Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu5.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu5.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu5.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu5.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu5.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu5.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster1.cpu9.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu9.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu9.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu9.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu9.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu9.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu9.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster1.cpu9.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu9.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu9.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu9.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu9.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 1

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL
Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster1.ete.REVISION
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

subcluster1.ete.SIM_OVERFLOW_GRANULARITY
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE
Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS
Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT
File to which to write trace byte stream.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster1.ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

`subcluster1.memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

`subcluster1.ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`subcluster1.treat-dcache-cmos-to-pou-as-nop`

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

`subcluster1.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

3.45 ARMCortexA510CT_CortexA710CT_CortexX2CT

Defined in `LISA/ARMCortexA510CT_CortexA710CT_CortexX2CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA510 r0p0	Full support
CortexA510 r1p3	Full support
CortexA710 r2p0	Full support
CortexX2 r2p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were removed:

- `pchannel_treat_simreset_as_poreset`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA510CT_CortexA710CT_CortexX2CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
: Possible values are 1-10 (ARMCortexA510CT).

`subcluster1.NUM_CORES`
: Possible values are 1-10 (ARMCortexA710CT).

`subcluster2.NUM_CORES`
: Possible values are 1-10 (ARMCortexX2CT).

The total number of cores in the cluster cannot exceed 12.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>`[0-9] for cores in `subcluster0`.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- <port_name>[10-19] for cores in subcluster1.
- <port_name>[20-29] for cores in subcluster2.

Note

All instances in the Master cross trigger matrix port array, cti[30] must be connected, regardless of the NUM_CORES value used.

Core-specific parameters have the following prefixes:

- subcluster0.cpu0 to subcluster0.cpu9 identify cores in subcluster0.
- subcluster1.cpu0 to subcluster1.cpu9 identify cores in subcluster1.
- subcluster2.cpu0 to subcluster2.cpu9 identify cores in subcluster2.

For information about the cores in this model, see:

- ARMCortexA510CT.
- ARMCortexA710CT.
- ARMCortexX2CT.

Iris and MTI instances for ARMCortexA510CT_CortexA710CT_CortexX2CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA510CT_CortexA710CT_CortexX2CT	Cluster_ARM_CortexA510_CortexA710_CortexX2_Heterogeneous
ARMCortexA510CT_CortexA710CT_CortexX2CT.AMU	PVBusLogger
ARMCortexA510CT_CortexA710CT_CortexX2CT.AMU.mapper	PVBusMapper
ARMCortexA510CT_CortexA710CT_CortexX2CT.DAP	PVBusLogger
ARMCortexA510CT_CortexA710CT_CortexX2CT.DAP.mapper	PVBusMapper

Ports for ARMCortexA510CT_CortexA710CT_CortexX2CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA510CT_CortexA710CT_CortexX2CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: false

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`subcluster0.CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

`subcluster0.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu0.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

`subcluster0.cpu0.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.l2cache-write_bus_width_in_bytes`

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

`subcluster0.cpu0.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster0.cpu0.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu3.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu3.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu3.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu3.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu4.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu4.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu4.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu6.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu6.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu7.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu7.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu8.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.l2cache-write_bus_width_in_bytes`

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

`subcluster0.cpu8.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster0.cpu8.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu8.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu9.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu9.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu9.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu9.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu9.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu9.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu9.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster0.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster0.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVISION

TRCPIDR REVISION value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster0.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.max_32bit_el

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: EL0 supports A32. This parameter is ignored in Rev0 i.e. when revision_number = 0.

Type: `int8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 1

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu0.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu0.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu4.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu5.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu5.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu5.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu5.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu5.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu5.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu5.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster1.cpu6.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu6.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu6.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu6.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu6.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu6.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu6.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

`subcluster1.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

`subcluster1.cpu8.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu8.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu8.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu8.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster1.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu8.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu8.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu8.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu8.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu8.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu8.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu8.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster1.cpu9.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu9.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu9.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu9.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu9.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster1.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`subcluster1.ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster1.ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster1.ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_read_is_sync`

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

subcluster2.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu0.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster2.cpu0.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu0.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu0.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster2.cpu1.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster2.cpu1.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu1.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu2.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu2.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu2.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu2.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

subcluster2.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster2.cpu4.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu4.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu4.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu4.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu4.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu6.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu6.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu6.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu6.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu6.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Default value: `0x0`

subcluster2.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

`subcluster2.cpu6.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu6.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu6.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu6.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu6.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu6.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu6.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster2.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Non-Confidential

subcluster2.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Non-Confidential

`subcluster2.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu7.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: `0xf000`

subcluster2.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu8.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster2.cpu8.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu8.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.l2cache-read_access_latency`

subcluster2.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster2.cpu8.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu8.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu8.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu8.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu8.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu8.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu8.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu8.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu8.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu9.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu9.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster2.cpu9.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster2.cpu9.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 32

subcluster2.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster2.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster2.ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`subcluster2.ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

`subcluster2.ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`subcluster2.ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster2.ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster2.ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.ext_abort_device_read_is_sync

