index within the query pool that will contain the query results for the first video coding operation. The query results of subsequent video coding operations will be contained by subsequent query indices.
- `queryCount` is the number of queries to execute.

NOTE

In practice, if `queryPool` is not `VK_NULL_HANDLE`, then `queryCount` will always have to match the number of video coding operations issued by the video coding command this structure is specified to, meaning that using inline queries in a video coding command will always execute a query for each issued video coding operation.

This structure **can** be included in the `pNext` chain of the input parameter structure of video coding commands.

- In the `pNext` chain of the `pDecodeInfo` parameter of the `vkCmdDecodeVideoKHR` command to execute a query for each video decode operation issued by the command.

- In the `pNext` chain of the `pEncodeInfo` parameter of the `vkCmdEncodeVideoKHR` command to execute a query for each video encode operation issued by the command.

Valid Usage

- VUID-VkVideoInlineQueryInfoKHR-queryPool-08372
If `queryPool` is not `VK_NULL_HANDLE`, then `firstQuery` **must** be less than the number of queries in `queryPool`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-08373
If `queryPool` is not `VK_NULL_HANDLE`, then the sum of `firstQuery` and `queryCount` **must** be less than or equal to the number of queries in `queryPool`

Valid Usage (Implicit)

- VUID-VkVideoInlineQueryInfoKHR-sType-sType
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_INLINE_QUERY_INFO_KHR`
- VUID-VkVideoInlineQueryInfoKHR-queryPool-parameter
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` **must** be a valid `VkQueryPool` handle

Structure Chaining

Extends the structures

- `VkVideoDecodeInfoKHR`
- `VkVideoEncodeInfoKHR`

48.11. Video Decode Operations

Video decode operations consume compressed video data from a video bitstream buffer and zero or more reference pictures, and produce a *decode output picture* and an optional *reconstructed picture*.

NOTE

Such decode output pictures can be shared with the *Decoded Picture Buffer*, and can also be used as the *input* of video encode operations, with graphics or compute operations, or with *Window System Integration* APIs, depending on the capabilities of the implementation.

Video decode operations **may** access the following resources in the `VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR` stage:

- The source video bitstream buffer range and the image subregions corresponding to the list of *active reference pictures* with access `VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR`.
- The image subregions corresponding to the target *decode output picture* and *reconstructed picture* with access `VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR`.

The image subresource of each [video picture resource](#) accessed by the video decode operation is specified using a corresponding [VkVideoPictureResourceInfoKHR](#) structure. Each such image subresource **must** be in the appropriate image layout as follows:

- If the image subresource is used in the video decode operation only as [decode output picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .
- If the image subresource is used in the video decode operation both as [decode output picture](#) and [reconstructed picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .
- If the image subresource is used in the video decode operation only as [reconstructed picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .
- If the image subresource is used in the video decode operation as a [reference picture](#), then it **must** be in the [VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR](#) layout , unless the [unifiedImageLayoutsVideo](#) feature is enabled, in which case it **may** be in the [VK_IMAGE_LAYOUT_GENERAL](#) layout .

A video decode operation **may** complete unsuccessfully. In this case the [decode output picture](#) will have undefined contents. Similarly, if [reference picture setup](#) is requested, the [reconstructed picture](#) will also have undefined contents, and the activated DPB slot will have an [invalid picture reference](#).

48.11.1. Codec-Specific Semantics

The following aspects of video decode operations are codec-specific:

- The interpretation of the contents of the source video bitstream buffer range.
- The construction and interpretation of the list of [active reference pictures](#) and the interpretation of the picture data referred to by the corresponding image subregions.
- The construction and interpretation of information related to the [decode output picture](#) and the generation of picture data to the corresponding image subregion.
- The decision on [reference picture setup](#).
- The construction and interpretation of information related to the optional [reconstructed picture](#) and the generation of picture data to the corresponding image subregion.

These codec-specific behaviors are defined for each video codec operation separately.

- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [H.264 Decode Operations](#) section.
- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the

[H.265 Decode Operations](#) section.

- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [VP9 Decode Operations](#) section.
- If the used video codec operation is [VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR](#), then the codec-specific aspects of the video decoding process are performed as defined in the [AV1 Decode Operations](#) section.

48.11.2. Video Decode Operation Steps

Each video decode operation performs the following steps in the [VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR](#) stage:

1. Reads the encoded video data from the source video bitstream buffer range.
2. Performs picture reconstruction of the encoded video data according to the [codec-specific semantics](#), applying any prediction data read from the [active reference pictures](#) in the process;
3. Writes the decoded picture data to the [decode output picture](#), and optionally to the [reconstructed picture](#), if one is specified and is different from the decode output picture, according to the [codec-specific semantics](#);
4. If [reference picture setup](#) is requested, the [DPB slot index](#) specified in the [reconstructed picture information](#) is [activated](#) with the [reconstructed picture](#).

When [reconstructed picture information](#) is provided, the specified [DPB slot index](#) is associated with the corresponding [bound reference picture resource](#), regardless of whether [reference picture setup](#) is requested.

48.11.3. Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) with [pVideoProfile->videoCodecOperation](#) specifying a decode operation, the [VkVideoDecodeCapabilitiesKHR](#) structure **must** be included in the [pNext](#) chain of the [VkVideoCapabilitiesKHR](#) structure to retrieve capabilities specific to video decoding.

The [VkVideoDecodeCapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeCapabilitiesKHR {
    VkStructureType      sType;
    void*                 pNext;
    VkVideoDecodeCapabilityFlagsKHR flags;
} VkVideoDecodeCapabilitiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkVideoDecodeCapabilityFlagBitsKHR](#) describing the supported video

decoding capabilities.

Valid Usage (Implicit)

- VUID-VkVideoDecodeCapabilitiesKHR-sType-sType
sType must be [VK_STRUCTURE_TYPE_VIDEO_DECODE_CAPABILITIES_KHR](#)

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

Bits which **may** be set in [VkVideoDecodeCapabilitiesKHR::flags](#), indicating the decoding capabilities supported, are:

```
// Provided by VK_KHR_video_decode_queue
typedef enum VkVideoDecodeCapabilityFlagBitsKHR {
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR = 0x00000002,
} VkVideoDecodeCapabilityFlagBitsKHR;
```

- [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#) specifies support for using the same video picture resource as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.
- [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR](#) specifies support for using distinct video picture resources as the [reconstructed picture](#) and [decode output picture](#) in a video decode operation.

NOTE

Some video profiles allow using distinct video picture resources as the reconstructed picture and decode output picture in specific video decode operations even when the video decode profile does not support [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR](#). Even if the implementation only reports coincide, the decode output picture for [film grain](#) enabled frames must be a different video picture resource from the reconstructed picture because film grain is applied outside of the coding loop.

Implementations are only **required** to support one of [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#) and [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR](#). Accordingly, applications **should** handle both cases to maximize portability.

NOTE

If both [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR](#) and [VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR](#) are supported, an application can choose to create separate images for decode DPB and

decode output. E.g. in cases when linear tiling is preferred (and supported) for the decode output picture and the DPB requires optimal tiling, this avoids the need for a separate copy at the expense of additional memory bandwidth requirements during decoding.

