Non-Confidential

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu2.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu3.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu3.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`subcluster0.cpu4.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu4.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu4.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.trace_special_hlt_imm16`
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu5.AA64nAA32`

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

`subcluster0.cpu5.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu5.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu5.CP15SDISABLE`

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

`subcluster0.cpu5.CRYPTODISABLE`

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster0.cpu5.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu5.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu5.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu6.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CCSIDR-L1D_override

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

subcluster1.CCSIDR-L1I_override

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

subcluster1.CCSIDR-L2_override

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster1.cpu1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu1.CP15SDISABLE`

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

`subcluster1.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster1.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster1.cpu2.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu2.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu2.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu2.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu2.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu3.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu3.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu3.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset
Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency
L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`subcluster1.icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.57 ARMCortexA55CT_CortexA76CT

Defined in `LISA/ARMCortexA55CT_CortexA76CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA76 r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA55CT_CortexA76CT

The number of cores in each subcluster is configurable using the following parameters:

subcluster0.NUM_CORES

Possible values are 1-7 (ARMCortexA55CT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.NUM_CORES`

Possible values are 1-4 (ARMCortexA76CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port_name[0-6] for cores in subcluster0.
- port_name[7-10] for cores in subcluster1.

Note

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu6` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA55CT
- ARMCortexA76CT

Iris and MTI instances for ARMCortexA55CT_CortexA76CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA55CT_CortexA76CT`	Cluster_ARM_Cortex-A55_Cortex-A76
`ARMCortexA55CT_CortexA76CT.AMU`	PVBusLogger
`ARMCortexA55CT_CortexA76CT.AMU.mapper`	PVBusMapper
`ARMCortexA55CT_CortexA76CT.DAP`	PVBusLogger
`ARMCortexA55CT_CortexA76CT.DAP.mapper`	PVBusMapper
`ARMCortexA55CT_CortexA76CT.DSU`	DSU
`ARMCortexA55CT_CortexA76CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA55CT_CortexA76CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA55CT_CortexA76CT.DSU.shared_cache`	PVCache
`ARMCortexA55CT_CortexA76CT.DSU.shared_cache.upstream[Z]` (where Z = 0–5)	PVBusSlave
`ARMCortexA55CT_CortexA76CT.MMAP`	PVBusLogger
`ARMCortexA55CT_CortexA76CT.MMAP.mapper`	PVBusMapper
`ARMCortexA55CT_CortexA76CT.RAS`	PVBusLogger
`ARMCortexA55CT_CortexA76CT.RAS.mapper`	PVBusMapper

Ports for ARMCortexA55CT_CortexA76CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamIQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamIQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initilizes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA55CT_CortexA76CT

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`subcluster0.NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`subcluster0.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpu0.AA64nAA32`

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

`subcluster0.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu0.CP15SDISABLE`

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

`subcluster0.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster0.cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu0.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu0.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu1.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu1.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu2.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu2.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu2.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu2.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu2.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster0.cpu2.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu3.AA64nAA32`

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

`subcluster0.cpu3.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu3.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu3.CP15SDISABLE`

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

`subcluster0.cpu3.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu3.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster0.cpu4.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-size`

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-cwd

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu5.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster0.cpu5.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu5.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu5.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu5.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu5.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu5.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu5.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu6.AA64nAA32`

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu6.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`subcluster0.cpu6.semihosting-A32_HLT`
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu6.semihosting-A64_HLT`
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu6.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu6.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu6.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu6.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu6.semihosting-cwd`
Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

`subcluster0.icache-read_access_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`subcluster0.invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`subcluster0.ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster1.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu2.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu2.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu2.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster1.cpu2.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu3.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`subcluster1.ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`subcluster1.treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`subcluster1.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.58 ARMCortexA55CT_CortexA78CT

Defined in `LISA/ARMCortexA55CT_CortexA78CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA78 r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA55CT_CortexA78CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
Possible values are 1-7 (ARMCortexA55CT).

`subcluster1.NUM_CORES`
Possible values are 1-4 (ARMCortexA78CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port_name[0-6] for cores in subcluster0.
- port_name[7-10] for cores in subcluster1.

Note

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu6` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA55CT
- ARMCortexA78CT

Iris and MTI instances for ARMCortexA55CT_CortexA78CT

This model has the following Iris instances:

Ports for ARMCortexA55CT_CortexA78CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamIQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamIQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
`clusterid`	slave	Value	The port reads the value in CPU ID register field, bits[11:14] of the MPIDR.
`clusterpmuirq`	master	Signal	DynamIQ pmu irq
`CNTHPIRQ`	master	Signal	Timer signals to SOC.
`CNTHVIRQ`	master	Signal	Timer signals to SOC.
`CNTPNSIRQ`	master	Signal	Timer signals to SOC.
`CNTPSIRQ`	master	Signal	Timer signals to SOC.
`cntvalueb`	slave	CounterInterface	Interface to SoC level counter module.
`CNTVIRQ`	master	Signal	Timer signals to SOC.
`commirq`	master	Signal	Interrupt signal from debug communications channel.
`core_clk_in`	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
`cp15sdisable`	slave	Signal	This signal disables write access to some system control processor registers.
`cpuporeset`	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
`cryptodisable`	slave	Signal	Disable cryptography extensions after reset.
`cti`	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
`ctidbgirq`	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
`dbgen`	slave	Signal	External debug interface.
`dbgnopwrdwn`	master	Signal	No power-down request.
`dbgpwrupreq`	master	Signal	Debug power up request.
`dev_debug_s`	slave	PVBus	External debug interface.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPUs fast-interrupt handling.
`gicv3_redistributor_s`	slave	GICv3Comms	GICv3 AXI-stream port.
`irq`	slave	Signal	This signal drives the CPUs interrupt handling.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`niden`	slave	Signal	External debug interface.
`pchannel_cluster`	slave	PChannel	PChannel for cluster.
`pchannel_core`	slave	PChannel	PChannels for cores
`pmbirq`	master	Signal	Interrupt signal from statistical profiling unit.
`pmuirq`	master	Signal	Interrupt signal from performance monitoring unit.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA55CT_CortexA78CT

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`bus_type`

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu0.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu1.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu2.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu3.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu3.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu5.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu6.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu0.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu0.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu0.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu0.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu0.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`subcluster1.cpu1.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu1.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu1.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu2.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu2.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu2.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.trace_special_hlt_imm16`
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.59 ARMCortexA57CT

Defined in `LISA/ARMCortexA57CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p1	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA57CT

The per-core parameters are preceded by cpun., where n identifies the core (0-3).

The cache latency parameters are only effective when you enable cache-state modeling. Timing annotation for transactions downstream of the cache and TLB models propagates through the models. This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a PVBusDecoder to direct traffic to the correct port, dev_debug_s or memorymapped_debug_s.

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The value of the AArch64 PMCEID0_EL0 register, and the AArch32 alias of this register, differs in the model from the TRM value. The model value reflects the model counters.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The mechanisms for setting the affinity fields of the MPIDR. The RTL has two ports:
    - CLUSTERIDAFF1[7:0].
    - CLUSTERIDAFF2[7:0]. AFF1 sets the value of MPIDR bits[15:8] and AFF2 sets the value of MPIDR bits[23:16]. In contrast, the model has a single CLUSTER_ID port. This difference allows the setting of bits[23:8] of the MPIDR using bits[15:0] of the CLUSTER_ID value.
- The memory mapped debug registers have a view for cores and a view for external debug agents. In the model, these views require two PVBus ports. In hardware, the system designer decides how the implementation differentiates the views.
- In the model, a single peer event port combines the functionality of the eventi and evento signals in the RTL.
- The Generic Timers are Programmer's View (PV) level abstractions: a model-specific protocol connects the cntvalueb port to the MemoryMappedCounterModule.
- The GIC CPU Interface is a PV level abstraction: a model-specific protocol connects the GIC CPU Interface to the GIC Distributor.
- The CoreSight Cross Trigger Interface (CTI) is a PV level abstraction: the interface is a model-specific one.
- The model has no mechanism to read the internal memory that the Cache and TLB structures use, through the implementation defined region of the system coprocessor interface. This memory includes the RAM Index Register, IL1DATA Registers, DL1DATA Registers, and associated functionality.
- The model does not implement:
    - ETM registers.
    - The PMUEVENT bus.
    - The WARMRESETREQ signal. However, the warm reset code sequence (see the section Code sequence to request a Warm reset as a result of RMR_ELx.RR in the Arm Architecture Reference Manual for A-profile architecture) makes the model simulate a warm reset of the core.
    - The PMUSNAPSHOTREQ and PMUSNAPSHOTACK signals.
    - The EXTERRIRQ and INTERRIRQ signals.
    - Processor dynamic-retention signals.
    - The SYSBARDISABLE signal.
    - This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
    - The DBGPWRDUP, DBGPWRUPREQ, DBGNOPWRDWN, and DBGRSTREQ debug power management signals.
    - ECC and parity schemes are hardware-specific so are not supported.

Iris and MTI instances for ARMCortexA57CT

This model has the following Iris instances:

ARMCortexA57CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA57CT.cpu0.l1icache	PVCache
ARMCortexA57CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA57CT.ext_bus	PVBusLogger
ARMCortexA57CT.ext_bus.mapper	PVBusMapper
ARMCortexA57CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA57CT.l2_cache	PVCache
ARMCortexA57CT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexA57CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexA57CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastinner	slave	Signal	Enable broadcasting of Inner Shareable transactions.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	The per-EL counter signal.
CNTPNSIRQ	master	Signal	The per-EL counter signal.
CNTPSIRQ	master	Signal	The per-EL counter signal.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	The per-EL counter signal.
commirq	master	Signal	Interrupt signal from debug communications channel.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.

Port	Direction	Protocol	Description
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	These signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`standbywfil2`	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtual FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtual IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Processor Virtual System Error Interrupt request.

Parameters for ARMCortexA57CT

`cpuX.AA64nAA32`

Type: `bool`

Default value: true

`cpuX.CFGEND`

Type: `bool`

Default value: false

`cpuX.CFGTE`

Type: `bool`

Default value: false

`cpuX.CP15SDISABLE`

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: 256

cpuX.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

cpuX.semihosting-A32_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-A64_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-ARM_SVC

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

Type: `uint32_t`

Default value: `0x3C`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-Thumb_SVC

Type: `uint32_t`

Default value: `0xAB`

cpuX.semihosting-cmd_line

Type: `string`

Default value: “”

cpuX.semihosting-cwd

Type: `string`

Default value: “”

cpuX.semihosting-enable

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Type: `uint32_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.semihosting-stack_base

Type: `uint32_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.vfp-enable_at_reset`

Type: `bool`

Default value: false

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTINNER`

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

Type: `uint32_t`

Default value: 0

`DBGROMADDR`

Type: `uint64_t`

Default value: `0x22000000`

`DBGROMADDRV`

Type: `bool`

Default value: true

`GICDISABLE`

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PERIPHBASE

Type: `uint64_t`

Default value: `0x13080000`

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-hit_latency

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

dcache-miss_latency

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-state_modelled

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`icache-state_modelled`

Type: `bool`

Default value: false

`l2cache-hit_latency`

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

`l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-miss_latency`

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

3.60 ARMCortexA65AECT

Defined in `LISA/ARMCortexA65AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA65AECT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the NUM_CORES parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

  As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.
- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMCortexA65AECT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA65AECT`	Cluster_ARM_Cortex-A65AE
`ARMCortexA65AECT.AMU`	PVBusLogger
`ARMCortexA65AECT.AMU.mapper`	PVBusMapper
`ARMCortexA65AECT.DAP`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA65AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT.DSU	DSU
ARMCortexA65AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–5)	PVBusSlave
ARMCortexA65AECT.MMAP	PVBusLogger
ARMCortexA65AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT.RAS	PVBusLogger
ARMCortexA65AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT.cpuY.dtlb (where *Y* = 0–1)	TLB
ARMCortexA65AECT.cpuY.threadZ (where *Y* = 0–1; *Z* = 0–1)	ARM_Cortex-A65AE
ARMCortexA65AECT.cpuY.threadZ.UTLB (where *Y* = 0–1; *Z* = 0–1)	TLB
ARMCortexA65AECT.cpuY.thread0.l1dcache (where *Y* = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1dcache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l1icache (where *Y* = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1icache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l2cache (where *Y* = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l2cache.upstream[V] (where *Y* = 0–1; *V* = 0–1)	PVBusSlave
ARMCortexA65AECT.ext_bus	PVBusLogger
ARMCortexA65AECT.ext_bus.mapper	PVBusMapper
ARMCortexA65AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA65AECT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA65AECT.AMU	PVBusLogger
ARMCortexA65AECT.AMU.mapper	PVBusMapper
ARMCortexA65AECT.DAP	PVBusLogger
ARMCortexA65AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT.DSU	DSU
ARMCortexA65AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–5)	PVBusSlave
ARMCortexA65AECT.MMAP	PVBusLogger
ARMCortexA65AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT.RAS	PVBusLogger
ARMCortexA65AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT.cpuY.threadZ (where *Y* = 0–1; *Z* = 0–1)	ARM_Cortex-A65AE

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
`ARMCortexA65AECT.cpuY.threadZ.UTLB` (where *Y* = 0–1; *Z* = 0–1)	TLB
`ARMCortexA65AECT.cpuY.thread0.l1dcache` (where *Y* = 0–1)	PVCache
`ARMCortexA65AECT.cpuY.thread0.l1dcache.upstream[0]` (where *Y* = 0–1)	PVBusSlave
`ARMCortexA65AECT.cpuY.thread0.l1icache` (where *Y* = 0–1)	PVCache
`ARMCortexA65AECT.cpuY.thread0.l1icache.upstream[0]` (where *Y* = 0–1)	PVBusSlave
`ARMCortexA65AECT.cpuY.thread0.l2cache` (where *Y* = 0–1)	PVCache
`ARMCortexA65AECT.cpuY.thread0.l2cache.upstream[V]` (where *Y* = 0–1; *V* = 0–1)	PVBusSlave
`ARMCortexA65AECT.ext_bus`	PVBusLogger
`ARMCortexA65AECT.ext_bus.mapper`	PVBusMapper
`ARMCortexA65AECT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder

Ports for ARMCortexA65AECT

Port	Direction	Protocol	Description
`acp_s`	slave	PVBus	AXI ACP slave port
`AENDMP`	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
`ASTARTMP`	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
`broadcastatomic`	slave	Signal	CHI defined pins.
`broadcastcachemaint`	slave	Signal	ACE defined pins.
`broadcastouter`	slave	Signal	ACE defined pins.
`broadcastpersist`	slave	Signal	CHI defined pins.
`cfgend`	slave	Signal	This signal if for EE bit initialisation.
`cfgte`	slave	Signal	This signal provides default exception handling state.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`clusterid`	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
`clusterpmuirq`	master	Signal	DynamIQ pmu irq
`CNTHPIRQ`	master	Signal	Timer signals to SOC.
`CNTHVIRQ`	master	Signal	Timer signals to SOC.
`CNTPNSIRQ`	master	Signal	Timer signals to SOC.
`CNTPSIRQ`	master	Signal	Timer signals to SOC.
`cntvalueb`	slave	CounterInterface	Interface to SoC level counter module.
`CNTVIRQ`	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port per thread.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA65AECT

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.enable_single_thread_at_reset`

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

cpuX.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

cpuX.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

`cluster_patch_level`

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cluster_revision_number

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: `uint8_t`

Default value: 0

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_lock_step

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.61 ARMCortexA65AECT_CortexA76AECT

Defined in `LISA/ARMCortexA65AECT_CortexA76AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA65AE r0p0	Full support
CortexA76AE r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA65AECT_CortexA76AECT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
: Possible values are 2-6 (ARMCortexA65AECT).

`subcluster1.NUM_CORES`
: Possible values are 2-4 (ARMCortexA76AECT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port_name[0-11] for cores in subcluster0.
    - port_name[0] is a port for subcluster0.cpu0.thread0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- port_name[1] is a port for subcluster0.cpu0.thread1
- port_name[2] is a port for subcluster0.cpu1.thread0
- port_name[12-15] for cores in subcluster1.

Note

All instances in the Master cross trigger matrix port array, `cti[16]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu5` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA65AECT
- ARMCortexA76AECT

Iris and MTI instances for ARMCortexA65AECT_CortexA76AECT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA65AECT_CortexA76AECT`	Cluster_ARM_Cortex-A65AE_Cortex-A76AE
`ARMCortexA65AECT_CortexA76AECT.AMU`	PVBusLogger
`ARMCortexA65AECT_CortexA76AECT.AMU.mapper`	PVBusMapper
`ARMCortexA65AECT_CortexA76AECT.DAP`	PVBusLogger
`ARMCortexA65AECT_CortexA76AECT.DAP.mapper`	PVBusMapper
`ARMCortexA65AECT_CortexA76AECT.DSU`	DSU
`ARMCortexA65AECT_CortexA76AECT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA65AECT_CortexA76AECT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache`	PVCache
`ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache.upstream[Z]` (where *Z* = 0–9)	PVBusSlave
`ARMCortexA65AECT_CortexA76AECT.MMAP`	PVBusLogger
`ARMCortexA65AECT_CortexA76AECT.MMAP.mapper`	PVBusMapper
`ARMCortexA65AECT_CortexA76AECT.RAS`	PVBusLogger
`ARMCortexA65AECT_CortexA76AECT.RAS.mapper`	PVBusMapper

Ports for ARMCortexA65AECT_CortexA76AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamIQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamIQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.

Port	Direction	Protocol	Description
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
`clusterid`	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
`clusterpmuirq`	master	Signal	DynamIQ pmu irq
`CNTHPIRQ`	master	Signal	Timer signals to SOC.
`CNTHVIRQ`	master	Signal	Timer signals to SOC.
`CNTPNSIRQ`	master	Signal	Timer signals to SOC.
`CNTPSIRQ`	master	Signal	Timer signals to SOC.
`cntvalueb`	slave	CounterInterface	Interface to SoC level counter module.
`CNTVIRQ`	master	Signal	Timer signals to SOC.
`commirq`	master	Signal	Interrupt signal from debug communications channel.
`core_clk_in`	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
`cpuporeset`	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
`cryptodisable`	slave	Signal	Disable cryptography extensions after reset.
`cti`	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
`ctidbgirq`	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
`dbgen`	slave	Signal	External debug interface.
`dbgnopwrdwn`	master	Signal	No power-down request.
`dbgpwrupreq`	master	Signal	Debug power up request.
`dev_debug_s`	slave	PVBus	External debug interface.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPUs fast-interrupt handling.
`gicv3_redistributor_s`	slave	GICv3Comms	GICv3 AXI-stream port.
`irq`	slave	Signal	This signal drives the CPUs interrupt handling.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`niden`	slave	Signal	External debug interface.
`pchannel_cluster`	slave	PChannel	PChannel for cluster.
`pchannel_core`	slave	PChannel	PChannels for cores
`pmbirq`	master	Signal	Interrupt signal from statistical profiling unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA65AECT_CortexA76AECT

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_lock_step`

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_peripheral_port
If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-state_modelled
Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

l3cache-hit_latency
L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency
L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency
L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency
L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`subcluster0.NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

`subcluster0.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu0.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster0.cpu0.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu0.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu0.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu0.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu0.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu0.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu0.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu0.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.thread1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu1.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu1.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.thread0.CFGEND`
Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

`subcluster0.cpu1.thread0.CFGTE`
Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu1.thread0.MPIDR-override`
Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.thread0.RVBARADDR`
Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.thread0.VINITHI
Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu1.thread1.CFGEND
Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu1.thread1.CFGTE
Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu1.thread1.MPIDR-override
Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.thread1.RVBARADDR
Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.thread1.VINITHI
Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu1.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu2.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

`subcluster0.cpu2.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu2.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu2.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu2.thread0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.thread0.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu2.thread1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

`subcluster0.cpu2.thread1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu2.thread1.MPIDR-override`

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.thread1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.thread1.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu3.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu3.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.thread0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

`subcluster0.cpu3.thread0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster0.cpu3.thread0.MPIDR-override`

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.thread0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.thread0.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu3.thread1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

`subcluster0.cpu3.thread1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu3.thread1.MPIDR-override`

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.thread1.RVBARADDR`

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu4.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu4.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu4.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.thread0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu4.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu4.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu4.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu4.thread1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.thread1.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu4.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu5.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu5.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu5.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu5.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

subcluster0.cpu5.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu5.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.thread1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 2

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

subcluster0.reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster1.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu2.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu2.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu2.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster1.cpu2.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Non-Confidential

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu3.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu3.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu3.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu3.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

subcluster1.reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.62 ARMCortexA65CT

Defined in `LISA/ARMCortexA65CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA65CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the NUM_CORES parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA65CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA65CT`	Cluster_ARM_Cortex-A65
`ARMCortexA65CT.AMU`	PVBusLogger
`ARMCortexA65CT.AMU.mapper`	PVBusMapper
`ARMCortexA65CT.DAP`	PVBusLogger
`ARMCortexA65CT.DAP.mapper`	PVBusMapper
`ARMCortexA65CT.DSU`	DSU
`ARMCortexA65CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA65CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA65CT.DSU.shared_cache`	PVCache
`ARMCortexA65CT.DSU.shared_cache.upstream[Y]` (where Y = 0–3)	PVBusSlave
`ARMCortexA65CT.MMAP`	PVBusLogger
`ARMCortexA65CT.MMAP.mapper`	PVBusMapper
`ARMCortexA65CT.RAS`	PVBusLogger
`ARMCortexA65CT.RAS.mapper`	PVBusMapper
`ARMCortexA65CT.cpu0.dtlb`	TLB
`ARMCortexA65CT.cpu0.threadZ` (where Z = 0–1)	ARM_Cortex-A65

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA65CT.cpu0.threadZ.UTLB (where *Z* = 0–1)	TLB
ARMCortexA65CT.cpu0.thread0.l1dcache	PVCache
ARMCortexA65CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l1icache	PVCache
ARMCortexA65CT.cpu0.thread0.l1icache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l2cache	PVCache
ARMCortexA65CT.cpu0.thread0.l2cache.upstream[V] (where *V* = 0–1)	PVBusSlave
ARMCortexA65CT.ext_bus	PVBusLogger
ARMCortexA65CT.ext_bus.mapper	PVBusMapper
ARMCortexA65CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA65CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA65CT.AMU	PVBusLogger
ARMCortexA65CT.AMU.mapper	PVBusMapper
ARMCortexA65CT.DAP	PVBusLogger
ARMCortexA65CT.DAP.mapper	PVBusMapper
ARMCortexA65CT.DSU	DSU
ARMCortexA65CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65CT.DSU.shared_cache	PVCache
ARMCortexA65CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexA65CT.MMAP	PVBusLogger
ARMCortexA65CT.MMAP.mapper	PVBusMapper
ARMCortexA65CT.RAS	PVBusLogger
ARMCortexA65CT.RAS.mapper	PVBusMapper
ARMCortexA65CT.cpu0.threadZ (where *Z* = 0–1)	ARM_Cortex-A65
ARMCortexA65CT.cpu0.threadZ.UTLB (where *Z* = 0–1)	TLB
ARMCortexA65CT.cpu0.thread0.l1dcache	PVCache
ARMCortexA65CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l1icache	PVCache
ARMCortexA65CT.cpu0.thread0.l1icache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l2cache	PVCache
ARMCortexA65CT.cpu0.thread0.l2cache.upstream[V] (where *V* = 0–1)	PVBusSlave
ARMCortexA65CT.ext_bus	PVBusLogger
ARMCortexA65CT.ext_bus.mapper	PVBusMapper
ARMCortexA65CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA65CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA65CT

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.enable_single_thread_at_reset

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

`cpuX.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

cpuX.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Non-Confidential

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cluster_patch_level

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: `uint8_t`

Default value: 0

cluster_revision_number

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: `uint8_t`

Default value: 0

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.63 ARMCortexA710CT

Defined in `LISA/ARMCortexA710CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were removed:

- `pchannel_treat_simreset_as_poreset`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA710CT

The model supports the following features:

- DynamIQ Shared Unit-110 (DSU-110) system registers.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- PChannel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- L3Cache partition.
- Per-core clock.
- Utility bus.
- AArch32 at EL0.

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.
- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- Error correction or detection features.
- Self-test features (MBIST).
- Snoop filtering.

Non-Confidential

This model supports the ArmÂ®v8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA710CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA710CT`	Cluster_ARM_Cortex-A710
`ARMCortexA710CT.AMU`	PVBusLogger
`ARMCortexA710CT.AMU.mapper`	PVBusMapper
`ARMCortexA710CT.DAP`	PVBusLogger
`ARMCortexA710CT.DAP.mapper`	PVBusMapper
`ARMCortexA710CT.DSU`	DSU-110
`ARMCortexA710CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA710CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA710CT.DSU.PPU_core0`	PPUv1
`ARMCortexA710CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexA710CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA710CT.DSU.shared_cache`	PVCache
`ARMCortexA710CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA710CT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexA710CT.MMAP`	PVBusLogger
`ARMCortexA710CT.MMAP.mapper`	PVBusMapper
`ARMCortexA710CT.RAS`	PVBusLogger
`ARMCortexA710CT.RAS.mapper`	PVBusMapper
`ARMCortexA710CT.cpu0`	ARM_Cortex-A710
`ARMCortexA710CT.cpu0.UTLB`	TLB
`ARMCortexA710CT.cpu0.debug_rom`	debug_rom
`ARMCortexA710CT.cpu0.dtlb`	TLB
`ARMCortexA710CT.cpu0.l1dcache`	PVCache
`ARMCortexA710CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA710CT.cpu0.l1icache`	PVCache
`ARMCortexA710CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA710CT.cpu0.l2cache`	PVCache
`ARMCortexA710CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA710CT.ext_bus`	PVBusLogger
`ARMCortexA710CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA710CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA710CT.global_debug_rom`	debug_rom
`ARMCortexA710CT.secondary_debug_rom`	debug_rom
`ARMCortexA710CT.sve`	ScalableVectorExtension

`ARMCortexA710CT.MMAP`	PVBusLogger
`ARMCortexA710CT.MMAP.mapper`	PVBusMapper
`ARMCortexA710CT.RAS`	PVBusLogger
`ARMCortexA710CT.RAS.mapper`	PVBusMapper
`ARMCortexA710CT.cpu0`	ARM_Cortex-A710
`ARMCortexA710CT.cpu0.UTLB`	TLB
`ARMCortexA710CT.cpu0.l1dcache`	PVCache
`ARMCortexA710CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA710CT.cpu0.l1icache`	PVCache
`ARMCortexA710CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA710CT.cpu0.l2cache`	PVCache
`ARMCortexA710CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA710CT.ext_bus`	PVBusLogger
`ARMCortexA710CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA710CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder

Ports for ARMCortexA710CT

Port	Direction	Protocol	Description
`acp_s`	slave	PVBus	AXI ACP slave port.
`AEND0MP`	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
`AEND1MP`	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
`AEND2MP`	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
`AEND3MP`	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Reset signal to cluster.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA710CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

`ASTART0_DEFAULT`

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 32

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 1

ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Default value: 3

ete.REVISION
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

ete.SIM_OVERFLOW_GRANULARITY
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE
Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS
Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT
File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP
TRCRSR.TA value for a forcibly traced exception.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.64 ARMCortexA715CT

Defined in `LISA/ARMCortexA715CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA715CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

Note

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Limitations

- Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

Iris and MTI instances for ARMCortexA715CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA715CT`	Cluster_ARM_Cortex-A715
`ARMCortexA715CT.AMU`	PVBusLogger
`ARMCortexA715CT.AMU.mapper`	PVBusMapper
`ARMCortexA715CT.DAP`	PVBusLogger
`ARMCortexA715CT.DAP.mapper`	PVBusMapper
`ARMCortexA715CT.DSU`	DSU-110
`ARMCortexA715CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA715CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA715CT.DSU.PPU_core0`	PPUv1
`ARMCortexA715CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexA715CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA715CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA715CT.DSU.shared_cache`	PVCache
`ARMCortexA715CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA715CT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexA715CT.MMAP`	PVBusLogger
`ARMCortexA715CT.MMAP.mapper`	PVBusMapper
`ARMCortexA715CT.RAS`	PVBusLogger
`ARMCortexA715CT.RAS.mapper`	PVBusMapper
`ARMCortexA715CT.cpu0`	ARM_Cortex-A715

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA715CT.cpu0.UTLB	TLB
ARMCortexA715CT.cpu0.debug_rom	debug_rom
ARMCortexA715CT.cpu0.dtlb	TLB
ARMCortexA715CT.cpu0.l1dcache	PVCache
ARMCortexA715CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l1icache	PVCache
ARMCortexA715CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache	PVCache
ARMCortexA715CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA715CT.ext_bus	PVBusLogger
ARMCortexA715CT.ext_bus.mapper	PVBusMapper
ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA715CT.global_debug_rom	debug_rom
ARMCortexA715CT.secondary_debug_rom	debug_rom
ARMCortexA715CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA715CT.AMU	PVBusLogger
ARMCortexA715CT.AMU.mapper	PVBusMapper
ARMCortexA715CT.DAP	PVBusLogger
ARMCortexA715CT.DAP.mapper	PVBusMapper
ARMCortexA715CT.DSU	DSU-110
ARMCortexA715CT.DSU.PPU_cluster	PPUv1
ARMCortexA715CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA715CT.DSU.PPU_core0	PPUv1
ARMCortexA715CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA715CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA715CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA715CT.DSU.shared_cache	PVCache
ARMCortexA715CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexA715CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA715CT.MMAP	PVBusLogger
ARMCortexA715CT.MMAP.mapper	PVBusMapper
ARMCortexA715CT.RAS	PVBusLogger
ARMCortexA715CT.RAS.mapper	PVBusMapper
ARMCortexA715CT.cpu0	ARM_Cortex-A715
ARMCortexA715CT.cpu0.UTLB	TLB
ARMCortexA715CT.cpu0.l1dcache	PVCache
ARMCortexA715CT.cpu0.l1dcache.upstream[0]	PVBusSlave

Non-Confidential

Name	Component type
ARMCortexA715CT.cpu0.l1icache	PVCache
ARMCortexA715CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache	PVCache
ARMCortexA715CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA715CT.ext_bus	PVBusLogger
ARMCortexA715CT.ext_bus.mapper	PVBusMapper
ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA715CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA715CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

error_record_feature_register

RAS feature register values. An array of JSON objects. The JSON schema for the array is: [{"ED":`0x0`, "IMPDEF_3_2":`0x0`, "UI":`0x0`, "FI":`0x0`, "UE":`0x0`, "CFI":`0x0`, "CEC":`0x0`, "RP":`0x0`, "DUI":`0x0`, "CEO":`0x0`, "CI":`0x0`, "TS":`0x0`, "INJ":`0x0`, "FRX":`0x0`, "UC":`0x0`, "UEU":`0x0`, "UER":`0x0`, "UEO":`0x0`, "DE":`0x0`, "CE":`0x0`, "Visibility":"Core"},other_feature_register_values]. Where ED,UI,FI,CE and UE have valid values between `0x0 - 0x3`. CFI and DUI have valid values `0x0`, `0x2` and `0x3`. CEC has valid values `0x0`,`0x2` or `0x4`. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values `0x0` or `0x1`. CI and TS has valid values of `0x0`, `0x1` and `0x2`. Visibility has valid values "Core" or "Cluster".

Type: `string`

Default value:
“[{"ED":0x2,"IMPDEF_3_2":0x1,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,
"Visibility":"Cluster"},
{"ED":0x2,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,"INJ":0x1,"CI":0x0,"TS

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 1

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

pseudo_fault_generation_feature_register

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false,

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

"CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other_psuedo-fault_generating_features_register_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT_SUPPORTED) and true(FEATURE_CONTROLLABLE), where CE can have 0(NOT_SUPPORTED), 1(NONSPECIFIC_CE_SUPPORTED) and 3(TRANSIENT_OR_PERSISTENT_CE_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has_ras_fault_injection is true.

Type: `string`

Default value: “[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true},{"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]”

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`stage12_tlb_size`

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.65 ARMCortexA720AECT

Defined in `LISA/ARMCortexA720AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
Preliminary support	Full support

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

  As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, cpu0 and cpu1 identify the available cores and associated ports, not cpu0 and cpu2.
- Hybrid mode is not modeled in the DSU.

Ports for ARMCortexA720AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clustercriticalirq	master	Signal	Cluster Critical Irq
clustererrirq	master	Signal	Cluster Error Irq
clusterfaultirq	master	Signal	Cluster Fault Irq
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
mpam_err_irq_ns	master	Signal	-
mpam_err_irq_s	master	Signal	MPAM Error signals
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA720AECT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cluster_split_lock_config`

Default SPLIT/LOCKED config. The valid values are: 1 - Only LOCKED mode support, 4 - Only SPLIT mode support, 5 - SPLIT or MIXED mode support. Valid only when enable_ae_features is true.

Type: `uint8_t`

Default value: 1

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_lock_step`

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.PIDR_REVAND
TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVISION
TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE
Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL
Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Default value: 3

ete.REVISION
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_impdef_transient_fault_protection

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT_TFP).

Type: `bool`

Default value: true

has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: true

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.66 ARMCortexA720CT

Defined in `LISA/ARMCortexA720CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA720CT

The model supports the following features:

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- Internal PPU support is present.
- A P-Channel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- Memory-mapped register access to MPAM.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- DSU-120 system features are not fully implemented.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin
- `COREINSTRRET` and `COREINSTRRUN` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA720CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA720CT`	Cluster_ARM_Cortex-A720
`ARMCortexA720CT.AMU`	PVBusLogger
`ARMCortexA720CT.AMU.mapper`	PVBusMapper
`ARMCortexA720CT.DAP`	PVBusLogger
`ARMCortexA720CT.DAP.mapper`	PVBusMapper
`ARMCortexA720CT.DSU`	DSU-120
`ARMCortexA720CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA720CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA720CT.DSU.PPU_core0`	PPUv1
`ARMCortexA720CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexA720CT.DSU.l3_flusher`	AsyncCacheFlushUnit

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA720CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720CT.DSU.shared_cache	PVCache
ARMCortexA720CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexA720CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA720CT.MMAP	PVBusLogger
ARMCortexA720CT.MMAP.mapper	PVBusMapper
ARMCortexA720CT.RAS	PVBusLogger
ARMCortexA720CT.RAS.mapper	PVBusMapper
ARMCortexA720CT.cpu0	ARM_Cortex-A720
ARMCortexA720CT.cpu0.UTLB	TLB
ARMCortexA720CT.cpu0.debug_rom	debug_rom
ARMCortexA720CT.cpu0.dtlb	TLB
ARMCortexA720CT.cpu0.l1dcache	PVCache
ARMCortexA720CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l1icache	PVCache
ARMCortexA720CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l2cache	PVCache
ARMCortexA720CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA720CT.ext_bus	PVBusLogger
ARMCortexA720CT.ext_bus.mapper	PVBusMapper
ARMCortexA720CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA720CT.global_debug_rom	debug_rom
ARMCortexA720CT.secondary_debug_rom	debug_rom
ARMCortexA720CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA720CT.AMU	PVBusLogger
ARMCortexA720CT.AMU.mapper	PVBusMapper
ARMCortexA720CT.DAP	PVBusLogger
ARMCortexA720CT.DAP.mapper	PVBusMapper
ARMCortexA720CT.DSU	DSU-120
ARMCortexA720CT.DSU.PPU_cluster	PPUv1
ARMCortexA720CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720CT.DSU.PPU_core0	PPUv1
ARMCortexA720CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720CT.DSU.shared_cache	PVCache
ARMCortexA720CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave

ARMCortexA720CT.cpu0.l1dcache	PVCache
ARMCortexA720CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l1icache	PVCache
ARMCortexA720CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l2cache	PVCache
ARMCortexA720CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA720CT.ext_bus	PVBusLogger
ARMCortexA720CT.ext_bus.mapper	PVBusMapper
ARMCortexA720CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA720CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA720CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.force-fpsid`

Override the FPSID value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`bus_type`

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

`has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

`has_large_va`

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-has_mpam

L3 Cache has MPAM support.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_acp`

Number of ACP ports.

Type: `uint8_t`

Default value: 0

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`pmu-num_counters`

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.67 ARMCortexA725CT

Defined in `LISA/ARMCortexA725CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA725CT

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-A725 cores.