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: false

subcluster2.ext_abort_device_write_is_sync

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

subcluster2.ext_abort_so_read_is_sync

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

subcluster2.ext_abort_so_write_is_sync

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster2.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster2.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster2.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster2.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster2.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

subcluster2.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster2.treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

subcluster2.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.46 ARMCortexA510CT_CortexA710CT_CortexX3CT

Defined in `LISA/ARMCortexA510CT_CortexA710CT_CortexX3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA510 r0p0	Full support
CortexA510 r1p3	Full support
CortexA710 r2p0	Full support
CortexX3 r0p0	Full support

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following parameters were removed:

- `pchannel_treat_simreset_as_poreset`

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA510CT_CortexA710CT_CortexX3CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
Possible values are 1-10 (ARMCortexA510CT).

`subcluster1.NUM_CORES`
Possible values are 1-10 (ARMCortexA710CT).

`subcluster2.NUM_CORES`
Possible values are 1-10 (ARMCortexX3CT).

The total number of cores in the cluster cannot exceed 12.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port_name>[0-9] for cores in `subcluster0`.
- <port_name>[10-19] for cores in `subcluster1`.
- <port_name>[20-29] for cores in `subcluster2`.

Note

All instances in the Master cross trigger matrix port array, `cti[30]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu9` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu9` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu9` identify cores in `subcluster2`.

For information about the cores in this model, see:

Ports for ARMCortexA510CT_CortexA710CT_CortexX3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA510CT_CortexA710CT_CortexX3CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: false

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu1.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu1.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu2.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu2.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu2.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu2.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu2.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu2.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu3.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu3.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu5.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu5.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu5.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu5.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu7.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu7.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu8.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu8.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu8.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu8.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

`subcluster0.ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`subcluster0.ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`subcluster0.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`subcluster0.ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster0.ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`subcluster0.ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`subcluster0.ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster0.ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster0.ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster0.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.max_32bit_el

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: EL0 supports A32. This parameter is ignored in Rev0 i.e. when revision_number = 0.

Type: `int8_t`

Default value: 0

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 1

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

`subcluster1.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu2.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu2.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu2.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu3.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu3.CRYPTODISABLE`

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

Non-Confidential

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu3.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu3.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu3.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu3.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu3.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu3.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu4.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu4.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu7.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster1.cpu7.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu7.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu7.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu7.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu7.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

`subcluster1.cpu9.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu9.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu9.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu9.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu9.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0x1`

`subcluster1.ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`subcluster1.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 1

`subcluster1.ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`subcluster1.ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`subcluster1.ete.RETSTACK`

Return stack depth.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

`subcluster1.ete.REVISION`
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

`subcluster1.ete.SIM_OVERFLOW_GRANULARITY`
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`subcluster1.ete.SIM_OVERFLOW_PERCENTAGE`
Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.SOURCE_ADDRESS`
Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster1.ete.TRACE_OUTPUT`
File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster1.ete.TRCRSRTA_FORCED_EXCEP`
TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_read_is_sync`
Synchronous reporting of device-nGnRE read external aborts.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster1.ext_abort_device_write_is_sync`

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_read_is_sync`

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: false

`subcluster1.ext_abort_so_write_is_sync`

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: false

`subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

`subcluster1.force_zero_PSTATE_PAN`

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

`subcluster1.force_zero_mpam_partid_and_pmg`

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster1.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat-dcache-cmos-to-pou-as-nop

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.NUM_CORES

Number of cores per cluster.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

subcluster2.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu0.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`subcluster2.cpu0.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

`subcluster2.cpu0.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu0.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu0.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu0.semihosting-stack_limit`
Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster2.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu1.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

`subcluster2.cpu1.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

subcluster2.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

subcluster2.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu2.semihosting-A64_HLT`
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu2.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu2.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu2.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu2.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu2.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu2.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster2.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster2.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster2.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu3.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu3.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu3.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu3.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu3.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu3.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu3.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster2.cpu4.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu4.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster2.cpu4.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu4.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu4.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu4.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu4.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu4.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu5.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu5.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu5.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu5.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster2.cpu6.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.CFGTE
Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu6.CRYPTODISABLE
Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu6.RVBARADDR
Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.enable_trace_special_hlt_imm16
Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu6.force-fpsid
Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu6.l2cache-hit_latency
L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-maintenance_latency
L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster2.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Non-Confidential

subcluster2.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster2.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu9.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

subcluster2.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu9.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu9.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu9.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu9.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu9.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu9.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x8000`

subcluster2.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.error_record_feature_register

RAS feature register values. An array of JSON objects. The JSON schema for the array is: [{"ED":`0x0`, "IMPDEF_3_2":`0x0`, "UI":`0x0`, "FI":`0x0`, "UE":`0x0`, "CFI":`0x0`, "CEC":`0x0`, "RP":`0x0`, "DUI":`0x0`, "CEO":`0x0`, "CI":`0x0`, "TS":`0x0`, "INJ":`0x0`, "FRX":`0x0`, "UC":`0x0`, "UEU":`0x0`, "UER":`0x0`, "UEO":`0x0`, "DE":`0x0`, "CE":`0x0`, "Visibility":"Core"},other_feature_register_values]. Where ED,UI,FI,CE and UE have valid values between `0x0` - `0x3`. CFI and DUI have valid values `0x0`, `0x2` and `0x3`. CEC has valid values `0x0`,`0x2` or `0x4`. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values `0x0` or `0x1`. CI and TS has valid values of `0x0`, `0x1` and `0x2`. Visibility has valid values "Core" or "Cluster".