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeCapabilityFlagsKHR;
```

`VkVideoDecodeCapabilityFlagsKHR` is a bitmask type for setting a mask of zero or more `VkVideoDecodeCapabilityFlagBitsKHR`.

48.11.4. Video Decode Commands

To launch video decode operations, call:

```
// Provided by VK_KHR_video_decode_queue
void vkCmdDecodeVideoKHR(
    VkCommandBuffer          commandBuffer,
    const VkVideoDecodeInfoKHR* pDecodeInfo);
```

- `commandBuffer` is the command buffer in which to record the command.
- `pDecodeInfo` is a pointer to a `VkVideoDecodeInfoKHR` structure specifying the parameters of the video decode operations.

Each call issues one or more video decode operations. The implicit parameter `opCount` corresponds to the number of video decode operations issued by the command. After calling this command, the `active query index` of each `active` query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video decode operation.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then this command will execute a query for each video decode operation issued by it.

Active Reference Picture Information

The list of `active reference pictures` used by a video decode operation is a list of image subregions used as the source of `reference picture` data and related parameters, and is derived from the `VkVideoReferenceSlotInfoKHR` structures provided as the elements of the `pDecodeInfo->pReferenceSlots` array. For each element of `pDecodeInfo->pReferenceSlots`, one or more elements are added to the active reference picture list, as defined by the `codec-specific semantics`. Each element of this list contains the following information:

- The image subregion within the image subresource `referred` to by the `video picture resource` used as the reference picture.

- The [DPB slot](#) index the reference picture is associated with.
- The codec-specific reference information related to the reference picture.

Reconstructed Picture Information

Information related to the optional [reconstructed picture](#) used by a video decode operation is derived from the [VkVideoReferenceSlotInfoKHR](#) structure pointed to by [pDecodeInfo->pSetupReferenceSlot](#), if not [NULL](#), as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the reconstructed picture.
- The [DPB slot](#) index to use for picture reconstruction.
- The codec-specific reference information related to the reconstructed picture.

Specifying a valid [VkVideoReferenceSlotInfoKHR](#) structure in [pDecodeInfo->pSetupReferenceSlot](#) is always required, unless the video session was created with [VkVideoSessionCreateInfoKHR::maxDpbSlots](#) equal to zero. However, the DPB slot identified by [pDecodeInfo->pSetupReferenceSlot->slotIndex](#) is only [activated](#) with the [reconstructed picture](#) specified in [pDecodeInfo->pSetupReferenceSlot->pPictureResource](#) if reference picture setup is requested according to the [codec-specific semantics](#).

If reconstructed picture information is specified, and [pDecodeInfo->pSetupReferenceSlot->pPictureResource](#) refers to a [video picture resource](#) different than that of the [decode output picture](#), but reference picture setup is not requested, the contents of the [video picture resource](#) corresponding to the reconstructed picture will be undefined after the video decode operation.

NOTE

Some implementations may always output the reconstructed picture or use it as temporary storage during the video decode operation even when the reconstructed picture is not marked for future reference.

Decode Output Picture Information

Information related to the [decode output picture](#) used by a video decode operation is derived from [pDecodeInfo->dstPictureResource](#) and any codec-specific parameters provided in the [pDecodeInfo->pNext](#) chain, as defined by the [codec-specific semantics](#), and consists of the following:

- The image subregion within the image subresource [referred](#) to by the [video picture resource](#) used as the decode output picture.
- The codec-specific picture information related to the decode output picture.

Several limiting values are defined below that are referenced by the relevant valid usage statements of this command.

- Let [uint32_t activeReferencePictureCount](#) be the size of the list of active reference pictures used by the video decode operation. Unless otherwise defined, [activeReferencePictureCount](#) is set to the value of [pDecodeInfo->referenceSlotCount](#).
 - If the bound video session was created with an [H.264 decode profile](#), then let

`activeReferencePictureCount` be the value of `pDecodeInfo->referenceSlotCount` plus the number of elements of the `pDecodeInfo->pReferenceSlots` array that have a `VkVideoDecodeH264DpbSlotInfoKHR` structure included in their `pNext` chain with both `pStdReferenceInfo->flags.top_field_flag` and `pStdReferenceInfo->flags.bottom_field_flag` set.

NOTE

This means that the elements of `pDecodeInfo->pReferenceSlots` that include both a top and bottom field reference are counted as two separate active reference pictures, as described in the [active reference picture list construction rules for H.264 decode operations](#).

- Let `VkOffset2D codedOffsetGranularity` be the minimum alignment requirement for the coded offset of video picture resources. Unless otherwise defined, the value of the `x` and `y` members of `codedOffsetGranularity` are 0.
 - If the bound video session was created with an [H.264 decode profile](#) with a `VkVideoDecodeH264ProfileInfoKHR::pictureLayout` of `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`, then `codedOffsetGranularity` is equal to `VkVideoDecodeH264CapabilitiesKHR::fieldOffsetGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for that video profile.
- Let `uint32_t dpbFrameUseCount[]` be an array of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times a frame associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the array be 0.
 - If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `dpbFrameUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`. If the bound video session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain.
 - For each element of `pDecodeInfo->pReferenceSlots`, `dpbFrameUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the corresponding element. If the bound video session object was created with an [H.264 decode profile](#), then `dpbFrameUseCount[i]` is decremented by one if either `pStdReferenceInfo->flags.top_field_flag` or `pStdReferenceInfo->flags.bottom_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pNext` chain of the corresponding element of `pDecodeInfo->pReferenceSlots`.
- Let `uint32_t dpbTopFieldUseCount[]` and `uint32_t dpbBottomFieldUseCount[]` be arrays of size `maxDpbSlots`, where `maxDpbSlots` is the `VkVideoSessionCreateInfoKHR::maxDpbSlots` the bound video session was created with, with each element indicating the number of times the top field or the bottom field, respectively, associated with the corresponding DPB slot index is referred to by the video coding operation. Let the initial value of each element of the arrays be 0.
 - If the bound video session object was created with an [H.264 decode profile](#) and `pDecodeInfo-`

>pSetupReferenceSlot is not NULL, then perform the following:

- If `pStdReferenceInfo->flags.top_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
 - If `pStdReferenceInfo->flags.bottom_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pDecodeInfo->pSetupReferenceSlot->pNext` chain, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals `pDecodeInfo->pSetupReferenceSlot->slotIndex`.
- If the bound video session object was created with an `H.264 decode profile`, then perform the following for each element of `pDecodeInfo->pReferenceSlots`:
 - If `pStdReferenceInfo->flags.top_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pNext` chain of the element, then `dpbTopFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.
 - If `pStdReferenceInfo->flags.bottom_field_flag` is set in the `VkVideoDecodeH264DpbSlotInfoKHR` structure in the `pNext` chain of the element, then `dpbBottomFieldUseCount[i]` is incremented by one, where `i` equals the `slotIndex` member of the element.

Valid Usage

- VUID-vkCmdDecodeVideoKHR-None-08249
The bound video session **must** have been created with a decode operation
- VUID-vkCmdDecodeVideoKHR-None-07011
The bound video session **must** not be in `uninitialized` state at the time the command is executed on the device
- VUID-vkCmdDecodeVideoKHR-opCount-07134
For each `active` query, the `active query index` corresponding to the query type of that query plus `opCount` **must** be less than or equal to the `last activatable query index` corresponding to the query type of that query plus one
- VUID-vkCmdDecodeVideoKHR-pNext-08365
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then `VkVideoInlineQueryInfoKHR::queryCount` **must** equal `opCount`
- VUID-vkCmdDecodeVideoKHR-pNext-08366
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoInlineQueryInfoKHR` structure with its `queryPool` member specifying a valid `VkQueryPool` handle, then all the queries used by the command, as specified by the `VkVideoInlineQueryInfoKHR` structure, **must** be *unavailable*

- VUID-vkCmdDecodeVideoKHR-queryType-08367
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then the `queryType` used to create the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`
- VUID-vkCmdDecodeVideoKHR-queryPool-08368
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, then the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-queryType-08369
If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`, and the `queryType` used to create the `queryPool` specified in the `VkVideoInlineQueryInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from **must** have been created with a queue family index that supports `result status queries`, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07135
`pDecodeInfo->srcBuffer` **must** be `compatible` with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07136