The number of cores in the cluster is configurable using the following parameter:

`NUM_CORES`
Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA725CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA725CT`	Cluster_ARM_Cortex-A725
`ARMCortexA725CT.AMU`	PVBusLogger
`ARMCortexA725CT.AMU.mapper`	PVBusMapper
`ARMCortexA725CT.DAP`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA725CT.DAP.mapper	PVBusMapper
ARMCortexA725CT.DSU	DSU-120
ARMCortexA725CT.DSU.PPU_cluster	PPUv1
ARMCortexA725CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA725CT.DSU.PPU_core0	PPUv1
ARMCortexA725CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA725CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA725CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA725CT.DSU.shared_cache	PVCache
ARMCortexA725CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexA725CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT.MMAP	PVBusLogger
ARMCortexA725CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT.RAS	PVBusLogger
ARMCortexA725CT.RAS.mapper	PVBusMapper
ARMCortexA725CT.cpu0	ARM_Cortex-A725
ARMCortexA725CT.cpu0.UTLB	TLB

ARMCortexA725CT.cpu0.l2cache	PVCache
ARMCortexA725CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA725CT.ext_bus	PVBusLogger
ARMCortexA725CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA725CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Port	Direction	Protocol	Description
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA725CT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

`CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`bus_type`

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`ete.ETE_REVISION`

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`has_statistical_profiling`

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.68 ARMCortexA725CT_CortexX925CT

Defined in `LISA/ARMCortexA725CT_CortexX925CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA725 r0p0	Full support
CortexX925 r0p0	Full support

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

About ARMCortexA720CT_CortexX925CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
: Possible values are 1-13 (ARMCortexA720CT).

`subcluster1.NUM_CORES`
: Possible values are 1-13 (ARMCortexX925CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port_name>[0-12] for cores in `subcluster0`.
- <port_name>[13-25] for cores in `subcluster1`.

Note

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA720CT.
- ARMCortexX925CT.

Iris and MTI instances for ARMCortexA725CT_CortexX925CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA725CT_CortexX925CT`	Cluster_ARM_CortexA725_CortexX925_Heterogeneous
`ARMCortexA725CT_CortexX925CT.AMU`	PVBusLogger

Ports for ARMCortexA725CT_CortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA725CT_CortexX925CT

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu0.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu0.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu0.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu0.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu1.semihosting-A64_HLT`
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu1.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu10.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Default value: 0

`subcluster0.cpu10.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu10.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu10.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu10.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu10.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu10.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu10.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu10.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu10.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu10.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu10.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu10.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu10.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu11.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`subcluster0.cpu11.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster0.cpu11.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu11.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu11.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster0.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu12.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu12.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu12.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu12.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu12.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu12.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu12.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu12.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu12.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu12.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu12.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu12.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu12.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu12.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu12.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu12.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu12.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu2.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu2.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu2.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu2.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu3.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu3.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu3.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

`subcluster0.cpu4.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu5.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu5.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster0.cpu5.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

`subcluster0.cpu8.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu8.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu8.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu8.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu9.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

`subcluster0.cpu9.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu9.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu9.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu9.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster0.ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

subcluster0.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

subcluster0.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster0.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

`subcluster0.force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`subcluster0.force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

`subcluster0.has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`subcluster0.has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster0.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.icache-read_access_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`subcluster0.instruction_tlb_size`

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

`subcluster0.invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`subcluster0.memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

subcluster0.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu10.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu10.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu10.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster1.cpu11.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu11.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu11.semihosting-stack_limit
Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu12.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu12.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu12.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu12.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster1.cpu12.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu12.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu12.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu12.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu12.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu12.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu12.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu12.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu12.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu12.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu12.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu12.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu12.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu12.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu12.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu12.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster1.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu2.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu2.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu2.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu2.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu2.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Non-Confidential

subcluster1.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu5.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu5.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu5.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu5.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu5.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu5.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu5.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu6.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu6.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu6.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu6.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu6.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu6.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu7.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu7.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu7.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster1.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ecv_support_level

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.has_mt_pmu_disable_feature

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT_MTPMU). 0: FEAT_MTPMU is disabled, 1: FEAT_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT_MTPMU is cherry-picked, `0xF`: The feature is disabled and is represented by value `0xF` in ID_AA64DFR0_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

subcluster1.has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: false

subcluster1.has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster1.mpam_has_altsp

MPAM Whether MPAMIDR_EL1.HAS_ALTSP bit is set or clear.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.mpamidr_has_force_ns

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster1.mpamidr_has_sdeflt

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

subcluster1.mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

subcluster1.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.tcr_txsz_undersize_should_fault

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.69 ARMCortexA72CT

About ARMCortexA72CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- The cache latency cluster parameters are only effective when you enable cache-state modeling.
- Timing annotation for transactions downstream of the cache and TLB models propagates through the cache and TLB models.
- ECC and parity schemes are hardware-specific so are not supported.
- This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA72CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA72CT`	Cluster_ARM_Cortex-A72
`ARMCortexA72CT.AMU`	PVBusLogger
`ARMCortexA72CT.AMU.mapper`	PVBusMapper
`ARMCortexA72CT.DAP`	PVBusLogger
`ARMCortexA72CT.DAP.mapper`	PVBusMapper
`ARMCortexA72CT.DSU`	DSU
`ARMCortexA72CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA72CT.MMAP`	PVBusLogger
`ARMCortexA72CT.MMAP.mapper`	PVBusMapper
`ARMCortexA72CT.RAS`	PVBusLogger
`ARMCortexA72CT.RAS.mapper`	PVBusMapper
`ARMCortexA72CT.acp_mapper`	PVBusMapper
`ARMCortexA72CT.cpu0`	ARM_Cortex-A72
`ARMCortexA72CT.cpu0.UTLB`	TLB
`ARMCortexA72CT.cpu0.dtlb`	TLB
`ARMCortexA72CT.cpu0.l1dcache`	PVCache
`ARMCortexA72CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA72CT.cpu0.l1icache`	PVCache
`ARMCortexA72CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA72CT.ext_bus`	PVBusLogger
`ARMCortexA72CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA72CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`ARMCortexA72CT.global_debug_rom`	debug_rom
`ARMCortexA72CT.l2_cache`	PVCache
`ARMCortexA72CT.l2_cache.upstream[Z]` (where *Z* = 0–16)	PVBusSlave
`ARMCortexA72CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexA72CT.AMU`	PVBusLogger
`ARMCortexA72CT.AMU.mapper`	PVBusMapper
`ARMCortexA72CT.DAP`	PVBusLogger
`ARMCortexA72CT.DAP.mapper`	PVBusMapper
`ARMCortexA72CT.DSU`	DSU
`ARMCortexA72CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA72CT.MMAP`	PVBusLogger
`ARMCortexA72CT.MMAP.mapper`	PVBusMapper
`ARMCortexA72CT.RAS`	PVBusLogger
`ARMCortexA72CT.RAS.mapper`	PVBusMapper
`ARMCortexA72CT.acp_mapper`	PVBusMapper
`ARMCortexA72CT.cpu0`	ARM_Cortex-A72
`ARMCortexA72CT.cpu0.UTLB`	TLB
`ARMCortexA72CT.cpu0.l1dcache`	PVCache
`ARMCortexA72CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA72CT.cpu0.l1icache`	PVCache
`ARMCortexA72CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA72CT.ext_bus`	PVBusLogger
`ARMCortexA72CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA72CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA72CT.l2_cache`	PVCache
`ARMCortexA72CT.l2_cache.upstream[Z]` (where *Z* = 0–16)	PVBusSlave
`ARMCortexA72CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexA72CT

Port	Direction	Protocol	Description
`aa64naa32`	slave	Signal	Register width after reset.
`acp_s`	slave	PVBus	AXI ACP slave port.
`broadcastcachemaint`	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
`broadcastinner`	slave	Signal	Enable broadcasting of Inner Shareable transactions.
`broadcastouter`	slave	Signal	Enable broadcasting of Outer Shareable transactions.
`cfgend`	slave	Signal	This signal if for EE bit initialisation.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	The per-EL counter signal.
CNTPNSIRQ	master	Signal	The per-EL counter signal.
CNTPSIRQ	master	Signal	The per-EL counter signal.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	The per-EL counter signal.
commirq	master	Signal	Interrupt signal from debug communications channel.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	These signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete.
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
memorymapped_debug_s	slave	PVBus	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
standbywfil2	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Processor Virtual System Error Interrupt request.

Parameters for ARMCortexA72CT

cpuX.AA64nAA32

Type: `bool`

Default value: true

cpuX.CFGEND

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.CFGTE

Type: `bool`

Default value: false

cpuX.CP15SDISABLE

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Type: `bool`

Default value: false

cpuX.RVBARADDR

Type: `uint64_t`

Default value: 0

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: 256

cpuX.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-A32_HLT`

Type: `uint32_t`

Default value: `0xF000`

`cpuX.semihosting-A64_HLT`

Type: `uint32_t`

Default value: `0xF000`

`cpuX.semihosting-ARM_SVC`

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

Type: `uint32_t`

Default value: `0x3C`

`cpuX.semihosting-Thumb_SVC`

Type: `uint32_t`

Default value: `0xAB`

`cpuX.semihosting-cmd_line`

Type: `string`

Default value: “”

`cpuX.semihosting-cwd`

Type: `string`

Default value: “”

`cpuX.semihosting-enable`

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.semihosting-stack_base

Type: `uint32_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Type: `bool`

Default value: false

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTINNER

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

CLUSTER_ID

Type: `uint32_t`

Default value: 0

DBGROMADDR

Type: `uint64_t`

Default value: `0x22000000`

DBGROMADDRV

Type: `bool`

Default value: true

GICDISABLE

Type: `bool`

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PERIPHBASE

Type: `uint64_t`

Default value: `0x13080000`

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

`cpi_mul`

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-state_modelled

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-state_modelled

Type: `bool`

Default value: false

l2cache-hit_latency

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-miss_latency`

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

About ARMCortexA73CT

- The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).
- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.
- If either L1 cache is stateful, then the L2 cache is stateful. This is controlled by the `dcache-state_modelled` and `icache-state_modelled parameters`.
- The `semihosting-cwd` parameter sets the CWD that is used for semihosting. The host operating system limits the maximum path length. The `semihosting-cwd` parameter does not provide any security. Software running on the model can access files outside this directory using relative paths containing `..` or using absolute paths.

  This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
- The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a `PVBusDecoder` to direct traffic to the correct port, `dev_debug_s` or `memorymapped_debug_s`.
- ECC support is hardware-specific so is not modeled.

Iris and MTI instances for ARMCortexA73CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA73CT`	Cluster_ARM_Cortex-A73
`ARMCortexA73CT.AMU`	PVBusLogger
`ARMCortexA73CT.AMU.mapper`	PVBusMapper
`ARMCortexA73CT.DAP`	PVBusLogger
`ARMCortexA73CT.DAP.mapper`	PVBusMapper
`ARMCortexA73CT.DSU`	DSU
`ARMCortexA73CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA73CT.MMAP`	PVBusLogger
`ARMCortexA73CT.MMAP.mapper`	PVBusMapper
`ARMCortexA73CT.RAS`	PVBusLogger
`ARMCortexA73CT.RAS.mapper`	PVBusMapper
`ARMCortexA73CT.acp_mapper`	PVBusMapper
`ARMCortexA73CT.cpu0`	ARM_Cortex-A73
`ARMCortexA73CT.cpu0.UTLB`	TLB
`ARMCortexA73CT.cpu0.dtlb`	TLB
`ARMCortexA73CT.cpu0.l1dcache`	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA73CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA73CT.cpu0.l1icache	PVCache
ARMCortexA73CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA73CT.ext_bus	PVBusLogger
ARMCortexA73CT.ext_bus.mapper	PVBusMapper
ARMCortexA73CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA73CT.global_debug_rom	debug_rom
ARMCortexA73CT.l2_cache	PVCache
ARMCortexA73CT.l2_cache.upstream[Z] (where *Z* = 0-16)	PVBusSlave
ARMCortexA73CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA73CT.AMU	PVBusLogger
ARMCortexA73CT.AMU.mapper	PVBusMapper
ARMCortexA73CT.DAP	PVBusLogger
ARMCortexA73CT.DAP.mapper	PVBusMapper
ARMCortexA73CT.DSU	DSU
ARMCortexA73CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA73CT.MMAP	PVBusLogger
ARMCortexA73CT.MMAP.mapper	PVBusMapper
ARMCortexA73CT.RAS	PVBusLogger
ARMCortexA73CT.RAS.mapper	PVBusMapper
ARMCortexA73CT.acp_mapper	PVBusMapper
ARMCortexA73CT.cpu0	ARM_Cortex-A73
ARMCortexA73CT.cpu0.UTLB	TLB
ARMCortexA73CT.cpu0.l1dcache	PVCache
ARMCortexA73CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA73CT.cpu0.l1icache	PVCache
ARMCortexA73CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA73CT.ext_bus	PVBusLogger
ARMCortexA73CT.ext_bus.mapper	PVBusMapper
ARMCortexA73CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA73CT.l2_cache	PVCache
ARMCortexA73CT.l2_cache.upstream[Z] (where *Z* = 0-16)	PVBusSlave
ARMCortexA73CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexA73CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastinner	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Processor powerup request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.

Port	Direction	Protocol	Description
`l2flushdone`	master	Signal	Flush of L2 memory system complete.
`l2flushreq`	slave	Signal	Request flush of L2 memory system.
`l2reset`	slave	Signal	Level2 reset.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`niden`	slave	Signal	External debug interface.
`periphbase`	slave	Value_64	This port sets the base address of private peripheral region.
`pmuirq`	master	Signal	Interrupt signal from performance monitoring unit.
`presetdbg`	slave	Signal	Debug reset.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt
`reset`	slave	Signal	Reset.
`romaddr`	slave	Value_64	Debug ROM base address.
`romaddrv`	slave	Signal	Debug ROM base address valid.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sei`	slave	Signal	Per core System Error physical pins.
`smpen`	master	Signal	This signals AMP or SMP mode for each core.
`spiden`	slave	Signal	External debug interface.
`spniden`	slave	Signal	External debug interface.
`standbywfe`	master	Signal	This signal indicates if a core is in WFE state.
`standbywfi`	master	Signal	This signal indicates if a core is in WFI state
`standbywfil2`	master	Signal	This signal indicated all cores and L2 are idles and in low power state.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA73CT

`cpuX.AA64nAA32`

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.CFGEND

Type: `bool`

Default value: false

cpuX.CFGTE

Type: `bool`

Default value: false

cpuX.CP15SDISABLE

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Type: `bool`

Default value: false

cpuX.RVBARADDR

Type: `uint64_t`

Default value: 0

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: 256

cpuX.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: 0

cpuX.semihosting-A32_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-A64_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-ARM_SVC

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

Type: `uint32_t`

Default value: `0x3C`

cpuX.semihosting-Thumb_SVC

Type: `uint32_t`

Default value: `0xAB`

cpuX.semihosting-cmd_line

Type: `string`

Default value: “”

cpuX.semihosting-cwd

Type: `string`

Default value: “”

cpuX.semihosting-enable

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.semihosting-stack_base

Type: `uint32_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Type: `bool`

Default value: false

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTINNER

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

CCSIDR-L1D_override

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

CCSIDR-L1I_override

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

CCSIDR-L2_override

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

CLUSTER_ID

Type: `uint32_t`

Default value: 0

DBGROMADDR

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Type: `bool`

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PERIPHBASE

Type: `uint64_t`

Default value: `0x13080000`

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-hit_latency

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`dcache-size`

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`dcache-state_modelled`

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-state_modelled

Type: `bool`

Default value: false

l2cache-hit_latency

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-miss_latency

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

3.71 ARMCortexA75CT

Defined in `LISA/ARMCortexA75CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r3p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA75CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Dual ACE masters.
- This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter. The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).
- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA75CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA75CT`	Cluster_ARM_Cortex-A75
`ARMCortexA75CT.AMU`	PVBusLogger
`ARMCortexA75CT.AMU.mapper`	PVBusMapper
`ARMCortexA75CT.DAP`	PVBusLogger
`ARMCortexA75CT.DAP.mapper`	PVBusMapper
`ARMCortexA75CT.DSU`	DSU
`ARMCortexA75CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA75CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA75CT.DSU.shared_cache`	PVCache
`ARMCortexA75CT.DSU.shared_cache.upstream[Y]` (where Y = 0–3)	PVBusSlave
`ARMCortexA75CT.MMAP`	PVBusLogger
`ARMCortexA75CT.MMAP.mapper`	PVBusMapper
`ARMCortexA75CT.RAS`	PVBusLogger
`ARMCortexA75CT.RAS.mapper`	PVBusMapper

Ports for ARMCortexA75CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA75CT

`cpuX.AA64nAA32`

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

cpuX.CFGEND

Type: `bool`

Default value: false

cpuX.CFGTE

Type: `bool`

Default value: false

cpuX.CP15SDISABLE

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Type: `bool`

Default value: false

cpuX.RVBARADDR

Type: `uint64_t`

Default value: 0

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: 256

cpuX.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

cpuX.semihosting-A32_HLT

Type: `uint32_t`

Default value: `0xF000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-A64_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-ARM_SVC

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

Type: `uint32_t`

Default value: `0x3C`

cpuX.semihosting-Thumb_SVC

Type: `uint32_t`

Default value: `0xAB`

cpuX.semihosting-cmd_line

Type: `string`

Default value: “”

cpuX.semihosting-cwd

Type: `string`

Default value: “”

cpuX.semihosting-enable

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Type: `uint32_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-stack_base

Type: `uint32_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistance operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

Type: `uint32_t`

Default value: 0

GICDISABLE

Type: `bool`

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-hit_latency

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-miss_latency

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-state_modelled

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0. 0: No effect, 1: PSTATE.PAN is always treated as 0.The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-state_modelled

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-hit_latency

L3 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l3cache-miss_latency

L3 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

3.72 ARMCortexA76AECT

Defined in `LISA/ARMCortexA76AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA76AECT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGPWRDUP and DBGRSTREQ are not implemented, but DBGPWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the NUM_CORES parameter.

The per-core parameters are preceded by cpun., where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

  As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, cpu0 and cpu1 identify the available cores and associated ports, not cpu0 and cpu2.
- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMCortexA76AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexA76AECT	Cluster_ARM_Cortex-A76AE
ARMCortexA76AECT.AMU	PVBusLogger
ARMCortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA76AECT.DAP	PVBusLogger
ARMCortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA76AECT.DSU	DSU
ARMCortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA76AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–5)	PVBusSlave
ARMCortexA76AECT.MMAP	PVBusLogger
ARMCortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA76AECT.RAS	PVBusLogger
ARMCortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA76AECT.cpuY (where *Y* = 0–1)	ARM_Cortex-A76AE
ARMCortexA76AECT.cpuY.UTLB (where *Y* = 0–1)	TLB
ARMCortexA76AECT.cpuY.debug_rom (where *Y* = 0–1)	debug_rom
ARMCortexA76AECT.cpuY.dtlb (where *Y* = 0–1)	TLB
ARMCortexA76AECT.cpuY.l1dcache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1dcache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l1icache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1icache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l2cache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l2cache.upstream[U] (where *Y* = 0–1; *U* = 0–1)	PVBusSlave
ARMCortexA76AECT.ext_bus	PVBusLogger
ARMCortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA76AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA76AECT.global_debug_rom	debug_rom
ARMCortexA76AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA76AECT.AMU	PVBusLogger
ARMCortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA76AECT.DAP	PVBusLogger
ARMCortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA76AECT.DSU	DSU
ARMCortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA76AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–5)	PVBusSlave
ARMCortexA76AECT.MMAP	PVBusLogger
ARMCortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA76AECT.RAS	PVBusLogger
ARMCortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA76AECT.cpuY (where *Y* = 0–1)	ARM_Cortex-A76AE
ARMCortexA76AECT.cpuY.UTLB (where *Y* = 0–1)	TLB

Name	Component type
ARMCortexA76AECT.cpuY.l1dcache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1dcache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l1icache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1icache.upstream[0] (where *Y* = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l2cache (where *Y* = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l2cache.upstream[U] (where *Y* = 0–1; *U* = 0–1)	PVBusSlave
ARMCortexA76AECT.ext_bus	PVBusLogger
ARMCortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA76AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA76AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA76AECT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels,

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`enable_lock_step`

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`has_statistical_profiling`

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.73 ARMCortexA76CT

Defined in `LISA/ARMCortexA76CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA76CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGPWRDUP and DBGRSTREQ are not implemented, but DBGPWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the NUM_CORES parameter.

The per-core parameters are preceded by cpun., where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA76CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA76CT	Cluster_ARM_Cortex-A76
ARMCortexA76CT.AMU	PVBusLogger
ARMCortexA76CT.AMU.mapper	PVBusMapper
ARMCortexA76CT.DAP	PVBusLogger
ARMCortexA76CT.DAP.mapper	PVBusMapper
ARMCortexA76CT.DSU	DSU
ARMCortexA76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA76CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76CT.DSU.shared_cache	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA76CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexA76CT.MMAP	PVBusLogger
ARMCortexA76CT.MMAP.mapper	PVBusMapper
ARMCortexA76CT.RAS	PVBusLogger
ARMCortexA76CT.RAS.mapper	PVBusMapper
ARMCortexA76CT.cpu0	ARM_Cortex-A76
ARMCortexA76CT.cpu0.UTLB	TLB
ARMCortexA76CT.cpu0.debug_rom	debug_rom
ARMCortexA76CT.cpu0.dtlb	TLB
ARMCortexA76CT.cpu0.l1dcache	PVCache
ARMCortexA76CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l1icache	PVCache
ARMCortexA76CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l2cache	PVCache
ARMCortexA76CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA76CT.ext_bus	PVBusLogger
ARMCortexA76CT.ext_bus.mapper	PVBusMapper
ARMCortexA76CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA76CT.global_debug_rom	debug_rom
ARMCortexA76CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA76CT.AMU	PVBusLogger
ARMCortexA76CT.AMU.mapper	PVBusMapper
ARMCortexA76CT.DAP	PVBusLogger
ARMCortexA76CT.DAP.mapper	PVBusMapper
ARMCortexA76CT.DSU	DSU
ARMCortexA76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA76CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76CT.DSU.shared_cache	PVCache
ARMCortexA76CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave

ARMCortexA76CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA76CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA76CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

3.74 ARMCortexA77CT

Defined in `LISA/ARMCortexA77CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA77CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter. The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA77CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA77CT`	Cluster_ARM_Cortex-A77
`ARMCortexA77CT.AMU`	PVBusLogger
`ARMCortexA77CT.AMU.mapper`	PVBusMapper
`ARMCortexA77CT.DAP`	PVBusLogger
`ARMCortexA77CT.DAP.mapper`	PVBusMapper
`ARMCortexA77CT.DSU`	DSU
`ARMCortexA77CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA77CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA77CT.DSU.shared_cache`	PVCache
`ARMCortexA77CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA77CT.MMAP`	PVBusLogger
`ARMCortexA77CT.MMAP.mapper`	PVBusMapper
`ARMCortexA77CT.RAS`	PVBusLogger
`ARMCortexA77CT.RAS.mapper`	PVBusMapper
`ARMCortexA77CT.cpu0`	ARM_Cortex-A77
`ARMCortexA77CT.cpu0.UTLB`	TLB
`ARMCortexA77CT.cpu0.debug_rom`	debug_rom
`ARMCortexA77CT.cpu0.dtlb`	TLB
`ARMCortexA77CT.cpu0.l1dcache`	PVCache
`ARMCortexA77CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA77CT.cpu0.l1icache`	PVCache
`ARMCortexA77CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA77CT.cpu0.l2cache`	PVCache
`ARMCortexA77CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA77CT.ext_bus`	PVBusLogger
`ARMCortexA77CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA77CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA77CT.global_debug_rom`	debug_rom
`ARMCortexA77CT.secondary_debug_rom`	debug_rom

This model has the following MTI trace components:

ARMCortexA77CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA77CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA77CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.75 ARMCortexA78AECT

Defined in `LISA/ARMCortexA78AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA78AECT

The model supports the following features:

- DynamIQ (DSU) system registers.

- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMCortexA78AECT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA78AECT`	Cluster_ARM_Cortex-A78AE
`ARMCortexA78AECT.AMU`	PVBusLogger
`ARMCortexA78AECT.AMU.mapper`	PVBusMapper
`ARMCortexA78AECT.DAP`	PVBusLogger
`ARMCortexA78AECT.DAP.mapper`	PVBusMapper
`ARMCortexA78AECT.DSU`	DSU
`ARMCortexA78AECT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA78AECT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA78AECT.DSU.shared_cache`	PVCache
`ARMCortexA78AECT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–5)	PVBusSlave
`ARMCortexA78AECT.MMAP`	PVBusLogger
`ARMCortexA78AECT.MMAP.mapper`	PVBusMapper
`ARMCortexA78AECT.RAS`	PVBusLogger
`ARMCortexA78AECT.RAS.mapper`	PVBusMapper
`ARMCortexA78AECT.cpuY` (where *Y* = 0–1)	ARM_Cortex-A78AE
`ARMCortexA78AECT.cpuY.UTLB` (where *Y* = 0–1)	TLB
`ARMCortexA78AECT.cpuY.debug_rom` (where *Y* = 0–1)	debug_rom
`ARMCortexA78AECT.cpuY.dtlb` (where *Y* = 0–1)	TLB
`ARMCortexA78AECT.cpuY.l1dcache` (where *Y* = 0–1)	PVCache
`ARMCortexA78AECT.cpuY.l1dcache.upstream[0]` (where *Y* = 0–1)	PVBusSlave
`ARMCortexA78AECT.cpuY.l1icache` (where *Y* = 0–1)	PVCache
`ARMCortexA78AECT.cpuY.l1icache.upstream[0]` (where *Y* = 0–1)	PVBusSlave
`ARMCortexA78AECT.cpuY.l2cache` (where *Y* = 0–1)	PVCache
`ARMCortexA78AECT.cpuY.l2cache.upstream[U]` (where *Y* = 0–1; *U* = 0–1)	PVBusSlave
`ARMCortexA78AECT.ext_bus`	PVBusLogger
`ARMCortexA78AECT.ext_bus.mapper`	PVBusMapper
`ARMCortexA78AECT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA78AECT.global_debug_rom`	debug_rom
`ARMCortexA78AECT.secondary_debug_rom`	debug_rom

This model has the following MTI trace components:

ARMCortexA78AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA78AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
`clusterid`	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
`clusterpmuirq`	master	Signal	DynamIQ pmu irq
`CNTHPIRQ`	master	Signal	Timer signals to SOC.
`CNTHVIRQ`	master	Signal	Timer signals to SOC.
`CNTPNSIRQ`	master	Signal	Timer signals to SOC.
`CNTPSIRQ`	master	Signal	Timer signals to SOC.
`cntvalueb`	slave	CounterInterface	Interface to SoC level counter module.
`CNTVIRQ`	master	Signal	Timer signals to SOC.
`commirq`	master	Signal	Interrupt signal from debug communications channel.
`core_clk_in`	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
`cpuporeset`	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
`cryptodisable`	slave	Signal	Disable cryptography extensions after reset.
`cti`	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
`ctidbgirq`	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
`dbgen`	slave	Signal	External debug interface.
`dbgnopwrdwn`	master	Signal	No power-down request.
`dbgpwrupreq`	master	Signal	Debug power up request.
`dev_debug_s`	slave	PVBus	External debug interface.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPUs fast-interrupt handling.
`gicv3_redistributor_s`	slave	GICv3Comms	GICv3 AXI-stream port.
`irq`	slave	Signal	This signal drives the CPUs interrupt handling.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`niden`	slave	Signal	External debug interface.
`pchannel_cluster`	slave	PChannel	PChannel for cluster.
`pchannel_core`	slave	PChannel	PChannels for cores
`pmbirq`	master	Signal	Interrupt signal from statistical profiling unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`pmuirq`	master	Signal	Interrupt signal from performance monitoring unit.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Raising this signal will put the core into reset mode.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`spniden`	slave	Signal	External debug interface.
`sporeset`	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA78AECT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_lock_step

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.76 ARMCortexA78CCT

Defined in `LISA/ARMCortexA78CCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA78CCT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA78CCT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA78CCT`	Cluster_ARM_Cortex-A78C
`ARMCortexA78CCT.AMU`	PVBusLogger
`ARMCortexA78CCT.AMU.mapper`	PVBusMapper
`ARMCortexA78CCT.DAP`	PVBusLogger
`ARMCortexA78CCT.DAP.mapper`	PVBusMapper
`ARMCortexA78CCT.DSU`	DSU
`ARMCortexA78CCT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA78CCT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA78CCT.DSU.shared_cache`	PVCache
`ARMCortexA78CCT.DSU.shared_cache.upstream[Y]` (where Y = 0–3)	PVBusSlave
`ARMCortexA78CCT.MMAP`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`ARMCortexA78CCT.MMAP.mapper`	PVBusMapper
`ARMCortexA78CCT.RAS`	PVBusLogger
`ARMCortexA78CCT.RAS.mapper`	PVBusMapper
`ARMCortexA78CCT.cpu0`	ARM_Cortex-A78C
`ARMCortexA78CCT.cpu0.UTLB`	TLB
`ARMCortexA78CCT.cpu0.debug_rom`	debug_rom
`ARMCortexA78CCT.cpu0.dtlb`	TLB
`ARMCortexA78CCT.cpu0.l1dcache`	PVCache
`ARMCortexA78CCT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA78CCT.cpu0.l1icache`	PVCache
`ARMCortexA78CCT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA78CCT.cpu0.l2cache`	PVCache
`ARMCortexA78CCT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA78CCT.ext_bus`	PVBusLogger
`ARMCortexA78CCT.ext_bus.mapper`	PVBusMapper
`ARMCortexA78CCT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA78CCT.global_debug_rom`	debug_rom
`ARMCortexA78CCT.secondary_debug_rom`	debug_rom

This model has the following MTI trace components:

Name	Component type
`ARMCortexA78CCT.AMU`	PVBusLogger
`ARMCortexA78CCT.AMU.mapper`	PVBusMapper
`ARMCortexA78CCT.DAP`	PVBusLogger
`ARMCortexA78CCT.DAP.mapper`	PVBusMapper
`ARMCortexA78CCT.DSU`	DSU
`ARMCortexA78CCT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA78CCT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA78CCT.DSU.shared_cache`	PVCache
`ARMCortexA78CCT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA78CCT.MMAP`	PVBusLogger
`ARMCortexA78CCT.MMAP.mapper`	PVBusMapper
`ARMCortexA78CCT.RAS`	PVBusLogger
`ARMCortexA78CCT.RAS.mapper`	PVBusMapper
`ARMCortexA78CCT.cpu0`	ARM_Cortex-A78C
`ARMCortexA78CCT.cpu0.UTLB`	TLB
`ARMCortexA78CCT.cpu0.l1dcache`	PVCache
`ARMCortexA78CCT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA78CCT.cpu0.l1icache`	PVCache
`ARMCortexA78CCT.cpu0.l1icache.upstream[0]`	PVBusSlave

ARMCortexA78CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA78CCT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA78CCT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels,

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.77 ARMCortexA78CT

Defined in `LISA/ARMCortexA78CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA78CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA78CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA78CT`	Cluster_ARM_Cortex-A78
`ARMCortexA78CT.AMU`	PVBusLogger
`ARMCortexA78CT.AMU.mapper`	PVBusMapper

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`ARMCortexA78CT.DAP`	PVBusLogger
`ARMCortexA78CT.DAP.mapper`	PVBusMapper
`ARMCortexA78CT.DSU`	DSU
`ARMCortexA78CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA78CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA78CT.DSU.shared_cache`	PVCache
`ARMCortexA78CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA78CT.MMAP`	PVBusLogger
`ARMCortexA78CT.MMAP.mapper`	PVBusMapper
`ARMCortexA78CT.RAS`	PVBusLogger
`ARMCortexA78CT.RAS.mapper`	PVBusMapper
`ARMCortexA78CT.cpu0`	ARM_Cortex-A78
`ARMCortexA78CT.cpu0.UTLB`	TLB
`ARMCortexA78CT.cpu0.debug_rom`	debug_rom
`ARMCortexA78CT.cpu0.dtlb`	TLB
`ARMCortexA78CT.cpu0.l1dcache`	PVCache
`ARMCortexA78CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA78CT.cpu0.l1icache`	PVCache
`ARMCortexA78CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA78CT.cpu0.l2cache`	PVCache
`ARMCortexA78CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA78CT.ext_bus`	PVBusLogger
`ARMCortexA78CT.ext_bus.mapper`	PVBusMapper
`ARMCortexA78CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexA78CT.global_debug_rom`	debug_rom
`ARMCortexA78CT.secondary_debug_rom`	debug_rom

This model has the following MTI trace components:

Name	Component type
`ARMCortexA78CT.AMU`	PVBusLogger
`ARMCortexA78CT.AMU.mapper`	PVBusMapper
`ARMCortexA78CT.DAP`	PVBusLogger
`ARMCortexA78CT.DAP.mapper`	PVBusMapper
`ARMCortexA78CT.DSU`	DSU
`ARMCortexA78CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA78CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA78CT.DSU.shared_cache`	PVCache
`ARMCortexA78CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexA78CT.MMAP`	PVBusLogger

Ports for ARMCortexA78CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`sporeset`	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA78CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`
Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-size`

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.78 ARMCortexM0CT

Defined in `LISA/ARMCortexM0CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through CADI but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

Iris and MTI instances for ARMCortexM0CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM0CT`	ARM_Cortex-M0
`ARMCortexM0CT.acp_mapper`	PVBusMapper
`ARMCortexM0CT.ext_bus`	PVBusLogger
`ARMCortexM0CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM0CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM0CT`	ARM_Cortex-M0
`ARMCortexM0CT.acp_mapper`	PVBusMapper
`ARMCortexM0CT.ext_bus`	PVBusLogger
`ARMCortexM0CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM0CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexM0CT

Port	Direction	Protocol	Description
`ahbd`	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`currpri`	master	Value	Current execution priority.
`edbgrq`	slave	Signal	External debug request.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
`intisr`	slave	Signal	This signal array delivers signals to the NVIC.
`intnmi`	slave	Signal	Configure non maskable interrupt.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`lockup`	master	Signal	Asserted when the processor is in lockup state.
`poreset`	slave	Signal	Raising this signal will do a power-on reset of the core.
`pv_ppbus_m`	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
`pvbus_m`	master	PVBus	The core will generate bus requests on this port.
`sleepdeep`	master	Signal	Asserted when the processor is in deep sleep.
`sleeping`	master	Signal	Asserted when the processor is in sleep.
`stcalib`	slave	Value	This is the calibration value for the SysTick timer.
`stclk`	slave	ClockSignal	This is the reference clock for the SysTick timer.
`sysreset`	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
`sysresetreq`	master	Signal	Asserted to indicate that a reset is required.
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Parameters for ARMCortexM0CT

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`BKPT`

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

`DBG`

Set whether debug extensions are implemented.

Type: `bool`

Default value: true

`NUM_IRQ`

Number of user interrupts.

Type: `uint8_t`

Default value: 32

`SYST`

Enable support for SysTick timer functionality.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

WIC
Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

WPT
Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 2

cpi_div
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

manager_id
Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level
force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

semihosting-heap_base

Virtual address of heap base.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

3.79 ARMCortexM0PlusCT

Defined in `LISA/ARMCortexM0PlusCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally required register state is reset.

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through CADI but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

Iris and MTI instances for ARMCortexM0PlusCT

This model has the following Iris instances:

Name	Instance type
ARMCortexM0PlusCT	ARM_Cortex-M0+
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM0PlusCT	ARM_Cortex-M0+
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM0PlusCT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	slave	Signal	CPUWAIT extends effect of reset when true
currpri	master	Value	Current execution priority.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr	slave	Signal	This signal array delivers signals to the NVIC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`intnmi`	slave	Signal	Configure non maskable interrupt.
`io_port_in`	slave	PVBus	I/O port pair. See the documentation for the io_port_out port.
`io_port_out`	master	PVBus	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not “match” should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
`lockup`	master	Signal	Asserted when the processor is in lockup state.
`poreset`	slave	Signal	Raising this signal will do a power-on reset of the core.
`pv_ppbus_m`	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
`pvbus_m`	master	PVBus	The core will generate bus requests on this port.
`sleepdeep`	master	Signal	Asserted when the processor is in deep sleep.
`sleeping`	master	Signal	Asserted when the processor is in sleep.
`stcalib`	slave	Value	This is the calibration value for the SysTick timer.
`stclk`	slave	ClockSignal	This is the reference clock for the SysTick timer.
`sysreset`	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
`sysresetreq`	master	Signal	Asserted to indicate that a reset is required.
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Parameters for ARMCortexM0PlusCT

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`BKPT`

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

`DBG`

Set whether debug extensions are implemented.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`IOP`

Send all d-side transactions to the port, io_port_out. Transactions which do not match should be returned to the port, io_port_in.

Type: `bool`

Default value: false

`IRQDIS`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n].

Type: `uint32_t`

Default value: `0x0`

`NUM_IRQ`

Number of user interrupts.

Type: `uint8_t`

Default value: 32

`NUM_MPU_REGION`

Number of MPU regions.

Type: `uint8_t`

Default value: 0

`SYST`

Enable support for SysTick timer functionality.

Type: `bool`

Default value: true

`USER`

Enable support for Unprivileged/Privileged Extension.

Type: `bool`

Default value: false

`VTOR`

Include Vector Table Offset Register.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

WIC

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

WPT

Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 2

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

manager_id

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`semihosting-Thumb_SVC`

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

3.80 ARMCortexM23CT

Defined in `LISA/ARMCortexM23CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the CT model and RTL implementations

The model does not support MTB, ETM, or TPIU. MTB RAM is absent on the model.