Type: `string`

Default value:
“[{"ED":`0x2`,"IMPDEF_3_2":`0x0`,"UI":`0x2`,"FI":`0x2`,"UE":`0x1`,"CFI":`0x2`,"CEC":`0x2`,"RP":`0x1`,"DUI":`0x0`,"CEO":`0x0`,
"Visibility":"Cluster"},
{"ED":`0x2`,"IMPDEF_3_2":`0x0`,"UI":`0x2`,"FI":`0x2`,"UE":`0x1`,"CFI":`0x2`,"CEC":`0x2`,"RP":`0x1`,"DUI":`0x0`,"CEO":`0x0`,"I

subcluster2.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 32

subcluster2.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster2.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

`subcluster2.ete.RETSTACK`
Return stack depth.

Type: `uint8_t`

Default value: 3

`subcluster2.ete.REVISION`
TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.SIM_OVERFLOW_GRANULARITY`
Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`subcluster2.ete.SIM_OVERFLOW_PERCENTAGE`
Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.SOURCE_ADDRESS`
Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster2.ete.TRACE_OUTPUT`
File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster2.ete.TRCRSRTA_FORCED_EXCEP`
TRCRSR.TA value for a forcibly traced exception.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.ext_abort_normal_noncacheable_read_is_sync

Synchronous reporting of normal noncacheable-read external aborts.

Type: `bool`

Default value: true

subcluster2.ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster2.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster2.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster2.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster2.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster2.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster2.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster2.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster2.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster2.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster2.pseudo_fault_generation_feature_register

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":`0x0`, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other_psuedo-fault_generating_features_register_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT_SUPPORTED) and true(FEATURE_CONTROLLABLE), where CE can have 0(NOT_SUPPORTED), 1(NONSPECIFIC_CE_SUPPORTED) and 3(TRANSIENT_OR_PERSISTENT_CE_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has_ras_fault_injection is true.

Type: `string`

Default value: “[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":`0x1`, "CE":`0x1`,"CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true},{"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":`0x1`, "CE":`0x1`,"CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]”

subcluster2.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster2.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster2.trace_physical_registers_when_host_virtualisation_enabled

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR_EL1 as ELR/SPSR_EL2, 2=Trace all redirected registers as physical registers.

Type: `uint8_t`

Default value: 1

subcluster2.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster2.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

3.47 ARMCortexA510CT_CortexA715CT_CortexX3CT

Defined in `LISA/ARMCortexA510CT_CortexA715CT_CortexX3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA510 r0p0	Full support
CortexA510 r1p3	Full support
CortexA715 r1p2	Full support
CortexX3 r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA510CT_CortexA715CT_CortexX3CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
Possible values are 1-10 (ARMCortexA510CT).

`subcluster1.NUM_CORES`
Possible values are 1-10 (ARMCortexA715CT).

`subcluster2.NUM_CORES`
Possible values are 1-10 (ARMCortexX3CT).

The total number of cores in the cluster cannot exceed 12.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port_name>[0-9] for cores in subcluster0.
- <port_name>[10-19] for cores in subcluster1.
- <port_name>[20-29] for cores in subcluster2.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Note

All instances in the Master cross trigger matrix port array, cti[30] must be connected, regardless of the NUM_CORES value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu9` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu9` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu9` identify cores in `subcluster2`.

For information about the cores in this model, see:

- ARMCortexA510CT.
- ARMCortexA715CT.
- ARMCortexX3CT.

Iris and MTI instances for ARMCortexA510CT_CortexA715CT_CortexX3CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA510CT_CortexA715CT_CortexX3CT`	Cluster_ARM_CortexA510_CortexA715_CortexX3_Heterogeneous
`ARMCortexA510CT_CortexA715CT_CortexX3CT.AMU`	PVBusLogger
`ARMCortexA510CT_CortexA715CT_CortexX3CT.AMU.mapper`	PVBusMapper
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DAP`	PVBusLogger
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DAP.mapper`	PVBusMapper
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU`	DSU-110
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.PPU_coreU` (where *U* = 0–2)	PPUv1
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.PPU_coreU.busslave` (where *U* = 0–2)	PVBusSlave
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.shared_cache`	PVCache
`ARMCortexA510CT_CortexA715CT_CortexX3CT.DSU.shared_cache.upstream[U]` (where *U* = 0–7)	PVBusSlave