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->srcBuffer` **must** not be a protected buffer
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07138
`pDecodeInfo->srcBufferOffset` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07139
`pDecodeInfo->srcBufferRange` **must** be an integer multiple of `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07140
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `VkVideoDecodeCapabilitiesKHR::flags` does not include `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with, then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** not `match`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07141

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and none of the following is true:

- `VkVideoDecodeCapabilitiesKHR::flags` includes `VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the bound video session was created with
- the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport` set to `VK_TRUE`, and `film grain` is enabled for the decoded picture

then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must match**

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07142
`pDecodeInfo->dstPictureResource.imageViewBinding` **must** be `compatible` with the video profile the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07143
The format of `pDecodeInfo->dstPictureResource.imageViewBinding` **must** match the `VkVideoSessionCreateInfoKHR::pictureFormat` the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07144
`pDecodeInfo->dstPictureResource.codedOffset` **must** be an integer multiple of `codedOffsetGranularity`
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07145
`pDecodeInfo->dstPictureResource.codedExtent` **must** be between `minCodedExtent` and `maxCodedExtent`, inclusive, the bound video session was created with
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07146
`pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` usage flag set
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07147
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** not have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-commandBuffer-07148
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, then `pDecodeInfo->dstPictureResource.imageViewBinding` **must** have been created from a protected image
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-08376
`pDecodeInfo->pSetupReferenceSlot` **must** not be `NULL` unless the bound video session was created with `VkVideoSessionCreateInfoKHR::maxDpbSlots` equal to zero
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07170
If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->slotIndex` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created
- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07173

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource->codedOffset` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07149

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must match** one of the `bound reference picture resource`

- VUID-vkCmdDecodeVideoKHR-activeReferencePictureCount-07150

`activeReferencePictureCount` **must** be less than or equal to the `VkVideoSessionCreateInfoKHR::maxActiveReferencePictures` specified when the bound video session was created

- VUID-vkCmdDecodeVideoKHR-slotIndex-07256

The `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** be less than the `VkVideoSessionCreateInfoKHR::maxDpbSlots` specified when the bound video session was created

- VUID-vkCmdDecodeVideoKHR-codedOffset-07257

The `codedOffset` member of the `VkVideoPictureResourceInfoKHR` structure pointed to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be an integer multiple of `codedOffsetGranularity`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07151

The `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must match** one of the `bound reference picture resource` associated with the DPB slot index specified in the `slotIndex` member of that element

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07264

Each video picture resource corresponding to the `pPictureResource` member specified in the elements of `pDecodeInfo->pReferenceSlots` **must** be `unique` within `pDecodeInfo->pReferenceSlots`

- VUID-vkCmdDecodeVideoKHR-dpbFrameUseCount-07176

All elements of `dpbFrameUseCount` **must** be less than or equal to `1`

- VUID-vkCmdDecodeVideoKHR-dpbTopFieldUseCount-07177

All elements of `dpbTopFieldUseCount` **must** be less than or equal to `1`

- VUID-vkCmdDecodeVideoKHR-dpbBottomFieldUseCount-07178

All elements of `dpbBottomFieldUseCount` **must** be less than or equal to `1`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10801

If `pDecodeInfo->pSetupReferenceSlot` is `NULL` or `pDecodeInfo->pSetupReferenceSlot->pPictureResource` does not `refer` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR` layout at the time the video decode operation is executed on the device, unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10802

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` `refers` to the same image subresource as `pDecodeInfo->dstPictureResource`, then the image subresource `referred` to by `pDecodeInfo->`

`>dstPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-10803

If `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the image subresource `referred` to by `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pPictureResource-10804

The image subresource `referred` to by the `pPictureResource` member of each element of `pDecodeInfo->pReferenceSlots` **must** be in the `VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR` layout at the time the video decode operation is executed on the device , unless the `unifiedImageLayoutsVideo` feature is enabled, in which case it **may** be in the `VK_IMAGE_LAYOUT_GENERAL` layout

- VUID-vkCmdDecodeVideoKHR-pNext-07152

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeH264PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-None-07258

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, then the `decode output picture` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pSliceOffsets-07153

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then all elements of the `pSliceOffsets` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-None-10400

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`
- the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure
- the `pStdSPS` member of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`
- the `pStdPPS` member of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`

- VUID-vkCmdDecodeVideoKHR-StdVideoH264SequenceParameterSet-07154

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264SequenceParameterSet` entry with `seq_parameter_set_id` matching `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure, and its `pStdSPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10401

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure with a non-`NULL` `pStdSPS` member, then `pStdSPS->seq_parameter_set_id` **must** equal `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH264PictureParameterSet-07155

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH264PictureParameterSet` entry with `seq_parameter_set_id` and `pic_parameter_set_id` matching `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure, and its `pStdPPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10402

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure with a non-`NULL` `pStdPPS` member, then `pStdPPS->seq_parameter_set_id` and `pStdPPS->pic_parameter_set_id` **must** equal `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`, respectively, provided in the `pStdPictureInfo` member of the `VkVideoDecodeH264PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07156

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07259

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `reconstructed picture` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pNext-07157

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then the `pNext` chain of each element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeH264DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07260

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` but was not created with `interlaced frame support`, then each `active reference picture` corresponding to the elements of `pDecodeInfo->pReferenceSlots` **must** represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07261

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a frame, then the `reconstructed picture` **must** also represent a frame

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07262

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a top field, then the `reconstructed picture` **must** also represent a top field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07263

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the `decode output picture` represents a bottom field, then the `reconstructed picture` **must** also represent a bottom field

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07266

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and an `active reference picture` corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a frame, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a frame picture `matching` the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07267

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and an `active reference picture` corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a top field, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a top field picture `matching` the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07268

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#) and an [active reference picture](#) corresponding to any element of [pDecodeInfo->pReferenceSlots](#) represents a bottom field, then the DPB slot index of the bound video session specified by the [slotIndex](#) member of that element **must** be currently associated with a bottom field picture [matching](#) the video picture resource specified by the [pPictureResource](#) member of the same element at the time the command is executed on the device