Iris and MTI instances for ARMCortexM23CT

This model has the following Iris instances:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM23CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
core_ dside_bus_gasket_in	slave	PVBus	-
core_ dside_bus_gasket_out	master	PVBus	-
cpuwait	slave	Signal	Clear = Core goes through reset sequence as normal, Set = Core waits out of reset.
currpri	master	Value	Current execution priority.
dap_s	slave	PVBus	Debug Access Port (DAP).
dbgen	slave	Signal	Invasive debug control signals. Debug enable, Set=enabled, Clear=disabled
dbgrestart	slave	Signal	External request to leave debug state
dbgrestarted	master	Signal	Acknowledge for DBGRESTART
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
halted	master	Signal	Core is in halt mode debug state
hreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
idau_ invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32| end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`initvtor`	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
`initvtorns`	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
`io_port_in`	slave	PVBus	I/O port pair. See the documentation for the io_port_out port.
`io_port_out`	master	PVBus	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not "match" should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
`irq`	slave	Signal	This signal array delivers signals to the NVIC.
`lockup`	master	Signal	Asserted when the processor is in lockup state.
`niden`	slave	Signal	Non-invasive debug enable, Set=enabled, Clear=disabled
`nmi`	slave	Signal	Configure non maskable interrupt.
`poreset`	slave	Signal	Raising this signal will do a power-on reset of the core.
`pv_ppbus_m`	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
`pvbus_m`	master	PVBus	The core will generate bus requests on this port.
`sleepdeep`	master	Signal	Asserted when the processor is in deep sleep.
`sleeping`	master	Signal	Asserted when the processor is in sleep.
`spiden`	slave	Signal	Secure Debug enable , Set=enabled, Clear=disabled
`spniden`	slave	Signal	Secure Non-invasive debug enable, Set=enabled, Clear=disabled
`stcalib`	slave	Value	This is the calibration value for the Secure (or only, when ARMv8-M Security Extensions are not included) SysTick timer.
`stcalibns`	slave	Value	This is the calibration value for the Non-Secure SysTick timer. When ARMv8-M Security Extensions are not included, this port will be ignored.
`stclk`	slave	ClockSignal	This is the reference clock for the SysTick timer.
`sysresetreq`	master	Signal	Asserted to indicate that a reset is required.
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
`wicenack`	master	Signal	Acknowledge signal for WICENREQ
`wicenreq`	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
`wicsense`	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Parameters for ARMCortexM23CT

SAU_REGIONX.BADDR
Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

SAU_REGIONX.ENABLE
Enable SAU region0 at reset.

Type: `bool`

Default value: false

SAU_REGIONX.LADDR
Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

SAU_REGIONX.NSC
Set NSC for SAU region0 at reset.

Type: `bool`

Default value: false

BE
Initialize processor to big endian mode.

Type: `bool`

Default value: false

BKPT
Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

CTI
CTI (Cross Trigger Interface) included.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`CTI_irq0_pin`
CTI interrupt request 0 pin.

Type: `uint8_t`

Default value: 4

`CTI_irq1_pin`
CTI interrupt request 1 pin.

Type: `uint8_t`

Default value: 5

`DBG`
Set whether debug extensions are implemented.

Type: `bool`

Default value: true

`INITVTOR`
Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

`INITVTORNS`
Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

`IOP`
Send all d-side transactions to the port, io_port_out. Transactions which do not match should be returned to the port, io_port_in.

Type: `bool`

Default value: false

IRQDIS0

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

IRQDIS1

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

MPU_NS

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

MPU_S

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

NUMIRQ

Number of user interrupts.

Type: `uint8_t`

Default value: 16

SAU

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

SAU_CTRL.ALLNS

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: false

SAU_CTRL.ENABLE

Enable SAU at reset.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`SECEXT`

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

`SYST`

Include SysTick timer functionality (0=Absent, 1=Secure only, 2=Secure and NS).

Type: `uint8_t`

Default value: 2

`VTOR`

Include Vector Table Offset Register.

Type: `bool`

Default value: true

`WIC`

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

`WICLINES`

Number of lines supported by the WIC interface.

Type: `uint8_t`

Default value: 18

`WPT`

Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

`cpi_div`

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

`cpi_mul`

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`has_core_dside_bus_gasket`

STL gasket enabled.

Type: `bool`

Default value: false

`manager_id`

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

semihosting-Thumb_SVC
T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line
Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

semihosting-enable
Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

semihosting-heap_base
Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit
Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

3.81 ARMCortexM33CT

Defined in `LISA/ARMCortexM33CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

The model does not support the following:

- ETM, MTB, CTI, or TPIU. MTB RAM is absent on the model.
- The power control (Q-Channel) interface.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM33CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM33CT`	ARM_Cortex-M33
`ARMCortexM33CT.acp_mapper`	PVBusMapper
`ARMCortexM33CT.ext_bus`	PVBusLogger
`ARMCortexM33CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM33CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM33CT`	ARM_Cortex-M33
`ARMCortexM33CT.acp_mapper`	PVBusMapper
`ARMCortexM33CT.ext_bus`	PVBusLogger
`ARMCortexM33CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM33CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexM33CT

Port	Direction	Protocol	Description
`ahbd`	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
`auxfault`	slave	Value	This is wired to the Auxiliary Fault Status Register.
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
`coproc_bus`	slave	CoprocBusProtocol	Co-Processor Interface
`cpuwait`	slave	Signal	Stall the CPU out of reset
`currns`	master	Signal	Current Security state of the processor
`currpri`	master	Value	Current execution priority.
`dbgen`	slave	Signal	Invasive debug enable

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_ invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32|end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M33-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
`wicenack`	master	Signal	Acknowledge signal for WICENREQ
`wicenreq`	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
`wicsense`	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Parameters for ARMCortexM33CT

`SAU_REGIONX.BADDR`

Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

`SAU_REGIONX.ENABLE`

Enable SAU region0 at reset.

Type: `bool`

Default value: false

`SAU_REGIONX.LADDR`

Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

`SAU_REGIONX.NSC`

Set NSC for SAU region0 at reset.

Type: `bool`

Default value: false

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`CDEMAPPEDONCP`

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 255

`CDERTLID`
Value of ID_AFR0.CDERTLID.

Type: `uint8_t`

Default value: 32

`CFGNOCDECP`
Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

`CPIF`
Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: true

`CPNSPRESENT`
Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

`CPSPRESENT`
Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

`CTI`
CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

`CTI_irq0_pin`
CTI interrupt request 0 pin.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: 4

CTI_irq1_pin

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

DBGLVL

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

DSP

Set whether the model has the DSP extension.

Type: `bool`

Default value: true

FPU

Set whether the model has VFP support.

Type: `bool`

Default value: true

INITNSVTOR

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITSVTOR

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS0

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

IRQDIS1

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

IRQDIS10

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: `0x0`

IRQDIS11

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: `0x0`

IRQDIS12

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: `0x0`

IRQDIS13

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: `0x0`

IRQDIS14

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

IRQDIS8

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS9

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

IRQLVL

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

ITM

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Default value: true

LOCK_NS_MPU

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: false

LOCK_SAU

Lock down of SAU registers write.

Type: `bool`

Default value: false

LOCK_S_MPU

Lock down of Secure MPU registers write.

Type: `bool`

Default value: false

MPU_NS

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

MPU_S
Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

NUMIRQ
Number of user interrupts.

Type: `uint16_t`

Default value: 32

SAU
Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

SAU_CTRL.ALLNS
At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: false

SAU_CTRL.ENABLE
Enable SAU at reset.

Type: `bool`

Default value: false

SECEXT
Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

WIC
Include support for WIC-mode deep sleep.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

WICLINES

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

cde_impl_name

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: N/A

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

has_cde

Enables Custom Datapath Extensions.

Type: `bool`

Default value: false

manager_id

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

`vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

3.82 ARMCortexM35PCT

Defined in `LISA/ARMCortexM35PCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see Quality level definitions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

- The model does not support the following:
  - ETM, MTB, CTI, or TPIU. MTB RAM is absent on the model.
  - Caches.
  - The co-processor interface.
  - The power control (Q-Channel) interface.
- The model does not implement any physical security features.
- Bits[3:0] of the Anti-tampering Features Control Register are supported for read/write. No functionality is implemented.
- Read/write access to the Anti-tampering Features Control Register is supported using SECKEY. No functionality is implemented.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM35PCT

This model has the following Iris instances:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexM35PCT	ARM_Cortex-M35P
ARMCortexM35PCT.acp_mapper	PVBusMapper
ARMCortexM35PCT.ext_bus	PVBusLogger
ARMCortexM35PCT.ext_bus.mapper	PVBusMapper
ARMCortexM35PCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM35PCT	ARM_Cortex-M35P
ARMCortexM35PCT.acp_mapper	PVBusMapper
ARMCortexM35PCT.ext_bus	PVBusLogger
ARMCortexM35PCT.ext_bus.mapper	PVBusMapper
ARMCortexM35PCT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM35PCT

Port	Direction	Protocol	Description
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
currpri	master	Value	Current execution priority.
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_ invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32|end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
LOCKATFCR	slave	Signal	Port Lock ATFCR register
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Disable writes to VTOR_NS
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Parameters for ARMCortexM35PCT

SAU_REGIONX.BADDR

Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`SAU_REGIONX.ENABLE`

Enable SAU region0 at reset.

Type: `bool`

Default value: false

`SAU_REGIONX.LADDR`

Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

`SAU_REGIONX.NSC`

Set NSC for SAU region0 at reset.

Type: `bool`

Default value: false

`ATFINITEN`

ATFCR is enabled when the core goes out of reset.

Type: `bool`

Default value: false

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`CPIF`

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: true

`CPNSPRESENT`

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`CPSPRESENT`

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

`CTI`

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

`CTI_irq0_pin`

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

`CTI_irq1_pin`

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

`DBGLVL`

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

`DSP`

Set whether the model has the DSP extension.

Type: `bool`

Default value: true

`FPU`

Set whether the model has VFP support.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

INITNSVTOR

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITSVTOR

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

IRQDIS0

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

IRQDIS1

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

IRQDIS10

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: `0x0`

IRQDIS11

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: `0x0`

IRQDIS12

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

IRQDIS13

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: `0x0`

IRQDIS14

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

IRQDIS8

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

IRQDIS9

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

IRQLVL

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

ITM

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Default value: true

LOCK_NS_MPU

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: false

LOCK_SAU

Lock down of SAU registers write.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

LOCK_S_MPU
Lock down of Secure MPU registers write.

Type: `bool`

Default value: false

MPU_NS
Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

MPU_S
Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

NUMIRQ
Number of user interrupts.

Type: `uint16_t`

Default value: 32

SAU
Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

SAU_CTRL.ALLNS
At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: false

SAU_CTRL.ENABLE
Enable SAU at reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`SECEXT`
Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

`WIC`
Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

`WICLINES`
Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

`cpi_div`
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`manager_id`
Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`
force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

3.83 ARMCortexM3CT

Defined in `LISA/ARMCortexM3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The WIC is not currently implemented.
- Power control is not implemented, so the processor does not set the SLEEPING or SLEEPDEEP signals. It does not support powering down of the processor.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- Debug-related components are not implemented.
- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pvbus_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv_ppbus_m master port.
- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET_ALL_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM3CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM3CT`	ARM_Cortex-M3
`ARMCortexM3CT.acp_mapper`	PVBusMapper
`ARMCortexM3CT.ext_bus`	PVBusLogger
`ARMCortexM3CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM3CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM3CT`	ARM_Cortex-M3
`ARMCortexM3CT.acp_mapper`	PVBusMapper
`ARMCortexM3CT.ext_bus`	PVBusLogger
`ARMCortexM3CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM3CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexM3CT

Port	Direction	Protocol	Description
`ahb_ap`	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
`auxfault`	slave	Value	This is wired to the Auxiliary Fault Status Register.
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`currpri`	master	Value	Current execution priority.
`edbgrq`	slave	Signal	External debug request.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Parameters for ARMCortexM3CT

`BB_PRESENT`

Enable bitbanding.

Type: `bool`

Default value: true

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`DBGLVL`

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with DWT data-comparators.

Type: `uint8_t`

Default value: 3

`LVL_WIDTH`

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

NUM_IRQ

Number of user interrupts.

Type: `uint8_t`

Default value: 16

NUM_MPU_REGION

Number of MPU regions.

Type: `uint8_t`

Default value: 8

TRACE_LVL

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

Type: `uint8_t`

Default value: 1

WIC

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

manager_id

Manager ID presented in bus transactions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`semihosting-Thumb_SVC`

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

3.84 ARMCortexM4CT

Defined in `LISA/ARMCortexM4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The Wakeup Interrupt Controller (WIC) is not implemented.
- Power control is not implemented. Powering down of the processor is not supported. The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- No debug-related components are implemented.
- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET_ALL_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pvbus_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv_ppbus_m master port.
- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.
- Because the CT model does not provide a DAP port or halting debug capability, the dbgen signal is ignored.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM4CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM4CT`	ARM_Cortex-M4
`ARMCortexM4CT.acp_mapper`	PVBusMapper
`ARMCortexM4CT.ext_bus`	PVBusLogger
`ARMCortexM4CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM4CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM4CT`	ARM_Cortex-M4
`ARMCortexM4CT.acp_mapper`	PVBusMapper
`ARMCortexM4CT.ext_bus`	PVBusLogger
`ARMCortexM4CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM4CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexM4CT

Port	Direction	Protocol	Description
`ahb_ap`	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
`auxfault`	slave	Value	This is wired to the Auxiliary Fault Status Register.
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`currpri`	master	Value	Current execution priority.
`dbgen`	slave	Signal	Disallow (DAP) debugger access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	slave	Signal	Configure core with no FPU on reset.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
mpudisable	slave	Signal	Configure core with no MPU on reset.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Parameters for ARMCortexM4CT

`BB_PRESENT`

Enable bitbanding.

Type: `bool`

Default value: true

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`DBGLVL`

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with, DWT can compare data as well as address.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 3

LVL_WIDTH
Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

NUM_IRQ
Number of user interrupts.

Type: `uint8_t`

Default value: 16

NUM_MPU_REGION
Number of MPU regions.

Type: `uint8_t`

Default value: 8

TRACE_LVL
Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

Type: `uint8_t`

Default value: 1

WIC
Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

cpi_div
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpi_mul
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

manager_id
Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level
force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

reported_patch_level
Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number
Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC
T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line
Command line available to semihosting SVC calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

vfp-present

Set whether the model has VFP support.

Type: `bool`

Default value: true

3.85 ARMCortexM52CT

Defined in `LISA/ARMCortexM52CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

About ARMCortexM52CT

This model supports the M-Profile Vector Extension (MVE) and the Custom Datapath Extension (CDE). For more information, see CDE.

Iris and MTI instances for ARMCortexM52CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM52CT`	ARM_Cortex-M52
`ARMCortexM52CT.acp_mapper`	PVBusMapper
`ARMCortexM52CT.ext_bus`	PVBusLogger
`ARMCortexM52CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM52CT.l1_incoherent_interconnect`	PVCache
`ARMCortexM52CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexM52CT.l1dcache`	PVCache
`ARMCortexM52CT.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexM52CT.l1icache`	PVCache
`ARMCortexM52CT.l1icache.upstream[0]`	PVBusSlave

Name	Instance type
ARMCortexM52CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM52CT	ARM_Cortex-M52
ARMCortexM52CT.acp_mapper	PVBusMapper
ARMCortexM52CT.ext_bus	PVBusLogger
ARMCortexM52CT.ext_bus.mapper	PVBusMapper
ARMCortexM52CT.l1_incoherent_interconnect	PVCache
ARMCortexM52CT.l1_incoherent_interconnect.upstream[Z] (where *Z* = 0–17)	PVBusSlave
ARMCortexM52CT.l1dcache	PVCache
ARMCortexM52CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM52CT.l1icache	PVCache
ARMCortexM52CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM52CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM52CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
core_ dside_bus_gasket_in	slave	PVBus	-
core_ dside_bus_gasket_out	master	PVBus	-
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
currpri	master	Value	Current execution priority.
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_ invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32| end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	slave	Signal	Enable P-AHB on the next reset
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcmen	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockdcaic	slave	Signal	Disable access to instruction cache direct cache access registers
lockdtgu	slave	Signal	Disable writes to registers associated with the DTGU
lockitgu	slave	Signal	Disable writes to registers associated with the ITGU
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M52-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	slave	Signal	P-AHB related ports Disable writes to PAHBCR
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	slave	Signal	Disable writes to registers associated with the TCM
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
prequest	slave	PChannel	Low Power Interface
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
qrequest	slave	PChannel	-
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Parameters for ARMCortexM52CT

CDEMAPPEDONCP

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: `uint8_t`

Default value: 255

CDERTLID

Value of ID_AFR0.CDERTLID.

Type: `uint8_t`

Default value: 32

CFGBIGEND

Initialize processor to big endian mode.

Type: `bool`

Default value: false

CFGCPUINST

CPU instance number. This is part of the TCM base address, in bits 25:24.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CFGDTCMSZ

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

CFGITCMSZ

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

CFGMEMALIAS

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 26, 2=Alias bit 27, 4=Alias bit 28.

Type: `uint8_t`

Default value: 0

CFGNOCDECP

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

CFGPACBTI

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE:PAC implemented using the QARMA3 algorithm with BTI.

Type: `bool`

Default value: false

CFGPAHBSZ

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CPIF

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: true

CPNSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

CPSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

CTI

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

CTI_irq0_pin

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

CTI_irq1_pin

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

DBGLVL

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

DCACHESZ

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: `0x0`=4KB D-cache, `0x1`=8KB D-cache, `0x3`=16KB D-cache, `0x7`=32KB D-cache, `0xF`=64KB D-cache.

Type: `uint8_t`

Default value: 15

DTGU

DTCM Security Gate Unit included.

Type: `bool`

Default value: false

DTGUBLKSZ

DTCM gate unit block size. Size=pow(2, DTGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

DTGUMAXBLKS

Maximum number of DTCM gate unit blocks. Number of blocks=pow(2, DTGUMAXBLKS).

Type: `uint8_t`

Default value: 0

ECOREVNUM

ECO Revision number.

Type: `uint64_t`

Default value: `0x0`

ERRDEVID.NUM

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ETM

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

Type: `bool`

Default value: true

FPMVE

Set whether the model has FP and / or MVE support. 0: No FP and MVE support. 1: FP half and single precision. 2: FP half, single and double precision. 3: MVE integer. 4: FP half and single precision and MVE integer. 5: FP half, single and double precision and MVE floating point.

Type: `uint8_t`

Default value: 5

ICACHESZ

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [6:1]: `0x0`=1KB I-cache (only with unified cache), `0x1`=2KB I-cache (only with unified cache), `0x3`=4KB I-cache, `0x7`=8KB I-cache, `0xF`=16KB I-cache, `0x1F`=32KB I-cache, `0x3F`=64KB I-cache.

Type: `uint8_t`

Default value: 63

INITNSVTOR

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITPAHBEN

The P-AHB enable state at reset.

Type: `bool`

Default value: false

INITSVTOR

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`INITTCMEN`

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: 3

`IRQDIS0`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

`IRQDIS1`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

`IRQDIS10`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: `0x0`

`IRQDIS11`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: `0x0`

`IRQDIS12`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: `0x0`

`IRQDIS13`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

IRQDIS14

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

IRQDIS8

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

IRQDIS9

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

IRQLVL

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

ITGU

ITCM Security Gate Unit included.

Type: `bool`

Default value: false

ITGUBLKSZ

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

ITGUMAXBLKS

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

Type: `uint8_t`

Default value: 0

ITM

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

IWIC

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: true

LOCKDTGU

Lock down of Data TGU registers write.

Type: `bool`

Default value: false

LOCKITGU

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: false

LOCKTCM

Lock down of TCM registers write.

Type: `bool`

Default value: false

LOCK_NS_MPU

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: false

LOCK_SAU

Lock down of SAU registers write.

Type: `bool`

Default value: false

LOCK_S_MPU

Lock down of Secure MPU registers write.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

MPU_NS

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

MPU_S

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

NUMIRQ

Number of user interrupts.

Type: `uint16_t`

Default value: 32

SAU

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

SECEXT

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

UCACHE

Whether the I-cache acts as a unified cache (ICACHESZ is used for the size).

Type: `bool`

Default value: false

WICLINES

Number of lines supported by the WIC interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: 35

cde_impl_name

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: N/A

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

delay_faultmask_update

Delay FAULTMASK update to context sync.

Type: `bool`

Default value: false

delay_sysreg_update

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: false

ecc_on

Enable Error Correcting Code.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`has_cde`

Enables Custom Datapath Extensions.

Type: `bool`

Default value: false

`has_core_dside_bus_gasket`

STL gasket enabled.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`manager_id`

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x20700000`

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

`trace_style`

MVE instruction trace style: Add 16 for [**-] beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: 2

`vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

3.86 ARMCortexM55CT

Defined in `LISA/ARMCortexM55CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

About ARMCortexM55CT

The model supports Custom Datapath Extension (CDE). For more information, see CDE.

The model does not support the following functionality:

- Cross Trigger Interface (CTI).
- Programmable MBIST controller (PMC-100).
- Error Correcting Code (ECC).
- Q-Channel.

The following interfaces and registers are not modeled:

- ITM and ETM trace and trace synchronization and trigger interface signals.
- Dual-core lock-step operation.
- Interrupt latencies.
- Prefetcher Control Register (PFCR).
- Direct cache access registers.

In the Memory System Control Register (MSCR), only the cache-related bits are supported:

- `FORCEWT`
- `DCACTIVE`
- `ICACTIVE`
- `IDCCLEAN`

Differences between the model and the RTL

In hardware, PMU_CCNTR is an alias of the `DWT_CYCCNT` register, so they contain the same values. In the model, `PMU_CCNTR` is implemented differently to `DWT_CYCCNT`, so they contain different values. The value held in `DWT_CYCCNT` is not representative of hardware.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM55CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM55CT`	ARM_Cortex-M55
`ARMCortexM55CT.acp_mapper`	PVBusMapper
`ARMCortexM55CT.ext_bus`	PVBusLogger
`ARMCortexM55CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM55CT.l1_incoherent_interconnect`	PVCache
`ARMCortexM55CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexM55CT.l1dcache`	PVCache
`ARMCortexM55CT.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexM55CT.l1icache`	PVCache
`ARMCortexM55CT.l1icache.upstream[0]`	PVBusSlave
`ARMCortexM55CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM55CT`	ARM_Cortex-M55
`ARMCortexM55CT.acp_mapper`	PVBusMapper
`ARMCortexM55CT.ext_bus`	PVBusLogger
`ARMCortexM55CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM55CT.l1_incoherent_interconnect`	PVCache
`ARMCortexM55CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexM55CT.l1dcache`	PVCache
`ARMCortexM55CT.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexM55CT.l1icache`	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexM55CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM55CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM55CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
core_ dside_bus_gasket_in	slave	PVBus	-
core_ dside_bus_gasket_out	master	PVBus	-
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
currpri	master	Value	Current execution priority.
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_ invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32| end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	slave	Signal	Enable P-AHB on the next reset
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
inittcmen	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockdcaic	slave	Signal	Disable access to instruction cache direct cache access registers
lockdtgu	slave	Signal	Disable writes to registers associated with the DTGU
lockitgu	slave	Signal	Disable writes to registers associated with the ITGU
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M55-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	slave	Signal	P-AHB related ports Disable writes to PAHBCR
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	slave	Signal	Disable writes to registers associated with the TCM
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
prequest	slave	PChannel	Low Power Interface
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
qrequest	slave	PChannel	-
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
tramdueeca	master	Value	-
tramsceeca	master	Value	-
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Non-Confidential

Parameters for ARMCortexM55CT

CDEMAPPEDONCP

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: `uint8_t`

Default value: 255

CDERTLID

Value of ID_AFR0.CDERTLID.

Type: `uint8_t`

Default value: 32

CFGBIGEND

Initialize processor to big endian mode.

Type: `bool`

Default value: false

CFGDTCMSZ

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

CFGITCMSZ

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

CFGMEMALIAS

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CFGNOCDECP

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

CFGPAHBSZ

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

CPIF

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: true

CPNSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

CPSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

CTI

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

CTI_irq0_pin

CTI interrupt request 0 pin.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

`CTI_irq1_pin`

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

`DBGLVL`

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

`DCACHESZ`

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: `0x0`=4KB D-cache, `0x1`=8KB D-cache, `0x3`=16KB D-cache, `0x7`=32KB D-cache, `0xF`=64KB D-cache.

Type: `uint8_t`

Default value: 15

`DTGU`

DTCM Security Gate Unit included.

Type: `bool`

Default value: false

`DTGUBLKSZ`

DTCM gate unit block size. Size=pow(2, DTGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

`DTGUMAXBLKS`

Maximum number of DTCM gate unit blocks. Number of blocks=pow(2, DTGUMAXBLKS).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ECOREVNUM

ECO Revision number.

Type: `uint64_t`

Default value: `0x0`

ERRDEVID.NUM

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: 1

ETM

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

Type: `bool`

Default value: true

FPU

Set whether the model has VFP support.

Type: `bool`

Default value: true

ICACHESZ

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: `0x0`=4KB I-cache, `0x1`=8KB I-cache, `0x3`=16KB I-cache, `0x7`=32KB I-cache, `0xF`=64KB I-cache.

Type: `uint8_t`

Default value: 15

INITNSVTOR

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITPAHBEN

The P-AHB enable state at reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

INITSVTOR

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITTCMEN

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: 3

IRQDIS0

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

IRQDIS1

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

IRQDIS10

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: `0x0`

IRQDIS11

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS12

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: `0x0`

IRQDIS13

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: `0x0`

IRQDIS14

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

IRQDIS8

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

IRQDIS9

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

IRQLVL

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

ITGU

ITCM Security Gate Unit included.

Type: `bool`

Default value: false

ITGUBLKSZ

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ITGUMAXBLKS

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

Type: `uint8_t`

Default value: 0

ITM

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Default value: true

IWIC

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: true

LOCKDTGU

Lock down of Data TGU registers write.

Type: `bool`

Default value: false

LOCKITGU

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: false

LOCKTCM

Lock down of TCM registers write.

Type: `bool`

Default value: false

LOCK_NS_MPU

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

LOCK_SAU
Lock down of SAU registers write.

Type: `bool`

Default value: false

LOCK_S_MPU
Lock down of Secure MPU registers write.

Type: `bool`

Default value: false

MPU_NS
Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

MPU_S
Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

MVE
Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

Type: `uint8_t`

Default value: 1

NUMIRQ
Number of user interrupts.

Type: `uint16_t`

Default value: 32

SAU
Number of SAU regions (0 => no SAU).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

SECEXT
Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

WICLINES
Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

cde_impl_name
Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: N/A

cpi_div
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-state_modelled
Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

delay_faultmask_update
Delay FAULTMASK update to context sync.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

delay_sysreg_update

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: false

ecc_on

Enable Error Correcting Code.

Type: `bool`

Default value: false

has_cde

Enables Custom Datapath Extensions.

Type: `bool`

Default value: false

has_core_dside_bus_gasket

STL gasket enabled.

Type: `bool`

Default value: false

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

manager_id

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

rse_ecc_support

Support for ECC initialization in TCM, following RSE spec. 0=No support, 1=Supported, faults are reported as single bit correctable errors, 2=Supported, faults are reported as double bit uncorrected errors.

Type: `uint8_t`

Default value: 0

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

trace_style

MVE instruction trace style: Add 16 for [**-] beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

3.87 ARMCortexM7CT

Defined in `LISA/ARMCortexM7CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- ECC support is hardware-specific so is not modeled.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMCortexM7CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexM7CT`	ARM_Cortex-M7
`ARMCortexM7CT.acp_mapper`	PVBusMapper
`ARMCortexM7CT.ext_bus`	PVBusLogger
`ARMCortexM7CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM7CT.l1_incoherent_interconnect`	PVCache
`ARMCortexM7CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexM7CT.l1dcache`	PVCache
`ARMCortexM7CT.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexM7CT.l1icache`	PVCache
`ARMCortexM7CT.l1icache.upstream[0]`	PVBusSlave
`ARMCortexM7CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexM7CT`	ARM_Cortex-M7
`ARMCortexM7CT.acp_mapper`	PVBusMapper
`ARMCortexM7CT.ext_bus`	PVBusLogger
`ARMCortexM7CT.ext_bus.mapper`	PVBusMapper
`ARMCortexM7CT.l1_incoherent_interconnect`	PVCache
`ARMCortexM7CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexM7CT.l1dcache`	PVCache
`ARMCortexM7CT.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexM7CT.l1icache`	PVCache
`ARMCortexM7CT.l1icache.upstream[0]`	PVBusSlave
`ARMCortexM7CT.l2_flusher`	AsyncCacheFlushUnit

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Ports for ARMCortexM7CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	External master (e.g. DMA) can write TCMs (whether or not enabled in xTCMCR).
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	slave	Signal	When this signal is HIGH out of reset, it forces the processor into a quiescent state that delays its boot-up sequence and instruction execution until this signal is driven LOW
currpri	master	Value	Current execution priority.
dap_s	slave	PVBus	Debug Access Port (DAP).
dbgen	slave	Signal	Invasive debug enable.
dbgrestart	slave	Signal	External debug request.
dbgrestarted	master	Signal	External debug request.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	slave	Signal	Configure core with no FPU on reset.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	External debug request.
initahbpen	slave	Signal	Enable AHBP on the next reset
initvtor	slave	Value	Initial value of the Vector Table Offset Register (VTOR)
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
mpudisable	slave	Signal	Configure core with no MPU on reset.
niden	slave	Signal	Non-invasive debug enable.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Non-Confidential

Parameters for ARMCortexM7CT

BIGENDINIT

Initialize processor to big endian mode.

Type: `bool`

Default value: false

CFGAHBPSZ

Size of the AHBP port memory region. 0=AHBP disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

CTI

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

CTI_irq0_pin

CTI interrupt request 0 pin.

Type: `uint8_t`

Default value: 4

CTI_irq1_pin

CTI interrupt request 1 pin.

Type: `uint8_t`

Default value: 5

DBGLVL

0: 2 DWT, 4 FPB; 1: 4 DWT, 8 FPB comparators.

Type: `uint8_t`

Default value: 1

DP_FLOAT

Support 8-byte floats.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

INITAHBPEN

The AHBP enable state at reset.

Type: `bool`

Default value: false

INITVTOR

vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

LVL_WIDTH

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

NUM_IRQ

Number of user interrupts.

Type: `uint8_t`

Default value: 32

NUM_MPU_REGION

Number of MPU regions.

Type: `uint8_t`

Default value: 16

TRC

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Default value: true

WIC

Include support for WIC-mode deep sleep.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`cpi_div`
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-size`
L1 D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`dcache-state_modelled`
Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dtcm_enable`
Enable DTCM at reset.

Type: `bool`

Default value: false

`dtcm_size`
DTCM size in KB.

Type: `uint16_t`

Default value: `0x100`

`icache-size`
L1 I-cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled
Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

itcm_enable
Enable ITCM at reset.

Type: `bool`

Default value: false

itcm_size
ITCM size in KB.

Type: `uint16_t`

Default value: `0x100`

manager_id
Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level
force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

reported_patch_level
Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`semihosting-Thumb_SVC`

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

vfp-present

Set whether the model has VFP support.

Type: `bool`

Default value: true

3.88 ARMCortexM85CT

Defined in `LISA/ARMCortexM85CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

3.89 About ARMCortexM85CT

This model supports the M-Profile Vector Extension (MVE) and the Custom Datapath Extension (CDE). For more information about CDE support in Fast Models, see CDE.

Iris and MTI instances for ARMCortexM85CT

This model has the following Iris instances:

Name	Instance type
ARMCortexM85CT	ARM_Cortex-M85
ARMCortexM85CT.acp_mapper	PVBusMapper
ARMCortexM85CT.ext_bus	PVBusLogger
ARMCortexM85CT.ext_bus.mapper	PVBusMapper
ARMCortexM85CT.l1_incoherent_interconnect	PVCache
ARMCortexM85CT.l1_incoherent_interconnect.upstream[Z] (where *Z* = 0–17)	PVBusSlave
ARMCortexM85CT.l1dcache	PVCache
ARMCortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM85CT.l1icache	PVCache
ARMCortexM85CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM85CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM85CT	ARM_Cortex-M85
ARMCortexM85CT.acp_mapper	PVBusMapper
ARMCortexM85CT.ext_bus	PVBusLogger
ARMCortexM85CT.ext_bus.mapper	PVBusMapper
ARMCortexM85CT.l1_incoherent_interconnect	PVCache
ARMCortexM85CT.l1_incoherent_interconnect.upstream[Z] (where *Z* = 0–17)	PVBusSlave
ARMCortexM85CT.l1dcache	PVCache
ARMCortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM85CT.l1icache	PVCache
ARMCortexM85CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM85CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexM85CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
`coproc_bus`	slave	CoprocBusProtocol	Co-Processor Interface
`core_dside_bus_gasket_in`	slave	PVBus	-
`core_dside_bus_gasket_out`	master	PVBus	-
`cpuwait`	slave	Signal	Stall the CPU out of reset
`currns`	master	Signal	Current Security state of the processor
`currpri`	master	Value	Current execution priority.
`dbgen`	slave	Signal	Invasive debug enable
`dbgrestart`	slave	Signal	Request for synchronised exit from halt mode
`dbgrestarted`	master	Signal	Handshakes with DBGRESTART
`edbgrq`	slave	Signal	External request to enter halt mode
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
`fpxxc`	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
`halted`	master	Signal	Indicates that the processor is in halt mode
`idau_invalidate_region`	slave	Value_64	64 bit number to invalid IDAU memory ranage (start_address<<32| end_address)
`idau`	master	PVBus	The core will generate IDAU requests on this port.
`initnsvtor`	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
`initpahben`	slave	Signal	Enable P-AHB on the next reset
`initsvtor`	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
`inittcmen`	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
`intnum`	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
`irq`	slave	Signal	This signal array delivers signals to the NVIC.
`lockdcaic`	slave	Signal	Disable access to instruction cache direct cache access registers
`lockdtgu`	slave	Signal	Disable writes to registers associated with the DTGU
`lockitgu`	slave	Signal	Disable writes to registers associated with the ITGU
`locknsmpu`	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`locknsvtor`	slave	Signal	Cortex-M85 specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
`lockpahb`	slave	Signal	P-AHB related ports Disable writes to PAHBCR
`locksau`	slave	Signal	Disable writes to the SAU_* registers
`locksmpu`	slave	Signal	Disable writes to the Secure MPU_* registers
`locksvtaircr`	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
`locktcm`	slave	Signal	Disable writes to registers associated with the TCM
`lockup`	master	Signal	Asserted when the processor is in lockup state.
`niden`	slave	Signal	Non-invasive debug enable
`nmi`	slave	Signal	Configure non maskable interrupt.
`poreset`	slave	Signal	Raising this signal will do a power-on reset of the core.
`prequest`	slave	PChannel	Low Power Interface
`pv_ppbus_m`	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
`pvbus_m`	master	PVBus	The core will generate bus requests on this port.
`qrequest`	slave	PChannel	-
`sleepdeep`	master	Signal	Asserted when the processor is in deep sleep.
`sleeping`	master	Signal	Asserted when the processor is in sleep.
`spiden`	slave	Signal	Secure invasive debug enable
`spniden`	slave	Signal	Secure non-invasive debug enable
`stcalib`	slave	Value	This is the calibration value for the SysTick timer.
`stclk`	slave	ClockSignal	This is the reference clock for the SysTick timer.
`sysreset`	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
`sysresetreq`	master	Signal	Asserted to indicate that a reset is required.
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
`wicenack`	master	Signal	Acknowledge signal for WICENREQ
`wicenreq`	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
`wicsense`	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

Parameters for ARMCortexM85CT

`CDEMAPPEDONCP`

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: `uint8_t`

Default value: 255

`CDERTLID`

Value of ID_AFR0.CDERTLID.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 32

`CFGBIGEND`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`CFGCPUINST`

CPU instance number. This is part of the TCM base address, in bits 25:24.

Type: `uint8_t`

Default value: 0

`CFGDTCMSZ`

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

`CFGITCMSZ`

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

`CFGMEMALIAS`

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

Type: `uint8_t`

Default value: 0

`CFGNOCDECP`

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CFGPACBTI

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE:PAC implemented using the QARMA3 algorithm with BTI.

Type: `bool`

Default value: false

CFGPAHBSZ

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

CPIF

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: true

CPNSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

CPSPRESENT

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

CTI

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: false

CTI_irq0_pin

CTI interrupt request 0 pin.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: 4

CTI_irq1_pin

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

DBGLVL

1: 4 Watchpoints, 4 Breakpoint comparators; 2: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

DCACHESZ

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: `0x0`=4KB D-cache, `0x1`=8KB D-cache, `0x3`=16KB D-cache, `0x7`=32KB D-cache, `0xF`=64KB D-cache.

Type: `uint8_t`

Default value: 15

DTGU

DTCM Security Gate Unit included.

Type: `bool`

Default value: false

DTGUBLKSZ

DTCM gate unit block size. Size=pow(2, DTGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

DTGUMAXBLKS

Maximum number of DTCM gate unit blocks. Number of blocks=pow(2, DTGUMAXBLKS).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ECOREVNUM

ECO Revision number.