Ports for ARMCortexA510CT_CortexA715CT_CortexX3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`ppu_core_irq`	master	Signal	PPU core interrupt.
`ppu_core_isolate`	master	Signal	PPU Core Domain isolation control.
`ppu_core_wakerequest`	slave	Signal	PPU Core wake request signals.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Reset signal to cluster.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA510CT_CortexA715CT_CortexX3CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

default_opmode

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

diagnostics

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: false

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`subcluster0.CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

Type: `uint8_t`

Default value: 1

`subcluster0.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu1.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu1.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu2.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu2.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu2.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu3.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu3.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu5.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu5.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster0.cpu5.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu5.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu5.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

`subcluster0.cpu5.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.l2cache-write_bus_width_in_bytes`

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu5.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu5.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu5.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu6.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu6.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu6.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu6.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu6.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu6.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu6.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu6.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu7.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu7.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu7.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu7.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu7.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster0.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

`subcluster0.ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`subcluster0.ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`subcluster0.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`subcluster0.ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster0.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.max_32bit_el

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: EL0 supports A32. This parameter is ignored in Rev0 i.e. when revision_number = 0.

Type: `int8_t`

Default value: 0

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 1

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.NUM_CORES`

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

`subcluster1.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu1.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu1.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu1.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster1.cpu2.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu2.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu2.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu2.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu7.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu7.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

subcluster1.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu9.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu9.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu9.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

`subcluster1.cpu9.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu9.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu9.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.error_record_feature_register

RAS feature register values. An array of JSON objects. The JSON schema for the array is:
[{"ED":`0x0`, "IMPDEF_3_2":`0x0`, "UI":`0x0`, "FI":`0x0`, "UE":`0x0`, "CFI":`0x0`, "CEC":`0x0`, "RP":`0x0`,

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

"DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other_feature_register_values]. Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

Type: `string`

Default value:
“[{"ED":0x2,"IMPDEF_3_2":0x1,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,
"Visibility":"Cluster"},
{"ED":0x2,"UI":0x2,"FI":0x2,"UE":0x1,"CFI":0x2,"CEC":0x2,"RP":0x1,"DUI":0x0,"CEO":0x0,"INJ":0x1,"CI":0x0,"TS

`subcluster1.ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`subcluster1.ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`subcluster1.ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`subcluster1.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster1.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 1

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.has_coherent_icache`

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

`subcluster1.has_enhanced_pan`

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`subcluster1.has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

`subcluster1.has_large_va`

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

`subcluster1.has_statistical_profiling`

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

`subcluster1.icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x8000`

subcluster1.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster1.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster1.pseudo_fault_generation_feature_register

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":`0x0`, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other_psuedo-fault_generating_features_register_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT_SUPPORTED) and true(FEATURE_CONTROLLABLE), where CE can have 0(NOT_SUPPORTED), 1(NONSPECIFIC_CE_SUPPORTED) and 3(TRANSIENT_OR_PERSISTENT_CE_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has_ras_fault_injection is true.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: “[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true},{"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]”

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster2.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu0.CRYPTODISABLE

Disable cryptographic features.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu0.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu0.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu0.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster2.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu1.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

`subcluster2.cpu1.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu1.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu1.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Non-Confidential

Type: `bool`

Default value: true

subcluster2.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: true

subcluster2.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu5.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu5.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu5.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu5.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu5.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu5.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu5.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu5.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu5.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu5.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu5.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu5.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster2.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster2.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster2.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu7.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu7.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu7.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu8.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu8.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu8.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu8.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu8.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu9.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster2.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster2.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu9.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu9.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu9.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu9.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu9.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu9.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu9.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu9.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu9.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu9.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu9.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu9.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu9.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu9.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster2.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster2.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.error_record_feature_register

RAS feature register values. An array of JSON objects. The JSON schema for the array is:
[{"ED":`0x0`, "IMPDEF_3_2":`0x0`, "UI":`0x0`, "FI":`0x0`, "UE":`0x0`, "CFI":`0x0`, "CEC":`0x0`, "RP":`0x0`,

`subcluster2.ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 32

`subcluster2.ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`subcluster2.ete.NumberOfRSPairs`

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

`subcluster2.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`subcluster2.ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`subcluster2.ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`subcluster2.ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`subcluster2.ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster2.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster2.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster2.ext_abort_normal_noncacheable_read_is_sync

Synchronous reporting of normal noncacheable-read external aborts.

Type: `bool`

Default value: true

subcluster2.ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster2.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster2.has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: true

subcluster2.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster2.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster2.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster2.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster2.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster2.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster2.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster2.pseudo_fault_generation_feature_register

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false,

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

"CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other_psuedo-fault_generating_features_register_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT_SUPPORTED) and true(FEATURE_CONTROLLABLE), where CE can have 0(NOT_SUPPORTED), 1(NONSPECIFIC_CE_SUPPORTED) and 3(TRANSIENT_OR_PERSISTENT_CE_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has_ras_fault_injection is true.

Type: `string`

Default value: “[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true},{"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1,"CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]”

subcluster2.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster2.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster2.trace_physical_registers_when_host_virtualisation_enabled

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR_EL1 as ELR/SPSR_EL2, 2=Trace all redirected registers as physical registers.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

`subcluster2.treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`subcluster2.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.48 ARMCortexA520AECT

Defined in `LISA/ARMCortexA520AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
Preliminary support	Full support

AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, cpu0 and cpu1 identify the available cores and associated ports, not cpu0 and cpu2.