- VUID-vkCmdDecodeVideoKHR-pNext-07158

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then the [pNext](#) chain of [pDecodeInfo](#) **must** include a [VkVideoDecodeH265PictureInfoKHR](#) structure

- VUID-vkCmdDecodeVideoKHR-pSliceSegmentOffsets-07159

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then all elements of the [pSliceSegmentOffsets](#) member of the [VkVideoDecodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) **must** be less than [pDecodeInfo->srcBufferRange](#)

- VUID-vkCmdDecodeVideoKHR-None-10403

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#)
- the [pNext](#) chain of [pDecodeInfo](#) includes a [VkVideoDecodeH265InlineSessionParametersInfoKHR](#) structure
- the [pStdVPS](#) member of the [VkVideoDecodeH265InlineSessionParametersInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) is not [NULL](#)
- the [pStdSPS](#) member of the [VkVideoDecodeH265InlineSessionParametersInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) is not [NULL](#)
- the [pStdPPS](#) member of the [VkVideoDecodeH265InlineSessionParametersInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#) is not [NULL](#)

- VUID-vkCmdDecodeVideoKHR-StdVideoH265VideoParameterSet-07160

If the bound video session was created with the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR](#), then the bound video session parameters object **must** contain a [StdVideoH265VideoParameterSet](#) entry with [vps_video_parameter_set_id](#) matching [StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id](#) that is provided in the [pStdPictureInfo](#) member of the [VkVideoDecodeH265PictureInfoKHR](#) structure included in the [pNext](#) chain of [pDecodeInfo](#), unless the bound video session was created with [VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR](#) and the [pNext](#) chain of [pDecodeInfo](#) includes a [VkVideoDecodeH265InlineSessionParametersInfoKHR](#) structure, and its [pStdVPS](#) member is not equal to [NULL](#)

- VUID-vkCmdDecodeVideoKHR-pNext-10404

If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure with a non-NULL `pStdVPS` member, then `pStdVPS->vps_video_parameter_set_id` **must** equal `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH265SequenceParameterSet-07161

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure, and its `pStdSPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10405

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure with a non-NULL `pStdSPS` member, then `pStdSPS->sps_video_parameter_set_id` and `pStdSPS->sps_seq_parameter_set_id` **must** equal `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-StdVideoH265PictureParameterSet-07162

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`, unless the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeH265InlineSessionParametersInfoKHR` structure, and its `pStdPPS` member is not equal to `NULL`

- VUID-vkCmdDecodeVideoKHR-pNext-10406

If the bound video session was created with the video codec operation

VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and with VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR, and the pNext chain of pDecodeInfo includes a VkVideoDecodeH265InlineSessionParametersInfoKHR structure with a non-NULL pStdPPS member, then pStdPPS->sps_video_parameter_set_id, pStdPPS->pps_seq_parameter_set_id, and pStdPPS->pps_pic_parameter_set_id must equal StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id, StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id, and StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id, respectively, provided in the pStdPictureInfo member of the VkVideoDecodeH265PictureInfoKHR structure included in the pNext chain of pDecodeInfo

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07163

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot must include a VkVideoDecodeH265DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pNext-07164

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then the pNext chain of each element of pDecodeInfo->pReferenceSlots must include a VkVideoDecodeH265DpbSlotInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-pNext-10805

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the pNext chain of pDecodeInfo must include a VkVideoDecodeVP9PictureInfoKHR structure

- VUID-vkCmdDecodeVideoKHR-uncompressedHeaderOffset-10806

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the uncompressedHeaderOffset member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo must be less than pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-compressedHeaderOffset-10807

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the compressedHeaderOffset member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo must be less than pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-tilesOffset-10808

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then the tilesOffset member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo must be less than pDecodeInfo->srcBufferRange

- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-10809

If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR, then each element of the referenceNameSlotIndices array member of the VkVideoDecodeVP9PictureInfoKHR structure included in the pNext chain of pDecodeInfo must either be negative or must equal the slotIndex member of one of the elements of pDecodeInfo->pReferenceSlots

- VUID-vkCmdDecodeVideoKHR-slotIndex-10810

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_VP9_BIT_KHR`, then the `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** equal one of the elements of the `referenceNameSlotIndices` array member of the `VkVideoDecodeVP9PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-filmGrainSupport-09248

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `VkVideoDecodeAV1ProfileInfoKHR::filmGrainSupport` set to `VK_FALSE`, then `film grain` **must** not be enabled for the decoded picture

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09249

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and `film grain` is enabled for the decoded picture, then the video picture resources specified by `pDecodeInfo->dstPictureResource` and `pDecodeInfo->pSetupReferenceSlot->pPictureResource` **must** not `match`

- VUID-vkCmdDecodeVideoKHR-pNext-09250

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeAV1PictureInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-frameHeaderOffset-09251

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `frameHeaderOffset` member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09253

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then all elements of the `pTileOffsets` member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pTileOffsets-09252

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then for each element `i` of the `pTileOffsets` and `pTileSizes` members of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` the sum of `pTileOffsets[i]` and `pTileSizes[i]` **must** be less than or equal to `pDecodeInfo->srcBufferRange`

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-09254

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR` and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-pNext-09255

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `pNext` chain of each

element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeAV1DpbSlotInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-referenceNameSlotIndices-09262

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then each element of the `referenceNameSlotIndices` array member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** either be negative or **must** equal the `slotIndex` member of one of the elements of `pDecodeInfo->pReferenceSlots`

- VUID-vkCmdDecodeVideoKHR-slotIndex-09263

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then the `slotIndex` member of each element of `pDecodeInfo->pReferenceSlots` **must** equal one of the elements of the `referenceNameSlotIndices` array member of the `VkVideoDecodeAV1PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`

- VUID-vkCmdDecodeVideoKHR-None-10407

If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_AV1_BIT_KHR`, then there **must** be a bound video session parameters object if any of the following conditions are not met:

- the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`
- the `pNext` chain of `pDecodeInfo` includes a `VkVideoDecodeAV1InlineSessionParametersInfoKHR` structure
- the `pStdSequenceHeader` member of the `VkVideoDecodeAV1InlineSessionParametersInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` is not `NULL`

Valid Usage (Implicit)

- VUID-vkCmdDecodeVideoKHR-commandBuffer-parameter

`commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-parameter

`pDecodeInfo` **must** be a valid pointer to a valid `VkVideoDecodeInfoKHR` structure

- VUID-vkCmdDecodeVideoKHR-commandBuffer-recording

`commandBuffer` **must** be in the `recording` state

- VUID-vkCmdDecodeVideoKHR-commandBuffer-cmdpool

The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_VIDEO_DECODE_BIT_KHR` operations

- VUID-vkCmdDecodeVideoKHR-renderpass

This command **must** only be called outside of a render pass instance

- VUID-vkCmdDecodeVideoKHR-suspended

This command **must** not be called between suspended render pass instances

- VUID-vkCmdDecodeVideoKHR-videocoding

This command **must** only be called inside of a video coding scope

- VUID-vkCmdDecodeVideoKHR-bufferlevel
commandBuffer **must** be a primary **VkCommandBuffer**

Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

Command Properties

Command Buffer Levels	Render Pass Scope	Video Coding Scope	Supported Queue Types	Command Type
Primary	Outside	Inside	VK_QUEUE_VIDEO_DECODE_BIT_KHR	Action

Conditional Rendering

vkCmdDecodeVideoKHR is not affected by [conditional rendering](#)

The **VkVideoDecodeInfoKHR** structure is defined as:

```
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeInfoKHR {
    VkStructureType      sType;
    const void*          pNext;
    VkVideoDecodeFlagsKHR flags;
    VkBuffer              srcBuffer;
    VkDeviceSize          srcBufferOffset;
    VkDeviceSize          srcBufferRange;
    VkVideoPictureResourceInfoKHR dstPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t              referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoDecodeInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is reserved for future use.

- `srcBuffer` is the source video bitstream buffer to read the encoded bitstream from.
- `srcBufferOffset` is the starting offset in bytes from the start of `srcBuffer` to read the encoded bitstream from.
- `srcBufferRange` is the size in bytes of the encoded bitstream to decode from `srcBuffer`, starting from `srcBufferOffset`.
- `dstPictureResource` is the video picture resource to use as the [decode output picture](#).
- `pSetupReferenceSlot` is `NULL` or a pointer to a [VkVideoReferenceSlotInfoKHR](#) structure specifying the [reconstructed picture information](#).
- `referenceSlotCount` is the number of elements in the `pReferenceSlots` array.
- `pReferenceSlots` is `NULL` or a pointer to an array of [VkVideoReferenceSlotInfoKHR](#) structures describing the DPB slots and corresponding [reference picture](#) resources to use in this video decode operation (the set of [active reference pictures](#)).

Valid Usage

- VUID-VkVideoDecodeInfoKHR-srcBuffer-07165
`srcBuffer` **must** have been created with the [VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR](#) usage flag set
- VUID-VkVideoDecodeInfoKHR-srcBufferOffset-07166
`srcBufferOffset` **must** be less than the size of `srcBuffer`
- VUID-VkVideoDecodeInfoKHR-srcBufferRange-07167
`srcBufferRange` **must** be less than or equal to the size of `srcBuffer` minus `srcBufferOffset`
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07168
If `pSetupReferenceSlot` is not `NULL`, then its `slotIndex` member **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07169
If `pSetupReferenceSlot` is not `NULL`, then its `pPictureResource` **must** not be `NULL`
- VUID-VkVideoDecodeInfoKHR-slotIndex-07171
The `slotIndex` member of each element of `pReferenceSlots` **must** not be negative
- VUID-VkVideoDecodeInfoKHR-pPictureResource-07172
The `pPictureResource` member of each element of `pReferenceSlots` **must** not be `NULL`

Valid Usage (Implicit)

- VUID-VkVideoDecodeInfoKHR-sType-sType
`sType` **must** be [VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR](#)
- VUID-VkVideoDecodeInfoKHR-pNext-pNext
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of [VkVideoDecodeAV1InlineSessionParametersInfoKHR](#), [VkVideoDecodeAV1PictureInfoKHR](#), [VkVideoDecodeH264InlineSessionParametersInfoKHR](#), [VkVideoDecodeH264PictureInfoKHR](#),

[VkVideoDecodeH265InlineSessionParametersInfoKHR](#),
[VkVideoDecodeH265PictureInfoKHR](#), [VkVideoDecodeVP9PictureInfoKHR](#), or
[VkVideoInlineQueryInfoKHR](#)

- VUID-VkVideoDecodeInfoKHR-sType-unique
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkVideoDecodeInfoKHR-flags-zero bitmask
flags **must** be 0
- VUID-VkVideoDecodeInfoKHR-srcBuffer-parameter
srcBuffer **must** be a valid [VkBuffer](#) handle
- VUID-VkVideoDecodeInfoKHR-dstPictureResource-parameter
dstPictureResource **must** be a valid [VkVideoPictureResourceInfoKHR](#) structure
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-parameter
If **pSetupReferenceSlot** is not NULL, **pSetupReferenceSlot** **must** be a valid pointer to a valid [VkVideoReferenceSlotInfoKHR](#) structure
- VUID-VkVideoDecodeInfoKHR-pReferenceSlots-parameter
If **referenceSlotCount** is not 0, **pReferenceSlots** **must** be a valid pointer to an array of **referenceSlotCount** valid [VkVideoReferenceSlotInfoKHR](#) structures

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeFlagsKHR;
```

[VkVideoDecodeFlagsKHR](#) is a bitmask type for setting a mask, but is currently reserved for future use.

48.12. H.264 Decode Operations

Video decode operations using an [H.264 decode profile](#) **can** be used to decode elementary video stream sequences compliant to the [ITU-T H.264 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of the [ITU-T H.264 Specification](#) as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The [StdVideoH264SequenceParameterSet](#) structure corresponding to the [active SPS](#) specifying the [H.264 sequence parameter set](#).
 - The [StdVideoH264PictureParameterSet](#) structure corresponding to the [active PPS](#) specifying the [H.264 picture parameter set](#).
 - The [StdVideoDecodeH264PictureInfo](#) structure specifying the [H.264 picture information](#).

- The `StdVideoDecodeH264ReferenceInfo` structures specifying the H.264 reference information corresponding to the optional reconstructed picture and any active reference pictures.
- The contents of the provided video bitstream buffer range are interpreted as defined in the H.264 Decode Bitstream Data Access section.
- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the H.264 Decode Picture Data Access section.
- The decision on reference picture setup is made according to the parameters specified in the H.264 picture information.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.264 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete unsuccessfully.

48.12.1. H.264 Decode Bitstream Data Access

If the target decode output picture is a frame, then the video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice headers and data of a picture representing an entire frame, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

If the target decode output picture is a field, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing a field, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

The offsets provided in `VkVideoDecodeH264PictureInfoKHR::pSliceOffsets` **should** specify the starting offsets corresponding to each slice header within the video bitstream buffer range.

48.12.2. H.264 Decode Picture Data Access

The effective `imageOffset` and `imageExtent` corresponding to a decode output picture, reference picture, or reconstructed picture used in video decode operations with an H.264 decode profile are defined as follows:

- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height)`, if the picture represents a frame.
- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height)`, if the picture represents a field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- `imageOffset` is `(codedOffset.x,codedOffset.y)` and `imageExtent` is `(codedExtent.width, codedExtent.height / 2)`, if the picture represents a field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Where `codedOffset` and `codedExtent` are the members of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

However, accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile. This means that the complete image subregion accessed by video coding operations using an H.264 decode profile for the video picture resource is defined as the set of texels within the coordinate range:

$([startX, endX), [startY, endY))$

Where:

- `startX` equals `imageOffset.x` rounded down to the nearest integer multiple of `pictureAccessGranularity.width`;
- `endX` equals `imageOffset.x + imageExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;
- `startY` equals `imageOffset.y` rounded down to the nearest integer multiple of `pictureAccessGranularity.height`;
- `endY` equals `imageOffset.y + imageExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure.

In case of video decode operations using an H.264 decode profile, any access to a picture at the coordinates (x, y) , as defined by the ITU-T H.264 Specification, is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates specified below:

- (x, y) , if the accessed picture represents a frame.
- $(x, y \times 2)$, if the accessed picture represents a top field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- $(x, y \times 2 + 1)$, if the accessed picture represents a bottom field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR`.
- (x, y) , if the accessed picture represents a top field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.
- $(codedOffset.x + x, codedOffset.y + y)$, if the accessed picture represents a bottom field and the picture layout of the used H.264 decode profile is `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Where `codedOffset` is the member of the corresponding `VkVideoPictureResourceInfoKHR` structure.

48.12.3. H.264 Decode Profile

A video profile supporting H.264 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and adding a `VkVideoDecodeH264ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH264ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264ProfileInfoKHR {
    VkStructureType              sType;
    const void*                  pNext;
    StdVideoH264ProfileIdc       stdProfileIdc;
    VkVideoDecodeH264PictureLayoutFlagBitsKHR pictureLayout;
} VkVideoDecodeH264ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH264ProfileIdc` value specifying the H.264 codec profile IDC, where enum constant `STD_VIDEO_H264_PROFILE_IDC_BASELINE` identifies the Constrained Baseline profile as defined in A.2.1.1 of the [ITU-T H.264 Specification](#), and all other values correspond to profiles defined in section A.2 of the [ITU-T H.264 Specification](#).
- `pictureLayout` is a `VkVideoDecodeH264PictureLayoutFlagBitsKHR` value specifying the picture layout used by the H.264 video sequence to be decoded.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264ProfileInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PROFILE_INFO_KHR`
- VUID-VkVideoDecodeH264ProfileInfoKHR-pictureLayout-parameter
If `pictureLayout` is not `0`, `pictureLayout` must be a valid `VkVideoDecodeH264PictureLayoutFlagBitsKHR` value

Structure Chaining

Extends the structures

- [VkQueryPoolCreateInfo](#)
- [VkVideoProfileInfoKHR](#)

The H.264 video decode picture layout flags are defined as follows:

```
// Provided by VK_KHR_video_decode_h264
typedef enum VkVideoDecodeH264PictureLayoutFlagBitsKHR {
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR = 0,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR =
0x00000001,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR =
0x00000002,
} VkVideoDecodeH264PictureLayoutFlagBitsKHR;
```

- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR](#) specifies support for progressive content. This flag has the value `0`.
- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to the top field are decoded to the even-numbered lines within the picture resource, and all lines belonging to the bottom field are decoded to the odd-numbered lines within the picture resource.
- [VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR](#) specifies support for or use of a picture layout for interlaced content where all lines belonging to a field are grouped together in a single image subregion, and the two fields comprising the frame **can** be stored in separate image subregions of the same image subresource or in separate image subresources.

```
// Provided by VK_KHR_video_decode_h264
typedef VkFlags VkVideoDecodeH264PictureLayoutFlagsKHR;
```

[VkVideoDecodeH264PictureLayoutFlagsKHR](#) is a bitmask type for setting a mask of zero or more [VkVideoDecodeH264PictureLayoutFlagBitsKHR](#).

48.12.4. H.264 Decode Capabilities

When calling [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) to query the capabilities for an [H.264 decode profile](#), the [VkVideoCapabilitiesKHR::pNext](#) chain **must** include a [VkVideoDecodeH264CapabilitiesKHR](#) structure that will be filled with the profile-specific capabilities.

The [VkVideoDecodeH264CapabilitiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264CapabilitiesKHR {
    VkStructureType      sType;
    void*                pNext;
    StdVideoH264LevelIdc maxLevelIdc;
    VkOffset2D           fieldOffsetGranularity;
} VkVideoDecodeH264CapabilitiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH264LevelIdc` value indicating the maximum H.264 level supported by the profile, where enum constant `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifies H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#).
- `fieldOffsetGranularity` is the minimum alignment for `VkVideoPictureResourceInfoKHR::codedOffset` specified for a [video picture resource](#) when using the picture layout `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR`.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264CapabilitiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- [VkVideoCapabilitiesKHR](#)

48.12.5. H.264 Decode Parameter Sets

[Video session parameters](#) objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` can contain the following types of parameters:

H.264 Sequence Parameter Sets (SPS)

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the [ITU-T H.264 Specification](#);
- `pOffsetForRefFrame` is a pointer to an array of `num_ref_frames_in_pic_order_cnt_cycle` number of signed integers specifying the elements of the `offset_for_ref_frame` array, as defined in section 7.4.2.1.1 of the [ITU-T H.264 Specification](#);
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to

`UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);

- `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the [ITU-T H.264 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - `flags.color_description_present_flag` is interpreted as the value of `colour_description_present_flag`, as defined in section E.2.1 of the [ITU-T H.264 Specification](#);

NOTE

The name of `colour_description_present_flag` was misspelled in the Video Std header.

- if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `reserved1` is used only for padding purposes and is otherwise ignored;
 - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the [ITU-T H.264 Specification](#);
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the [ITU-T H.264 Specification](#).

H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#);
 - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);
 - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the [ITU-T H.264 Specification](#);

- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the [ITU-T H.264 Specification](#).

When a `video session parameters` object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain **must** include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersCreateInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    uint32_t                 maxStdSPSCount;
    uint32_t                 maxStdPPSCount;
    const VkVideoDecodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of `H.264 SPS` entries the created `VkVideoSessionParametersKHR` **can** contain.
- `maxStdPPSCount` is the maximum number of `H.264 PPS` entries the created `VkVideoSessionParametersKHR` **can** contain.
- `pParametersAddInfo` is `NULL` or a pointer to a `VkVideoDecodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR`
- `VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter`
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` **must** be a valid pointer to a valid `VkVideoDecodeH264SessionParametersAddInfoKHR` structure

Structure Chaining

Extends the structure

- `VkVideoSessionParametersCreateInfoKHR`

The `VkVideoDecodeH264SessionParametersAddInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersAddInfoKHR {
    VkStructureType           sType;
    const void*               pNext;
    uint32_t                  stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t                  stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoDecodeH264SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures describing the H.264 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures describing the H.264 PPS entries to add.

This structure **can** be specified in the following places:

- In the `pParametersAddInfo` member of the `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specified in the `pNext` chain of `VkVideoSessionParametersCreateInfoKHR` used to create a `video session parameters` object. In this case, if the video codec operation the video session parameters object is created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of initial parameters to add to the created object (see [Creating Video Session Parameters](#)).
- In the `pNext` chain of `VkVideoSessionParametersUpdateInfoKHR`. In this case, if the video codec operation the `video session parameters` object to be updated was created with is `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, then it defines the set of parameters to add to it (see [Updating Video Session Parameters](#)).

Valid Usage

- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04825
The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` **must** be unique within `pStdSPSs`
- VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04826
The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` **must** be unique within `pStdPPSs`

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR`
- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter`
If `stdSPSCount` is not 0, `pStdSPSs` **must** be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values
- `VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter`
If `stdPPSCount` is not 0, `pStdPPSs` **must** be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values

Structure Chaining

Extends the structure

- `VkVideoSessionParametersUpdateInfoKHR`

Inline Parameter Sets

In case of `video sessions` created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` and with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR`, the application **can** also specify the active parameter sets *inline* by including an instance of the `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure in the `pNext` chain of `VkVideoDecodeInfoKHR`.

The `VkVideoDecodeH264InlineSessionParametersInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264 with VK_KHR_video_maintenance2
typedef struct VkVideoDecodeH264InlineSessionParametersInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoH264SequenceParameterSet* pStdSPS;
    const StdVideoH264PictureParameterSet*  pStdPPS;
} VkVideoDecodeH264InlineSessionParametersInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdSPS` is `NULL` or a pointer to an instance of the `StdVideoH264SequenceParameterSet` structure describing the *active H.264 SPS*.
- `pStdPPS` is `NULL` or a pointer to an instance of the `StdVideoH264PictureParameterSet` structure describing the *active H.264 PPS*.

If `pStdSPS` or `pStdPPS` is not `NULL`, the issued video decode operations will use the parameter sets specified by them, respectively, instead of the corresponding parameter sets being sourced from the bound video session parameters object.

Valid Usage (Implicit)

- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-sType-sType`
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_INLINE_SESSION_PARAMETERS_INFO_KHR`
- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdSPS-parameter`
If `pStdSPS` is not `NULL`, `pStdSPS` must be a valid pointer to a valid `StdVideoH264SequenceParameterSet` value
- `VOID-VkVideoDecodeH264InlineSessionParametersInfoKHR-pStdPPS-parameter`
If `pStdPPS` is not `NULL`, `pStdPPS` must be a valid pointer to a valid `StdVideoH264PictureParameterSet` value

Structure Chaining

Extends the structure

- `VkVideoDecodeInfoKHR`

48.12.6. H.264 Decoding Parameters

The `VkVideoDecodeH264PictureInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264PictureInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264PictureInfo* pStdPictureInfo;
    uint32_t           sliceCount;
    const uint32_t*     pSliceOffsets;
} VkVideoDecodeH264PictureInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a `StdVideoDecodeH264PictureInfo` structure specifying [H.264 picture information](#).
- `sliceCount` is the number of elements in `pSliceOffsets`.
- `pSliceOffsets` is a pointer to an array of `sliceCount` offsets specifying the start offset of the slices of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`.

This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to

[vkCmdDecodeVideoKHR](#) to specify the codec-specific picture information for an [H.264 decode operation](#).

Decode Output Picture Information

When this structure is specified in the [pNext](#) chain of the [VkVideoDecodeInfoKHR](#) structure passed to [vkCmdDecodeVideoKHR](#), the information related to the [decode output picture](#) is defined as follows:

- If [pStdPictureInfo->flags.field_pic_flag](#) is not set, then the picture represents a frame.
- If [pStdPictureInfo->flags.field_pic_flag](#) is set, then the picture represents a field. Specifically:
 - If [pStdPictureInfo->flags.bottom_field_flag](#) is not set, then the picture represents the top field of the frame.
 - If [pStdPictureInfo->flags.bottom_field_flag](#) is set, then the picture represents the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- The decode output picture is associated with the [H.264 picture information](#) provided in [pStdPictureInfo](#).

Std Picture Information

The members of the [StdVideoDecodeH264PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are interpreted as follows:

- [reserved1](#) and [reserved2](#) are used only for padding purposes and are otherwise ignored;
- [flags.is_intra](#) as defined in section 3.73 of the [ITU-T H.264 Specification](#);
- [flags.is_reference](#) as defined in section 3.136 of the [ITU-T H.264 Specification](#);
- [flags.complementary_field_pair](#) as defined in section 3.35 of the [ITU-T H.264 Specification](#);
- [seq_parameter_set_id](#) and [pic_parameter_set_id](#) are used to identify the active parameter sets, as described below;
- all other members are interpreted as defined in section 7.4.3 of the [ITU-T H.264 Specification](#).

Reference picture setup is controlled by the value of [StdVideoDecodeH264PictureInfo::flags.is_reference](#). If it is set and a [reconstructed picture](#) is specified, then the latter is used as the target of picture reconstruction to [activate](#) the [DPB slot](#) specified in [pDecodeInfo->pSetupReferenceSlot->slotIndex](#). If [StdVideoDecodeH264PictureInfo::flags.is_reference](#) is not set, but a [reconstructed picture](#) is specified, then the corresponding picture reference associated with the [DPB slot](#) is invalidated, as described in the [DPB Slot States](#) section.