Type: `uint64_t`

Default value: `0x0`

ERRDEVID.NUM

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: 1

ETM

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

Type: `bool`

Default value: true

FPU

Set whether the model has VFP support.

Type: `bool`

Default value: true

ICACHESZ

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: `0x0`=4KB I-cache, `0x1`=8KB I-cache, `0x3`=16KB I-cache, `0x7`=32KB I-cache, `0xF`=64KB I-cache.

Type: `uint8_t`

Default value: 15

INITNSVTOR

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITPAHBEN

The P-AHB enable state at reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

INITSVTOR

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

INITTCMEN

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: 3

IRQDIS0

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: `0x0`

IRQDIS1

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: `0x0`

IRQDIS10

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: `0x0`

IRQDIS11

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS12

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: `0x0`

IRQDIS13

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: `0x0`

IRQDIS14

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

IRQDIS2

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

IRQDIS3

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

IRQDIS4

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

IRQDIS5

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

IRQDIS6

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

IRQDIS7

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

IRQDIS8

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

IRQDIS9

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

IRQLVL

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

ITGU

ITCM Security Gate Unit included.

Type: `bool`

Default value: false

ITGUBLKSZ

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ITGUMAXBLKS

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

Type: `uint8_t`

Default value: 0

ITM

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

Type: `bool`

Default value: true

IWIC

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: true

LOCKDTGU

Lock down of Data TGU registers write.

Type: `bool`

Default value: false

LOCKITGU

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: false

LOCKTCM

Lock down of TCM registers write.

Type: `bool`

Default value: false

LOCK_NS_MPU

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

LOCK_SAU
Lock down of SAU registers write.

Type: `bool`

Default value: false

LOCK_S_MPU
Lock down of Secure MPU registers write.

Type: `bool`

Default value: false

MPU_NS
Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

MPU_S
Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

MVE
Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

Type: `uint8_t`

Default value: 1

NUMIRQ
Number of user interrupts.

Type: `uint16_t`

Default value: 32

SAU
Number of SAU regions (0 => no SAU).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

`SECEXT`
Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: true

`WICLINES`
Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

`cde_impl_name`
Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: N/A

`cpi_div`
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-state_modelled`
Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`delay_faultmask_update`
Delay FAULTMASK update to context sync.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`delay_sysreg_update`

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: false

`ecc_on`

Enable Error Correcting Code.

Type: `bool`

Default value: false

`has_cde`

Enables Custom Datapath Extensions.

Type: `bool`

Default value: false

`has_core_dside_bus_gasket`

STL gasket enabled.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`manager_id`

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`semihosting-Thumb_SVC`

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

trace_style

MVE instruction trace style: Add 16 for [**-] beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: 2

vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.90 ARMCortexR4CT

Defined in `LISA/ARMCortexR4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

About ARMCortexR4CT

- The model implements the `cfgie` port, although it is optional in hardware.
- `pvbus_s` is the slave port to access the TCM RAM. Bits [3:0] of the user flags in the transaction are used to select the TCM:

  1

  selects the ATCM.

  2

  selects the BTCM.

  Any other value is reserved.
- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- There is a single memory port combining instruction, data, DMA and peripheral access.
- ECC and parity schemes are not supported (although the registers might be present).
- The dual core redundancy configuration is not supported.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The hardware refers to the TCMs as “A” and “B”. The model refers to these as “i” and “d”.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The RTL permits two data TCMs, B0 and B1, to be configured for extra bandwidth. These are not modeled.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.
- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting vic_ack.
4. The VIC writes the vector address to the processor using vic_addr.
5. The processor de-asserts vic_ack.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

Iris and MTI instances for ARMCortexR4CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR4CT`	ARM_Cortex-R4
`ARMCortexR4CT.acp_mapper`	PVBusMapper
`ARMCortexR4CT.cpu0.l1dcache`	PVCache
`ARMCortexR4CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR4CT.cpu0.l1icache`	PVCache
`ARMCortexR4CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR4CT.ext_bus`	PVBusLogger
`ARMCortexR4CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR4CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR4CT.l1_incoherent_interconnect.upstream[Z]` (where *Z* = 0–17)	PVBusSlave
`ARMCortexR4CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexR4CT	ARM_Cortex-R4
ARMCortexR4CT.acp_mapper	PVBusMapper
ARMCortexR4CT.cpu0.l1dcache	PVCache
ARMCortexR4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR4CT.cpu0.l1icache	PVCache
ARMCortexR4CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR4CT.ext_bus	PVBusLogger
ARMCortexR4CT.ext_bus.mapper	PVBusMapper
ARMCortexR4CT.l1_incoherent_interconnect	PVCache
ARMCortexR4CT.l1_incoherent_interconnect.upstream[Z] (where *Z* = 0–17)	PVBusSlave
ARMCortexR4CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexR4CT

Port	Direction	Protocol	Description
cfgend0	slave	Signal	Configure BE8 mode after a reset.
cfgie	slave	Signal	Configure big endian instruction format after a reset.
cfgnmfi	slave	Signal	Configure FIQs as non-maskable after a reset.
cfgte	slave	Signal	Configure exceptions to be taken in thumb mode after a reset.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
fiq	slave	Signal	This signal drives the CPU's fast-interrupt handling.
initramd	slave	Signal	Configure DTCM enabled after a reset.
initrami	slave	Signal	Configure ITCM enabled after a reset.
irq	slave	Signal	This signal drives the CPU's interrupt handling.
loczrama	slave	Signal	Location of ATCM at reset.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	Slave access to TCMs.
reset	slave	Signal	Raising this signal will put the core into reset mode.
standbywfi	master	Signal	Signal from the core that it is waiting in standby for an interrupt.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
vic_ack	master	Signal	Vic acknowledge port to primary VIC.
vic_addr	slave	Value	Vic address port from primary VIC.
vinithi	slave	Signal	Configure high vectors after a reset.

Parameters for ARMCortexR4CT

CFGEND0

Initialize to BE8 endianness.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`CFGIE`
Set the reset value of the instruction endian bit.

Type: `bool`

Default value: false

`CFGNMFI`
Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: false

`CFGTE`
Initialize to take exceptions in T32 state. Model starts in T32 state.

Type: `bool`

Default value: false

`INITRAMD`
Set or reset the INITRAMD signal.

Type: `bool`

Default value: false

`INITRAMI`
Set or reset the INITRAMI signal.

Type: `bool`

Default value: false

`LOCZRAMI`
Set or reset the LOCZRAMI signal.

Type: `bool`

Default value: false

`NUM_MPU_REGION`
Number of MPU regions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x8`

VINITHI
Initialize with high vectors enabled.

Type: `bool`

Default value: false

cpi_div
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul
multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-size
Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-state_modelled
Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dtcm0_base
Base address of DTCM at startup.

Type: `uint32_t`

Default value: `0x800000`

dtcm0_size
Size of DTCM in KB.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x8`

`icache-size`

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`implements_vfp`

Set whether the model has been built with VFP support.

Type: `bool`

Default value: true

`itcm0_base`

Base address of ITCM at startup.

Type: `uint32_t`

Default value: `0x0`

`itcm0_size`

Size of ITCM in KB.

Type: `uint32_t`

Default value: `0x8`

`manager_id`

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

`min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: 0

reported_fp_revision

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

semihosting-ARM_HLT

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

semihosting-ARM_SVC

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

semihosting-Thumb_HLT

Thumb HLT number for semihosting.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x3C`

`semihosting-Thumb_SVC`

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: “”

`semihosting-cwd`

virtual address of CWD.

Type: `string`

Default value: “”

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xF000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`semihosting-hlt-enable`

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: false

`semihosting-prefix`

Prefix semihosting output with target instance name.

Type: `bool`

Default value: false

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xF000000`

`vfp-enable_at_reset`

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: false

3.91 ARMCortexR52CT

Defined in `LISA/ARMCortexR52CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p4	Full support

For an explanation of the quality levels, see Quality level definitions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

About ARMCortexR52CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.
- The Cortex-R52 processor does not implement TrustZone technology, therefore the model does not support S_* or NS_* registers or exceptions.
- If flash memory is not enabled, to disable all routing to the flash port, set the `has_flash` parameter to `false`.

Differences between the model and the RTL

- The model does not implement redundant cores for Dual-Core Lock-Step operations.
- The model does not implement the Low Power Interface to wake up the target core on receiving a `wake_request` signal from the GIC distributor.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model does not support running Software Test Libraries (STLs).
- The `vfp-enable_at_reset` parameter is a model-specific behavior with no hardware equivalent.
- ECC and parity schemes are hardware-specific so are not supported.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the IMP_SLAVEPCTLR register.

Note

The reset value of IMP_SLAVEPCTLR is `0x1` which means privileged access only.

Iris and MTI instances for ARMCortexR52CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR52CT`	Cluster_ARM_Cortex-R52
`ARMCortexR52CT.AMU`	PVBusLogger
`ARMCortexR52CT.AMU.mapper`	PVBusMapper
`ARMCortexR52CT.DAP`	PVBusLogger
`ARMCortexR52CT.DAP.mapper`	PVBusMapper
`ARMCortexR52CT.MMAP`	PVBusLogger
`ARMCortexR52CT.MMAP.mapper`	PVBusMapper

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexR52CT.RAS	PVBusLogger
ARMCortexR52CT.RAS.mapper	PVBusMapper
ARMCortexR52CT.acp_mapper	PVBusMapper
ARMCortexR52CT.cpu0	ARM_CortexR52
ARMCortexR52CT.cpu0.UTLB	TLB
ARMCortexR52CT.cpu0.dtlb	TLB
ARMCortexR52CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52CT.cpu0.l1dcache	PVCache
ARMCortexR52CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52CT.cpu0.l1icache	PVCache
ARMCortexR52CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52CT.ext_bus	PVBusLogger
ARMCortexR52CT.ext_bus.mapper	PVBusMapper
ARMCortexR52CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52CT.gic_iri	GIC_IRI
ARMCortexR52CT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0_V (where *V* = 0–1)	GICv3Redistributor
ARMCortexR52CT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52CT.global_debug_rom	debug_rom
ARMCortexR52CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR52CT.AMU	PVBusLogger
ARMCortexR52CT.AMU.mapper	PVBusMapper
ARMCortexR52CT.DAP	PVBusLogger
ARMCortexR52CT.DAP.mapper	PVBusMapper
ARMCortexR52CT.MMAP	PVBusLogger
ARMCortexR52CT.MMAP.mapper	PVBusMapper
ARMCortexR52CT.RAS	PVBusLogger
ARMCortexR52CT.RAS.mapper	PVBusMapper
ARMCortexR52CT.acp_mapper	PVBusMapper
ARMCortexR52CT.cpu0	ARM_CortexR52
ARMCortexR52CT.cpu0.UTLB	TLB
ARMCortexR52CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52CT.cpu0.l1dcache	PVCache
ARMCortexR52CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52CT.cpu0.l1icache	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexR52CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52CT.ext_bus	PVBusLogger
ARMCortexR52CT.ext_bus.mapper	PVBusMapper
ARMCortexR52CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52CT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0_V (where *V* = 0–1)	GICv3Redistributor
ARMCortexR52CT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexR52CT

Port	Direction	Protocol	Description
cfgdbgromaddr	slave	Value_64	Debug ROM base address.
cfgdbgromaddrv	slave	Signal	Debug ROM base address valid.
cfgendianess	slave	Signal	This signal if for EE bit initialisation.
cfgperiphbase	slave	Value_64	This port sets the base address of private peripheral region.
cfgthumbexceptions	slave	Signal	This signal provides default exception handling state.
cfgvectable	slave	Value_64	Reset vector base address.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
COREPACTIVEx1	master	Signal	These signals relate to core power down. Equivalent to COREPACTIVEx[1]
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	There is no support for PChannel in CortexR52. These signals relate to core power down. Equivalent to COREPACTIVEx[0]

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	slave	PVBus	External Slave port. Equivalent to AXIS port
extppi_in_0	slave	Signal	Core 0 external ppi signals.
extppi_in_1	slave	Signal	Core 1 external ppi signals.
extppi_in_2	slave	Signal	Core 2 external ppi signals.
extppi_in_3	slave	Signal	Core 3 external ppi signals.
flash_m	master	PVBus	Flash Port.
gdu_external_m	master	GICv3Comms	GDU external messaging port.
hiden	slave	Signal	External debug interface.
hniden	slave	Signal	External debug interface.
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m	master	PVBus	The core will generate bus requests on this port. Equivalent to AXIM port
reset	slave	Signal	Raising this signal will put the core into reset mode.
sei	slave	Signal	Per core virtual System Error physical pins.
spi_in	slave	Signal	Shared peripheral interrupts.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	slave	Signal	This signal resets timer and interrupt controller.
vsei	slave	Signal	Per core virtual System Error physical pins.
warmrstreq	master	Signal	Warm reset request from core.

Parameters for ARMCortexR52CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.CFGTE`

Equivalent to CFGTHUMBEXCEPTIONS.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Equivalent to CFGVECTABLE.

Type: `uint32_t`

Default value: `0x0`

`cpuX.ase-present`

Set whether the model has been built with NEON support.

Type: `bool`

Default value: true

`cpuX.dcache-size`

L1 D-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.flash.enable`

Equivalent to CFGFLASHEN.

Type: `bool`

Default value: false

`cpuX.icache-size`

L1 I-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.llpp.base`

Equivalent to CFGLLPPBASEADDR.

Type: `uint32_t`

Default value: `0x0`

`cpuX.llpp.size`

Equivalent to CFGLLPPSIZE.

Type: `uint32_t`

Default value: `0x1000`

`cpuX.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: `0x4000000`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xf000000`

`cpuX.tcm.a.enable`

Equivalent to CFGTCMBOOT.

Type: `bool`

Default value: false

`cpuX.tcm.a.size`

Sets the size of the ATCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

`cpuX.tcm.a.wait`

TCM Register A accesses wait states: 0-1 states.

Type: `uint32_t`

Default value: `0x0`

`cpuX.tcm.b.size`

Sets the size of the BTCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

`cpuX.tcm.b.wait`

TCM Register B accesses wait states: 0-1 states.

Type: `uint32_t`

Default value: `0x0`

`cpuX.tcm.c.size`

Sets the size of the CTCM(in bytes).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x2000`

cpuX.tcm.c.wait

TCM Register C accesses wait states: 0-1 states.

Type: `uint32_t`

Default value: `0x0`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-dp-present

Whether double-precision floating point feature is implemented.

Type: `bool`

Default value: true

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

CLUSTER_ID

CLUSTER_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER_ID[7:0] equivalent to CFGMPIDRAFF1.

Type: `uint16_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

`DBGROMADDR`
Equivalent to CFGDBGROMADDR.

Type: `uint32_t`

Default value: `0x0`

`DBGROMADDRV`
If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

`GICDISABLE`
Used internally. Please ignore.

Type: `bool`

Default value: false

`NUM_CORES`
Number of cores in cluster.

Type: `uint8_t`

Default value: 1

`PERIPHBASE`
Equivalent to CFGPERIPHBASE.

Type: `uint32_t`

Default value: `0x13080000`

`cluster_utid`
Equivalent to CFGCLUSTERUTID.

Type: `uint8_t`

Default value: 0

`cpi_div`
Divider for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

enable_lock_step

(equivalent to CFGSLSPLIT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`flash_protection_enable_at_reset`

Equivalent to CFGFLASHPROTEN.

Type: `bool`

Default value: false

`has_export_m_port`

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

Type: `bool`

Default value: true

`has_flash`

Equivalent to CFGFLASHIMP. has_flash = false => CFGFLASHIMP = false.

Type: `bool`

Default value: false

`has_flash_protection`

Equivalent to CFGFLASHPROTIMP.

Type: `bool`

Default value: true

`has_llpp`

Equivalent to CFGLLPPIMP.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

memory.ext_slave_base

Equivalent to CFGAXISTCMBASEADDR.

Type: `uint32_t`

Default value: `0x0`

memory.flash_base

Equivalent to CFGFLASHBASEADDR.

Type: `uint32_t`

Default value: `0x0`

num_protection_regions_s1

Number of v8-R stage1 protection regions.

Type: `uint8_t`

Default value: 24

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

num_protection_regions_s2

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: 16

num_spi

Number of interrupts (SPI) into the internal GIC controller.

Type: `uint16_t`

Default value: 960

ram_protection_enable_at_reset

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: false

reported_fp_revision

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

3.92 ARMCortexR52PlusCT

Defined in `LISA/ARMCortexR52PlusCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexR52PlusCT

The model does not implement the following:

- Redundant cores for Dual Core Lock Step operation.
- Low Power Interface to wake the target core on receiving a `wake_request` from the GIC Distributor.

Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the `IMP_SLAVEPCTLR` register.

Note

The reset value of `IMP_SLAVEPCTLR` is `0x1` which means privileged access only.

Iris and MTI instances for ARMCortexR52PlusCT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR52PlusCT`	Cluster_ARM_Cortex-R52Plus
`ARMCortexR52PlusCT.AMU`	PVBusLogger
`ARMCortexR52PlusCT.AMU.mapper`	PVBusMapper
`ARMCortexR52PlusCT.DAP`	PVBusLogger
`ARMCortexR52PlusCT.DAP.mapper`	PVBusMapper
`ARMCortexR52PlusCT.MMAP`	PVBusLogger
`ARMCortexR52PlusCT.MMAP.mapper`	PVBusMapper
`ARMCortexR52PlusCT.RAS`	PVBusLogger
`ARMCortexR52PlusCT.RAS.mapper`	PVBusMapper
`ARMCortexR52PlusCT.acp_mapper`	PVBusMapper
`ARMCortexR52PlusCT.cpu0`	ARM_Cortex-R52Plus
`ARMCortexR52PlusCT.cpu0.UTLB`	TLB
`ARMCortexR52PlusCT.cpu0.dtlb`	TLB

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache
ARMCortexR52PlusCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri	GIC_IRI
ARMCortexR52PlusCT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V (where *V* = 0–1)	GICv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52PlusCT.global_debug_rom	debug_rom
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR52PlusCT.AMU	PVBusLogger
ARMCortexR52PlusCT.AMU.mapper	PVBusMapper
ARMCortexR52PlusCT.DAP	PVBusLogger
ARMCortexR52PlusCT.DAP.mapper	PVBusMapper
ARMCortexR52PlusCT.MMAP	PVBusLogger
ARMCortexR52PlusCT.MMAP.mapper	PVBusMapper
ARMCortexR52PlusCT.RAS	PVBusLogger
ARMCortexR52PlusCT.RAS.mapper	PVBusMapper
ARMCortexR52PlusCT.acp_mapper	PVBusMapper
ARMCortexR52PlusCT.cpu0	ARM_Cortex-R52Plus
ARMCortexR52PlusCT.cpu0.UTLB	TLB
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache
ARMCortexR52PlusCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri.rd_0	GICv3RedistributorInternal

Name	Component type
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V (where *V* = 0–1)	GICv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexR52PlusCT

Port	Direction	Protocol	Description
cfgdbgromaddr	slave	Value_64	Debug ROM base address.
cfgdbgromaddrv	slave	Signal	Debug ROM base address valid.
cfgendianess	slave	Signal	This signal if for EE bit initialisation.
cfgperiphbase	slave	Value_64	This port sets the base address of private peripheral region.
cfgthumbexceptions	slave	Signal	This signal provides default exception handling state.
cfgvectable	slave	Value_64	Reset vector base address.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	There is no support for PChannel in CortexR52Plus. These signals relate to core power down. Equivalent to COREPACTIVEx
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	slave	PVBus	External Slave port. Equivalent to AXIS port
extppi_in_0	slave	Signal	Core 0 external ppi signals.
extppi_in_1	slave	Signal	Core 1 external ppi signals.
extppi_in_2	slave	Signal	Core 2 external ppi signals.
extppi_in_3	slave	Signal	Core 3 external ppi signals.
flash_m	master	PVBus	Flash Port.
gdu_external_m	master	GICv3Comms	GDU external messaging port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
hiden	slave	Signal	External debug interface.
hniden	slave	Signal	External debug interface.
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m	master	PVBus	The core will generate bus requests on this port. Equivalent to AXIM port
reset	slave	Signal	Raising this signal will put the core into reset mode.
sei	slave	Signal	Per core virtual System Error physical pins.
spi_in	slave	Signal	Shared peripheral interrupts.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	slave	Signal	This signal resets timer and interrupt controller.
vsei	slave	Signal	Per core virtual System Error physical pins.
warmrstreq	master	Signal	Warm reset request from core.

Parameters for ARMCortexR52PlusCT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Equivalent to CFGTHUMBEXCEPTIONS.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Equivalent to CFGVECTABLE.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.ase-present

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

cpuX.dcache-size

L1 D-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.flash.enable

Equivalent to CFGFLASHEN.

Type: `bool`

Default value: false

cpuX.icache-size

L1 I-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

cpuX.llpp.base

Equivalent to CFGLLPPBASEADDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.llpp.size

Equivalent to CFGLLPPSIZE.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x8000000`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`
Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xf000000`

`cpuX.tcm.a.enable`
Equivalent to CFGTCMBOOT.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.tcm.a.size

Sets the size of the ATCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

cpuX.tcm.a.wait

TCM Register A accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: 0

cpuX.tcm.b.size

Sets the size of the BTCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

cpuX.tcm.b.wait

TCM Register B accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: 0

cpuX.tcm.c.size

Sets the size of the CTCM(in bytes).

Type: `uint32_t`

Default value: `0x2000`

cpuX.tcm.c.wait

TCM Register C accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-dp-present

Whether double-precision floating point feature is implemented (FEAT_F64MM).

Type: `bool`

Default value: true

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

CLUSTER_ID

CLUSTER_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER_ID[7:0] equivalent to CFGMPIDRAFF1.

Type: `uint16_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

DBGROMADDR

Equivalent to CFGDBGROMADDR.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: false

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PERIPHBASE

Equivalent to CFGPERIPHBASE.

Type: `uint32_t`

Default value: `0x13080000`

cluster_utid

Equivalent to CFGCLUSTERUTID.

Type: `uint8_t`

Default value: 0

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x1`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`enable_lock_step`

(equivalent to CFGSLSPLIT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

flash_protection_enable_at_reset

Equivalent to CFGFLASHPROTEN.

Type: `bool`

Default value: false

has_export_m_port

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

Type: `bool`

Default value: true

has_flash

Equivalent to CFGFLASHIMP.

Type: `bool`

Default value: false

has_flash_protection

Equivalent to CFGFLASHPROTIMP.

Type: `bool`

Default value: true

has_llpp

Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

memory.ext_slave_base

Equivalent to CFGAXISTCMBASEADDR.

Type: `uint64_t`

Default value: `0x0`

memory.flash_base

Equivalent to CFGFLASHBASEADDR.

Type: `uint32_t`

Default value: `0x0`

num_protection_regions_s1

Number of v8-R protection regions.

Type: `uint8_t`

Default value: 24

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

num_protection_regions_s2

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: 24

num_spi

Number of interrupts (SPI) into the internal GIC controller.

Type: `uint16_t`

Default value: 960

ram_protection_enable_at_reset

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: false

reported_fp_revision

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int8_t`

Default value: -1

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.93 ARMCortexR5x1CT

Defined in `LISA/ARMCortexR5x1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexR5x1CT

An ARMCortexR5x2CT component also exists.

The per-core parameters are preceded by cpun., where n identifies the core (0 or 1).

The allowed values for the `LOCK_STEP` parameter are:

0
: Disable. Set for two independent cores.

1
: Lock Step. Appears to the system as two cores but is internally modeled as a single core.

3
: Split Lock. Appears to the system as two cores but can be statically configured from reset either as two independent cores or two locked cores. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the cluster.

`pvbus_s` is the slave port to access the TCM RAM of CPU n. Bits [3:0] of the user flags in the transaction are used to select the TCM:

1
: Selects the ATCM of CPU 0

2
: Selects the BTCM of CPU 0

3
: Selects the ATCM of CPU 1

4
: Selects the BTCM of CPU 1

Any other value is reserved.

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The RR bit in the SCTLR is ignored.
- The Low Latency Peripheral Port is not modeled.
- The model only has a single bus master port combining instruction, data, DMA and peripheral accesses. The CP15 control registers associated with peripheral buses preserve values but do not have any other effect.
- The model only supports static split lock and not dynamic split lock. Contact Arm for details.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model cannot experience an ECC error and does not support fault injection into the system, so Arm does not provide the ability to set error schemes for the caches or TCMs. Contact Arm if you require a particular value in the Build Options registers.

Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.
- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting `vic_ack`.
4. The VIC writes the vector address to the processor using `vic_addr`.
5. The processor de-asserts `vic_ack`.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

Iris and MTI instances for ARMCortexR5x1CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR5x1CT`	Cluster_ARM_Cortex-R5
`ARMCortexR5x1CT.acp_mapper`	PVBusMapper
`ARMCortexR5x1CT.cpu0`	ARM_Cortex-R5
`ARMCortexR5x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR5x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`ARMCortexR5x1CT.cpu0.l1icache`	PVCache
`ARMCortexR5x1CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR5x1CT.ext_bus`	PVBusLogger
`ARMCortexR5x1CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR5x1CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[U]` (where *U* = 0–17)	PVBusSlave
`ARMCortexR5x1CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexR5x1CT.acp_mapper`	PVBusMapper
`ARMCortexR5x1CT.cpu0`	ARM_Cortex-R5
`ARMCortexR5x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR5x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR5x1CT.cpu0.l1icache`	PVCache
`ARMCortexR5x1CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR5x1CT.ext_bus`	PVBusLogger
`ARMCortexR5x1CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR5x1CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[U]` (where *U* = 0–17)	PVBusSlave
`ARMCortexR5x1CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMCortexR5x1CT

Port	Direction	Protocol	Description
`acp_s`	slave	PVBus	ACP slave port.
`cfgatcmsz`	slave	Value	ATCM size.
`cfgbtcmsz`	slave	Value	BTCM Size.
`cfgend`	slave	Signal	This signal is for EE bit initialisation. This is CFGEE in RTL but cfgend here fastsim consistency reasons.
`cfgnmfi`	slave	Signal	Controls non-maskable Fast Interrupts.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`cpuhalt`	slave	Signal	Raising this signal will put the core into halt mode.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPU's fast-interrupt handling.
`groupid`	slave	Value	Group ID used for MPIDR.
`initrama`	slave	Signal	If ATCM is enabled at reset.
`initramb`	slave	Signal	If BTCM is enabled at reset.
`irq`	slave	Signal	This signal drives the CPU's interrupt handling.
`loczrama`	slave	Signal	Location of ATCM at reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	tcm slave port.
reset	slave	Signal	Raising this signal will put the core into reset mode.
standbywfe	master	Signal	This signal indicate if a core is in wfe state RTL calls this WFEPIPESTOPPED.
standbywfi	master	Signal	This signal indicates if a core is in WFI state RTL uses WFIPIPESTOPPED.
teinit	slave	Signal	Default exception handling state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vic_ack	master	Signal	Vic acknowledge port to primary VIC.
vic_addr	slave	Value	Vic address port from primary VIC.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.

Parameters for ARMCortexR5x1CT

`cpu0.CFGATCMSZ`

Sets the size of the ATCM.

Type: `uint32_t`

Default value: `0xE`

`cpu0.CFGBTCMSZ`

Sets the size of the BTCM.

Type: `uint32_t`

Default value: `0xE`

`cpu0.CFGEND`

Initialize to BE8 endianness.

Type: `bool`

Default value: false

`cpu0.CFGIE`

Set the reset value of the instruction endian bit.

Type: `bool`

Default value: false

`cpu0.CFGNMFI`

Enable nonmaskable FIQ interrupts on startup.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpu0.DP_FLOAT

Sets whether double-precision instructions are available.

Type: `bool`

Default value: true

cpu0.LOCZRAMA

Initialize with LOCZRAMA set to 1.

Type: `bool`

Default value: false

cpu0.TEINIT

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: false

cpu0.VINITHI

Initialize with high vectors enabled.

Type: `bool`

Default value: false

cpu0.atcm_base

Model-specific. Sets the base address of the ATCM (forced to 0 if LOCZRAMA is 1).

Type: `uint32_t`

Default value: `0x00000000`

cpu0.btcm_base

Model-specific. Sets the base address of the BTCM (forced to 0 if LOCZRAMA is 0).

Type: `uint32_t`

Default value: `0x00800000`

cpu0.dcache-size

Set D-cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x10000`

cpu0.icache-size

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

cpu0.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

cpu0.semihosting-ARM_HLT

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

cpu0.semihosting-ARM_SVC

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-Thumb_HLT

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: `0x3C`

cpu0.semihosting-Thumb_SVC

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

cpu0.semihosting-cmd_line

Command line available to semihosting SVC calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: “”

`cpu0.semihosting-cwd`

Virtual address of CWD.

Type: `string`

Default value: “”

`cpu0.semihosting-enable`

Enable semihosting SVC Boolean true or false truetraps. Applications that do not use semihosting must set this parameter to False.

Type: `bool`

Default value: true

`cpu0.semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

`cpu0.semihosting-hlt-enable`

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: false

`cpu0.semihosting-prefix`

Prefix semihosting output with target instance name.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x0F000000`

cpu0.vfp-enable_at_reset

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: false

cpu0.vfp-present

Set whether model has VFP support.

Type: `bool`

Default value: true

GROUP_ID

Value read in GROUP ID register field, bits[15:8] of the MPIDR.

Type: `uint32_t`

Default value: `0x0`

INST_ENDIAN

Controls whether the model supports the instruction endianness bit.

Type: `bool`

Default value: true

LOCK_STEP

Affects dual-processor configurations only, and ignored by single-processor configurations.

Type: `uint32_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

MICRO_SCU

Controls whether the effects of the MicroSCU are modeled.

Type: `bool`

Default value: true

NUM_BREAKPOINTS

Controls with how many breakpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

Type: `uint32_t`

Default value: `0x7`

NUM_MPU_REGION

Sets the number of MPU regions.

Type: `uint32_t`

Default value: 12

NUM_WATCHPOINTS

Controls with how many watchpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

Type: `uint32_t`

Default value: `0x7`

SLSPLIT

Sets whether the model starts in split mode or locked mode.

Type: `bool`

Default value: false

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: 1

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`reported_fp_revision`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

Non-Confidential

3.94 ARMCortexR7x1CT

Defined in LISA/ARMCortexR7x1CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexR7x1CT

An ARMCortexR7x2CT component also exists.

The per-core parameters are preceded by cpun., where n identifies the core (0 or 1).

`pvbus_s` is the slave port to access the TCM RAM of CPU n. Bits [3:0] of the user flags in the transaction are used to select the TCM:

0
: Selects the ITCM of CPU 0

1
: Selects the DTCM of CPU 0

2
: Selects the ITCM of CPU 1

3
: Selects the DTCM of CPU 1

Any other value is reserved.

When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the CFGSDISABLE signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.
- The SCU ignores the invalidate all register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTLR is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.
- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- ECC and parity schemes are hardware-specific so are not supported.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

Iris and MTI instances for ARMCortexR7x1CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR7x1CT`	Cluster_ARM_Cortex-R7
`ARMCortexR7x1CT.ARMCortexR7x1CT.debug_rom`	debug_rom
`ARMCortexR7x1CT.acp_mapper`	PVBusMapper
`ARMCortexR7x1CT.cpu0`	ARM_Cortex-R7
`ARMCortexR7x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR7x1CT.cpu0.l1icache`	PVCache
`ARMCortexR7x1CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR7x1CT.ext_bus`	PVBusLogger
`ARMCortexR7x1CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR7x1CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[U]` (where *U* = 0–17)	PVBusSlave
`ARMCortexR7x1CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexR7x1CT.acp_mapper`	PVBusMapper
`ARMCortexR7x1CT.cpu0`	ARM_Cortex-R7
`ARMCortexR7x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR7x1CT.cpu0.l1icache`	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexR7x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.ext_bus	PVBusLogger
ARMCortexR7x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR7x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[U] (where *U* = 0–17)	PVBusSlave
ARMCortexR7x1CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexR7x1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgnmfi	slave	Signal	This signal disables FIQ mask in CPSR.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The port sets the value in CPU ID register field, bits[11:8] of the MPIDR.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	Legacy FIQ request input line.
fiqout	master	Signal	Output of individual processor nFIQ from the interrupt controller.
fpuflags	master	ValueState	Floating-Point Unit output flags.
halt	slave	Signal	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram	slave	Signal	This signal enables the processor to boot from the instruction TCM.
ints	slave	Signal	Interrupt distributor interrupt lines.
irq	slave	Signal	Legacy IRQ request input line.
irqout	master	Signal	Output of individual processor nIRQ from the interrupt controller.
mfilteren	slave	Signal	This signal enables filtering of address ranges between master bus ports.
mfilterend	slave	Value	This port sets end of region mapped to pvbus_m1.
mfilterstart	slave	Value	This port sets start of region mapped to pvbus_m1.
periphbase	slave	Value	This port sets the base address of private peripheral region.
periphclk_in	slave	ClockSignal	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	slave	Signal	This signal resets timer and interrupt controller.
pfilterend	slave	Value	This port sets end of region mapped to pvbus_mp.
pfilterstart	slave	Value	This port sets start of region mapped to pvbus_mp.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_m1	master	PVBus	The core will generate bus requests on this port.
pvbus_mp	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	tcm slave port
reset	slave	Signal	Raising this signal will put the core into reset mode.
scureset	slave	Signal	This signal resets SCU.
smpnamp	master	Signal	This signals AMP or SMP mode for each Cortex-R7 processor.

Port	Direction	Protocol	Description
`standbywfe`	master	Signal	This signal indicates if a core is in WFE state.
`standbywfi`	master	Signal	This signal indicates if a core is in WFI state.
`teinit`	slave	Signal	This signal provides default exception handling state.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`wdreset`	slave	Signal	This signal resets individual watchdog.
`wdresetreq`	master	Signal	CPU watchdog reset requests.

Parameters for ARMCortexR7x1CT

`cpu0.CFGEND`

Initialize to BE8 endianness.

Type: `bool`

Default value: false

`cpu0.CFGNMFI`

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: false

`cpu0.DP_FLOAT`

Sets whether double-precision instructions are available.

Type: `bool`

Default value: true

`cpu0.INITRAM`

Enable the processor to boot from the instruction TCM.

Type: `bool`

Default value: false

`cpu0.POWERCTLI`

Default power control state for processor.

Type: `uint32_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.SMPnAMP`

Set whether the processor is part of a coherent domain.

Type: `bool`

Default value: false

`cpu0.TEINIT`

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: false

`cpu0.VINITHI`

Initialize with high vectors enabled.

Type: `bool`

Default value: false

`cpu0.dcache-size`

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`cpu0.dtcm_size`

Size of DTCM in KB.

Type: `uint32_t`

Default value: `0x8`

`cpu0.icache-size`

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`cpu0.itcm_size`

Size of ITCM in KB.

Type: `uint32_t`

Default value: `0x8`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.min_sync_level`

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

`cpu0.semihosting-ARM_HLT`

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

`cpu0.semihosting-ARM_SVC`

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

`cpu0.semihosting-Thumb_HLT`

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: `0x3C`

`cpu0.semihosting-Thumb_SVC`

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

`cpu0.semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: “”

`cpu0.semihosting-cwd`

Virtual address of CWD.

Type: `string`

Default value: “”

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

cpu0.semihosting-hlt-enable

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: false

cpu0.semihosting-prefix

Prefix semihosting output with target instance name.

Type: `bool`

Default value: false

cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

cpu0.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0F000000`

`cpu0.tcm-present`

Disables the DTCM and ITCM.

Type: `bool`

Default value: true

`cpu0.vfp-enable_at_reset`

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: false

`cpu0.vfp-present`

Set whether model has VFP support.

Type: `bool`

Default value: true

`CLUSTER_ID`

Processor cluster ID value.

Type: `uint32_t`

Default value: `0x0`

`LOCK_STEP`

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

Type: `uint32_t`

Default value: 0

`MFILTEREN`

Enables filtering of address ranges.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

MFILTEREND

Specifies the end address for address filtering.

Type: `uint32_t`

Default value: `0x0`

MFILTERSTART

Specifies the start address for address filtering.

Type: `uint32_t`

Default value: `0x0`

NUM_MPU_REGION

Sets the number of MPU regions.

Type: `uint32_t`

Default value: 12

PERIPHBASE

Base address of peripheral memory space.

Type: `uint32_t`

Default value: `0xAE000000`

PFILTEREND

Specifies the end address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

PFILTERSTART

Specifies the start address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: 1

`cpi_mul`

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dic-spi_count`

Number of shared peripheral interrupts implemented.

Type: `uint32_t`

Default value: `0x40`

`ecc_on`

Enable Error Correcting Code.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`reported_fp_revision`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

3.95 ARMCortexR82AECT

Defined in `LISA/ARMCortexR82AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
Preliminary support	Full support

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

  As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.
- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMCortexR82AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexR82AECT	Cluster_ARM_Cortex-R82AE
ARMCortexR82AECT.AMU	PVBusLogger
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	SharedR
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.debug_rom	debug_rom
ARMCortexR82AECT.cpu0.dtlb	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1icache	PVCache
ARMCortexR82AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.global_debug_rom	debug_rom
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.upstream[Y] (where *Y* = 0–2)	PVBusSlave
ARMCortexR82AECT.sbist_controllerChunk0	SBISTC0
ARMCortexR82AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Non-Confidential

Name	Component type
ARMCortexR82AECT.AMU	PVBusLogger
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	SharedR
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1icache	PVCache
ARMCortexR82AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.upstream[Y] (where *Y* = 0–2)	PVBusSlave

Ports for ARMCortexR82AECT

Port	Direction	Protocol	Description
acel_s	slave	PVBus	External Slave port. Equivalent to AXIS port.
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	slave	Value	This signal provides default exception handling state.
cfgendianess	slave	Signal	This signal if for EE bit initialisation

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPSIRQ	master	Signal	Timer signals to SOC
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	Timer signals to SOC
commirq	master	Signal	Interrupt signal from debug communication channel.
complexcritirq	master	Signal	Complex RAS critical interrupt
complexerrirq	master	Signal	Complex RAS error interrupt
complexfaultirq	master	Signal	Complex RAS fault interrupt
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Core RAS error interrupt
corefaultirq	master	Signal	Core RAS fault interrupt
coreinstrrun	slave	Signal	Core Running State
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cti0extin	slave	Signal	CTI trace inputs for core 0.
cti0extout	master	Signal	CTI trace outputs for core 0.
cti1extin	slave	Signal	CTI trace inputs for core 1.
cti1extout	master	Signal	CTI trace outputs for core 1.
cti2extin	slave	Signal	CTI trace inputs for core 2.
cti2extout	master	Signal	CTI trace outputs for core 2.
cti3extin	slave	Signal	CTI trace inputs for core 3.
cti3extout	master	Signal	CTI trace outputs for core 3.
cti4extin	slave	Signal	CTI trace inputs for core 4.
cti4extout	master	Signal	CTI trace outputs for core 4.
cti5extin	slave	Signal	CTI trace inputs for core 5.
cti5extout	master	Signal	CTI trace outputs for core 5.
cti6extin	slave	Signal	CTI trace inputs for core 6.
cti6extout	master	Signal	CTI trace outputs for core 6.
cti7extin	slave	Signal	CTI trace inputs for core 7.
cti7extout	master	Signal	CTI trace outputs for core 7.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cti	master	v8EmbeddedCrossTrigger_controlprotocol	-
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	-
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrdwnack	master	Signal	Debug power down acknowledge.
dbgpwrdwnreq	slave	Signal	Debug power down request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset	slave	Signal	ETMv4 External Trace Reset signal.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2reset	slave	Signal	This signal resets timer and interrupt controller and l2cache
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
llram_m	master	PVBus	LLRAM Port
macp_s	slave	PVBus	MACP slave interface
memorymapped_debug_s	slave	PVBus	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster irq signal
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wakeup request
ppu_core_irq	master	Signal	PPU core irq signal
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wakeup request
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
reset	slave	Signal	-
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbar	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins
spiden	slave	Signal	Secure invasive debug enable.
spp_m	master	PVBus	SPP (Shared Peripheral Port).
standbywfe	master	Signal	This signal indicates if a core is in WFE state
standbywfi	master	Signal	This signal indicates if a core is in WFI state

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
stlfailed	master	Signal	Indicates the STL has failed, set in any condition in which FFMIR.FMID has a failure mode set.
stlrunning	master	Signal	Indicates the STL is running, set in any condition in which FCTLR.STATUS is non-idle.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset	slave	Signal	ETMv4 Trace Unit Reset signal.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	This signal drives the CPUs virtual fast-interrupt handling.
virq	slave	Signal	This signal drives the CPUs virtual interrupt handling.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

Parameters for ARMCortexR82AECT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

cpuX.RVBAR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.TEINIT

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.ase-present

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

cpuX.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

cpuX.dtcm_base

Sets the 16K aligned base address of DTCM.

Type: `uint64_t`

Default value: `0x0`

cpuX.dtcm_size

Sets the size of DTCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

cpuX.dtcm_stretch_clk

Whether DTCM clock stretched to occupy full cycle.

Type: `bool`

Default value: false

cpuX.dtcm_wait

DTCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.icache-size
L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

cpuX.itcm_base
Sets the 16K aligned base address of ITCM.

Type: `uint64_t`

Default value: `0x0`

cpuX.itcm_size
Sets the size of ITCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

cpuX.itcm_stretch_clk
Whether ITCM clock stretched to occupy full cycle.

Type: `bool`

Default value: false

cpuX.itcm_wait
ITCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

cpuX.llpp.base
Equivalent to CFGLLPPBASEADDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.llpp.size
Equivalent to CFGLLPPSIZE.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x8000000`

`cpuX.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.tcm.a.enable

Equivalent to CFGITCMENm.

Type: `bool`

Default value: false

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-dp-present

Whether double-precision floating point feature is implemented (FEAT_F64MM).

Type: `bool`

Default value: true

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation to NC/DEV memory.The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTATOMICL

Enable broadcasting of atomic operation to LLRAM memory.The broadcastatomicl signal will override this value and it will be functional for revision 2.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

CCSIDR-L1D_override

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CCSIDR-L1I_override

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CCSIDR-L2_override

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CCSIDR-L3_override

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CFGTFPEN_pin_reset

CFGTFPEN pin at reset.

Type: `bool`

Default value: false

CHI

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

Type: `bool`

Default value: false

CLUSTER_ID

CLUSTER_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER_ID[7:0] equivalent to CFGMPIDRAFF2.

Type: `uint16_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: false

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PA_SIZE

Physical address range supported (FEAT_LPA).

Type: `uint8_t`

Default value: 40

PERIPHBASE

Base address of peripheral memory space.

Type: `uint64_t`

Default value: `0x13080000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`VMSA_supported`

VMSA is supported at EL1.

Type: `bool`

Default value: true

`bus_protection_enable_at_reset`

Equivalent to CFGBUSPROTEN.

Type: `bool`

Default value: false

`core_power_on_by_default`

Equivalent to PPU_RST_STATE. 0 = Cluster PPU and all core PPUs reset to OFF, 1 = Cluster PPU and all core PPUs reset to ON.

Type: `bool`

Default value: true

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

enable_lock_step

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

gicv3.BPR-min

The minimum value for the GICC_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

gicv3.VBPR-min
The minimum value for the GICV_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

has_dense_mem_map
If true, the cluster follows the dense memory map else it implements the sparse memory map.

Type: `bool`

Default value: false

has_impdef_transient_fault_protection
Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT_TFP).

Type: `bool`

Default value: true

has_llpp
Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: true

has_pmc
Programmable MBIST controllers implemented.

Type: `bool`

Default value: false

has_spp
Equivalent to CFGSPPIMP.

Type: `bool`

Default value: true

icache-hit_latency
L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

`l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`memory.ext_slave_base`

Equivalent to CFGACELSTCMBASEADDR.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`memory.has_llram`

Equivalent to CFGLLRAMIMP.

Type: `bool`

Default value: true

`memory.llram_base`

Equivalent to CFGLLRAMBASEADDR.

Type: `uint64_t`

Default value: `0x20000000`

`memory.llram_enable_at_reset`

Equivalent to CFGLLRAMEN.

Type: `bool`

Default value: true

`memory.llram_shared`

Equivalent to CFGLLRAMSHARED and it is only functional for revision 2.

Type: `bool`

Default value: false

`memory.llram_size`

Size of the LLRAM.

Type: `uint32_t`

Default value: `0x10000000`

`num_protection_regions_s1`

Number of v8-R protection regions.

Type: `uint8_t`

Default value: 16

`num_protection_regions_s2`

Number of v8-R hyp protection regions.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 16

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`ram_protection_enable_at_reset`

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: false

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`sbist_controller.Chunk0.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk0.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`sbist_controller.Chunk1.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk1.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

`sbist_controller.Chunk2.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk2.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

`sbist_controller.Chunk3.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk3.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`sbist_controller.Chunk4.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk4.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

`sbist_controller.Chunk5.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk5.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

`sbist_controller.Chunk6.DL_CYCLES`

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

`sbist_controller.Chunk6.DL_RESET`

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

sbist_controller.Chunk7.DL_CYCLES

DL_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

sbist_controller.Chunk7.DL_RESET

DL_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

sbist_controller.SBIST_PAGE_SIZE

Size of the memory assigned to one Core in the SBIST Controller memory map.

Type: `uint32_t`

Default value: `0x10000`

spp.base

Equivalent to CFGSPPBASEADDR.

Type: `uint64_t`

Default value: `0x0`

spp.size

Sets the size of SPP(in bytes).

Type: `uint32_t`

Default value: `0x8000000`

stage12_tlb_size

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction_tlb_size !=0, this is treated as dtlb size.

Type: `uint32_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.96 ARMCortexR82CT

Defined in `LISA/ARMCortexR82CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support
r1p1	Full support
r2p1	Full support
r3p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
r0p0=Preliminary support r1p1=Preliminary support r2p0=Preliminary support r3p0=Preliminary support	r0p0=Full support r1p1=Full support r2p0=Full support r3p0=Full support

About ARMCortexR82CT

To simulate the r1p0 model, use the following parameters:

- `revision_number=1`
- `VMSA_supported=1`

Limitations

Dense memory map support has been added for the Utility bus only.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Iris and MTI instances for ARMCortexR82CT

This model has the following Iris instances:

Name	Instance type
ARMCortexR82CT	Cluster_ARM_Cortex-R82
ARMCortexR82CT.AMU	PVBusLogger
ARMCortexR82CT.AMU.mapper	PVBusMapper
ARMCortexR82CT.DAP	PVBusLogger
ARMCortexR82CT.DAP.mapper	PVBusMapper
ARMCortexR82CT.DSU	SharedR
ARMCortexR82CT.DSU.PPU_cluster	PPUv1
ARMCortexR82CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82CT.DSU.PPU_core0	PPUv1
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.debug_rom	debug_rom
ARMCortexR82CT.cpu0.dtlb	TLB
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1icache	PVCache
ARMCortexR82CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.global_debug_rom	debug_rom
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect	PVCache
ARMCortexR82CT.llram_coherent_interconnect.upstream[Y] (where *Y* = 0–2)	PVBusSlave
ARMCortexR82CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexR82CT.AMU	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexR82CT.AMU.mapper	PVBusMapper
ARMCortexR82CT.DAP	PVBusLogger
ARMCortexR82CT.DAP.mapper	PVBusMapper
ARMCortexR82CT.DSU	SharedR
ARMCortexR82CT.DSU.PPU_cluster	PPUv1
ARMCortexR82CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82CT.DSU.PPU_core0	PPUv1
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1icache	PVCache
ARMCortexR82CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect	PVCache
ARMCortexR82CT.llram_coherent_interconnect.upstream[Y] (where *Y* = 0–2)	PVBusSlave

Ports for ARMCortexR82CT

Port	Direction	Protocol	Description
acel_s	slave	PVBus	External Slave port. Equivalent to AXIS port.
broadcastatomic	slave	Signal	CHI defined pins.
broadcastatomicl	slave	Signal	BROADCASTATOMIC pin for LLRAM
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	slave	Value	This signal provides default exception handling state.
cfgendianess	slave	Signal	This signal if for EE bit initialisation

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPSIRQ	master	Signal	Timer signals to SOC
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	Timer signals to SOC
commirq	master	Signal	Interrupt signal from debug communication channel.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Core RAS error interrupt
corefaultirq	master	Signal	Core RAS fault interrupt
coreinstrrun	slave	Signal	Core Running State
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cti0extin	slave	Signal	CTI trace inputs for core 0.
cti0extout	master	Signal	CTI trace outputs for core 0.
cti1extin	slave	Signal	CTI trace inputs for core 1.
cti1extout	master	Signal	CTI trace outputs for core 1.
cti2extin	slave	Signal	CTI trace inputs for core 2.
cti2extout	master	Signal	CTI trace outputs for core 2.
cti3extin	slave	Signal	CTI trace inputs for core 3.
cti3extout	master	Signal	CTI trace outputs for core 3.
cti4extin	slave	Signal	CTI trace inputs for core 4.
cti4extout	master	Signal	CTI trace outputs for core 4.
cti5extin	slave	Signal	CTI trace inputs for core 5.
cti5extout	master	Signal	CTI trace outputs for core 5.
cti6extin	slave	Signal	CTI trace inputs for core 6.
cti6extout	master	Signal	CTI trace outputs for core 6.
cti7extin	slave	Signal	CTI trace inputs for core 7.
cti7extout	master	Signal	CTI trace outputs for core 7.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	-
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	-

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
dbgnopwrdwn	master	Signal	These signals relate to core power down.
dbgpwrdwnack	master	Signal	Debug power down acknowledge.
dbgpwrdwnreq	slave	Signal	Debug power down request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset	slave	Signal	ETMv4 External Trace Reset signal.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2reset	slave	Signal	This signal resets timer and interrupt controller and l2cache
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
llram_m	master	PVBus	LLRAM Port
macp_s	slave	PVBus	MACP slave interface
memorymapped_debug_s	slave	PVBus	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster irq signal
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wakeup request
ppu_core_irq	master	Signal	PPU core irq signal
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wakeup request
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
reset	slave	Signal	-
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbar	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins
spiden	slave	Signal	Secure invasive debug enable.
spp_m	master	PVBus	SPP (Shared Peripheral Port).
standbywfe	master	Signal	This signal indicates if a core is in WFE state
standbywfi	master	Signal	This signal indicates if a core is in WFI state
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset	slave	Signal	ETMv4 Trace Unit Reset signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	This signal drives the CPUs virtual fast-interrupt handling.
`virq`	slave	Signal	This signal drives the CPUs virtual interrupt handling.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

Parameters for ARMCortexR82CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CP15SDISABLE`

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

`cpuX.RVBAR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.TEINIT`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.ase-present`

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`cpuX.dcache-size`

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`cpuX.dtcm_base`

Sets the 16K aligned base address of DTCM.

Type: `uint64_t`

Default value: `0x0`

`cpuX.dtcm_size`

Sets the size of DTCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

`cpuX.dtcm_stretch_clk`

Whether DTCM clock stretched to occupy full cycle.

Type: `bool`

Default value: false

`cpuX.dtcm_wait`

DTCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10000`

cpuX.itcm_base

Sets the 16K aligned base address of ITCM.

Type: `uint64_t`

Default value: `0x0`

cpuX.itcm_size

Sets the size of ITCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

cpuX.itcm_stretch_clk

Whether ITCM clock stretched to occupy full cycle.

Type: `bool`

Default value: false

cpuX.itcm_wait

ITCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

cpuX.llpp.base

Equivalent to CFGLLPPBASEADDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.llpp.size

Equivalent to CFGLLPPSIZE.

Type: `uint32_t`

Default value: `0x8000000`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.tcm.a.enable

Equivalent to CFGITCMENm.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-dp-present`

Whether double-precision floating point feature is implemented (FEAT_F64MM).

Type: `bool`

Default value: true

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`BROADCASTATOMIC`

Enable broadcasting of atomic operation to NC/DEV memory.The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTATOMICL`

Enable broadcasting of atomic operation to LLRAM memory.The broadcastatomicl signal will override this value and it will be functional for revision 2.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

CCSIDR-L1D_override

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CCSIDR-L1I_override

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CCSIDR-L2_override

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

CCSIDR-L3_override

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

CHI

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

Type: `bool`

Default value: false

CLUSTER_ID

CLUSTER_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER_ID[7:0] equivalent to CFGMPIDRAFF2.

Type: `uint16_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`NUM_CORES`

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

`PA_SIZE`

Physical address range supported (FEAT_LPA).

Type: `uint8_t`

Default value: 40

`PERIPHBASE`

Base address of peripheral memory space.

Type: `uint64_t`

Default value: `0x13080000`

`VMSA_supported`

VMSA is supported at EL1.

Type: `bool`

Default value: false

`core_power_on_by_default`

Equivalent to PPU_RST_STATE. 0 = Cluster PPU and all core PPUs reset to OFF, 1 = Cluster PPU and all core PPUs reset to ON.

Type: `bool`

Default value: true

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

enable_lock_step

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

gicv3.BPR-min

The minimum value for the GICC_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

gicv3.VBPR-min

The minimum value for the GICV_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

has_dense_mem_map

If true, the cluster follows the dense memory map else it implements the sparse memory map.

Type: `bool`

Default value: false

has_llpp

Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: true

has_spp

Equivalent to CFGSPPIMP.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

`l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

memory.ext_slave_base

Equivalent to CFGACELSTCMBASEADDR.

Type: `uint64_t`

Default value: `0x0`

memory.has_llram

Equivalent to CFGLLRAMIMP.

Type: `bool`

Default value: true

memory.llram_base

Equivalent to CFGLLRAMBASEADDR.

Type: `uint64_t`

Default value: `0x20000000`

memory.llram_enable_at_reset

Equivalent to CFGLLRAMEN.

Type: `bool`

Default value: true

memory.llram_shared

Equivalent to CFGLLRAMSHARED and it is only functional for revision 2.

Type: `bool`

Default value: false

memory.llram_size

Size of the LLRAM.

Type: `uint32_t`

Default value: `0x10000000`

num_protection_regions_s1

Number of v8-R protection regions.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 16

`num_protection_regions_s2`

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: 16

`patch_level`

Patch level of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Revision field in MIDR/MIDR_EL1. Corresponds to the patch number Y in rXpY.

Type: `uint8_t`

Default value: 1

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`ram_protection_enable_at_reset`

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: false

`revision_number`

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 1

`spp.base`

Equivalent to CFGSPPBASEADDR.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

spp.size

Sets the size of SPP(in bytes).

Type: `uint32_t`

Default value: `0x8000000`

stage12_tlb_size

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction_tlb_size !=0, this is treated as dtlb size.

Type: `uint32_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.97 ARMCortexR8x1CT

Defined in `LISA/ARMCortexR8x1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexR8x1CT

The following components also exist:

ARMCortexR8x2CT. ARMCortexR8x3CT. ARMCortexR8x4CT.

The per-core parameters are preceded by cpun., where n identifies the core (0-3).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`pvbus_s` is the slave port to access the TCM RAM of CPU n. Bits [3:0] of the user flags in the transaction are used to select the TCM:

0
: Selects the ITCM of CPU 0.

1
: Selects the DTCM of CPU 0.

2
: Selects the ITCM of CPU 1.

3
: Selects the DTCM of CPU 1.

4
: Selects the ITCM of CPU 2.

5
: Selects the DTCM of CPU 2.

6
: Selects the ITCM of CPU 3.

7
: Selects the DTCM of CPU 3.

Any other value is reserved.

The `semihosting-cwd` parameter sets the CWD that is used for semihosting. The host operating system limits the maximum path length. The `semihosting-cwd` parameter does not provide any security. Software running on the model can access files outside this directory using relative paths containing .. or using absolute paths.

Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the `CFGSDISABLE` signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.
- The SCU ignores the invalidate all register.
- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTLR is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.
- ECC and parity schemes are hardware-specific so are not supported.

Iris and MTI instances for ARMCortexR8x1CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexR8x1CT`	Cluster_ARM_Cortex-R8
`ARMCortexR8x1CT.ARMCortexR8x1CT.debug_rom`	debug_rom
`ARMCortexR8x1CT.acp_mapper`	PVBusMapper
`ARMCortexR8x1CT.cpu0`	ARM_Cortex-R8
`ARMCortexR8x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR8x1CT.cpu0.l1icache`	PVCache
`ARMCortexR8x1CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR8x1CT.ext_bus`	PVBusLogger
`ARMCortexR8x1CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR8x1CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[U]` (where *U* = 0–17)	PVBusSlave
`ARMCortexR8x1CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMCortexR8x1CT.acp_mapper`	PVBusMapper
`ARMCortexR8x1CT.cpu0`	ARM_Cortex-R8
`ARMCortexR8x1CT.cpu0.l1dcache`	PVCache
`ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexR8x1CT.cpu0.l1icache`	PVCache
`ARMCortexR8x1CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexR8x1CT.ext_bus`	PVBusLogger
`ARMCortexR8x1CT.ext_bus.mapper`	PVBusMapper
`ARMCortexR8x1CT.l1_incoherent_interconnect`	PVCache
`ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[U]` (where *U* = 0–17)	PVBusSlave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexR8x1CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexR8x1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgnmfi	slave	Signal	This signal disables FIQ mask in CPSR.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The port sets the value in CPU ID register field, bits[11:8] of the MPIDR.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	Legacy FIQ request input line.
fiqout	master	Signal	Output of individual processor nFIQ from the interrupt controller.
fpfilterend0	slave	Value	This port sets end of region mapped to pvbus_mfp0.
fpfilterend1	slave	Value	This port sets end of region mapped to pvbus_mfp1.
fpfilterend2	slave	Value	This port sets end of region mapped to pvbus_mfp2.
fpfilterend3	slave	Value	This port sets end of region mapped to pvbus_mfp3.
fpfilterstart0	slave	Value	This port sets start of region mapped to pvbus_mfp0.
fpfilterstart1	slave	Value	This port sets start of region mapped to pvbus_mfp1.
fpfilterstart2	slave	Value	This port sets start of region mapped to pvbus_mfp2.
fpfilterstart3	slave	Value	This port sets start of region mapped to pvbus_mfp3.
fpuflags	master	ValueState	Floating-Point Unit output flags.
halt	slave	Signal	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram	slave	Signal	This signal enables the processor to boot from the instruction TCM.
ints	slave	Signal	Interrupt distributor interrupt lines.
irq	slave	Signal	Legacy IRQ request input line.
irqout	master	Signal	Output of individual processor nIRQ from the interrupt controller.
mfilteren	slave	Signal	This signal enables filtering of address ranges between master bus ports.
mfilterend	slave	Value	This port sets end of region mapped to pvbus_m1.
mfilterstart	slave	Value	This port sets start of region mapped to pvbus_m1.
periphbase	slave	Value	This port sets the base address of private peripheral region.
periphclk_in	slave	ClockSignal	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	slave	Signal	This signal resets timer and interrupt controller.
pfilterend	slave	Value	This port sets end of region mapped to pvbus_mp.
pfilterstart	slave	Value	This port sets start of region mapped to pvbus_mp.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m0	master	PVBus	AXI master port 0.
pvbus_m1	master	PVBus	AXI master port 1.
pvbus_mfp0	master	PVBus	Fast peripheral port for core 0.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`pvbus_mfp1`	master	PVBus	Fast peripheral port for core 1.
`pvbus_mfp2`	master	PVBus	Fast peripheral port for core 2.
`pvbus_mfp3`	master	PVBus	Fast peripheral port for core 3.
`pvbus_mp`	master	PVBus	Shared peripheral port.
`pvbus_s`	slave	PVBus	tcm slave port.
`reset`	slave	Signal	Raising this signal will put the core into reset mode.
`scureset`	slave	Signal	This signal resets SCU.
`smpnamp`	master	Signal	This signals AMP or SMP mode for each Cortex-R8 processor.
`standbywfe`	master	Signal	This signal indicates if a core is in WFE state.
`standbywfi`	master	Signal	This signal indicates if a core is in WFI state.
`teinit`	slave	Signal	This signal provides default exception handling state.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`wdreset`	slave	Signal	This signal resets individual watchdog.
`wdresetreq`	master	Signal	CPU watchdog reset requests.

Parameters for ARMCortexR8x1CT

`cpu0.CFGEND`

Initialize to BE8 endianness.

Type: `bool`

Default value: false

`cpu0.CFGNMFI`

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: false

`cpu0.DP_FLOAT`

Sets whether double-precision instructions are available.

Type: `bool`

Default value: true

`cpu0.INITRAM`

Enable the processor to boot from the instruction TCM.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`cpu0.POWERCTLI`

Default power control state for processor.

Type: `uint32_t`

Default value: 0

`cpu0.SMPnAMP`

Set whether the processor is part of a coherent domain.

Type: `bool`

Default value: false

`cpu0.TEINIT`

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: false

`cpu0.VINITHI`

Initialize with high vectors enabled.

Type: `bool`

Default value: false

`cpu0.dcache-size`

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`cpu0.dtcm_size`

Size of DTCM in KB.

Type: `uint32_t`

Default value: `0x8`

`cpu0.icache-size`

Set I-cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x8000`

cpu0.itcm_size

Size of ITCM in KB.

Type: `uint32_t`

Default value: `0x8`

cpu0.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

cpu0.semihosting-ARM_HLT

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

cpu0.semihosting-ARM_SVC

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-Thumb_HLT

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: `0x3C`

cpu0.semihosting-Thumb_SVC

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

cpu0.semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: “”

cpu0.semihosting-cwd

Virtual address of CWD.

Type: `string`

Default value: “”

cpu0.semihosting-enable

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

cpu0.semihosting-hlt-enable

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: false

cpu0.semihosting-prefix

Prefix semihosting output with target instance name.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

`cpu0.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x0F000000`

`cpu0.tcm-present`

Disables the DTCM and ITCM.

Type: `bool`

Default value: true

`cpu0.vfp-enable_at_reset`

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: false

`cpu0.vfp-present`

Set whether model has VFP support.

Type: `bool`

Default value: true

`CLUSTER_ID`

Processor cluster ID value.

Type: `uint32_t`

Default value: `0x0`

`FPFILTEREND0`

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

FPFILTEREND1

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

FPFILTEREND2

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

FPFILTEREND3

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

FPFILTERSTART0

Specifies the start address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

FPFILTERSTART1

Specifies the start address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

FPFILTERSTART2

Specifies the start address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

FPFILTERSTART3

Specifies the start address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`LOCK_STEP`

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

Type: `uint32_t`

Default value: 0

`MFILTEREN`

Enables filtering of address ranges.

Type: `bool`

Default value: false

`MFILTEREND`

Specifies the end address for address filtering.

Type: `uint32_t`

Default value: `0x0`

`MFILTERSTART`

Specifies the start address for address filtering.

Type: `uint32_t`

Default value: `0x0`

`NUM_MPU_REGION`

Sets the number of MPU regions.

Type: `uint32_t`

Default value: 12

`PERIPHBASE`

Base address of peripheral memory space.

Type: `uint32_t`

Default value: `0xAE000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

PFILTEREND

Specifies the end address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

PFILTERSTART

Specifies the start address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFF00000`

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dic-spi_count

Number of shared peripheral interrupts implemented.

Type: `uint32_t`

Default value: `0x40`

ecc_on

Enable Error Correcting Code.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`reported_fp_revision`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

3.98 ARMCortexX1CCT

Defined in `LISA/ARMCortexX1CCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexX1CCT

The model supports the following features:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

Note

The `cfgsdisable` signal will be removed in a future release.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexX1CCT

This model has the following Iris instances:

Name	Instance type
`ARMCortexX1CCT`	Cluster_ARM_Cortex-X1C
`ARMCortexX1CCT.AMU`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`ARMCortexX1CCT.AMU.mapper`	PVBusMapper
`ARMCortexX1CCT.DAP`	PVBusLogger
`ARMCortexX1CCT.DAP.mapper`	PVBusMapper
`ARMCortexX1CCT.DSU`	DSU
`ARMCortexX1CCT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexX1CCT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexX1CCT.DSU.shared_cache`	PVCache
`ARMCortexX1CCT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexX1CCT.MMAP`	PVBusLogger
`ARMCortexX1CCT.MMAP.mapper`	PVBusMapper
`ARMCortexX1CCT.RAS`	PVBusLogger
`ARMCortexX1CCT.RAS.mapper`	PVBusMapper
`ARMCortexX1CCT.cpu0`	ARM_Cortex-X1C
`ARMCortexX1CCT.cpu0.UTLB`	TLB
`ARMCortexX1CCT.cpu0.debug_rom`	debug_rom
`ARMCortexX1CCT.cpu0.dtlb`	TLB
`ARMCortexX1CCT.cpu0.l1dcache`	PVCache
`ARMCortexX1CCT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexX1CCT.cpu0.l1icache`	PVCache
`ARMCortexX1CCT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexX1CCT.cpu0.l2cache`	PVCache
`ARMCortexX1CCT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexX1CCT.ext_bus`	PVBusLogger
`ARMCortexX1CCT.ext_bus.mapper`	PVBusMapper
`ARMCortexX1CCT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMCortexX1CCT.global_debug_rom`	debug_rom
`ARMCortexX1CCT.secondary_debug_rom`	debug_rom

This model has the following MTI trace components:

Name	Component type
`ARMCortexX1CCT.AMU`	PVBusLogger
`ARMCortexX1CCT.AMU.mapper`	PVBusMapper
`ARMCortexX1CCT.DAP`	PVBusLogger
`ARMCortexX1CCT.DAP.mapper`	PVBusMapper
`ARMCortexX1CCT.DSU`	DSU
`ARMCortexX1CCT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexX1CCT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexX1CCT.DSU.shared_cache`	PVCache
`ARMCortexX1CCT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexX1CCT.MMAP`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexX1CCT.MMAP.mapper	PVBusMapper
ARMCortexX1CCT.RAS	PVBusLogger
ARMCortexX1CCT.RAS.mapper	PVBusMapper
ARMCortexX1CCT.cpu0	ARM_Cortex-X1C
ARMCortexX1CCT.cpu0.UTLB	TLB
ARMCortexX1CCT.cpu0.l1dcache	PVCache
ARMCortexX1CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l1icache	PVCache
ARMCortexX1CCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l2cache	PVCache
ARMCortexX1CCT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX1CCT.ext_bus	PVBusLogger
ARMCortexX1CCT.ext_bus.mapper	PVBusMapper
ARMCortexX1CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX1CCT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`spniden`	slave	Signal	External debug interface.
`sporeset`	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX1CCT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-prefetch_enabled`

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.99 ARMCortexX1CT

Defined in `LISA/ARMCortexX1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexX1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexX1CT

This model has the following Iris instances:

Name	Instance type
ARMCortexX1CT	Cluster_ARM_Cortex-X1
ARMCortexX1CT.AMU	PVBusLogger
ARMCortexX1CT.AMU.mapper	PVBusMapper
ARMCortexX1CT.DAP	PVBusLogger
ARMCortexX1CT.DAP.mapper	PVBusMapper
ARMCortexX1CT.DSU	DSU
ARMCortexX1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CT.DSU.shared_cache	PVCache
ARMCortexX1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexX1CT.MMAP	PVBusLogger
ARMCortexX1CT.MMAP.mapper	PVBusMapper
ARMCortexX1CT.RAS	PVBusLogger
ARMCortexX1CT.RAS.mapper	PVBusMapper
ARMCortexX1CT.cpu0	ARM_Cortex-X1
ARMCortexX1CT.cpu0.UTLB	TLB
ARMCortexX1CT.cpu0.debug_rom	debug_rom
ARMCortexX1CT.cpu0.dtlb	TLB
ARMCortexX1CT.cpu0.l1dcache	PVCache
ARMCortexX1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l1icache	PVCache
ARMCortexX1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l2cache	PVCache
ARMCortexX1CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX1CT.ext_bus	PVBusLogger
ARMCortexX1CT.ext_bus.mapper	PVBusMapper
ARMCortexX1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX1CT.global_debug_rom	debug_rom
ARMCortexX1CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexX1CT.AMU	PVBusLogger
ARMCortexX1CT.AMU.mapper	PVBusMapper
ARMCortexX1CT.DAP	PVBusLogger
ARMCortexX1CT.DAP.mapper	PVBusMapper
ARMCortexX1CT.DSU	DSU

Non-Confidential

Name	Component type
ARMCortexX1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CT.DSU.shared_cache	PVCache
ARMCortexX1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexX1CT.MMAP	PVBusLogger
ARMCortexX1CT.MMAP.mapper	PVBusMapper
ARMCortexX1CT.RAS	PVBusLogger
ARMCortexX1CT.RAS.mapper	PVBusMapper
ARMCortexX1CT.cpu0	ARM_Cortex-X1
ARMCortexX1CT.cpu0.UTLB	TLB
ARMCortexX1CT.cpu0.l1dcache	PVCache
ARMCortexX1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l1icache	PVCache
ARMCortexX1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l2cache	PVCache
ARMCortexX1CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX1CT.ext_bus	PVBusLogger
ARMCortexX1CT.ext_bus.mapper	PVBusMapper
ARMCortexX1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX1CT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.100 ARMCortexX2CT

Defined in `LISA/ARMCortexX2CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were removed:

- `pchannel_treat_simreset_as_poreset`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexX2CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

Support for the following features is planned for a future release:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.

The following features will not be implemented:

- 256-bit wide output transactions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- Error correction/detection features.
- Self-test features (MBIST).
- Snoop filtering.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexX2CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexX2CT`	Cluster_ARM_Cortex-X2
`ARMCortexX2CT.AMU`	PVBusLogger
`ARMCortexX2CT.AMU.mapper`	PVBusMapper
`ARMCortexX2CT.DAP`	PVBusLogger
`ARMCortexX2CT.DAP.mapper`	PVBusMapper
`ARMCortexX2CT.DSU`	DSU-110
`ARMCortexX2CT.DSU.PPU_cluster`	PPUv1
`ARMCortexX2CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexX2CT.DSU.PPU_core0`	PPUv1
`ARMCortexX2CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexX2CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexX2CT.DSU.shared_cache`	PVCache
`ARMCortexX2CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexX2CT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexX2CT.MMAP`	PVBusLogger
`ARMCortexX2CT.MMAP.mapper`	PVBusMapper
`ARMCortexX2CT.RAS`	PVBusLogger
`ARMCortexX2CT.RAS.mapper`	PVBusMapper
`ARMCortexX2CT.cpu0`	ARM_Cortex-X2
`ARMCortexX2CT.cpu0.UTLB`	TLB
`ARMCortexX2CT.cpu0.debug_rom`	debug_rom
`ARMCortexX2CT.cpu0.dtlb`	TLB
`ARMCortexX2CT.cpu0.l1dcache`	PVCache
`ARMCortexX2CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexX2CT.cpu0.l1icache`	PVCache
`ARMCortexX2CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexX2CT.cpu0.l2cache`	PVCache
`ARMCortexX2CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexX2CT.ext_bus`	PVBusLogger
`ARMCortexX2CT.ext_bus.mapper`	PVBusMapper

Non-Confidential

Name	Instance type
ARMCortexX2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX2CT.global_debug_rom	debug_rom
ARMCortexX2CT.secondary_debug_rom	debug_rom
ARMCortexX2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX2CT.AMU	PVBusLogger
ARMCortexX2CT.AMU.mapper	PVBusMapper
ARMCortexX2CT.DAP	PVBusLogger
ARMCortexX2CT.DAP.mapper	PVBusMapper
ARMCortexX2CT.DSU	DSU-110
ARMCortexX2CT.DSU.PPU_cluster	PPUv1
ARMCortexX2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX2CT.DSU.PPU_core0	PPUv1
ARMCortexX2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX2CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX2CT.DSU.shared_cache	PVCache
ARMCortexX2CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexX2CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX2CT.MMAP	PVBusLogger
ARMCortexX2CT.MMAP.mapper	PVBusMapper
ARMCortexX2CT.RAS	PVBusLogger
ARMCortexX2CT.RAS.mapper	PVBusMapper
ARMCortexX2CT.cpu0	ARM_Cortex-X2
ARMCortexX2CT.cpu0.UTLB	TLB
ARMCortexX2CT.cpu0.l1dcache	PVCache
ARMCortexX2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l1icache	PVCache
ARMCortexX2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache	PVCache
ARMCortexX2CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX2CT.ext_bus	PVBusLogger
ARMCortexX2CT.ext_bus.mapper	PVBusMapper
ARMCortexX2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX2CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.

Port	Direction	Protocol	Description
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX2CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

cpuX.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

`dcache-read_access_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-read_latency`

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

`ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

`icache-read_access_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.101 ARMCortexX3CT

Defined in `LISA/ARMCortexX3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexX3CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

Note

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

Iris and MTI instances for ARMCortexX3CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexX3CT`	Cluster_ARM_Cortex-X3
`ARMCortexX3CT.AMU`	PVBusLogger
`ARMCortexX3CT.AMU.mapper`	PVBusMapper
`ARMCortexX3CT.DAP`	PVBusLogger
`ARMCortexX3CT.DAP.mapper`	PVBusMapper
`ARMCortexX3CT.DSU`	DSU-110
`ARMCortexX3CT.DSU.PPU_cluster`	PPUv1
`ARMCortexX3CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexX3CT.DSU.PPU_core0`	PPUv1
`ARMCortexX3CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexX3CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexX3CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexX3CT.DSU.shared_cache`	PVCache
`ARMCortexX3CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMCortexX3CT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexX3CT.MMAP`	PVBusLogger
`ARMCortexX3CT.MMAP.mapper`	PVBusMapper
`ARMCortexX3CT.RAS`	PVBusLogger
`ARMCortexX3CT.RAS.mapper`	PVBusMapper
`ARMCortexX3CT.cpu0`	ARM_Cortex-X3
`ARMCortexX3CT.cpu0.UTLB`	TLB
`ARMCortexX3CT.cpu0.debug_rom`	debug_rom
`ARMCortexX3CT.cpu0.dtlb`	TLB
`ARMCortexX3CT.cpu0.l1dcache`	PVCache
`ARMCortexX3CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexX3CT.cpu0.l1icache`	PVCache
`ARMCortexX3CT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexX3CT.cpu0.l2cache`	PVCache
`ARMCortexX3CT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexX3CT.ext_bus`	PVBusLogger
`ARMCortexX3CT.ext_bus.mapper`	PVBusMapper

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexX3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX3CT.global_debug_rom	debug_rom
ARMCortexX3CT.secondary_debug_rom	debug_rom
ARMCortexX3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX3CT.AMU	PVBusLogger
ARMCortexX3CT.AMU.mapper	PVBusMapper
ARMCortexX3CT.DAP	PVBusLogger
ARMCortexX3CT.DAP.mapper	PVBusMapper
ARMCortexX3CT.DSU	DSU-110
ARMCortexX3CT.DSU.PPU_cluster	PPUv1
ARMCortexX3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX3CT.DSU.PPU_core0	PPUv1
ARMCortexX3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX3CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX3CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX3CT.DSU.shared_cache	PVCache
ARMCortexX3CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexX3CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX3CT.MMAP	PVBusLogger
ARMCortexX3CT.MMAP.mapper	PVBusMapper
ARMCortexX3CT.RAS	PVBusLogger
ARMCortexX3CT.RAS.mapper	PVBusMapper
ARMCortexX3CT.cpu0	ARM_Cortex-X3
ARMCortexX3CT.cpu0.UTLB	TLB
ARMCortexX3CT.cpu0.l1dcache	PVCache
ARMCortexX3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l1icache	PVCache
ARMCortexX3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache	PVCache
ARMCortexX3CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX3CT.ext_bus	PVBusLogger
ARMCortexX3CT.ext_bus.mapper	PVBusMapper
ARMCortexX3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.

Port	Direction	Protocol	Description
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX3CT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-miss_latency`

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`error_record_feature_register`

RAS feature register values. An array of JSON objects. The JSON schema for the array is: [{"ED":0x0, "IMPDEF_3_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other_feature_register_values]. Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

Type: `string`

Default value:
“[{"ED":0x2,"IMPDEF_3_2":0x0,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,
"Visibility":"Cluster"},
{"ED":0x2,"IMPDEF_3_2":0x0,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,"I

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 32

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ext_abort_normal_noncacheable_read_is_sync

Synchronous reporting of normal noncacheable-read external aborts.

Type: `bool`

Default value: true

ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 3

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`pmu-num_counters`

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

`pseudo_fault_generation_feature_register`

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":`0x0`, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other_psuedo-fault_generating_features_register_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT_SUPPORTED) and true(FEATURE_CONTROLLABLE), where CE can have 0(NOT_SUPPORTED), 1(NONSPECIFIC_CE_SUPPORTED) and 3(TRANSIENT_OR_PERSISTENT_CE_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has_ras_fault_injection is true.

Type: `string`

Default value: “[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":`0x1`, "CE":`0x1`,"CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true},{"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":`0x1`, "CE":`0x1`,"CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]”

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

trace_physical_registers_when_host_virtualisation_enabled

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR_EL1 as ELR/SPSR_EL2, 2=Trace all redirected registers as physical registers.

Type: `uint8_t`

Default value: 1

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

3.102 ARMCortexX4CT

Defined in `LISA/ARMCortexX4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexX4CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

Note

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

Iris and MTI instances for ARMCortexX4CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexX4CT`	Cluster_ARM_Cortex-X4
`ARMCortexX4CT.AMU`	PVBusLogger
`ARMCortexX4CT.AMU.mapper`	PVBusMapper
`ARMCortexX4CT.DAP`	PVBusLogger
`ARMCortexX4CT.DAP.mapper`	PVBusMapper
`ARMCortexX4CT.DSU`	DSU-120

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexX4CT.DSU.PPU_cluster	PPUv1
ARMCortexX4CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX4CT.DSU.PPU_core0	PPUv1
ARMCortexX4CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX4CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX4CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX4CT.DSU.shared_cache	PVCache
ARMCortexX4CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexX4CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX4CT.MMAP	PVBusLogger
ARMCortexX4CT.MMAP.mapper	PVBusMapper
ARMCortexX4CT.RAS	PVBusLogger
ARMCortexX4CT.RAS.mapper	PVBusMapper
ARMCortexX4CT.cpu0	ARM_Cortex-X4
ARMCortexX4CT.cpu0.UTLB	TLB
ARMCortexX4CT.cpu0.debug_rom	debug_rom
ARMCortexX4CT.cpu0.dtlb	TLB
ARMCortexX4CT.cpu0.l1dcache	PVCache
ARMCortexX4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l1icache	PVCache
ARMCortexX4CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l2cache	PVCache
ARMCortexX4CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX4CT.ext_bus	PVBusLogger
ARMCortexX4CT.ext_bus.mapper	PVBusMapper
ARMCortexX4CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX4CT.global_debug_rom	debug_rom
ARMCortexX4CT.secondary_debug_rom	debug_rom
ARMCortexX4CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX4CT.AMU	PVBusLogger
ARMCortexX4CT.AMU.mapper	PVBusMapper
ARMCortexX4CT.DAP	PVBusLogger
ARMCortexX4CT.DAP.mapper	PVBusMapper
ARMCortexX4CT.DSU	DSU-120
ARMCortexX4CT.DSU.PPU_cluster	PPUv1
ARMCortexX4CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX4CT.DSU.PPU_core0	PPUv1

Non-Confidential

Name	Component type
ARMCortexX4CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX4CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX4CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX4CT.DSU.shared_cache	PVCache
ARMCortexX4CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexX4CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX4CT.MMAP	PVBusLogger
ARMCortexX4CT.MMAP.mapper	PVBusMapper
ARMCortexX4CT.RAS	PVBusLogger
ARMCortexX4CT.RAS.mapper	PVBusMapper
ARMCortexX4CT.cpu0	ARM_Cortex-X4
ARMCortexX4CT.cpu0.UTLB	TLB
ARMCortexX4CT.cpu0.l1dcache	PVCache
ARMCortexX4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l1icache	PVCache
ARMCortexX4CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l2cache	PVCache
ARMCortexX4CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX4CT.ext_bus	PVBusLogger
ARMCortexX4CT.ext_bus.mapper	PVBusMapper
ARMCortexX4CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX4CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX4CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`ecv_support_level`

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: false

has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 16

log2_trace_buffer_alignment

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: `uint8_t`

Default value: 6

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpam_has_altsp

MPAM Whether MPAMIDR_EL1.HAS_ALTSP bit is set or clear.

Type: `bool`

Default value: false

mpamidr_has_force_ns

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

mpamidr_has_sdeflt

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_acp`

Number of ACP ports.

Type: `uint8_t`

Default value: 0

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`pmu-num_counters`

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`stage12_tlb_size`

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tcr_txsz_undersize_should_fault`

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.103 ARMCortexX925CT

Defined in `LISA/ARMCortexX925CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
Preliminary support	Full support

About ARMCortexX925CT

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-X925 cores.

The number of cores in the cluster is configurable using the following parameter:

`NUM_CORES`
: Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexX925CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexX925CT`	Cluster_ARM_Cortex-X925
`ARMCortexX925CT.AMU`	PVBusLogger
`ARMCortexX925CT.AMU.mapper`	PVBusMapper
`ARMCortexX925CT.DAP`	PVBusLogger
`ARMCortexX925CT.DAP.mapper`	PVBusMapper
`ARMCortexX925CT.DSU`	DSU-120
`ARMCortexX925CT.DSU.PPU_cluster`	PPUv1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX925CT.DSU.PPU_core0	PPUv1
ARMCortexX925CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX925CT.DSU.shared_cache	PVCache
ARMCortexX925CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX925CT.MMAP	PVBusLogger
ARMCortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexX925CT.RAS	PVBusLogger
ARMCortexX925CT.RAS.mapper	PVBusMapper
ARMCortexX925CT.cpu0	ARM_Cortex-X925
ARMCortexX925CT.cpu0.UTLB	TLB
ARMCortexX925CT.cpu0.debug_rom	debug_rom
ARMCortexX925CT.cpu0.dtlb	TLB
ARMCortexX925CT.cpu0.l1dcache	PVCache
ARMCortexX925CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l1icache	PVCache
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX925CT.global_debug_rom	debug_rom
ARMCortexX925CT.secondary_debug_rom	debug_rom
ARMCortexX925CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX925CT.AMU	PVBusLogger
ARMCortexX925CT.AMU.mapper	PVBusMapper
ARMCortexX925CT.DAP	PVBusLogger
ARMCortexX925CT.DAP.mapper	PVBusMapper
ARMCortexX925CT.DSU	DSU-120
ARMCortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX925CT.DSU.PPU_core0	PPUv1

ARMCortexX925CT.cpu0.l1icache	PVCache
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexX925CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

ecv_support_level

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`ext_abort_so_write_ras_type`

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

`force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_mt_pmu_disable_feature

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT_MTPMU). 0: FEAT_MTPMU is disabled, 1: FEAT_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT_MTPMU is cherry-picked, `0xF`: The feature is disabled and is represented by value `0xF` in ID_AA64DFR0_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`has_v8_7_spe_previous_branch_target`

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

`icache-read_access_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`log2_trace_buffer_alignment`

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: `uint8_t`

Default value: 6

`memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

`mpam_has_altsp`

MPAM Whether MPAMIDR_EL1.HAS_ALTSP bit is set or clear.

Type: `bool`

Default value: false

`mpamidr_has_force_ns`

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`mpamidr_has_sdeflt`

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_acp

Number of ACP ports.

Type: `uint8_t`

Default value: 0

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tcr_txsz_undersize_should_fault

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Non-Confidential

3.104 ARMNeoverseE1CT

Defined in `LISA/ARMNeoverseE1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMNeoverseE1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but DBGPWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseE1CT

This model has the following Iris instances:

Name	Instance type
`ARMNeoverseE1CT`	Cluster_ARM_Neoverse-E1
`ARMNeoverseE1CT.AMU`	PVBusLogger
`ARMNeoverseE1CT.AMU.mapper`	PVBusMapper
`ARMNeoverseE1CT.DAP`	PVBusLogger
`ARMNeoverseE1CT.DAP.mapper`	PVBusMapper
`ARMNeoverseE1CT.DSU`	DSU
`ARMNeoverseE1CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMNeoverseE1CT.DSU.mpam_busslave`	PVBusSlave
`ARMNeoverseE1CT.DSU.shared_cache`	PVCache
`ARMNeoverseE1CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMNeoverseE1CT.MMAP`	PVBusLogger
`ARMNeoverseE1CT.MMAP.mapper`	PVBusMapper
`ARMNeoverseE1CT.RAS`	PVBusLogger
`ARMNeoverseE1CT.RAS.mapper`	PVBusMapper
`ARMNeoverseE1CT.cpu0.dtlb`	TLB
`ARMNeoverseE1CT.cpu0.threadZ` (where *Z* = 0–1)	ARM_Neoverse-E1
`ARMNeoverseE1CT.cpu0.threadZ.UTLB` (where *Z* = 0–1)	TLB
`ARMNeoverseE1CT.cpu0.thread0.l1dcache`	PVCache
`ARMNeoverseE1CT.cpu0.thread0.l1dcache.upstream[0]`	PVBusSlave
`ARMNeoverseE1CT.cpu0.thread0.l1icache`	PVCache
`ARMNeoverseE1CT.cpu0.thread0.l1icache.upstream[0]`	PVBusSlave
`ARMNeoverseE1CT.cpu0.thread0.l2cache`	PVCache
`ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[V]` (where *V* = 0–1)	PVBusSlave
`ARMNeoverseE1CT.ext_bus`	PVBusLogger
`ARMNeoverseE1CT.ext_bus.mapper`	PVBusMapper
`ARMNeoverseE1CT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder
`ARMNeoverseE1CT.global_debug_rom`	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMNeoverseE1CT.AMU	PVBusLogger
ARMNeoverseE1CT.AMU.mapper	PVBusMapper
ARMNeoverseE1CT.DAP	PVBusLogger
ARMNeoverseE1CT.DAP.mapper	PVBusMapper
ARMNeoverseE1CT.DSU	DSU
ARMNeoverseE1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseE1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache	PVCache
ARMNeoverseE1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseE1CT.MMAP	PVBusLogger
ARMNeoverseE1CT.MMAP.mapper	PVBusMapper
ARMNeoverseE1CT.RAS	PVBusLogger
ARMNeoverseE1CT.RAS.mapper	PVBusMapper
ARMNeoverseE1CT.cpu0.threadZ (where *Z* = 0–1)	ARM_Neoverse-E1
ARMNeoverseE1CT.cpu0.threadZ.UTLB (where *Z* = 0–1)	TLB
ARMNeoverseE1CT.cpu0.thread0.l1dcache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l1icache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l2cache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[V] (where *V* = 0–1)	PVBusSlave
ARMNeoverseE1CT.ext_bus	PVBusLogger
ARMNeoverseE1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseE1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseE1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`clusterid`	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
`clusterpmuirq`	master	Signal	DynamIQ pmu irq
`CNTHPIRQ`	master	Signal	Timer signals to SOC.
`CNTHVIRQ`	master	Signal	Timer signals to SOC.
`CNTPNSIRQ`	master	Signal	Timer signals to SOC.
`CNTPSIRQ`	master	Signal	Timer signals to SOC.
`cntvalueb`	slave	CounterInterface	Interface to SoC level counter module.
`CNTVIRQ`	master	Signal	Timer signals to SOC.
`commirq`	master	Signal	Interrupt signal from debug communications channel.
`core_clk_in`	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
`cp15sdisable`	slave	Signal	This signal disables write access to some system control processor registers.
`cpuporeset`	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
`cryptodisable`	slave	Signal	Disable cryptography extensions after reset.
`cti`	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
`ctidbgirq`	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
`dbgen`	slave	Signal	External debug interface.
`dbgnopwrdwn`	master	Signal	These signals relate to core power down.
`dbgpwrupreq`	master	Signal	Debug power up request.
`dev_debug_s`	slave	PVBus	External debug interface.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPUs fast-interrupt handling.
`gicv3_redistributor_s`	slave	GICv3Comms	GICv3 AXI-stream port per thread.
`irq`	slave	Signal	This signal drives the CPUs interrupt handling.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`niden`	slave	Signal	External debug interface.
`pchannel_cluster`	slave	PChannel	PChannel for cluster.
`pchannel_core`	slave	PChannel	PChannels for cores

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`pmuirq`	master	Signal	Interrupt signal from performance monitoring unit.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Raising this signal will put the core into reset mode.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core virtual System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`spniden`	slave	Signal	External debug interface.
`sporeset`	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`vinithi`	slave	Signal	This signal controls of the location of the exception vectors at reset.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseE1CT

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.enable_single_thread_at_reset`

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.thread0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

cpuX.thread0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread0.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.thread1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: false

cpuX.thread1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.thread1.MPIDR-override

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.thread1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.thread1.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cluster_patch_level

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: `uint8_t`

Default value: 0

cluster_revision_number

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: `uint8_t`

Default value: 0

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-size`

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`dcache-snoop_data_transfer_latency`

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tlb_latency`
TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`
If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`walk_cache_latency`
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.105 ARMNeoverseN1CT

Defined in `LISA/ARMNeoverseN1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r4p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMNeoverseN1CT
The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGPWRDUP and DBGRSTREQ are not implemented, but DBGPWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseN1CT

This model has the following Iris instances:

Name	Instance type
ARMNeoverseN1CT	Cluster_ARM_Neoverse-N1
ARMNeoverseN1CT.AMU	PVBusLogger
ARMNeoverseN1CT.AMU.mapper	PVBusMapper
ARMNeoverseN1CT.DAP	PVBusLogger
ARMNeoverseN1CT.DAP.mapper	PVBusMapper
ARMNeoverseN1CT.DSU	DSU
ARMNeoverseN1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseN1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache	PVCache
ARMNeoverseN1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseN1CT.MMAP	PVBusLogger
ARMNeoverseN1CT.MMAP.mapper	PVBusMapper
ARMNeoverseN1CT.RAS	PVBusLogger
ARMNeoverseN1CT.RAS.mapper	PVBusMapper
ARMNeoverseN1CT.cpu0	ARM_Neoverse-N1
ARMNeoverseN1CT.cpu0.UTLB	TLB
ARMNeoverseN1CT.cpu0.debug_rom	debug_rom

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMNeoverseN1CT.cpu0.dtlb	TLB
ARMNeoverseN1CT.cpu0.l1dcache	PVCache
ARMNeoverseN1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l1icache	PVCache
ARMNeoverseN1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache	PVCache
ARMNeoverseN1CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN1CT.ext_bus	PVBusLogger
ARMNeoverseN1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN1CT.global_debug_rom	debug_rom
ARMNeoverseN1CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMNeoverseN1CT.AMU	PVBusLogger
ARMNeoverseN1CT.AMU.mapper	PVBusMapper
ARMNeoverseN1CT.DAP	PVBusLogger
ARMNeoverseN1CT.DAP.mapper	PVBusMapper
ARMNeoverseN1CT.DSU	DSU
ARMNeoverseN1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseN1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache	PVCache
ARMNeoverseN1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseN1CT.MMAP	PVBusLogger
ARMNeoverseN1CT.MMAP.mapper	PVBusMapper
ARMNeoverseN1CT.RAS	PVBusLogger
ARMNeoverseN1CT.RAS.mapper	PVBusMapper
ARMNeoverseN1CT.cpu0	ARM_Neoverse-N1
ARMNeoverseN1CT.cpu0.UTLB	TLB
ARMNeoverseN1CT.cpu0.l1dcache	PVCache
ARMNeoverseN1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l1icache	PVCache
ARMNeoverseN1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache	PVCache
ARMNeoverseN1CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN1CT.ext_bus	PVBusLogger
ARMNeoverseN1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseN1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseN1CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

cpuX.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpuX.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

`CLUSTER_ID`

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

3.106 ARMNeoverseN2CT

Defined in `LISA/ARMNeoverseN2CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were removed:

- `pchannel_treat_simreset_as_poreset`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMNeoverseN2CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

Support for the following features is planned for a future release:

- DynamIQ Shared Unit-110 (DSU-110) system registers.
- `BROADCASTCACHEMAINTPOU` pin
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- DSU-110 cluster. The implementation relies on DynamIQ only.
- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.

The following features will not be implemented:

- 256-bit wide output transactions.
- Error correction/detection features.
- Self-test features (MBIST).
- Snoop filtering.
- Armv9 trace extensions.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseN2CT

This model has the following Iris instances:

Name	Instance type
`ARMNeoverseN2CT`	Cluster_ARM_Neoverse-N2
`ARMNeoverseN2CT.AMU`	PVBusLogger
`ARMNeoverseN2CT.AMU.mapper`	PVBusMapper
`ARMNeoverseN2CT.DAP`	PVBusLogger
`ARMNeoverseN2CT.DAP.mapper`	PVBusMapper
`ARMNeoverseN2CT.DSU`	DSU-110
`ARMNeoverseN2CT.DSU.PPU_cluster`	PPUv1
`ARMNeoverseN2CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMNeoverseN2CT.DSU.PPU_core0`	PPUv1
`ARMNeoverseN2CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMNeoverseN2CT.DSU.mpam_busslave`	PVBusSlave
`ARMNeoverseN2CT.DSU.shared_cache`	PVCache
`ARMNeoverseN2CT.DSU.shared_cache.upstream[Y]` (where Y = 0–3)	PVBusSlave
`ARMNeoverseN2CT.DSU.utility_slave[0]`	PVBusSlave
`ARMNeoverseN2CT.MMAP`	PVBusLogger
`ARMNeoverseN2CT.MMAP.mapper`	PVBusMapper
`ARMNeoverseN2CT.RAS`	PVBusLogger
`ARMNeoverseN2CT.RAS.mapper`	PVBusMapper
`ARMNeoverseN2CT.cpu0`	ARM_Neoverse-N2
`ARMNeoverseN2CT.cpu0.UTLB`	TLB
`ARMNeoverseN2CT.cpu0.debug_rom`	debug_rom
`ARMNeoverseN2CT.cpu0.dtlb`	TLB

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

Name	Instance type
ARMNeoverseN2CT.cpu0.l1dcache	PVCache
ARMNeoverseN2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l1icache	PVCache
ARMNeoverseN2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache	PVCache
ARMNeoverseN2CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN2CT.default_CTM	EmbeddedCT
ARMNeoverseN2CT.ext_bus	PVBusLogger
ARMNeoverseN2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN2CT.global_debug_rom	debug_rom
ARMNeoverseN2CT.secondary_debug_rom	debug_rom
ARMNeoverseN2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMNeoverseN2CT.AMU	PVBusLogger
ARMNeoverseN2CT.AMU.mapper	PVBusMapper
ARMNeoverseN2CT.DAP	PVBusLogger
ARMNeoverseN2CT.DAP.mapper	PVBusMapper
ARMNeoverseN2CT.DSU	DSU-110
ARMNeoverseN2CT.DSU.PPU_cluster	PPUv1
ARMNeoverseN2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseN2CT.DSU.PPU_core0	PPUv1
ARMNeoverseN2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseN2CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN2CT.DSU.shared_cache	PVCache
ARMNeoverseN2CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseN2CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseN2CT.MMAP	PVBusLogger
ARMNeoverseN2CT.MMAP.mapper	PVBusMapper
ARMNeoverseN2CT.RAS	PVBusLogger
ARMNeoverseN2CT.RAS.mapper	PVBusMapper
ARMNeoverseN2CT.cpu0	ARM_Neoverse-N2
ARMNeoverseN2CT.cpu0.UTLB	TLB
ARMNeoverseN2CT.cpu0.l1dcache	PVCache
ARMNeoverseN2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l1icache	PVCache
ARMNeoverseN2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMNeoverseN2CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN2CT.ext_bus	PVBusLogger
ARMNeoverseN2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseN2CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseN2CT

`cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpu0.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpu0.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpu0.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpu0.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpu0.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

ext_abort_so_read_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 0

ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

has_external_rndr

Implement external random number generator module. When enabling this with has_rndr enabled, the external random number generator will be used instead of internal random number generator.

Type: `uint8_t`

Default value: 1

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_rndr

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT_RNG).

Type: `uint8_t`

Default value: 1

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

mpam_max_partid

MPAM Maximum PARTID Supported.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 511

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

rndr_rndrrs_seed

Initial seed for random engine used in RNDR register.

Type: `uint64_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.107 ARMNeoverseN3CT

Defined in `LISA/ARMNeoverseN3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
Preliminary support	Full support

About ARMNeoverseN3CT

A DSU-120 DynamIQ cluster containing a single Neoverse-N3 core configured for Direct connect.

The following DSU/CPU features will not be implemented:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseN3CT

This model has the following Iris instances:

Name	Instance type
`ARMNeoverseN3CT`	Cluster_ARM_Neoverse-N3
`ARMNeoverseN3CT.AMU`	PVBusLogger
`ARMNeoverseN3CT.AMU.mapper`	PVBusMapper
`ARMNeoverseN3CT.DAP`	PVBusLogger
`ARMNeoverseN3CT.DAP.mapper`	PVBusMapper
`ARMNeoverseN3CT.DSU`	DSU-120
`ARMNeoverseN3CT.DSU.PPU_cluster`	PPUv1
`ARMNeoverseN3CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMNeoverseN3CT.DSU.PPU_core0`	PPUv1
`ARMNeoverseN3CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMNeoverseN3CT.DSU.mpam_busslave`	PVBusSlave
`ARMNeoverseN3CT.DSU.shared_cache`	PVCache
`ARMNeoverseN3CT.DSU.shared_cache.upstream[Y]` (where Y = 0–4)	PVBusSlave
`ARMNeoverseN3CT.DSU.utility_slave[0]`	PVBusSlave
`ARMNeoverseN3CT.MMAP`	PVBusLogger
`ARMNeoverseN3CT.MMAP.mapper`	PVBusMapper
`ARMNeoverseN3CT.RAS`	PVBusLogger
`ARMNeoverseN3CT.RAS.mapper`	PVBusMapper
`ARMNeoverseN3CT.cpu0`	ARM_Neoverse-N3
`ARMNeoverseN3CT.cpu0.UTLB`	TLB
`ARMNeoverseN3CT.cpu0.debug_rom`	debug_rom
`ARMNeoverseN3CT.cpu0.dtlb`	TLB
`ARMNeoverseN3CT.cpu0.l1dcache`	PVCache
`ARMNeoverseN3CT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMNeoverseN3CT.cpu0.l1icache`	PVCache

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMNeoverseN3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l2cache	PVCache
ARMNeoverseN3CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN3CT.default_CTM	EmbeddedCT
ARMNeoverseN3CT.ext_bus	PVBusLogger
ARMNeoverseN3CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN3CT.global_debug_rom	debug_rom
ARMNeoverseN3CT.secondary_debug_rom	debug_rom
ARMNeoverseN3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMNeoverseN3CT.AMU	PVBusLogger
ARMNeoverseN3CT.AMU.mapper	PVBusMapper
ARMNeoverseN3CT.DAP	PVBusLogger
ARMNeoverseN3CT.DAP.mapper	PVBusMapper
ARMNeoverseN3CT.DSU	DSU-120
ARMNeoverseN3CT.DSU.PPU_cluster	PPUv1
ARMNeoverseN3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.PPU_core0	PPUv1
ARMNeoverseN3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache	PVCache
ARMNeoverseN3CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMNeoverseN3CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseN3CT.MMAP	PVBusLogger
ARMNeoverseN3CT.MMAP.mapper	PVBusMapper
ARMNeoverseN3CT.RAS	PVBusLogger
ARMNeoverseN3CT.RAS.mapper	PVBusMapper
ARMNeoverseN3CT.cpu0	ARM_Neoverse-N3
ARMNeoverseN3CT.cpu0.UTLB	TLB
ARMNeoverseN3CT.cpu0.l1dcache	PVCache
ARMNeoverseN3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l1icache	PVCache
ARMNeoverseN3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l2cache	PVCache
ARMNeoverseN3CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseN3CT.ext_bus	PVBusLogger
ARMNeoverseN3CT.ext_bus.mapper	PVBusMapper

ARMNeoverseN3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseN3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseN3CT

`cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpu0.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpu0.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpu0.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`cpu0.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpu0.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x4`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`bus_type`

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`ete.ETE_REVISION`

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVISION`

TRCPIDR REVISION value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 1

ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

`has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

`has_large_va`

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`has_rndr_trap`

Implement trapping for RNDR and RNDRSS random number registers from ARMv8.8. (FEAT_RNG_TRAP)values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.8 is enabled.- 2, feature is implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 2

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`instruction_tlb_size`

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.108 ARMNeoverseV1CT

Defined in `LISA/ARMNeoverseV1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMNeoverseV1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- Per-core clock.
- BROADCASTPERSIST pin.

Support for the following features is planned for a future release:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.
- A common cache that is shared by all threads of the core. Currently, each thread has its own L1 cache and L2 cache.
- Per-thread parameters, although signals are implemented.

The following features will not be implemented:

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- Latency configuration.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseV1CT

This model has the following Iris instances:

Name	Instance type
ARMNeoverseV1CT	Cluster_ARM_Neoverse-V1
ARMNeoverseV1CT.AMU	PVBusLogger
ARMNeoverseV1CT.AMU.mapper	PVBusMapper
ARMNeoverseV1CT.DAP	PVBusLogger
ARMNeoverseV1CT.DAP.mapper	PVBusMapper
ARMNeoverseV1CT.DSU	DSU
ARMNeoverseV1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache	PVCache
ARMNeoverseV1CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMNeoverseV1CT.MMAP	PVBusLogger
ARMNeoverseV1CT.MMAP.mapper	PVBusMapper

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMNeoverseV1CT.RAS	PVBusLogger
ARMNeoverseV1CT.RAS.mapper	PVBusMapper
ARMNeoverseV1CT.cpu0	ARM_Neoverse-V1
ARMNeoverseV1CT.cpu0.UTLB	TLB
ARMNeoverseV1CT.cpu0.debug_rom	debug_rom
ARMNeoverseV1CT.cpu0.dtlb	TLB
ARMNeoverseV1CT.cpu0.l1dcache	PVCache
ARMNeoverseV1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l1icache	PVCache
ARMNeoverseV1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l2cache	PVCache
ARMNeoverseV1CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV1CT.ext_bus	PVBusLogger
ARMNeoverseV1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV1CT.global_debug_rom	debug_rom
ARMNeoverseV1CT.secondary_debug_rom	debug_rom
ARMNeoverseV1CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMNeoverseV1CT.AMU	PVBusLogger
ARMNeoverseV1CT.AMU.mapper	PVBusMapper
ARMNeoverseV1CT.DAP	PVBusLogger
ARMNeoverseV1CT.DAP.mapper	PVBusMapper
ARMNeoverseV1CT.DSU	DSU
ARMNeoverseV1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache	PVCache
ARMNeoverseV1CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseV1CT.MMAP	PVBusLogger
ARMNeoverseV1CT.MMAP.mapper	PVBusMapper
ARMNeoverseV1CT.RAS	PVBusLogger
ARMNeoverseV1CT.RAS.mapper	PVBusMapper
ARMNeoverseV1CT.cpu0	ARM_Neoverse-V1
ARMNeoverseV1CT.cpu0.UTLB	TLB
ARMNeoverseV1CT.cpu0.l1dcache	PVCache
ARMNeoverseV1CT.cpu0.l1dcache.upstream[0]	PVBusSlave

Ports for ARMNeoverseV1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseV1CT

cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpuX.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpuX.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`cpuX.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

cpuX.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

enhanced_pac2_level

Implements Enhanced PAC2 from ARMv8.6 (FEAT_PAuth2), and PAC enhancements from ARMv9.5 (FEAT_PAuth_LR). options 0-3 of this feature are mandatory for ARMv8.6 but can be cherrypicked to a ARMv8.3(or greater) implementation. FEAT_FPACCOMBINE is mandatory in the presence of Future Architecture Technologies (FAT). 0: No EnhancedPAC2, 1: EnhancedPAC2 Only (FEAT_PAuth2), 2: EnhancedPAC2 with FPAC (FEAT_FPAC), 3: EnhancedPAC2 with FPACCombined (FEAT_FPACCOMBINE), 4: EnhancedPAC2 with LR signing (FEAT_PAuth_LR).

Type: `uint8_t`

Default value: 1

ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`has_external_rndr`

Implement external random number generator module. When enabling this with has_rndr enabled, the external random number generator will be used instead of internal random number generator.

Type: `uint8_t`

Default value: 1

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`has_rndr`

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT_RNG).

Type: `uint8_t`

Default value: 1

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

3.109 ARMNeoverseV2CT

Defined in `LISA/ARMNeoverseV2CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMNeoverseV2CT

The model supports the following features:

- DynamIQ r3p0.
- DynamIQâ¢ Shared Unit-110 (DSU-110) system registers.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- PChannel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- L3Cache partition.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.
- `BROADCASTCACHEMAINTPOU` pin.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.
- Core-Complex.
- Each thread currently has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- Error correction or detection features.
- Self-test features (MBIST).
- Snoop filtering.
- Latency configuration
- Cache stashing capability
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseV2CT

This model has the following Iris instances:

Name	Instance type
`ARMNeoverseV2CT`	Cluster_ARM_Neoverse-V2
`ARMNeoverseV2CT.AMU`	PVBusLogger
`ARMNeoverseV2CT.AMU.mapper`	PVBusMapper
`ARMNeoverseV2CT.DAP`	PVBusLogger
`ARMNeoverseV2CT.DAP.mapper`	PVBusMapper
`ARMNeoverseV2CT.DSU`	DSU-110
`ARMNeoverseV2CT.DSU.PPU_cluster`	PPUv1
`ARMNeoverseV2CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMNeoverseV2CT.DSU.PPU_core0`	PPUv1
`ARMNeoverseV2CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMNeoverseV2CT.DSU.mpam_busslave`	PVBusSlave
`ARMNeoverseV2CT.DSU.shared_cache`	PVCache
`ARMNeoverseV2CT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–3)	PVBusSlave
`ARMNeoverseV2CT.DSU.utility_slave[0]`	PVBusSlave

ARMNeoverseV2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache	PVCache
ARMNeoverseV2CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV2CT.default_CTM	EmbeddedCT
ARMNeoverseV2CT.ext_bus	PVBusLogger
ARMNeoverseV2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV2CT.global_debug_rom	debug_rom
ARMNeoverseV2CT.secondary_debug_rom	debug_rom
ARMNeoverseV2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMNeoverseV2CT.AMU	PVBusLogger
ARMNeoverseV2CT.AMU.mapper	PVBusMapper
ARMNeoverseV2CT.DAP	PVBusLogger
ARMNeoverseV2CT.DAP.mapper	PVBusMapper
ARMNeoverseV2CT.DSU	DSU-110
ARMNeoverseV2CT.DSU.PPU_cluster	PPUv1
ARMNeoverseV2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseV2CT.DSU.PPU_core0	PPUv1
ARMNeoverseV2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV2CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV2CT.DSU.shared_cache	PVCache
ARMNeoverseV2CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMNeoverseV2CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV2CT.MMAP	PVBusLogger
ARMNeoverseV2CT.MMAP.mapper	PVBusMapper
ARMNeoverseV2CT.RAS	PVBusLogger

Non-Confidential

Name	Component type
ARMNeoverseV2CT.RAS.mapper	PVBusMapper
ARMNeoverseV2CT.cpu0	ARM_Neoverse-V2
ARMNeoverseV2CT.cpu0.UTLB	TLB
ARMNeoverseV2CT.cpu0.l1dcache	PVCache
ARMNeoverseV2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l1icache	PVCache
ARMNeoverseV2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache	PVCache
ARMNeoverseV2CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV2CT.ext_bus	PVBusLogger
ARMNeoverseV2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseV2CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`dev_debug_s`	slave	PVBus	External debug interface.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
`fiq`	slave	Signal	This signal drives the CPUs fast-interrupt handling.
`gicreset`	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
`gicv3_redistributor_s`	slave	GICv3Comms	GICv3 AXI-stream port.
`irq`	slave	Signal	This signal drives the CPUs interrupt handling.
`memorymapped_debug_s`	slave	PVBus	External debug interface.
`pmbirq`	master	Signal	Interrupt signal from the statistical profiling unit.
`pmuirq`	master	Signal	Interrupt signal from performance monitoring unit.
`ppu_cluster_irq`	master	Signal	PPU cluster interrupt.
`ppu_cluster_isolate`	master	Signal	PPU Cluster Domain isolation control.
`ppu_cluster_wakerequest`	slave	Signal	PPU cluster wake request signal.
`ppu_core_irq`	master	Signal	PPU core interrupt.
`ppu_core_isolate`	master	Signal	PPU Core Domain isolation control.
`ppu_core_wakerequest`	slave	Signal	PPU Core wake request signals.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Reset signal to cluster.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseV2CT

cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`cpu0.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

`ASTART0_DEFAULT`

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 32

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.PIDR_REVISION
TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE
Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL
Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Default value: 3

ete.REVISION
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

ete.SIM_OVERFLOW_GRANULARITY
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE
Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ext_abort_normal_noncacheable_read_is_sync

Synchronous reporting of normal noncacheable-read external aborts.

Type: `bool`

Default value: true

ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

`has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

`has_external_rndr`

Implement external random number generator module. When enabling this with has_rndr enabled, the external random number generator will be used instead of internal random number generator.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`has_large_va`

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`has_rndr`

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT_RNG).

Type: `uint8_t`

Default value: 1

`icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpam_max_partid

MPAM Maximum PARTID Supported.

Type: `uint16_t`

Default value: 511

mpam_max_vpmr

MPAM Maximum VPMR Supported.

Type: `uint8_t`

Default value: 7

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

rndr_rndrrs_seed

Initial seed for random engine used in RNDR register.