- Hybrid mode is not modeled in the DSU.

Iris and MTI instances for ARMCortexA520AECT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA520AECT`	Cluster_ARM_Cortex-A520AE
`ARMCortexA520AECT.AMU`	PVBusLogger
`ARMCortexA520AECT.AMU.mapper`	PVBusMapper
`ARMCortexA520AECT.DAP`	PVBusLogger
`ARMCortexA520AECT.DAP.mapper`	PVBusMapper
`ARMCortexA520AECT.DSU`	DSU-120
`ARMCortexA520AECT.DSU.PPU_cluster`	PPUv1
`ARMCortexA520AECT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA520AECT.DSU.PPU_core0`	PPUv1
`ARMCortexA520AECT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexA520AECT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA520AECT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA520AECT.DSU.shared_cache`	PVCache
`ARMCortexA520AECT.DSU.shared_cache.upstream[Y]` (where *Y* = 0–4)	PVBusSlave
`ARMCortexA520AECT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexA520AECT.MMAP`	PVBusLogger
`ARMCortexA520AECT.MMAP.mapper`	PVBusMapper
`ARMCortexA520AECT.RAS`	PVBusLogger
`ARMCortexA520AECT.RAS.mapper`	PVBusMapper
`ARMCortexA520AECT.cpu0`	ARM_Cortex-A520AE
`ARMCortexA520AECT.cpu0.UTLB`	TLB
`ARMCortexA520AECT.cpu0.debug_rom`	debug_rom
`ARMCortexA520AECT.cpu0.dtlb`	TLB
`ARMCortexA520AECT.cpu0.l1dcache`	PVCache
`ARMCortexA520AECT.cpu0.l1dcache.upstream[0]`	PVBusSlave
`ARMCortexA520AECT.cpu0.l1icache`	PVCache
`ARMCortexA520AECT.cpu0.l1icache.upstream[0]`	PVBusSlave
`ARMCortexA520AECT.cpu0.l2cache`	PVCache
`ARMCortexA520AECT.cpu0.l2cache.upstream[U]` (where *U* = 0–1)	PVBusSlave
`ARMCortexA520AECT.ext_bus`	PVBusLogger
`ARMCortexA520AECT.ext_bus.mapper`	PVBusMapper
`ARMCortexA520AECT.gic_cpuif_decoder_cluster`	GICv3CPUInterfaceDecoder

Name	Instance type
ARMCortexA520AECT.global_debug_rom	debug_rom
ARMCortexA520AECT.secondary_debug_rom	debug_rom
ARMCortexA520AECT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA520AECT.AMU	PVBusLogger
ARMCortexA520AECT.AMU.mapper	PVBusMapper
ARMCortexA520AECT.DAP	PVBusLogger
ARMCortexA520AECT.DAP.mapper	PVBusMapper
ARMCortexA520AECT.DSU	DSU-120
ARMCortexA520AECT.DSU.PPU_cluster	PPUv1
ARMCortexA520AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA520AECT.DSU.PPU_core0	PPUv1
ARMCortexA520AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA520AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA520AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache	PVCache
ARMCortexA520AECT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexA520AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA520AECT.MMAP	PVBusLogger
ARMCortexA520AECT.MMAP.mapper	PVBusMapper
ARMCortexA520AECT.RAS	PVBusLogger
ARMCortexA520AECT.RAS.mapper	PVBusMapper
ARMCortexA520AECT.cpu0	ARM_Cortex-A520AE
ARMCortexA520AECT.cpu0.UTLB	TLB
ARMCortexA520AECT.cpu0.l1dcache	PVCache
ARMCortexA520AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA520AECT.cpu0.l1icache	PVCache
ARMCortexA520AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA520AECT.cpu0.l2cache	PVCache
ARMCortexA520AECT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA520AECT.ext_bus	PVBusLogger
ARMCortexA520AECT.ext_bus.mapper	PVBusMapper
ARMCortexA520AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA520AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520AECT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x10`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`cpuX.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`cpuX.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`cpuX.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`cpuX.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`cpuX.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

`ASTART0_DEFAULT`

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`ASTART1_DEFAULT`

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`ASTART2_DEFAULT`

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`ASTART3_DEFAULT`

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

`BROADCASTATOMIC`

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

`BROADCASTOUTER`

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

`BROADCASTPERSIST`

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

cluster_split_lock_config

Default SPLIT/LOCKED config. Directly maps to values of CLUSTERSLCFR. The valid values are: 1 - Only LOCKED configuration support 4 - Only SPLIT configuration support,5 - Mixed Configuration support. Modes are not software visible, and not modeled.Valid only when enable_ae_features is true.

Type: `uint8_t`

Default value: 1

core_cache_protection

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Default value: 1

core_complex_mapping

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [0, 1], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: “{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1": { "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4, 5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"}} }”

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`enable_lock_step`

Whether the core is configured in Dual Core Lock Step mode (FEAT_DCLS).