Active Parameter Sets

The members of the [StdVideoDecodeH264PictureInfo](#) structure pointed to by [pStdPictureInfo](#) are used to select the active parameter sets to use from the specified [inline parameter sets](#) or from the bound video session parameters object, as follows:

- The *active SPS* is the [SPS](#) identified by the key specified in [StdVideoDecodeH264PictureInfo](#)

`::seq_parameter_set_id`.

- The *active PPS* is the `PPS` identified by the key specified by the pair constructed from `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`.

If the bound video session was created with `VK_VIDEO_SESSION_CREATE_INLINE_SESSION_PARAMETERS_BIT_KHR` and any of the active parameter sets are specified `inline`, then the corresponding inline parameter set is used. Otherwise, the parameter set in question is sourced from the bound video session parameters object.

Valid Usage (Implicit)

- `VOID-VkVideoDecodeH264PictureInfoKHR-sType-sType`
`sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR`
- `VOID-VkVideoDecodeH264PictureInfoKHR-pStdPictureInfo-parameter`
`pStdPictureInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264PictureInfo` value
- `VOID-VkVideoDecodeH264PictureInfoKHR-pSliceOffsets-parameter`
`pSliceOffsets` **must** be a valid pointer to an array of `sliceCount uint32_t` values
- `VOID-VkVideoDecodeH264PictureInfoKHR-sliceCount-arraylength`
`sliceCount` **must** be greater than 0

Structure Chaining

Extends the structure

- `VkVideoDecodeInfoKHR`

The `VkVideoDecodeH264DpbSlotInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264DpbSlotInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    const StdVideoDecodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH264ReferenceInfo` structure specifying [H.264 reference information](#).

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an [H.264 decode operation](#).

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one or two elements are added to the list of [active reference pictures](#) used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a frame reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture is added as a top field reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a bottom field reference to the list of active reference pictures.
- For each added reference picture, the corresponding image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- Each added reference picture is associated with the [DPB slot](#) index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- Each added reference picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

NOTE

When both the top and bottom field of an interlaced frame currently associated with a DPB slot is intended to be used as an active reference picture and both fields are stored in the same image subregion (which is the case when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR` which stores the two fields at even and odd scanlines of the same image subregion), both references have to be provided through a single `VkVideoReferenceSlotInfoKHR` structure that has both `flags.top_field_flag` and `flags.bottom_field_flag` set in the `StdVideoDecodeH264ReferenceInfo` structure pointed to by the `pStdReferenceInfo` member of the `VkVideoDecodeH264DpbSlotInfoKHR` structure included in the corresponding `VkVideoReferenceSlotInfoKHR` structure's `pNext` chain. However, this approach can only be used when both fields are stored in the same image subregion. If that is not the case (e.g. when using `VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR` which requires separate `codedOffset` values for the two fields and also allows storing the two fields of a frame in separate image layers or entirely separate images), then a separate `VkVideoReferenceSlotInfoKHR` structure needs to be provided for referencing the two fields, each only setting one of `flags.top_field_flag` or `flags.bottom_field_flag`, and providing the appropriate video picture resource information in `VkVideoReferenceSlotInfoKHR::pPictureResource`.

Reconstructed Picture Information

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the [reconstructed picture](#) is defined as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a frame.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture represents a field, specifically, the top field of the frame.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a field, specifically, the bottom field of the frame.
- The image subregion used is determined according to the [H.264 Decode Picture Data Access](#) section.
- If [reference picture setup](#) is requested, then the reconstructed picture is used to [activate](#) the [DPB slot](#) with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the [H.264 reference information](#) provided in `pStdReferenceInfo`.

Std Reference Information

The members of the `StdVideoDecodeH264ReferenceInfo` structure pointed to by `pStdReferenceInfo` are interpreted as follows:

- `flags.top_field_flag` is used to indicate whether the reference is used as top field reference;
- `flags.bottom_field_flag` is used to indicate whether the reference is used as bottom field reference;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the [ITU-T H.264 Specification](#);
- `flags.is_non_existing` is used to indicate whether the picture is marked as “non-existing” as defined in section 8.2.5.2 of the [ITU-T H.264 Specification](#);
- all other members are interpreted as defined in section 8.2 of the [ITU-T H.264 Specification](#).

Valid Usage (Implicit)

- `VUID-VkVideoDecodeH264DpbSlotInfoKHR-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR`
- `VUID-VkVideoDecodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter` `pStdReferenceInfo` **must** be a valid pointer to a valid `StdVideoDecodeH264ReferenceInfo` value

Structure Chaining

Extends the structure

- [VkVideoReferenceSlotInfoKHR](#)

48.12.7. H.264 Decode Requirements

This section describes the **required** H.264 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation [VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR](#), as returned by [vkGetPhysicalDeviceQueueFamilyProperties2](#) in [VkQueueFamilyVideoPropertiesKHR::videoCodecOperations](#).

Table 57. Required *Video Std Header Versions*

Video Std Header Name	Version
vulkan_video_codec_h264std_decode	1.0.0

Table 58. Required Video Capabilities

Video Capability	Requirement	Requirement Type ¹
VkVideoCapabilitiesKHR		
flags	-	min
minBitstreamBufferOffsetAlignment	4096	max
minBitstreamBufferSizeAlignment	4096	max
pictureAccessGranularity	(64,64)	max
minCodedExtent	-	max
maxCodedExtent	-	min
maxDpbSlots	0	min
maxActiveReferencePictures	0	min
VkVideoDecodeCapabilitiesKHR		
flags	VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_COINCIDE_BIT_KHR or VK_VIDEO_DECODE_CAPABILITY_DPB_AND_OUTPUT_DISTINCT_BIT_KHR	min
VkVideoDecodeH264CapabilitiesKHR		
maxLevelIdc	STD_VIDEO_H264_LEVEL_IDC_1_0	min

Video Capability	Requirement	Requirement Type ¹
<code>fieldOffsetGranularity</code>	(0,0) except for profiles using VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR	implementation-dependent

1

The **Requirement Type** column specifies the requirement is either the minimum value all implementations **must** support, the maximum value all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum value is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

48.13. H.265 Decode Operations

Video decode operations using an [H.265 decode profile](#) **can** be used to decode elementary video stream sequences compliant to the [ITU-T H.265 Specification](#).

NOTE

Refer to the [Preamble](#) for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the [video decode operation steps](#) with the codec-specific semantics defined in section 8 of [ITU-T H.265 Specification](#):

- Syntax elements, derived values, and other parameters are applied from the following structures:
 - The `StdVideoH265VideoParameterSet` structure corresponding to the [active VPS](#) specifying the [H.265 video parameter set](#).
 - The `StdVideoH265SequenceParameterSet` structure corresponding to the [active SPS](#) specifying the [H.265 sequence parameter set](#).
 - The `StdVideoH265PictureParameterSet` structure corresponding to the [active PPS](#) specifying the [H.265 picture parameter set](#).
 - The `StdVideoDecodeH265PictureInfo` structure specifying the [H.265 picture information](#).
 - The `StdVideoDecodeH265ReferenceInfo` structures specifying the [H.265 reference information](#) corresponding to the optional [reconstructed picture](#) and any [active reference pictures](#).
- The contents of the provided video bitstream buffer range are interpreted as defined in the [H.265 Decode Bitstream Data Access](#) section.
- Picture data in the [video picture resources](#) corresponding to the used [active reference pictures](#), [decode output picture](#), and optional [reconstructed picture](#) is accessed as defined in the [H.265 Decode Picture Data Access](#) section.

- The decision on [reference picture setup](#) is made according to the parameters specified in the [H.265 picture information](#).

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the [ITU-T H.265 Specification](#), as described above, and the [DPB slots](#) associated with the [active reference pictures](#) all refer to [valid picture references](#), then the video decode operation will complete successfully. Otherwise, the video decode operation **may** complete [unsuccessfully](#).

48.13.1. H.265 Decode Bitstream Data Access

The video bitstream buffer range **should** contain a VCL NAL unit comprised of the slice segment headers and data of a picture representing a frame, as defined in sections 7.3.6 and 7.3.8, and this data is interpreted as defined in sections 7.4.7 and 7.4.9 of the [ITU-T H.265 Specification](#), respectively.

The offsets provided in [VkVideoDecodeH265PictureInfoKHR::pSliceSegmentOffsets](#) **should** specify the starting offsets corresponding to each slice segment header within the video bitstream buffer range.

48.13.2. H.265 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by [VkVideoCapabilitiesKHR::pictureAccessGranularity](#), as returned by [vkGetPhysicalDeviceVideoCapabilitiesKHR](#) for the used [video profile](#). Accordingly, the complete image subregion of a [decode output picture](#), [reference picture](#), or [reconstructed picture](#) accessed by video coding operations using an [H.265 decode profile](#) is defined as the set of texels within the coordinate range:

$([0, \text{endX}), [0, \text{endY}))$

Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;
- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure;

Where `codedExtent` is the member of the [VkVideoPictureResourceInfoKHR](#) structure corresponding to the picture.

In case of video decode operations using an [H.265 decode profile](#), any access to a picture at the coordinates (x, y) , as defined by the [ITU-T H.265 Specification](#), is an access to the image subresource [referred](#) to by the corresponding [VkVideoPictureResourceInfoKHR](#) structure at the texel coordinates (x, y) .

48.13.3. H.265 Decode Profile

A video profile supporting H.265 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and adding a `VkVideoDecodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH265ProfileInfoKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265ProfileInfoKHR {
    VkStructureType    sType;
    const void*        pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoDecodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A.3 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265ProfileInfoKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR`

Structure Chaining

Extends the structures

- `VkQueryPoolCreateInfo`
- `VkVideoProfileInfoKHR`

48.13.4. H.265 Decode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an H.265 decode profile, the `VkVideoCapabilitiesKHR::pNext` chain must include a `VkVideoDecodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeH265CapabilitiesKHR` structure is defined as:

```
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265CapabilitiesKHR {
    VkStructureType    sType;
    void*              pNext;
    StdVideoH265LevelIdc    maxLevelIdc;
} VkVideoDecodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value indicating the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#).

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265CapabilitiesKHR-sType-sType
`sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR`

Structure Chaining

Extends the structure

- `VkVideoCapabilitiesKHR`

48.13.5. H.265 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` can contain the following types of parameters:

H.265 Video Parameter Sets (VPS)

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as

follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
 - `cbr_flag` is a bitmask where bit index `i` corresponds to `cbr_flag[i]` as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
 - all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the [ITU-T H.265 Specification](#).

H.265 Sequence Parameter Sets (SPS)

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used as the key of the SPS entry;
- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
 - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the [ITU-T H.265 Specification](#);
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
 - `ScalingList4x4`, `ScalingList8x8`, `ScalingList16x16`, and `ScalingList32x32` correspond to `ScalingList[0]`, `ScalingList[1]`, `ScalingList[2]`, and `ScalingList[3]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
 - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the [ITU-T H.265 Specification](#);
- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
 - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the [ITU-T H.265 Specification](#);
- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:

- `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in section 7.4.3.2 of the [ITU-T H.265 Specification](#);
- if `flags.vui_parameters_present_flag` is set, then the `StdVideoH265SequenceParameterSetVui` structure pointed to by `pSequenceParameterSetVui` is interpreted as follows:
 - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
 - the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
 - `flags.fixed_pic_rate_general_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index `i` corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - `flags.low_delay_hrd_flag` is a bitmask where bit index `i` corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the [ITU-T H.265 Specification](#);
 - if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `sps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `sps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265SequenceParameterSet` structure and each element is interpreted as follows:
