1 Introduction

1.1 Product revision status

The `rxpy` identifier indicates the revision status of the product described in this manual, for example, `r1p2`, where:

- rx** Identifies the major revision of the product, for example, `r1`.
- py** Identifies the minor revision or modification status of the product, for example, `p2`.

1.2 Intended audience

This manual is for system designers, system integrators, and programmers who are designing or programming a *System-on-Chip* (SoC) that uses the Neoverse™ N2 core with the optional Cryptographic Extension.

1.3 Conventions

The following subsections describe conventions used in Arm documents.

Glossary

The Arm Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm® Glossary for more information: developer.arm.com/glossary.

Typographic conventions

Convention	Use
<i>italic</i>	Introduces citations.
bold	Highlights interface elements, such as menu names. Denotes signal names. Also used for terms in descriptive lists, where appropriate.
monospace	Denotes text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace bold	Denotes language keywords when used outside example code.
monospace <u>underline</u>	Denotes a permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.

Convention	Use
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments. For example: <pre>MRC p15, 0, <Rd>, <CRn>, <CRm>, <Opcode_2></pre>
SMALL CAPITALS	Used in body text for a few terms that have specific technical meanings, that are defined in the <i>Arm® Glossary</i> . For example, IMPLEMENTATION DEFINED , IMPLEMENTATION SPECIFIC , UNKNOWN , and UNPREDICTABLE .
 Caution	This represents a recommendation which, if not followed, might lead to system failure or damage.
 Warning	This represents a requirement for the system that, if not followed, might result in system failure or damage.
 Danger	This represents a requirement for the system that, if not followed, will result in system failure or damage.
 Note	This represents an important piece of information that needs your attention.
 Tip	This represents a useful tip that might make it easier, better or faster to perform a task.
 Remember	This is a reminder of something important that relates to the information you are reading.

Timing diagrams

The following figure explains the components used in timing diagrams. Variations, when they occur, have clear labels. You must not assume any timing information that is not explicit in the diagrams.

Shaded bus and signal areas are undefined, so the bus or signal can assume any value within the shaded area at that time. The actual level is unimportant and does not affect normal operation.

Figure 1-1: Key to timing diagram conventions

Signals

The signal conventions are:

Signal level

The level of an asserted signal depends on whether the signal is active-HIGH or active-LOW. Asserted means:

- HIGH for active-HIGH signals.
- LOW for active-LOW signals.

Lowercase n

At the start or end of a signal name, n denotes an active-LOW signal.

1.4 Additional reading

This document contains information that is specific to this product. See the following documents for other relevant information:

1.5 Feedback

Arm welcomes feedback on this product and its documentation.

Feedback on this product

If you have any comments or suggestions about this product, contact your supplier and give:

- The product name.
- The product revision or version.
- An explanation with as much information as you can provide. Include symptoms and diagnostic procedures if appropriate.

Feedback on content

Information about how to give feedback on the content.

If you have comments on content then send an e-mail to errata@arm.com. Give:

- The title Arm® Neoverse™ N2 Core Cryptographic Extension Technical Reference Manual.
- The number 102101_0000_04_en.
- If applicable, the page number(s) to which your comments refer.
- A concise explanation of your comments.

Arm also welcomes general suggestions for additions and improvements.

Arm tests the PDF only in Adobe Acrobat and Acrobat Reader, and cannot guarantee the quality of the represented document when used with any other PDF reader.

2 Cryptographic extension support in the Neoverse™ N2 core

The Neoverse™ N2 core supports the optional Arm®v8.0-A and Arm®v8.2-A Cryptographic Extension.

The Arm®v8.0-A Cryptographic Extension adds A64 instructions to Advanced SIMD that accelerate *Advanced Encryption Standard* (AES) encryption and decryption. It also adds instructions to implement the *Secure Hash Algorithm* (SHA) functions SHA-1, SHA-224, and SHA-256.

The Arm®v8.2-A extensions, Armv8.2-A-SHA and Armv8.2-SM, add A64 instructions to accelerate SHA2-512, SHA3, SM3, and SM4.

The SVE2-AES, SVE2-SHA3, and SVE2-SM extensions add A64 instructions to accelerate SHA3, SM3, SM4, and AES encryption and decryption.

2.1 Product Revisions

The following table indicates the main differences in functionality between product revisions.

Table 2-1: Product revisions

Revision	Notes
r0p0	First draft release

Changes in functionality that have an impact on the documentation also appear in [A Document revisions](#) on page 17.

2.2 Disabling the Cryptographic Extension

Disabling of the Cryptographic Extension applies to the Neoverse™ N2 core.

To disable the Cryptographic Extension, assert **CRYPTODISABLE**.

When **CRYPTODISABLE** is asserted:

- Executing a cryptographic instruction results in an **UNDEFINED** exception.
- ID_AA64ISAR0_EL1 and ID_ISAR5_EL1 indicates that the Cryptographic Extension is not implemented.

Related information

[2.4 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0](#) on page 11

2.3 Cryptographic Extensions register summary

Software can identify the cryptographic instructions that are implemented in the Neoverse™ N2 core by reading identification registers.

The following table shows the instruction identification registers for the Neoverse™ N2 core Cryptographic Extension.

Table 2-2: Cryptographic Extension register summary

Name	Execution state	Description
ID_AA64ISAR0_EL1	AArch64	See 2.4 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0 on page 11
ID_ISAR5_EL1	AArch32	2.5 ID_ISAR5_EL1, AArch32 Instruction Set Attribute Register 5 on page 14

2.4 ID_AA64ISAR0_EL1, AArch64 Instruction Set Attribute Register 0

Provides information about the instructions implemented in AArch64 state.

For general information about the interpretation of the ID registers, see 'Principles of the ID scheme for fields in ID registers'.

Configurations

This register is available in all configurations.

RDM			RES0		Atomic		CRC32		SHA2		SHA1		AES		RES0

Table 2-3: ID_AA64ISAR0_EL1 bit descriptions

Bits	Name	Description	Reset
[63:60]	RNDR	Indicates support for Random Number instructions in AArch64 state. Defined values are: 0b0000 No Random Number instructions are implemented. 0b0001 AArch64-RNDR and AArch64-RNDRRS registers are implemented, if the core has the RNDR feature configured.	
[59:56]	TLB	Indicates support for Outer shareable and TLB range maintenance instructions. Defined values are: 0b0010 Outer shareable and TLB range maintenance instructions are implemented.	
[55:52]	TS	Indicates support for flag manipulation instructions. Defined values are: 0b0010 CFINV, RMIF, SETF16, SETF8, AXFLAG, and XAFLAG instructions are implemented.	
[51:48]	FHM	Indicates support for FMLAL and FMLSL instructions. Defined values are: 0b0001 FMLAL and FMLSL instructions are implemented.	
[47:44]	DP	Indicates support for Dot Product instructions in AArch64 state. Defined values are: 0b0001 UDOT and SDOT instructions implemented.	
[43:40]	SM4	Indicates support for SM4 instructions in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then SM3 instructions are not implemented. 0b0001 When Cryptographic extensions are implemented and enabled then SM3 instructions SM4E and SM4EKEY are implemented.	
[39:36]	SM3	Indicates support for SM3 instructions in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then SM4 instructions are not implemented. 0b0001 When Cryptographic extensions are implemented and enabled then SM4 instructions SM3SS1, SM3TT1A, SM3TT1B, SM3TT2A, SM3TT2B, SM3PARTW1, and SM3PARTW2 are implemented.	
[35:32]	SHA3	Indicates support for SHA3 instructions in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then SHA3 instructions are not implemented. 0b0001 When Cryptographic extensions are implemented and enabled then SHA3 instructions EOR3, RAX1, XAR, and BCAX are implemented.	

Bits	Name	Description	Reset
[31:28]	RDM	Indicates support for SQRDMLAH and SQRDMLSH instructions in AArch64 state. Defined values are: 0b0001 SQRDMLAH and SQRDMLSH instructions implemented.	
[27:24]	RES0	Reserved	0b0000
[23:20]	Atomic	Indicates support for Atomic instructions in AArch64 state. Defined values are: 0b0010 LDADD, LDCLR, LDEOR, LDSET, LDSMAX, LDSMIN, LDUMAX, LDUMIN, CAS, CASP, and SWP instructions implemented.	
[19:16]	CRC32	CRC32 instructions implemented in AArch64 state. Defined values are: 0b0001 CRC32B, CRC32H, CRC32W, CRC32X, CRC32CB, CRC32CH, CRC32CW, and CRC32CX instructions implemented.	
[15:12]	SHA2	SHA2 instructions implemented in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then SHA2 instructions are not implemented. 0b0010 When Cryptographic extensions are implemented and enabled then SHA256H, SHA256H2, SHA256SU0, SHA256SU1, SHA512H, SHA512H2, SHA512SU0, and SHA512SU1 instructions are implemented. When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset Cryptographic Extensions are implemented	
[11:8]	SHA1	SHA1 instructions implemented in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then SHA1 instructions are not implemented. 0b0001 When Cryptographic extensions are implemented and enabled then SHA1C, SHA1P, SHA1M, SHA1H, SHA1SU0, and SHA1SU1 instructions are implemented. When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset Cryptographic Extensions are implemented	
[7:4]	AES	AES instructions implemented in AArch64 state. Defined values are: 0b0000 When Cryptographic extensions are not implemented or disabled then AES instructions are not implemented. 0b0010 When Cryptographic extensions are implemented and enabled then AESE, AESD, AESMC, and AESIMC instructions are implemented and also PMULL/PMULL2 instructions operating on 64-bit data quantities. When the CRYPTO configuration parameter is true and the CRYPTODISABLE input is low at reset Cryptographic Extensions are implemented	
[3:0]	RES0	Reserved	0b0000

Appendix A Document revisions

This appendix records the changes between released issues of this document.

A.1 Revisions

Changes between released issues of this book are summarized in tables.

The first table is for the first release. Then, each table compares the new issue of the book with the last released issue of the book. Release numbers match the revision history in [Release Information](#) on page 2.

Table A-1: Issue 0000-02

Change	Location
First Non-Confidential early access release for r0p0	-