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`ete.CLAIMTAGS`

Number of claim tags.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

ete.RETSTACK

Return stack depth.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

`ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_actlr2

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

has_coherent_icache

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: false

has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

has_impdef_transient_fault_protection

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT_TFP).

Type: `bool`

Default value: true

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`icache-prefetch_enabled`

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

`icache-read_access_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-read_latency`

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: true

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_bus_width_in_bytes`

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-write_bus_width_in_bytes

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_acp

Number of ACP ports.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

ras_extra_configurations

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: “[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]”

ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`reported_patch_level`

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`reported_revision_number`

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.49 ARMCortexA520CT

Defined in `LISA/ARMCortexA520CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA520CT

The model supports the following features:

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- Internal PPU support is present.
- A P-Channel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- Memory-mapped register access to MPAM.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- DSU-120 system features are not fully implemented.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin
- `COREINSTRRET` and `COREINSTRRUN` signals.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
- Automatic CPU retention mode.
- Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA520CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA520CT`	Cluster_ARM_Cortex-A520
`ARMCortexA520CT.AMU`	PVBusLogger
`ARMCortexA520CT.AMU.mapper`	PVBusMapper
`ARMCortexA520CT.DAP`	PVBusLogger
`ARMCortexA520CT.DAP.mapper`	PVBusMapper
`ARMCortexA520CT.DSU`	DSU-120
`ARMCortexA520CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA520CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA520CT.DSU.PPU_core0`	PPUv1
`ARMCortexA520CT.DSU.PPU_core0.busslave`	PVBusSlave
`ARMCortexA520CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA520CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA520CT.DSU.shared_cache`	PVCache
`ARMCortexA520CT.DSU.shared_cache.upstream[Y]` (where Y = 0–4)	PVBusSlave
`ARMCortexA520CT.DSU.utility_slave[0]`	PVBusSlave
`ARMCortexA520CT.MMAP`	PVBusLogger
`ARMCortexA520CT.MMAP.mapper`	PVBusMapper
`ARMCortexA520CT.RAS`	PVBusLogger

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA520CT.RAS.mapper	PVBusMapper
ARMCortexA520CT.cpu0	ARM_Cortex-A520
ARMCortexA520CT.cpu0.UTLB	TLB
ARMCortexA520CT.cpu0.debug_rom	debug_rom
ARMCortexA520CT.cpu0.dtlb	TLB
ARMCortexA520CT.cpu0.l1dcache	PVCache
ARMCortexA520CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l1icache	PVCache
ARMCortexA520CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l2cache	PVCache
ARMCortexA520CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA520CT.ext_bus	PVBusLogger
ARMCortexA520CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA520CT.global_debug_rom	debug_rom
ARMCortexA520CT.secondary_debug_rom	debug_rom
ARMCortexA520CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA520CT.AMU	PVBusLogger
ARMCortexA520CT.AMU.mapper	PVBusMapper
ARMCortexA520CT.DAP	PVBusLogger
ARMCortexA520CT.DAP.mapper	PVBusMapper
ARMCortexA520CT.DSU	DSU-120
ARMCortexA520CT.DSU.PPU_cluster	PPUv1
ARMCortexA520CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA520CT.DSU.PPU_core0	PPUv1
ARMCortexA520CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA520CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA520CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA520CT.DSU.shared_cache	PVCache
ARMCortexA520CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–4)	PVBusSlave
ARMCortexA520CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA520CT.MMAP	PVBusLogger
ARMCortexA520CT.MMAP.mapper	PVBusMapper
ARMCortexA520CT.RAS	PVBusLogger
ARMCortexA520CT.RAS.mapper	PVBusMapper

Name	Component type
ARMCortexA520CT.cpu0.l1dcache	PVCache
ARMCortexA520CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l1icache	PVCache
ARMCortexA520CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l2cache	PVCache
ARMCortexA520CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA520CT.ext_bus	PVBusLogger
ARMCortexA520CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Ports for ARMCortexA520CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520CT

`cpuX.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`cpuX.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`cpuX.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`cpuX.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

cpuX.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

cpuX.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

cpuX.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

cpuX.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

cpuX.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

cpuX.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

cpuX.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

cpuX.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND2_DEFAULT`

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND3_DEFAULT`

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_cache_protection

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

core_complex_mapping

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [0, 1], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

Type: `string`

Default value: “{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1": { "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4, 5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"}} }”

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-state_modelled

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

ete.CLAIMTAGS

Number of claim tags.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

`ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`ete.RETSTACK`

Return stack depth.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

`ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

`ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

has_actlr2

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

has_peripheral_port

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_bus_width_in_bytes`

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_bus_width_in_bytes`

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_acp

Number of ACP ports.