Type: `uint64_t`

Default value: `0x0`

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

trace_physical_registers_when_host_virtualisation_enabled

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR_EL1 as ELR/SPSR_EL2, 2=Trace all redirected registers as physical registers.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.110 ARMNeoverseV3AECT

Defined in `LISA/ARMNeoverseV3AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `brbe_disable_recording`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMNeoverseV3AECT

A DSU-120 DynamIQ cluster containing a single Neoverse-V3AE core configured for Direct connect.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

The core supports the following optional features:

- Realm Management Extension
- Coherent instruction cache

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

  As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, cpu0 and cpu1 identify the available cores and associated ports, not cpu0 and cpu2.
- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMNeoverseV3AECT

This model has the following Iris instances:

Name	Instance type
`ARMNeoverseV3AECT`	Cluster_ARM_Neoverse-V3AE
`ARMNeoverseV3AECT.AMU`	PVBusLogger
`ARMNeoverseV3AECT.AMU.mapper`	PVBusMapper
`ARMNeoverseV3AECT.DAP`	PVBusLogger
`ARMNeoverseV3AECT.DAP.mapper`	PVBusMapper
`ARMNeoverseV3AECT.DSU`	DSU-120
`ARMNeoverseV3AECT.DSU.PPU_cluster`	PPUv1
`ARMNeoverseV3AECT.DSU.PPU_cluster.busslave`	PVBusSlave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMNeoverseV3AECT.DSU.PPU_core0	PPUv1
ARMNeoverseV3AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV3AECT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV3AECT.DSU.shared_cache	PVCache
ARMNeoverseV3AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMNeoverseV3AECT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV3AECT.MMAP	PVBusLogger
ARMNeoverseV3AECT.MMAP.mapper	PVBusMapper
ARMNeoverseV3AECT.RAS	PVBusLogger
ARMNeoverseV3AECT.RAS.mapper	PVBusMapper
ARMNeoverseV3AECT.cpu0	ARM_Neoverse-V3AE
ARMNeoverseV3AECT.cpu0.UTLB	TLB
ARMNeoverseV3AECT.cpu0.debug_rom	debug_rom
ARMNeoverseV3AECT.cpu0.dtlb	TLB
ARMNeoverseV3AECT.cpu0.l1dcache	PVCache
ARMNeoverseV3AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV3AECT.cpu0.l1icache	PVCache
ARMNeoverseV3AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV3AECT.cpu0.l2cache	PVCache
ARMNeoverseV3AECT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV3AECT.default_CTM	EmbeddedCT
ARMNeoverseV3AECT.ext_bus	PVBusLogger
ARMNeoverseV3AECT.ext_bus.mapper	PVBusMapper
ARMNeoverseV3AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV3AECT.global_debug_rom	debug_rom
ARMNeoverseV3AECT.secondary_debug_rom	debug_rom
ARMNeoverseV3AECT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMNeoverseV3AECT.AMU	PVBusLogger
ARMNeoverseV3AECT.AMU.mapper	PVBusMapper
ARMNeoverseV3AECT.DAP	PVBusLogger
ARMNeoverseV3AECT.DAP.mapper	PVBusMapper
ARMNeoverseV3AECT.DSU	DSU-120
ARMNeoverseV3AECT.DSU.PPU_cluster	PPUv1
ARMNeoverseV3AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseV3AECT.DSU.PPU_core0	PPUv1
ARMNeoverseV3AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV3AECT.DSU.mpam_busslave	PVBusSlave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

Name	Component type
ARMNeoverseV3AECT.DSU.shared_cache	PVCache
ARMNeoverseV3AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMNeoverseV3AECT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV3AECT.MMAP	PVBusLogger
ARMNeoverseV3AECT.MMAP.mapper	PVBusMapper
ARMNeoverseV3AECT.RAS	PVBusLogger
ARMNeoverseV3AECT.RAS.mapper	PVBusMapper
ARMNeoverseV3AECT.cpu0	ARM_Neoverse-V3AE
ARMNeoverseV3AECT.cpu0.UTLB	TLB
ARMNeoverseV3AECT.cpu0.l1dcache	PVCache
ARMNeoverseV3AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV3AECT.cpu0.l1icache	PVCache
ARMNeoverseV3AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV3AECT.cpu0.l2cache	PVCache
ARMNeoverseV3AECT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV3AECT.ext_bus	PVBusLogger
ARMNeoverseV3AECT.ext_bus.mapper	PVBusMapper
ARMNeoverseV3AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseV3AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l0gptsz	slave	Value	RME L0GPTSZ port
legacy_tz_en	slave	Signal	RME LEGACY_TZ_EN port
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rlpiden	slave	Signal	External debug interface.
rtpiden	slave	Signal	External debug interface.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseV3AECT

`cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpu0.crypto_aes`

AES instructions supported (requires CryptoPlugin to be loaded). 0, not implemented. 2, AES and PMULL instructions implemented (FEAT_AES, FEAT_PMULL).

Type: `uint8_t`

Default value: 2

cpu0.crypto_sha3

Implement ARMv8.4 SHA-3 instructions (requires CryptoPlugin to be loaded) (FEAT_SHA3).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

cpu0.crypto_sha512

Implement ARMv8.4 SHA-512 instructions (requires CryptoPlugin to be loaded) (FEAT_SHA512).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

cpu0.crypto_sm3

Implement ARMv8.4 SM-3 instructions (requires CryptoPlugin to be loaded) (FEAT_SM3).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

cpu0.crypto_sm4

Implement ARMv8.4 SM-4 instructions (requires CryptoPlugin to be loaded) (FEAT_SM4).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpu0.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpu0.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpu0.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpu0.semihosting-stack_limit`
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpu0.trace_special_hlt_imm16`
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

brbe_disable_recording

If BRBE is implemented and this is set to true, disable BRBE recording. All registers will be functional, but no branches will be recorded. This will improve model performance for workloads that enable BRBE, but don't care about the information stored in it. (FEAT_BRBE).

Type: `bool`

Default value: false

brbe_log2_num_records

Log2 of number of BRB records supported. 3 -> 8 records, ... 6 -> 64 records.

Type: `uint8_t`

Default value: 5

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`ecv_support_level`

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/

GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

`force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

`has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

`has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_rndr

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT_RNG).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.5 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: false

has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x10000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`instruction_tlb_size`

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`log2_trace_buffer_alignment`

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: `uint8_t`

Default value: 6

`memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

mpamidr_has_force_ns

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

mpamidr_has_sdeflt

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_acp

Number of ACP ports.

Type: `uint8_t`

Default value: 0

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`rme_level0_gpt_size`

The range of address space protected by each entry in the level 0 GPT (0->1GB 1->16GB, 2->64GB, 3->512GB.

Type: `uint8_t`

Default value: 0

`rme_support_level`

0 -> Realm management extension not implemented, 1 -> LEGACY_TZ_EN mode i.e. RME register fields are stateful but only supports secure/non-secure states, 2 -> Realm management extension fully implemented (FEAT_RME).

Type: `uint8_t`

Default value: 2

`rndr_rndrrs_seed`

Initial seed for random engine used in RNDR register.

Type: `uint64_t`

Default value: `0x0`

`stage12_tlb_size`

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`tcr_txsz_undersize_should_fault`

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.111 ARMNeoverseV3CT

Defined in `LISA/ARMNeoverseV3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `brbe_disable_recording`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMNeoverseV3CT

A DSU-120 DynamIQ cluster containing a single Neoverse-V3 core configured for Direct connect.

The core supports the following optional features:

- Realm Management Extension
- Coherent instruction cache

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMNeoverseV3CT

This model has the following Iris instances:

ARMNeoverseV3CT.cpu0.UTLB	TLB
ARMNeoverseV3CT.cpu0.l1dcache	PVCache
ARMNeoverseV3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l1icache	PVCache
ARMNeoverseV3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l2cache	PVCache
ARMNeoverseV3CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMNeoverseV3CT.ext_bus	PVBusLogger
ARMNeoverseV3CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMNeoverseV3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l0gptsz	slave	Value	RME L0GPTSZ port
legacy_tz_en	slave	Signal	RME LEGACY_TZ_EN port
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
rlpiden	slave	Signal	External debug interface.
rtpiden	slave	Signal	External debug interface.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMNeoverseV3CT

cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpu0.crypto_aes`

AES instructions supported (requires CryptoPlugin to be loaded). 0, not implemented. 2, AES and PMULL instructions implemented (FEAT_AES, FEAT_PMULL).

Type: `uint8_t`

Default value: 2

`cpu0.crypto_sha3`

Implement ARMv8.4 SHA-3 instructions (requires CryptoPlugin to be loaded) (FEAT_SHA3).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`cpu0.crypto_sha512`

Implement ARMv8.4 SHA-512 instructions (requires CryptoPlugin to be loaded) (FEAT_SHA512).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`cpu0.crypto_sm3`

Implement ARMv8.4 SM-3 instructions (requires CryptoPlugin to be loaded) (FEAT_SM3).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`cpu0.crypto_sm4`

Implement ARMv8.4 SM-4 instructions (requires CryptoPlugin to be loaded) (FEAT_SM4).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.4 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x200000`

cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpu0.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpu0.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpu0.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x20`

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`brbe_disable_recording`

If BRBE is implemented and this is set to true, disable BRBE recording. All registers will be functional, but no branches will be recorded. This will improve model performance for workloads that enable BRBE, but don't care about the information stored in it. (FEAT_BRBE).

Type: `bool`

Default value: false

`brbe_log2_num_records`

Log2 of number of BRB records supported. 3 -> 8 records, ... 6 -> 64 records.

Type: `uint8_t`

Default value: 5

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

ecv_support_level

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

has_rndr

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT_RNG).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.5 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: false

has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

log2_trace_buffer_alignment

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 6

`memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

`mpamidr_has_force_ns`

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`mpamidr_has_sdeflt`

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

`mpamidr_has_tidr`

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

num_acp

Number of ACP ports.

Type: `uint8_t`

Default value: 0

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

reported_patch_level

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

rme_level0_gpt_size

The range of address space protected by each entry in the level 0 GPT (0->1GB 1->16GB, 2->64GB, 3->512GB.

Type: `uint8_t`

Default value: 0

rme_support_level

0 -> Realm management extension not implemented, 1 -> LEGACY_TZ_EN mode i.e. RME register fields are stateful but only supports secure/non-secure states, 2 -> Realm management extension fully implemented (FEAT_RME).

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

rndr_rndrrs_seed

Initial seed for random engine used in RNDR register.

Type: `uint64_t`

Default value: `0x0`

stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

tcr_txsz_undersize_should_fault

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.112 ARMSC000CT

Defined in `LISA/ARMSC000CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

The model has the following limitations:

- It does not implement any security features.
- Only bit[0] of the Auxiliary Control Register is supported for read/write. No functionality is implemented.
- The Security Features Control Register read/write access is supported using `SECKEY`. No functionality is implemented.

Iris and MTI instances for ARMSC000CT

This model has the following Iris instances:

Name	Instance type
`ARMSC000CT`	ARM_SC000
`ARMSC000CT.acp_mapper`	PVBusMapper
`ARMSC000CT.ext_bus`	PVBusLogger
`ARMSC000CT.ext_bus.mapper`	PVBusMapper
`ARMSC000CT.l2_flusher`	AsyncCacheFlushUnit

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

This model has the following MTI trace components:

Name	Component type
ARMSC000CT	ARM_SC000
ARMSC000CT.acp_mapper	PVBusMapper
ARMSC000CT.ext_bus	PVBusLogger
ARMSC000CT.ext_bus.mapper	PVBusMapper
ARMSC000CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMSC000CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	master	Value	Current execution priority.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
io_port_in	slave	PVBus	I/O port pair. See the documentation for the io_port_out port.
io_port_out	master	PVBus	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not “match” should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
lockup	master	Signal	Asserted when the processor is in lockup state.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Non-Confidential

Parameters for ARMSC000CT

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`BKPT`

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

`DBG`

Set whether debug extensions are implemented.

Type: `bool`

Default value: true

`IOP`

Send all d-side transactions to the port, io_port_out. Transactions which do not match should be returned to the port, io_port_in.

Type: `bool`

Default value: false

`IRQDIS`

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n].

Type: `uint32_t`

Default value: `0x0`

`NUM_IRQ`

Number of user interrupts.

Type: `uint8_t`

Default value: 32

`NUM_MPU_REGION`

Number of MPU regions.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`SYST`
Enable support for SysTick timer functionality.

Type: `bool`

Default value: true

`USER`
Enable support for Unprivileged/Privileged Extension.

Type: `bool`

Default value: true

`VTOR`
Include Vector Table Offset Register.

Type: `bool`

Default value: true

`WIC`
Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

`WPT`
Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 2

`cpi_div`
divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`
multiplier for calculating CPI (Cycles Per Instruction).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x1`

manager_id

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

reported_patch_level

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

reported_revision_number

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

semihosting-Thumb_SVC

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

semihosting-cmd_line

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

`semihosting-heap_base`

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

`semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

`semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

`semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.113 ARMSC300CT

Defined in `LISA/ARMSC300CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were added:

- `manager_id`

The following parameters were removed:

- `master_id`

Differences between the model and the RTL

The model has the following limitations:

- It does not implement any security features.
- The Trash Register is implemented as **RAZ/WI**.
- Only bit[0] of the Auxiliary Control Register is supported for read/write. No functionality is implemented.
- The Security Features Control Register read/write access is supported using `SECKEY`. No functionality is implemented.

Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Field value	Description	Supported by model
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

Iris and MTI instances for ARMSC300CT

This model has the following Iris instances:

Name	Instance type
`ARMSC300CT`	ARM_SC300
`ARMSC300CT.acp_mapper`	PVBusMapper
`ARMSC300CT.ext_bus`	PVBusLogger
`ARMSC300CT.ext_bus.mapper`	PVBusMapper
`ARMSC300CT.l2_flusher`	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
`ARMSC300CT`	ARM_SC300
`ARMSC300CT.acp_mapper`	PVBusMapper
`ARMSC300CT.ext_bus`	PVBusLogger
`ARMSC300CT.ext_bus.mapper`	PVBusMapper
`ARMSC300CT.l2_flusher`	AsyncCacheFlushUnit

Ports for ARMSC300CT

Port	Direction	Protocol	Description
`ahbd`	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
`auxfault`	slave	Value	This is wired to the Auxiliary Fault Status Register.
`bigend`	slave	Signal	Configure big endian data format.
`clk_in`	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
`currpri`	master	Value	Current execution priority.
`edbgrq`	slave	Signal	External debug request.
`event`	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
`intisr`	slave	Signal	This signal array delivers signals to the NVIC.
`intnmi`	slave	Signal	Configure non maskable interrupt.
`lockup`	master	Signal	Asserted when the processor is in lockup state.
`poreset`	slave	Signal	Raising this signal will do a power-on reset of the core.
`pv_ppbus_m`	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
`pvbus_m`	master	PVBus	The core will generate bus requests on this port.
`sleepdeep`	master	Signal	Asserted when the processor is in deep sleep.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`sleeping`	master	Signal	Asserted when the processor is in sleep.
`stcalib`	slave	Value	This is the calibration value for the SysTick timer.
`stclk`	slave	ClockSignal	This is the reference clock for the SysTick timer.
`sysreset`	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
`sysresetreq`	master	Signal	Asserted to indicate that a reset is required.
`ticks`	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

Parameters for ARMSC300CT

`BB_PRESENT`

Enable bitbanding.

Type: `bool`

Default value: true

`BIGENDINIT`

Initialize processor to big endian mode.

Type: `bool`

Default value: false

`DBGLVL`

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with DWT data-comparators.

Type: `uint8_t`

Default value: 3

`LVL_WIDTH`

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

`NUM_IRQ`

Number of user interrupts.

Type: `uint8_t`

Default value: 16

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

NUM_MPU_REGION

Number of MPU regions.

Type: `uint8_t`

Default value: 8

TRACE_LVL

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

Type: `uint8_t`

Default value: 1

WIC

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: true

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

manager_id

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`semihosting-Thumb_SVC`

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

`semihosting-cmd_line`

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

`semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`semihosting-enable`

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

semihosting-heap_base

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

semihosting-heap_limit

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

semihosting-stack_limit

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

3.114 AddressTranslationUnit

Defined in `LISA/AddressTranslationUnit.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
0.5	Alpha support

For an explanation of the quality levels, see Quality level definitions.

About AddressTranslationUnit

Address Translator Unit.

Iris and MTI instances for AddressTranslationUnit

This model has the following Iris instances:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
`AddressTranslationUnit`	AddressTranslationUnit
`AddressTranslationUnit.ATU_BusMapper`	PVBusMapper
`AddressTranslationUnit.apb`	PVBusSlave

This model has the following MTI trace components:

Name	Component type
`AddressTranslationUnit.ATU_BusMapper`	PVBusMapper
`AddressTranslationUnit.apb`	PVBusSlave

Ports for AddressTranslationUnit

Port	Direction	Protocol	Description
`apb`	slave	PVBus	-
`irq_out`	master	Signal	-
`pvbus_m`	master	PVBus	-
`pvbus_s`	slave	PVBus	-
`reset_in`	slave	Signal	-

Parameters for AddressTranslationUnit

`ATUNTR`

Number of translation regions (1=2, 2=4, 3=8, 4=16, and 5=32).

Type: `uint8_t`

Default value: 5

`ATUPAW`

Physical address width (0=32, 1=36, 2=40, 3=44, 4=48, 5=52, 6=56, 7=64 bits). No impact on the PVBUS transactions.

Type: `uint8_t`

Default value: 5

`ATUPS`

Selects the page size granularity in bytes (`0xC`=4096, `0xD`=8192, and `0xE`=16384) (Default=`0xD`).

Type: `uint8_t`

Default value: `0xD`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`DEBUG_disable_translation`

A model-only parameter to disable any remapping by the ATU, despite register configuration. For debug/test only.

Type: `bool`

Default value: false

`diagnostics`

Show diagnostics messages.

Type: `uint32_t`

Default value: 0

3.115 AndGate

Defined in `LISA/Gate.lisa`.

About AndGate

This component implements a logical AND of two signal input ports to generate a single output signal. For example, you can use it to combine two interrupt signals.

Iris and MTI instances for AndGate

This model has the following Iris instances:

Name	Instance type
`AndGate`	AndGate

No MTI components available.

Ports for AndGate

Port	Direction	Protocol	Description
`input`	slave	Signal	2 input signals to be AND'ed.
`output`	master	Signal	AND'ed output signal.

Parameters for AndGate

No LISA parameters found.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.116 Ashbrook_SoC_SCC

Defined in `LISA/Ashbrook_SoC_SCC.lisa`.

About Ashbrook_SoC_SCC

Ashbrook SoC Simple Configuration Controller IP Block.

Iris and MTI instances for Ashbrook_SoC_SCC

This model has the following Iris instances:

Name	Instance type
`Ashbrook_SoC_SCC`	Ashbrook_SoC_SCC
`Ashbrook_SoC_SCC.pvbusslave`	PVBusSlave

This model has the following MTI trace components:

Name	Component type
`Ashbrook_SoC_SCC.pvbusslave`	PVBusSlave

Ports for Ashbrook_SoC_SCC

Port	Direction	Protocol	Description
`cluster_temperature`	slave	ValueState	-
`pvbus_s`	slave	PVBus	-

Parameters for Ashbrook_SoC_SCC

`diagnostics`

Diagnostics.

Type: `uint32_t`

Default value: 0

`gpr0`

General Purpose Register 0.

Type: `uint32_t`

Default value: 0

`gpr1`

General Purpose Register 1.

Type: `uint32_t`

Default value: 0

`num_clusters`

Number of AP clusters in the platform.

Type: `uint32_t`

Default value: 12

`version`

Version number of the platform.

Type: `uint32_t`

Default value: 0

3.117 AsyncSignal

Defined in `LISA/AsyncSignal.lisa`.

About AsyncSignal

This component provides the means to cleanly schedule events from non-simulation threads onto the simulation thread.

Iris and MTI instances for AsyncSignal

No Iris instances available.

No MTI components available.

Ports for AsyncSignal

Port	Direction	Protocol	Description
`async_callback`	master	AsyncSignalCallback	This port emits a call to signal() on the simulation thread asyncronously after async_control.signal() has been called.
`async_control`	slave	AsyncSignalControl	Non-simulation threads call signal() on this port in order to schedule an event: a call to async_callback.signal() on the simulation thread.

Parameters for AsyncSignal

No LISA parameters found.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.118 AudioOut_File

Defined in `LISA/AudioOut_File.lisa`.

About AudioOut_File

This component implements an audio output that is suitable for use with the PL041_AACI component. It writes raw 16-bit 48KHz stereo audio data to a user-specified file.

We expect this component to have little effect on the performance of PV systems. AudioOut_File drains audio data at the rate that would be expected by software running in the simulation.

Iris and MTI instances for AudioOut_File

This model has the following Iris instances:

Name	Instance type
`AudioOut_File`	AudioOut_File

No MTI components available.

Ports for AudioOut_File

Port	Direction	Protocol	Description
`audio`	slave	AudioControl	Audio input for a connection to a component such as the PL041_AACI.

Parameters for AudioOut_File

`fname`

Filename.

Type: `string`

Default value: “”

3.119 AudioOut_SDL

Defined in `LISA/AudioOut_SDL.lisa`.

About AudioOut_SDL

AudioOut_SDL outputs audio using the host features of the Simple DirectMedia Layer (SDL) library.

This component results in SDL audio callbacks and might have a small impact on PV systems containing the component. It attempts to drain audio data at whatever rate is required to maintain smooth sound playback on the host PC. This might not match the data rate expected by applications running on the simulation.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Iris and MTI instances for AudioOut_SDL

This model has the following Iris instances:

Name	Instance type
`AudioOut_SDL`	AudioOut_SDL

No MTI components available.

Ports for AudioOut_SDL

Port	Direction	Protocol	Description
`audio`	slave	AudioControl	Audio input for a connection to a component such as the PL041_AACI.

Parameters for AudioOut_SDL

No LISA parameters found.

3.120 BMU

Defined in `LISA/BMU.lisa`.

About BMU

BMU (Bus Monitor Unit).

Iris and MTI instances for BMU

This model has the following Iris instances:

Name	Instance type
`BMU`	BMU

No MTI components available.

Ports for BMU

Port	Direction	Protocol	Description
`apb_bus`	slave	PVBus	for register read and write
`bmu_input_bus`	slave	PVBus	-
`bus_trace_m`	master	PVBus	-
`clk_in`	slave	ClockSignal	BMU core clock

Parameters for BMU

`amu_element_size`

AMU element size (0: 0KB, 1: 4KB).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

amu_element_start
AMU element start.

Type: `uint8_t`

Default value: 0

amu_monitors
Number of AMU monitors present.

Type: `uint8_t`

Default value: 4

amu_present
Configures whether an AMU is included in the monitor.

Type: `uint8_t`

Default value: 0

diagnostics
Diagnostics.

Type: `uint8_t`

Default value: 2

feat_rme
RME support.

Type: `uint8_t`

Default value: 1

imu_element_size
IMU element size (0: 0KB, 1: 4KB).

Type: `uint8_t`

Default value: 0

imu_element_start
IMU element start.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

monitor_protocol
Protocol 0:CHI, 1:AXI, 2:CXS.

Type: `uint8_t`

Default value: 0

mpam_capture
Determines if MPAM Capture interface is present.

Type: `uint8_t`

Default value: 0

mpam_element_size
MPAM element size (0: 0KB, 1: 4KB, 2: 8KB, 3: 16KB).

Type: `uint8_t`

Default value: 0

mpam_element_start
MPAM element start.

Type: `uint8_t`

Default value: 0

mpam_monitors
Configures number of MPAM monitors present.

Type: `uint8_t`

Default value: 0

mpam_present
Configures whether a MPAM is included in the monitor.

Type: `uint8_t`

Default value: 0

mpam_scale_factor
Determines MPAM SCALE FACTOR (Powers of 2).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

`mpam_width`

Width of the MPAM properties.

Type: `uint8_t`

Default value: 12

`num_imu_monitors`

Number of IMU monitors.

Type: `uint8_t`

Default value: 0

`num_monitors`

Number of monitors in PMU.

Type: `uint8_t`

Default value: 1

`pm_dual_page_ext`

Dual-page extension enabled.

Type: `uint8_t`

Default value: 0

`pm_edgedetect_ext`

Edge detect extension enabled.

Type: `uint8_t`

Default value: 0

`pm_export_ext`

Export extension enabled.

Type: `uint8_t`

Default value: 0

`pm_fzo_ext`

Freeze on overflow extension enabled.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

pm_mpam_filter_ext
MPAM filtering extension enabled.

Type: `uint8_t`

Default value: 0

pm_oac_ext
Observability and access control.

Type: `uint8_t`

Default value: 0

pm_sos_filter_ext
Secure operating state filtering extension enabled.

Type: `uint8_t`

Default value: 1

pm_sshot_ext
Snapshot extension enabled.

Type: `uint8_t`

Default value: 1

pm_threshold_ext
Threshold extension enabled.

Type: `uint8_t`

Default value: 0

pm_tro_ext
Trace generation extension enabled.

Type: `uint8_t`

Default value: 0

pmevfiltr2_present
Event filtering register present.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

pmevfiltr_present

Event filtering register present.

Type: `uint8_t`

Default value: 0

pmimpdef_present

Implementation defined register present.

Type: `uint8_t`

Default value: 0

pmoflow_present

Overflow interrupt present.

Type: `uint8_t`

Default value: 0

pmu_element_size

PMU element size (0: 0KB, 1: 4KB, 2: 8KB).

Type: `uint8_t`

Default value: 0

pmu_element_start

PMU element start.

Type: `uint8_t`

Default value: 0

pmu_latency_mon

Determines if Latency Monitoring is included.

Type: `uint8_t`

Default value: 1

pmu_monitors

Number of PMU monitors present.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 16

`pmu_present`

Configures whether a PMU is included in the monitor.

Type: `uint8_t`

Default value: 0

`pmu_snapshot`

Determines if PMU Snapshot interface is present.

Type: `uint8_t`

Default value: 1

`pmu_trace`

Determines if the ATB Output Trace is included.

Type: `uint8_t`

Default value: 0

`secure_addr_space`

Secure Address Space support.

Type: `uint8_t`

Default value: 1

3.121 BP141_TZMA

Defined in `LISA/BP141_TZMA.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see Quality level definitions.

About BP141_TZMA

BP141_TZMA permits a single physical memory cell of up to 2 MB to be shared between a secure and non-secure storage area. The partitioning between these areas is flexible.

This component routes transactions according to the following:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The memory region that they are attempting to access.
- The security mode of the transaction.

The BP141_TZMA fixes the base address of the secure region to the base address of the decode space. It uses the R0SIZE [9:0] input to configure the size of the secure region in 4 KB increments up to a maximum of 2 MB.

`TZMEMSIZE` is the maximum addressing range of the memory as defined by that parameter. By default, `TZMEMSIZE` is set to 2 MB. In the following table, AxADDR is the offset address that the transactions want to access:

Table 3-438: BP141_TZMA security control

<table>
<tr><td>AxADDR | Memory Region | Non-secure Transfer | Secure Transfer | === +===============+===================+================+ AxADDR < R0Size | Secure, R0 | Illegal | Legal |</td></tr>
<tr><td>R0SIZE <= AxADDR and AxADDR < TZMEMSIZE | Non-secure, R1 | Legal | Legal</td></tr>
<tr><td>AxADDR => TZMEMSIZE | No access | Illegal | Illegal |</td></tr>
</table>

Iris and MTI instances for BP141_TZMA

This model has the following Iris instances:

Name	Instance type
`BP141_TZMA`	BP141_TZMA
`BP141_TZMA.pvbusrange_0`	PVBusRange
`BP141_TZMA.pvbusrange_0.pvbus_mapper`	PVBusMapper
`BP141_TZMA.tzswitch_0`	tzswitch_0
`BP141_TZMA.tzswitch_0.pvbus_mapper`	PVBusMapper

This model has the following MTI trace components:

Name	Component type
`BP141_TZMA.pvbusrange_0.pvbus_mapper`	PVBusMapper
`BP141_TZMA.tzswitch_0.pvbus_mapper`	PVBusMapper

Ports for BP141_TZMA

Port	Direction	Protocol	Description
`pv_output`	master	PVBus	Routed PVBus output
`pvbus`	slave	PVBus	Bus slave interface.
`R0Size`	slave	Value	A software interface that is driven from the TrustZone Protection Controller (TZPC), setting the secure region size by bits[9:0].

Parameters for BP141_TZMA

`TZMEMSIZE`

Addressable range of device.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x200000`

`TZSECROMSIZE`
Default secure size.

Type: `uint32_t`

Default value: `0x200`

`TZSEGSIZE`
Segment size.

Type: `uint32_t`

Default value: `0x1000`

3.122 BP147_TZPC

Defined in `LISA/BP147_TZPC.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see Quality level definitions.

About BP147_TZPC

BP147_TZPC provides a software interface to the protection bits in a secure system in a TrustZone design.

Iris and MTI instances for BP147_TZPC

This model has the following Iris instances:

Name	Instance type
`BP147_TZPC`	BP147_TZPC
`BP147_TZPC.busslave`	PVBusSlave

This model has the following MTI trace components:

Name	Component type
`BP147_TZPC.busslave`	PVBusSlave

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Ports for BP147_TZPC

Port	Direction	Protocol	Description
`bus_in_s`	slave	PVBus	Slave port for register access.
`TZPCDECPROT0`	master	Value	Output decode protection 0 status.
`TZPCDECPROT1`	master	Value	Output decode protection 1 status.
`TZPCDECPROT2`	master	Value	Output decode protection 2 status.
`TZPCR0SIZE`	master	Value	Output secure RAM region size.

Parameters for BP147_TZPC

No LISA parameters found.

3.123 Base_PowerController

Defined in `examples/LISA/Common/LISA/Base_PowerController.lisa`.

About Base_PowerController

The Base Platform Power Controller component provides a basic register interface for software to control the power up and power down of cores in the cluster.

Identify cores in the system to the Base_PowerController by writing 24 bits in MPIDR format, providing the following levels of affinity:

Bits [23:16]
: Affinity level 2.

Bits [15:8]
: Affinity level 1.

Bits [7:0]
: Affinity level 0.

Examples of affinity usage are `not_applicable/cluster/processor` and `cluster/processor/thread`.

To identify which cores to power up at startup, use parameter `pctl.startup`.

Specify core affinities with a dotted-quad. Wildcards are allowed. The format depends on the architecture:

- In Armv8.1 and earlier, use:

  ```
  -C pctl.startup=0.0.Y.X
  ```

  where X refers to the core number and Y refers to the cluster number. For example `0.0.0.0` refers to cluster0.cpu0 and `0.0.1.1` refers to cluster1.cpu1. Use wildcards to indicate all cores at an affinity level. For example, to turn on all the cores in cluster 0, use `0.0.0.*`.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- In Armv8.2 and later, use:

```
-C pctl.startup=0.Z.Y.X
```

where X refers to the thread number, Y refers to the core number, and Z refers to the cluster number.

Base_PowerController registers

The following table summarises the power control registers in order of offset from the base memory address.

After the table, there is more information about each register.

Table 3-446: Base_PowerController register summary

Offset	Name	Type	Reset	Width	Description
0x00	PPOFFR	RW	0x---	32	Power Control Processor Off Register
0x04	PPONR	RW	0x---	32	Power Control Processor On Register
0x08	PCOFFR	RW	0x---	32	Power Control Cluster Off Register
0x0C	PWKUPR	RW	0x---	32	Power Control Wakeup Register
0x10	PSYSR	RW	0x---	32	Power Control SYS Status Register

PPOFFR

The Power Control Processor Off Register (PPOFFR) has the following characteristics:

Purpose

Processor SUSPEND command when PWKUPR and the GIC are programmed appropriately to provide wakeup events from IRQ and FIQ events to that processor.

Usage constraints

Processor must make power-off requests only for itself.

Configurations

Available in all configurations.

Attributes

See the register summary table.

Table 3-447: Power Control Processor Off Register bit assignments

Bits	Name	Function
[31:24]	-	Reserved
[23:0]	ID	MPIDR format affinity value of the processor to be switched off. Programming error if MPIDR != self.

PPONR

The Power Control Processor On Register (PPONR) has the following characteristics:

Purpose

Brings up a processor from low-power mode.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Usage constraints

Processor must make power-on requests only for other powered-off processors in the system.

Configurations

Available in all configurations.

Attributes

See the register summary table.

Table 3-448: Power Control Processor On Register bit assignments

Bits	Name	Function
[31:24]	-	Reserved
[23:0]	ID	MPIDR format affinity value of the processor to be switched on. Programming error if MPIDR == self.

PCOFFR

The Power Control Cluster Off Register (PCOFFR) has the following characteristics:

Purpose

Turns the cluster off.

Usage constraints

Cluster must make power-off requests only for itself.

Configurations

Available in all configurations.

Attributes

See the register summary table.

Table 3-449: Power Control Cluster Off Register bit assignments

Bits	Name	Function
[31:24]	-	Reserved
[23:0]	ID	MPIDR format affinity value of powered-on processor in the cluster to be switched off. Programming error if MPIDR != self.

PWKUPR

The Power Control Wakeup Register (PWKUPR) has the following characteristics:

Purpose

Configures whether wakeup requests from the GIC are enabled for this cluster.

Usage constraints

There are no usage constraints.

Configurations

Available in all configurations.

Attributes

See the register summary table.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Table 3-450: Power Control Wakeup Register bit assignments

Bits	Name	Function
[31]	WEN	If set, enables wakeup interrupts (return from SUSPEND) for this cluster.
[30:24]	-	Reserved
[23:0]	ID	MPIDR format affinity value of processor whose Wakeup Enable bit is to be configured.

PSYSR

The Power Control SYS Status Register (PSYSR) has the following characteristics:

Purpose

Provides information on the powered status of a given core. Software writes bits [23:0] for the required core and reads the value along with the associated status in bits [31:24].

Usage constraints

There are no usage constraints.

Configurations

Available in all configurations.

Attributes

See the register summary table.

Table 3-451: Power Control SYS Status Register bit assignments

Bits	Name	Function
[31]	L2	Read-only. A value of 1 indicates that affinity level 2 is active/on. If affinity level 2 is not implemented this bit is RAZ.
[30]	L1	Read-only. A value of 1 indicates that affinity level 1 is active/on. If affinity level 1 is not implemented this bit is RAZ.
[29]	L0	Read-only. A value of 1 indicates that affinity level 0 is active/on.
[28]	WEN	Read-only. A value of 1 indicates wakeup interrupts, return from SUSPEND, enabled for this processor. This is an alias of PWKUPR.WEN for this core.
[27]	PC	Read-only. A value of 1 indicates pending cluster off, the cluster enters low-power mode the next time it raises signal STANDBYWFIL2.
[26]	PP	Read-only. A value of 1 indicates pending processor off, the processor enters low-power mode the next time it raises signal STANDBYWFI.

[25:24]	WK	Read-only. Indicates the reason for LEVEL0 power on:
		`0b00`
		Cold power-on
		`0b01`
		System reset pin
		`0b10`
		Wake by PPONR
		`0b11`
		Wake by GIC WakeRequest signal

[23:0]	ID	MPIDR format affinity value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Iris and MTI instances for Base_PowerController

This model has the following Iris instances:

Name	Instance type
`Base_PowerController`	Base_PowerController
`Base_PowerController.busslave`	PVBusSlave
`Base_PowerController.timer_ppu_transition`	ClockTimerThread
`Base_PowerController.timer_ppu_transition.timer`	ClockTimerThread64
`Base_PowerController.timer_ppu_transition.timer.thread`	SchedulerThread
`Base_PowerController.timer_ppu_transition.timer.thread_event`	SchedulerThreadEvent
`Base_PowerController.timer_reset`	ClockTimerThread
`Base_PowerController.timer_reset.timer`	ClockTimerThread64
`Base_PowerController.timer_reset.timer.thread`	SchedulerThread
`Base_PowerController.timer_reset.timer.thread_event`	SchedulerThreadEvent
`Base_PowerController.timer_sys_reset_request`	ClockTimerThread
`Base_PowerController.timer_sys_reset_request.timer`	ClockTimerThread64
`Base_PowerController.timer_sys_reset_request.timer.thread`	SchedulerThread
`Base_PowerController.timer_sys_reset_request.timer.thread_event`	SchedulerThreadEvent
`Base_PowerController.utility_busX` (where *X* = 0–3)	PVBusMaster

This model has the following MTI trace components:

Name	Component type
`Base_PowerController`	Base_PowerController
`Base_PowerController.busslave`	PVBusSlave
`Base_PowerController.utility_busX` (where *X* = 0–3)	PVBusMaster

Ports for Base_PowerController

Port	Direction	Protocol	Description
`cpuporeset`	master	Signal	-
`dbgnopwrdwn`	slave	Signal	-
`l2reset`	master	Signal	-
`pchannel_m`	master	PChannel	-
`pvbus_s`	slave	PVBus	-
`standbywfi`	slave	Signal	-
`standbywfil2`	slave	Signal	-
`system_reset_req`	slave	Signal	-
`system_reset`	master	Signal	-
`utility_bus_m`	master	PVBus	-
`wakerequest`	slave	Signal	-

Non-Confidential

Parameters for Base_PowerController

`Affinity-shifted`

Whether core number is reflected in Affinity1 instead of Affinity0.

Type: `bool`

Default value: false

`CPU-affinities`

Definition of which cores are attached to the control pins, as a comma separated list of affinity dotted quads.

Type: `string`

Default value: “0.0.0.0”

`CPU-available-mask`

One bit per entry in CPU-affinities list, set zero if a CPU is wired up but actually not available.

Type: `uint64_t`

Default value: `0xffffFFFFffffFFFF`

`enable_lock_step`

If lock step is enabled, the number of available cores get reduced to half.

Type: `bool`

Default value: false

`startup`

Comma-separated list of cores (wildcards allowed) to be powered up at startup or system reset.

Type: `string`

Default value: “0.0.0.*”

`use_in_cluster_ppu`

Set this to true if base power controller is connected to V9 core where in-cluster PPU is used, false, otherwise.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

use_pchannel_for_threads

Set this to true if the pchannel is connected to cpus with thread support.

Type: `bool`

Default value: false

3.124 BroadcastSignal2AMBAPVSignal

Defined in `examples/SystemCExport/Bridges/BroadcastSignal2AMBAPVSignal.lisa`.

About BroadcastSignal2AMBAPVSignal

Broadcast signal to AMBAPVSignal coverter.

Iris and MTI instances for BroadcastSignal2AMBAPVSignal

This model has the following Iris instances:

Name	Instance type
`BroadcastSignal2AMBAPVSignal`	BroadcastSignal2AMBAPVSignal

No MTI components available.

Ports for BroadcastSignal2AMBAPVSignal

Port	Direction	Protocol	Description
`amba_pv_signal_m`	master	AMBAPVSignal	-
`amba_pv_signal_s`	slave	AMBAPVSignal	-
`b_signal`	broadcast	Signal	-

Parameters for BroadcastSignal2AMBAPVSignal

No LISA parameters found.

3.125 CCI400

Defined in `LISA/CCI400.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About CCI400

If you disable the `cache_state_modelled` parameter, this component has negligible performance impact. If you enable `cache_state_modelled`, it adds significant cost to throughput for coherent transactions.

This model implements the slave interface Shareable Override Register, which can be read and written, but it has no functionality.

ACE limitation

AXI Coherency Extensions (ACE) are extensions to AXI4 that support system-level cache coherency between multiple clusters. The ACE cache models in the Arm Cortex-A15 and Cortex-A7, and the ACE support in the CCI-400 have the limitation that they only process one transaction at a time. Normally, the simulation processes each transaction to completion before allowing any master to generate another transaction.

However, in the following situation the simulation might fail. If a SystemC bus slave calls `wait()` while it is processing a transaction, this call might allow another master to issue another transaction that passes through the CCI-400 or the Cortex-A15 or Cortex-A7 caches. This situation could happen if a SystemC bus master running in another thread is connected to one of the ACE-lite ports on the CCI-400.

Iris and MTI instances for CCI400

This model has the following Iris instances:

Name	Instance type
`CCI400`	CCI400
`CCI400.cciinterconnect`	PVCache
`CCI400.cciregisters`	CCIRegisters
`CCI400.cciregisters.clocktimer`	ClockTimerThread
`CCI400.cciregisters.clocktimer.timer`	ClockTimerThread64
`CCI400.cciregisters.clocktimer.timer.thread`	SchedulerThread
`CCI400.cciregisters.clocktimer.timer.thread_event`	SchedulerThreadEvent

This model has the following MTI trace components:

Name	Component type
`CCI400`	CCI400

Ports for CCI400

Port	Direction	Protocol	Description
`acchannelen`	slave	Value	For each upstream port, determine if it is enabled or not with respect to snoop requests.
`barrierterminate`	slave	Value	For each downstream port, determine if barriers are terminated at that port.
`broadcastcachemain`	slave	Value	For each downstream port, determine if broadcast cache maintenance operations are forwarded down that port. A three bit signal but as the model only have a single downstream port, setting any of the bits will make it work.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`bufferableoverride`	slave	Value	For each downstream port, determine if all transactions are forced to non-bufferable (AWCACHE[0] is forced to 0).
`clk_in`	slave	ClockSignal	Clock signal for cciregisters
`errorirq`	master	Signal	A signal stating that the imprecise error register is nonzero.
`evntcntoverflow`	master	Signal	When an event counter overflows, it sets the corresponding signal.
`lint_ace_3_reset_state`	slave	Signal	This port can be connected to the reset signals of the system attached to the pvbus_s_ace_3 port.
`lint_ace_4_reset_state`	slave	Signal	This port can be connected to the reset signals of the system attached to the pvbus_s_ace_4 port.
`periphbase`	slave	Value_64	This port sets the base address of the private peripheral region.
`pvbus_m`	master	PVBus	Master port for all downstream memory accesses.
`pvbus_s_ace_3`	slave	PVBus	ACE-capable slave ports.
`pvbus_s_ace_4`	slave	PVBus	ACE-capable slave ports.
`pvbus_s_ace_lite_plus_dvm_0`	slave	PVBus	Memory bus interface that implements ACE lite and DVM protocol.
`pvbus_s_ace_lite_plus_dvm_1`	slave	PVBus	Memory bus interface that implements ACE lite and DVM protocol.
`pvbus_s_ace_lite_plus_dvm_2`	slave	PVBus	Memory bus interface that implements ACE lite and DVM protocol.
`reset_in`	slave	Signal	Signal to reset the CCI.
`reset_state_of_ace_lite_ports`	slave	Signal	This port can be connected to the reset signals of the system attached to ACE-Lite ports 0,1,2

Parameters for CCI400

`acchannelen`

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

Type: `uint32_t`

Default value: 31

`barrierterminate`

For each downstream port, determine if barriers will be terminated at that port.

Type: `uint32_t`

Default value: 7

`broadcastcachemain`

For each downstream port a bit determines if broadcast cache maintenance operations are forwarded down that port.

Type: `uint32_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`bufferableoverride`

For each downstream port, determine if all transactions will be forced to non-bufferable.

Type: `uint32_t`

Default value: 0

`cache_state_modelled`

Model the cache state.

Type: `bool`

Default value: true

`force_on_from_start`

Enables snooping on upstream ports from the start of simulation.

The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without SW drivers programming the CCI.

This is only setup at simulation reset and not at signal reset.

If the upstreams can ever be held in reset then you *must* connect:

- `reset_state_of_ace_lite_ports[]`
- `lint_ace_3_reset_state`
- `lint_ace_4_reset_state`

so that it knows when to disable snoops to the upstream systems.

Otherwise, the upstream system will receive snoop messages whilst in reset and complain that it 'received a snoop request whilst it was in reset'.

Type: `bool`

Default value: false

`is_downstream_domain_boundary_for_far_atomic`

This interconnect is at the last stage of the domain boundary.

Type: `bool`

Default value: false

`log_enabled`

Enable log messages from the CCI register file.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

0
: do not print anything

1
: print only access violations

2
: also print writes

3
: print reads as well.

Type: `int`

Default value: 1

`periphbase`

Value for PERIPHBASE. Only bits [39:16] are used. This value may be overriden by an input on the periphbase port.

Type: `uint64_t`

Default value: `0x2C000000`

`revision`

Revision of the CCI400.

Type: `string`

Default value: "r0p0"

3.126 CCI500

Defined in `LISA/CCI500.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support
r0p2	Full support
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About CCI500

The LISA file declares seven upstream ports. You can configure these ports with `num_ace_ports` and `num_ace_lite_ports`:

- The bottom `num_ace_lite_ports` are ACE-Lite+DVM.
- The next num_ace_ports are ACE.
- Any remaining ports are ignored. If transactions are made on them, then warnings are produced.

For example, if `num_ace_ports = 1` and `num_ace_lite_ports = 1` then

- `pvbus_s[1]` is ACE
- `pvbus_s[0]` is ACE-Lite+DVM
- `pvbus_s[6-2]` are considered not to exist.

Differences between the model and the RTL

Address Decoder

- Only supports striping down to 4KiB.
- If the address decoder aborts the access, returns `SLVERR` rather than `DECERR`.

Interfaces

- The model does not implement the Q-Channel and P-Channel interfaces.

Performance Monitoring Unit

- PMU counters recognize only a few event sources:
  - Slave interface events:

    3
    : ReadOnce.

    4
    : ReadClean, ReadShared, ReadNotSharedDirty, ReadUnique.

    5
    : MakeUnique, CleanUnique.

    6
    : CleanInvalid, CleanShared, MakeInvalid.

    7
    : DVM transaction received from upstream.

    9
    : Read data that is satisfied by a snoop request.
  - No events are implemented for the global events or for the master events.
- The PMU does not implement the event bus (EVNTBUS).

Register access

- The register file only supports 32-bit accesses to its registers. Later versions of the CCI500 hardware support full write strobes to the register file. This limitation means that byte and halfword accesses work on the hardware but not on this version of the component.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Snoop filter RAMs

- Snoop filter RAMs are not modeled. The Status Register fields that relate to the power state of the Snoop filter RAMs are undefined.

Iris and MTI instances for CCI500

This model has the following Iris instances:

Name	Instance type
`CCI500`	CCI500
`CCI500.pvbus_register_file_s[0]`	PVBusSlave
`CCI500.upstream[Y]` (where Y = 0–6)	PVBusSlave

This model has the following MTI trace components:

Name	Component type
`CCI500`	CCI500
`CCI500.pvbus_register_file_s[0]`	PVBusSlave
`CCI500.upstream[Y]` (where Y = 0–6)	PVBusSlave

Ports for CCI500

Port	Direction	Protocol	Description
`acchannelensx`	slave	Value	ACCHANNELENSx represents the ports ACCHANNELENS0..ACCHANNELENS7 on the RTL (assuming there are seven upstream ports). * each upstream ACE port 'y' (pvbus_s[y]) has a two bit ACCHANNELENSx * bit 0 == 0 – DVM messages are disabled from being sent to this interface * bit 1 == 0 – Snoop messages are disabled from being sent to this interface * each upstream ACE-Lite port 'z' (pvbus_s[z]) has a one bit ACCHANNELENSx * bit 0 == 0 – DVM messages are disabled from being sent to this interface In the model, as we support a variety of configurations with a single LISA file then each port will behave as though it is one bit or two bit as appropriate. If you send a value that cannot be represented, given the width of the port, then the CCI model will halt and produce a fatal error. The assumed values of these are set by parameters until they are driven, so you need not drive them if they are constant. In the RTL, these signals are sampled at reset. Due to ordering issues w.r.t. reset() on different components then we cannot do that. Instead the signals are sampled at first transaction. Thus any controller that is producing these signals has to hold them constant for long enough. AC channel enables.
`address_decoder`	master	CCI500_AddressDecoderProtocol	An address decoder can be attached to the address_decoder port to choose which pvbus_s port a downstream transaction will go out of. If you do not connect an address decoder then all transactions will go out of port 0.
`dbgen`	slave	Signal	Invasive debug enable.
`errirq`	master	Signal	Indicates that an error response, DECERR or SLVERR, is received on the RRESP, BRESP, or CRRESP input signals, and it cannot be signaled precisely.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`evntcntoverflow`	master	Signal	Overflow flags for the PMU clock and counters.
`niden`	slave	Signal	Non-invasive debug enable.
`pvbus_m`	master	PVBus	Bus master ports.
`pvbus_register_file_s`	slave	PVBus	The slave port of the register file.
`pvbus_s`	slave	PVBus	Bus slave ports.
`reset_in`	slave	Signal	Reset the interconnect.
`reset_state_of_upstream_port`	slave	Signal	Tell the interconnect the reset state of the upstream ports, this can be used by the interconnect to check some aspects of the reset sequencing. If you are using force_on_from_start then you *must* connect these pins.
`spiden`	slave	Signal	Secure invasive debug enable.
`spniden`	slave	Signal	Secure privileged non-invasive debug enable.

Parameters for CCI500

`acchannelens0`

For upstream port `pvbus_s[0]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[0]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

`acchannelens1`

For upstream port `pvbus_s[1]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[1]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

acchannelens2

For upstream port `pvbus_s[2]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[2]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

acchannelens3

For upstream port `pvbus_s[3]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[3]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

acchannelens4

For upstream port `pvbus_s[4]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[4]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

acchannelens5

For upstream port `pvbus_s[5]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[5]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

acchannelens6

For upstream port `pvbus_s[6]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[6]`.

For an ACE-Lite port then bit[1] is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

Type: `uint64_t`

Default value: `0x0`

addr_width

The bit-width of the address that the CCI can accept.

Type: `uint64_t`

Default value: 40

cache_state_modelled

Model the cache state.

Type: `bool`

Default value: 1

dbgen

Invasive debug enable. If true, enables the counting of PMU events.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`enable_logger`

Enable PVBusLoggers for the downstream ports in the CCI model.

Type: `bool`

Default value: false

`force_on_from_start`

Enables snooping on upstream ports from the start of simulation.

The interconnect will normally start up with snooping/DVM disabled.This parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if ACCHANNELENSx allows it.

No software driver for the interconnect is needed.

Any port that could go into reset must have `reset_state_of_upstream_port[]` reflect the reset state of that upstream system.

Otherwise, the upstream system may receive snoop/DVM messages whilst in reset and may complain that it 'received a snoop request whilst it was in reset'.

Do not use if software is directly controlling the interconnect.

This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

Type: `bool`

Default value: false

`niden`

Whether non-secure events are allowed to be counted in the performance monitor.

Type: `bool`

Default value: true

`num_ace_lite_ports`

The number of ACE-Lite+DVM ports. These are the lowest numbered ports. The total number of ports must not exceed 7.

Type: `unsigned`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 5

num_ace_ports

The top num_ace_ports are ACE and support full coherency. The total number of ports must not exceed 7.

Type: `unsigned`

Default value: 2

number_of_phantom_entries

“Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

Type: `uint64_t`

Default value: `0x0000000000000020`

qos_threshold_upper

Reset value for the QoS threshold register.

Type: `uint64_t`

Default value: `0x000000000000000c`

reentrancy_support

Must be one of:

on
: hazard checking per cache line (normal mode)

off
: no hazard checking (use only for single master systems)

cacheglobal
: hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary)

env
: take value from `FM_REENTRANCY_SUPPORT` env var, if this is not set use ‘on'.

Type: `string`

Default value: “env”

spiden

Secure invasive debug enable. If both `SPIDEN` and `DBGEN` are high, enables the counting of both Non-secure and Secure events.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`spniden`

Whether secure and non-secure events are allowed to be counted in the performance monitor.

Type: `bool`

Default value: true

`version`

The version of the interconnect.

Allowed versions are:

- r0p0
- r0p2
- r1p0.

Type: `string`

Default value: “”

3.127 CCI550

Defined in `LISA/CCI550.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support
r1p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Differences between the model and the RTL

Address Decoder

- Only supports striping down to 4KiB.
- If the address decoder aborts the access, returns SLVERR rather than DECERR.

Interfaces

- The model does not implement the Q-Channel and P-Channel interfaces.

Performance Monitoring Unit

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- PMU counters recognize only a few event sources:
  - Slave interface events:

    3
    : ReadOnce.

    4
    : ReadClean, ReadShared, ReadNotSharedDirty, ReadUnique.

    5
    : MakeUnique, CleanUnique.

    6
    : CleanInvalid, CleanShared, MakeInvalid.

    7
    : DVM transaction received from upstream.

    9
    : Read data that is satisfied by a snoop request.
- No events are implemented for the global events or for the master events.
- The PMU does not implement the event bus (EVNTBUS).

Reset signal sampling

- The configuration ports acchannelensx[] are sampled in the hardware when coming out of reset. In the model, these ports are sampled at the first transaction to a pvbus_s port or to the register file.

Status Register, change-pending, and DVM messages

- The Status Register provides information on when the last transaction that could have observed an old value of a snoop or DVM enable has finished in the upstream system. Therefore a port that has been disabled can now have the system upstream of that port turned off. The model does not track DVM messages in the upstream system.

Snoop filter RAMs

- The CCI-550 hardware has a snoop filter that reduces the number of snoop requests that the interconnect has to make. The model does not have a snoop filter and could make more snoop requests than the hardware would. This difference has no programmer-visible effect.
- The Status Register fields that relate to the power state of the Snoop filter RAMs are undefined.

Registers

- The following registers provide storage but have no effect on the model.
  - QoS registers.
  - Interface monitor registers. These registers are intended for silicon debug.

Iris and MTI instances for CCI550

This model has the following Iris instances:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
CCI550	CCI550
CCI550.pvbus_register_file_s[0]	PVBusSlave
CCI550.upstream[Y] (where Y = 0–6)	PVBusSlave

This model has the following MTI trace components:

Name	Component type
CCI550	CCI550
CCI550.pvbus_register_file_s[0]	PVBusSlave
CCI550.upstream[Y] (where Y = 0–6)	PVBusSlave

Ports for CCI550

Port	Direction	Protocol	Description
acchannelensx	slave	Value	The acchannelensx[N] pins are used to tell the interconnect if the upstream system will accept snoops and/or DVM messages.
address_decoder	master	CCI500_AddressDecoderProtocol	An address decoder can be attached to the address_decoder port to choose which pvbus_s port a downstream transaction will go out of. If you do not connect an address decoder then all transactions will go out of port 0.
dbgen	slave	Signal	Invasive debug enable.
errirq	master	Signal	Some async error was detected.
evntcntoverflow	master	Signal	The output interrupts of the event counters.
niden	slave	Signal	Non-invasive debug enable.
pvbus_m	master	PVBus	The downstream master ports.
pvbus_register_file_s	slave	PVBus	The slave port of the register file.
pvbus_s	slave	PVBus	Bus slave ports.
reset_in	slave	Signal	Reset the interconnect.
reset_state_of_upstream_port	slave	Signal	Tell the interconnect the reset state of the upstream ports, this can be used by the interconnect to check some aspects of the reset sequencing. If you are using force_on_from_start then you *must* connect these pins.
sci_s	slave	SystemCoherencyInterface	The System Coherency Interface bus. For those upstream ports that have a corresponding bit set in the bitmap of si_system_coherency_interface then the corresponding sci_m port can be used to move the upstream system into and out of the coherency domain.
spiden	slave	Signal	Secure privileged invasive debug enable.
spniden	slave	Signal	Secure privileged non-invasive debug enable.

Parameters for CCI550

acchannelens0

For upstream port 0 determine if it is enabled or not w.r.t. snoop requests.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens1

For upstream port 1 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens2

For upstream port 2 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens3

For upstream port 3 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens4

For upstream port 4 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens5

For upstream port 5 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

acchannelens6

For upstream port 6 determine if it is enabled or not w.r.t. snoop requests.

Type: `uint64_t`

Default value: `0x0000000000000000`

addr_width

The bit-width of the address that the CCI can accept.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0000000000000028`

`cache_state_modelled`

Model the cache state.

Type: `bool`

Default value: true

`dbgen`

Invasive debug enable. If true, enables the counting of PMU events.

Type: `bool`

Default value: true

`enable_logger`

Enable PVBusLoggers for the downstream ports in the CCI model.

Type: `bool`

Default value: false

`force_on_from_start`

The interconnect will normally start up with snooping/DVM disabled.

The parameter `si_system_coherency_interface` determines which connections are managed by the System Coherency Interface (SCI).

For connections that are managed by SCI, then this parameter has no effect.

For all other connections, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `ACCHANNELENSx` allows it.

No software driver for the interconnect is needed.

Any non-SCI port that could go into reset must have `reset_state_of_upstream_port[]` reflect the reset state of that upstream.

Otherwise, the upstream system may receive snoop/DVM messages whilst in reset and may complain that it 'received a snoop request whilst it was in reset'.

Do not use if software is directly controlling the interconnect. This option does not disavow responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

niden

Whether non-secure events are allowed to be counted in the performance monitor.

Type: `bool`

Default value: true

num_ace_lite_ports

The bottom `num_ace_lite_ports` are ACE-Lite+DVM.

Type: `uint64_t`

Default value: `0x0000000000000005`

num_ace_ports

The top `num_ace_ports` are ACE and support full coherency.

Type: `uint64_t`

Default value: `0x0000000000000002`

number_of_phantom_entries

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

Type: `uint64_t`

Default value: `0x0000000000000020`

qos_threshold_upper

Reset value for the QoS threshold register.

Type: `uint64_t`

Default value: `0x000000000000000c`

reentrancy_support

Must be one of:

on

hazard checking per cache line (normal mode)

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

off
: no hazard checking (use only for single master systems)

cacheglobal
: hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary)

env
: take value from `FM_REENTRANCY_SUPPORT` env var, if this is not set use ‘on'.

Type: `string`

Default value: “env”

`si0_qos_bw_regulator`

For upstream port 0 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

`si1_qos_bw_regulator`

For upstream port 1 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

`si2_qos_bw_regulator`

For upstream port 2 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

`si3_qos_bw_regulator`

For upstream port 3 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

si4_qos_bw_regulator

For upstream port 4 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

si5_qos_bw_regulator

For upstream port 5 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

si6_qos_bw_regulator

For upstream port 6 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

Type: `bool`

Default value: false

si_system_coherency_interface

This parameter tells the interconnect which upstream ports should be controlled by the System Coherency Interface.

Each bit corresponds to an upstream port, bit 0 to upstream port 0, etc.

If the SCI port is connected but `si_system_coherency_interface` disables its use then messages from the upstream will be ignored and software must manage the upstream system's entrance and exit of the coherency domain.

Type: `uint64_t`

Default value: `0x0000000000000000`

spiden

Secure invasive debug enable.

If both `SPIDEN` and `DBGEN` are high, enables the counting of both Non-secure and Secure events.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

spniden

Whether secure and non-secure events are allowed to be counted in the performance monitor.

Type: `bool`

Default value: true

version

The version of the interconnect. Allowed versions are:

- r0p0
- r1p0.

Type: `string`

Default value: “”

3.128 CCN502

Defined in `LISA/CCN502.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About CCN502

CCN502 can be used for connecting components using the ACE and ACE-Lite interfaces. It has an L3 cache that can provide coherency between up to four fully-coherent ACE clusters and nine I/O coherent masters. It can connect up to two memory elements to drive transaction requests. This interconnect can be configured to support six or eight crosspoints, both of which are implemented in the model.

CCN502 has three or five downstream ports, depending on the number of crosspoints:

- Two or four SN-F ports for the memory controller
- One Acelite port (HNI)

The CCN502 parameters are not exposed through Iris, but can be seen in `CCN502.lisa`. Some useful parameters are:

- `cache_state_modelled`
- `cache_size_in_kbytes`
- `systemaddrmap`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- `variant_name`

CCN-502 supports up to 4 SN-Fs. To enable 4 SN-Fs in the model, set the `variant_name` parameter to CCN502_8XP, which means the 8XP/4HNF configuration.

Limitations

The model has the following limitations:

- No support for 3 SN striping.
- If there are multiple SN-Fs, the distribution of addresses to each SN-F is not guaranteed to match the hardware.
- The parameters for the CCNCache subcomponent are not accessible in System Canvas.

Iris and MTI instances for CCN502

This model has the following Iris instances:

Name	Instance type
`CCN502`	CCN5XX
`CCN502.bus_slave_ocm`	PVBusSlave
`CCN502.ccn502_hni_exclusive_monitor_0`	PVBusExclusiveMonitor
`CCN502.ccn502_hni_exclusive_monitor_0.bus_mapper`	PVBusMapper
`CCN502.ccn_cache`	CCNCache
`CCN502.ccn_cache.upstream[Y]` (where Y = 0–47)	PVBusSlave
`CCN502.ccn_registers`	CCNRegisterSet
`CCN502.ccn_registers.bus_slave`	PVBusSlave
`CCN502.ccn_router`	PVBusMapper

This model has the following MTI trace components:

Name	Component type
`CCN502.bus_slave_ocm`	PVBusSlave
`CCN502.ccn502_hni_exclusive_monitor_0`	PVBusExclusiveMonitor
`CCN502.ccn502_hni_exclusive_monitor_0.bus_mapper`	PVBusMapper
`CCN502.ccn_cache`	CCNCache
`CCN502.ccn_cache.upstream[Y]` (where Y = 0–47)	PVBusSlave
`CCN502.ccn_registers`	CCNRegisterSet
`CCN502.ccn_registers.bus_slave`	PVBusSlave
`CCN502.ccn_router`	PVBusMapper

Ports for CCN502

Port	Direction	Protocol	Description
`pvbus_m_hni`	master	PVBus	HNI downstream port.
`pvbus_m_snf`	master	PVBus	SNF downstream ports.
`pvbus_s_rnf`	slave	PVBus	RNF upstream ports.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`pvbus_s_rni`	slave	PVBus	RNI upstream ports
`reset_in`	slave	Signal	Reset signal.

Parameters for CCN502

`acchannelen_rnf`

Bitmap for each rnf upstream port to determine if it is enabled or not w.r.t. snoop requests.

Type: `uint32_t`

Default value: 15

`acchannelen_rni`

Bitmap for each rni upstream port to determine if it is enabled or not w.r.t. dvm requests.

Type: `uint32_t`

Default value: `0x1ff`

`cache_size_in_kbytes`

Size of the L3 cache to Model.

Type: `uint32_t`

Default value: 4096

`cache_state_modelled`

Model the cache state.

Type: `bool`

Default value: true

`enable_logger`

Enable PVBusLoggers for the downstream ports in the CCN model.

Type: `bool`

Default value: false

`force_on_from_start`

Enables snooping on upstream ports from the start of simulation.

The CCN502 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`number_of_snf`

Number of SNF nodes present.

Type: `uint32_t`

Default value: 2

`periphbase`

Value for PERIPHBASE. Only bits [43:24] are used.

Type: `uint64_t`

Default value: `0x2C000000`

`sbsx_bridge_present`

value for sbsx bridge presence.

Type: `bool`

Default value: true

`systemaddrmap`

Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

Type: `uint64_t`

Default value: 0

`variant_name`

Can be either CCN502_6XP or CCN502_8XP.

Type: `string`

Default value: “CCN502_6XP”

3.129 CCN504

Defined in `LISA/CCN504.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Non-Confidential

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About CCN504

CCN504 has three downstream ports:

- Two SNF ports for the memory controller
- One Acelite port (HNI)

Note

The parameters for the `CCNCache` subcomponent are not accessible in System Canvas.

Iris and MTI instances for CCN504

This model has the following Iris instances:

Name	Instance type
`CCN504`	CCN5XX
`CCN504.ccn502_hni_exclusive_monitor_0`	PVBusExclusiveMonitor
`CCN504.ccn502_hni_exclusive_monitor_0.bus_mapper`	PVBusMapper
`CCN504.ccn_cache`	CCNCache
`CCN504.ccn_cache.upstream[Y]` (where Y = 0–47)	PVBusSlave
`CCN504.ccn_registers`	CCNRegisterSet
`CCN504.ccn_registers.bus_slave`	PVBusSlave
`CCN504.ccn_router`	PVBusMapper

This model has the following MTI trace components:

Name	Component type
`CCN504.ccn502_hni_exclusive_monitor_0`	PVBusExclusiveMonitor
`CCN504.ccn502_hni_exclusive_monitor_0.bus_mapper`	PVBusMapper
`CCN504.ccn_cache`	CCNCache
`CCN504.ccn_cache.upstream[Y]` (where Y = 0–47)	PVBusSlave
`CCN504.ccn_registers`	CCNRegisterSet
`CCN504.ccn_registers.bus_slave`	PVBusSlave
`CCN504.ccn_router`	PVBusMapper

Ports for CCN504

Port	Direction	Protocol	Description
`pvbus_m_hni`	master	PVBus	HNI downstream port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`pvbus_m_snf`	master	PVBus	SNF downstream ports.
`pvbus_s_rnf`	slave	PVBus	RNF upstream ports.
`pvbus_s_rni`	slave	PVBus	RNI upstream ports.
`reset_in`	slave	Signal	Reset signal.

Parameters for CCN504

`acchannelen_rnf`

Bitmap for each rnf upstream port to determine if it is enabled or not w.r.t. snoop requests.

Type: `uint32_t`

Default value: 15

`acchannelen_rni`

Bitmap for each rni upstream port to determine if it is enabled or not w.r.t. dvm requests.

Type: `uint32_t`

Default value: `0x3ffff`

`cache_size_in_mbytes`

Size of the L3 cache to Model.

Type: `uint32_t`

Default value: 8

`cache_state_modelled`

Model the cache state.

Type: `bool`

Default value: true

`disable_hni_cacheable_error`

When set to true, disables the generation of error response when HNI receives cacheable access.

Type: `bool`

Default value: false

`enable_logger`

Enable PVBusLoggers for the downstream ports in the CCN model.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`force_on_from_start`

Enables snooping on upstream ports from the start of simulation.

The CCN504 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

Type: `bool`

Default value: false

`number_of_snf`

Number of SNF nodes present.

Type: `uint32_t`

Default value: 2

`periphbase`

Value for PERIPHBASE. Only bits [43:24] are used.

Type: `uint64_t`

Default value: `0x2C000000`

`sbas_bridge_present`

value for sbas bridge presence.

Type: `bool`

Default value: true

`sbsx_bridge_present`

value for sbsx bridge presence.

Type: `bool`

Default value: true

`systemaddrmap`

Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

Type: `uint64_t`

Default value: 0

Non-Confidential

Name	Component type
CCN508.ccn_registers.bus_slave	PVBusSlave
CCN508.ccn_router	PVBusMapper

Ports for CCN508

Port	Direction	Protocol	Description
pvbus_m_hni	master	PVBus	HNI downstream ports.
pvbus_m_snf	master	PVBus	SNF downstream ports.
pvbus_s_rnf	slave	PVBus	RNF upstream ports.
pvbus_s_rni	slave	PVBus	RNI upstream ports.
reset_in	slave	Signal	Reset signal.

Parameters for CCN508

acchannelen_rnf

Bitmap for each rnf upstream port to determine if it is enabled or not w.r.t. snoop requests.

Type: `uint32_t`

Default value: 255

acchannelen_rni

Bitmap for each rni upstream port to determine if it is enabled or not w.r.t. dvm requests.

Type: `uint32_t`

Default value: `0xffffff`

cache_size_in_mbytes

Size of the L3 cache to Model.

Type: `uint32_t`

Default value: 8

cache_state_modelled

Model the cache state.

Type: `bool`

Default value: true

enable_logger

Enable PVBusLoggers for the downstream ports in the CCN model.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`force_on_from_start`

Enables snooping on upstream ports from the start of simulation.

The CCN508 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

Type: `bool`

Default value: false

`number_of_snf`

Number of SNF nodes present.

Type: `uint32_t`

Non-Confidential

Type: `uint8_t`

Default value: 2

`CFMM.CMM.diagnostics`
Diagnostics.

Type: `uint8_t`

Default value: 2

`CFMM.CMM.throttler_num`
Number of input/output core clocks, and corresponding throttlers.

Type: `uint8_t`

Default value: 1

`CFMM.CMM.warn_num`
Number of warning events.

Type: `uint8_t`

Default value: 1

`CFMM.diagnostics`
Diagnostics.

Type: `uint8_t`

Default value: 2

`DVFSM.diagnostics`
Diagnostics.

Type: `uint8_t`

Default value: 2

`DVFSM.num_dvfsm_ctrl_out`
Number of bits in DVFSM_CTRL_OUT output.

Type: `uint8_t`

Default value: 1

`DVFSM.num_dvfsm_data_in`
Number of DVFSM_DATA_IN inputs.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

`DVFSM.num_dvfsm_dynamic_out`
Number of DVFSM_DYNAMIC_OUT outputs.

Type: `uint8_t`

Default value: 7

`DVFSM.num_dvfsm_event_in`
Number of bits in DVFSM_EVENT_IN inputs.

Type: `uint8_t`

Default value: 3

`DVFSM.num_dvfsm_pse_instr`
Maximum number of PSE instructions supported: 64 or 128.

Type: `uint8_t`

Default value: 128

`DVFSM.num_dvfsm_static_out`
Number of DVFSM_STATIC_OUT outputs.

Type: `uint8_t`

Default value: 3

`DVFSM.num_pll_dynamic_out`
Number of PLL Dynamic Setting outputs.

Type: `uint8_t`

Default value: 3

`DVFSM.num_pll_static_out`
Number of PLL Static Setting outputs.

Type: `uint8_t`

Default value: 5

`DVFSM.num_pll_status_in`
Number of PLL Status inputs.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

`ccsm_clk_dd_div`

Division parameter for CLK_DD relative to CLK_NOMM: 0 - no division, 1 - divide by 2 (currently supports only 0).

Type: `uint8_t`

Default value: 0

`diagnostics`

Diagnostics.

Type: `uint8_t`

Default value: 2

`num_ccsm_ctrl_out`

Number of bits in CCSM_CTRL_OUT output.

Type: `uint8_t`

Default value: 1

`num_ccsm_data_in`

Number of CCSM_DATA_IN inputs.

Type: `uint8_t`

Default value: 1

`num_ccsm_dynamic_out`

Number of CCSM_DYNAMIC_OUT outputs.

Type: `uint8_t`

Default value: 6

`num_ccsm_event_in`

Number of bits in CCSM_EVENT_IN inputs.

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`num_ccsm_ext_warn`
Number of Warning Events for CCSM CMM.

Type: `uint8_t`

Default value: 1

`num_ccsm_static_out`
Number of CCSM_STATIC_OUT outputs.

Type: `uint8_t`

Default value: 3

`num_cffm`
Number of CFMMs per CCSM.

Type: `uint8_t`

Default value: 1

`num_clk_throttlers`
Number of modulators/output clocks per CMM/CFMM.

Type: `uint8_t`

Default value: 1

`num_dvfsm_pse_instr`
Maximum number of PSE instructions supported: 64 or 128.

Type: `uint8_t`

Default value: 128

`num_pll_dynamic_out`
Number of PLL Dynamic Setting outputs.

Type: `uint8_t`

Default value: 3

`num_pll_static_out`
Number of PLL Static Setting outputs.

Type: `uint8_t`

Default value: 5

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

num_pll_status_in

Number of PLL Status inputs.

Type: `uint8_t`

Default value: 1

3.133 CFM

Defined in `LISA/CFM.lisa`.

About CFM

Clock Frequency based Mitigator (CFM).

Iris and MTI instances for CFM

This model has the following Iris instances:

Name	Instance type
CFM	CFM
CFM.CfmMaskOrGate	WideOrGate
CFM.TrigOrGate	WideOrGate
CFM.clksel_mux	Value_Multiplexer
CFM.clock_mux	Clock_Multiplexer
CFM.fw_clksel_mux	Value_Multiplexer
CFM.trig_droop_mux	Signal_Multiplexer
CFM.trig_soff_mux	Signal_Multiplexer

No MTI components available.

Ports for CFM

Port	Direction	Protocol	Description
cfm_clksel_ack	master	Signal	-
cfm_clksel_cur	master	ValueState	-
cfm_clksel_override_req	slave	ValueState	-
cfm_clksel_override_val	slave	ValueState	-
cfm_mask	slave	ValueState	-
cfm_override_applied	master	Signal	-
clk_dd_in	slave	ClockSignal	-
clk_fallback_in	slave	ClockSignal	-
clk_nominal_in	slave	ClockSignal	-
clkout_fm	master	ClockSignal	-
irq_err	master	Signal	-

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
PORESETn	slave	Signal	-
reg_pvbus_s	slave	PVBus	-
RESETn	slave	Signal	-
sysclk_in	slave	ClockSignal	-
trig_droop_alt	slave	Signal	-
trig_droop_main	slave	Signal	-
trig_overshoot	slave	Signal	-
trig_soff_alt	slave	Signal	-
trig_soff_main	slave	Signal	-
warn_exit_fb_ack	slave	Signal	-
warn_exit_fb	master	Signal	-
warn_exit_stop_ack	slave	Signal	-
warn_exit_stop	master	Signal	-

Parameters for CFM

`diagnostics`

Diagnostics.

Type: `uint8_t`

Default value: 2

3.134 CFMM

Defined in `LISA/CFMM.lisa`.

About CFMM

Clock Frequency-based and Modulation-based Mitigator.

Iris and MTI instances for CFMM

This model has the following Iris instances:

Name	Instance type
CFMM	CFMM
CFMM.CFM	CFM
CFMM.CFM.CfmMaskOrGate	WideOrGate
CFMM.CFM.TrigOrGate	WideOrGate
CFMM.CFM.clksel_mux	Value_Multiplexer
CFMM.CFM.clock_mux	Clock_Multiplexer
CFMM.CFM.fw_clksel_mux	Value_Multiplexer

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
CFMM.CFM.trig_droop_mux	Signal_Multiplexer
CFMM.CFM.trig_soff_mux	Signal_Multiplexer
CFMM.CMM	CMM
CFMM.CMM.throttler0	Throttler

No MTI components available.

Ports for CFMM

Port	Direction	Protocol	Description
cfm_clksel_cur	master	ValueState	-
cfm_clksel_override_ack	master	Signal	-
cfm_clksel_override_req	slave	ValueState	-
cfm_clksel_override_val	slave	ValueState	-
cfm_irq	master	Signal	-
cfm_mask_ack	master	Signal	-
cfm_mask_req	slave	Signal	-
clk_dd_in	slave	ClockSignal	-
clk_fallback_in	slave	ClockSignal	-
clk_mm_out	master	ClockSignal	-
clk_nominal_in	slave	ClockSignal	-
clkout_fm	master	ClockSignal	-
PORESETn	slave	Signal	-
reg_pvbus_s	slave	PVBus	-
RESETn	slave	Signal	-
spare_in	slave	Signal	-
spare_out	master	Signal	-
sysclk_in	slave	ClockSignal	-
sysclk_qactive	master	Signal	-
trig_droop_alt	slave	Signal	-
trig_droop_main	slave	Signal	-
trig_overshoot	slave	Signal	-
trig_soff_alt	slave	Signal	-
trig_soff_main	slave	Signal	-
warn_ack	master	Signal	-
warn_event	slave	Signal	-

Parameters for CFMM

CFM.diagnostics

Diagnostics.

Type: `uint8_t`