Type: `uint8_t`

Default value: 0

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

ras_extra_configurations

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: "[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]"

ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.50 ARMCortexA520CT_CortexA720CT

Defined in `LISA/ARMCortexA520CT_CortexA720CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA520 r0p1	Full support
CortexA720 r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

The following ports were added:

- `cluster_ppu_hw_stat`
- `core_ppu_hw_stat`
- `coreinstrrun`
- `ppu_cluster_isolate`
- `ppu_core_isolate`

About ARMCortexA520CT_CortexA720CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`

Possible values are 1-13 (ARMCortexA520CT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.NUM_CORES

Possible values are 1-13 (ARMCortexA720CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>`[0-12] for cores in `subcluster0`.
- `<port_name>`[13-25] for cores in `subcluster1`.

Note

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA520CT.
- ARMCortexA720CT.

Iris and MTI instances for ARMCortexA520CT_CortexA720CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA520CT_CortexA720CT`	Cluster_ARM_CortexA520_CortexA720_Heterogeneous
`ARMCortexA520CT_CortexA720CT.AMU`	PVBusLogger
`ARMCortexA520CT_CortexA720CT.AMU.mapper`	PVBusMapper
`ARMCortexA520CT_CortexA720CT.DAP`	PVBusLogger
`ARMCortexA520CT_CortexA720CT.DAP.mapper`	PVBusMapper
`ARMCortexA520CT_CortexA720CT.DSU`	DSU-120
`ARMCortexA520CT_CortexA720CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA520CT_CortexA720CT.DSU.PPU_cluster.busslave`	PVBusSlave
`ARMCortexA520CT_CortexA720CT.DSU.PPU_coreZ` (where *Z* = 0–1)	PPUv1
`ARMCortexA520CT_CortexA720CT.DSU.PPU_coreZ.busslave` (where *Z* = 0–1)	PVBusSlave
`ARMCortexA520CT_CortexA720CT.DSU.l3_flusher`	AsyncCacheFlushUnit
`ARMCortexA520CT_CortexA720CT.DSU.mpam_busslave`	PVBusSlave
`ARMCortexA520CT_CortexA720CT.DSU.shared_cache`	PVCache
`ARMCortexA520CT_CortexA720CT.DSU.shared_cache.upstream[Z]` (where *Z* = 0–6)	PVBusSlave

ARMCortexA520CT_CortexA720CT.subclusterZ.cpu0.l2cache (where *Z* = 0–1)	PVCache
ARMCortexA520CT_CortexA720CT.subclusterZ.cpu0.l2cache.upstream[W] (where *Z* = 0–1; *W* = 0–1)	PVBusSlave
ARMCortexA520CT_CortexA720CT.subcluster1.cpu0	ARM_Cortex-A720

Ports for ARMCortexA520CT_CortexA720CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_ pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_ powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_ cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520CT_CortexA720CT

AEND0_DEFAULT

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_complex_mapping

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [0, 1], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

Type: `string`

Default value: “{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1": { "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4, 5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"}} }”

core_power_on_by_default

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: false

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_bus_width_in_bytes

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-write_bus_width_in_bytes`

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

subcluster0.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster0.core_cache_protection

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu0.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu0.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu0.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu10.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu10.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu10.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster0.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster0.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu12.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu12.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu12.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu12.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu12.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu12.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu12.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu12.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu12.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu12.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu12.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu12.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu12.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu12.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu12.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu12.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu12.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu12.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu2.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu2.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu2.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu2.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu2.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu2.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu2.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu3.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu4.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu5.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu5.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu5.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu5.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu5.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu5.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu5.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu6.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster0.cpu6.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu6.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu6.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu6.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu6.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu6.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu6.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu6.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu6.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu6.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu6.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu8.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu8.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu8.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu8.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu8.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu9.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu9.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster0.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster0.cpu9.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu9.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu9.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster0.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`subcluster0.has_actlr2`

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

`subcluster0.has_dot_product`

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

`subcluster0.has_ete`

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

`subcluster0.icache-hit_latency`

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-maintenance_latency`

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-miss_latency`

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ras_extra_configurations

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: “[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]”

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

`subcluster1.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster1.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu0.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu0.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu1.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu1.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu10.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu10.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu10.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu10.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu11.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu11.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu11.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu12.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu12.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu12.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster1.cpu12.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu12.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu12.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu12.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu12.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu12.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu12.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu12.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster1.cpu12.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu12.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu12.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu12.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu12.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu12.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu12.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu12.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu12.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu2.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu2.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu2.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu2.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu2.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.CFGTE
Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE
Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR
Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16
Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.force-fpsid
Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu3.l2cache-hit_latency
L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency
L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu4.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Non-Confidential

Default value: N/A

subcluster1.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu9.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster1.ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

`subcluster1.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.PIDR_REVISION`

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.Q_CADENCE`

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

`subcluster1.ete.RES0_STATEFUL`

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

`subcluster1.ete.RETSTACK`

Return stack depth.

Type: `uint8_t`

Default value: 3

`subcluster1.ete.REVISION`

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

`subcluster1.ete.SIM_OVERFLOW_GRANULARITY`

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster1.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

3.51 ARMCortexA520CT_CortexA720CT_CortexX4CT

Defined in `LISA/ARMCortexA520CT_CortexA720CT_CortexX4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA520 r0p1	Full support
CortexA720 r0p1	Full support
CortexX4 r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
CortexA520 r0p1=Full support CortexA720 r0p1=Full support CortexX4 r0p0=Preliminary support	CortexA520 r0p1=Full support CortexA720 r0p1=Full support CortexX4 r0p0=Full support

About ARMCortexA520CT_CortexA720CT_CortexX4CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
Possible values are 1-12 (ARMCortexA520CT).

`subcluster1.NUM_CORES`
Possible values are 1-12 (ARMCortexA720CT).

`subcluster2.NUM_CORES`
Possible values are 1-12 (ARMCortexX4CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>`[0-11] for cores in `subcluster0`.
- `<port_name>`[12-23] for cores in `subcluster1`.
- `<port_name>`[24-35] for cores in `subcluster2`.

Note

All instances in the Master cross trigger matrix port array, `cti[36]` must be connected, regardless of the `NUM_CORES` value used.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu11` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu11` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu11` identify cores in `subcluster2`.

For information about the cores in this model, see:

- ARMCortexA520CT.
- ARMCortexA720CT.
- ARMCortexX4CT.

Iris and MTI instances for ARMCortexA520CT_CortexA720CT_CortexX4CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA520CT_CortexA720CT_CortexX4CT`	Cluster_ARM_CortexA520_CortexA720_CortexX4_Heterogeneous
`ARMCortexA520CT_CortexA720CT_CortexX4CT.AMU`	PVBusLogger
`ARMCortexA520CT_CortexA720CT_CortexX4CT.AMU.mapper`	PVBusMapper
`ARMCortexA520CT_CortexA720CT_CortexX4CT.DAP`	PVBusLogger
`ARMCortexA520CT_CortexA720CT_CortexX4CT.DAP.mapper`	PVBusMapper
`ARMCortexA520CT_CortexA720CT_CortexX4CT.DSU`	DSU-120
`ARMCortexA520CT_CortexA720CT_CortexX4CT.DSU.PPU_cluster`	PPUv1
`ARMCortexA520CT_CortexA720CT_CortexX4CT.DSU.PPU_cluster.busslave`	PVBusSlave

Ports for ARMCortexA520CT_CortexA720CT_CortexX4CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDOMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Reset signal to cluster.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520CT_CortexA720CT_CortexX4CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_complex_mapping

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [0, 1], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: “{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1": { "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4, 5], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"}} }”

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-has_mpam

L3 Cache has MPAM support.

Type: `bool`

Default value: true

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_bus_width_in_bytes

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-read_latency`

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-ways`

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`l3cache-write_bus_width_in_bytes`

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`num_nodes`

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

`revision_number`

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

`subcluster0.CPUCFR`

Value of CPU Configuration Register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster0.core_cache_protection

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`subcluster0.cpu1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster0.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu1.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu10.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu10.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu10.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu10.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu10.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu10.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu10.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu11.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Default value: `0x0`

`subcluster0.cpu3.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu3.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

`subcluster0.cpu3.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.l2cache-write_bus_width_in_bytes`

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu3.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu3.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu3.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu4.l2cache-read_bus_width_in_bytes`

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`subcluster0.cpu4.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu4.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu5.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu5.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu5.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Default value: `0x0`

`subcluster0.cpu6.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu6.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

`subcluster0.cpu6.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.l2cache-write_bus_width_in_bytes`

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu6.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu6.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu6.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu6.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu6.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu6.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu6.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu9.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu9.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu9.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu9.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu9.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu9.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu9.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu9.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu9.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu9.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.dcache-hit_latency`

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.dcache-maintenance_latency`

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`subcluster0.dcache-write_access_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.dcache-write_latency`

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.ete.CLAIMTAGS`

Number of claim tags.

Type: `uint8_t`

Default value: 4

`subcluster0.ete.MAX_INST_PER_Q`

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

`subcluster0.ete.PIDR_CMOD`

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

`subcluster0.ete.PIDR_REVAND`

TRCPIDR REVAND value.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster0.has_actlr2

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ras_extra_configurations

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: “[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]”

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu1.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu10.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

subcluster1.cpu10.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu10.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu10.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu10.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu10.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

Non-Confidential

subcluster1.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster1.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu4.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu4.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster1.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu4.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu4.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu4.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu5.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu5.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Default value: `0x0`

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu7.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu7.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu7.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu7.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster1.cpu8.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu8.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`subcluster1.cpu9.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu9.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu9.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu9.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu9.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster1.ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVAND

TRCPIDR REVAND value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster1.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`subcluster1.instruction_tlb_size`

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

`subcluster1.invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`subcluster1.memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

`subcluster1.pmu-num_counters`

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

`subcluster1.ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.stage12_tlb_size`

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x80`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 1

subcluster2.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster2.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster2.cpu1.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu1.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu1.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu1.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu1.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu1.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster2.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu10.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu10.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu10.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu10.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu10.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu10.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu10.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu11.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu11.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster2.cpu11.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu11.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu11.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu11.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu11.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu11.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu11.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu11.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu11.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu11.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu11.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu11.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster2.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster2.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster2.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster2.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

`subcluster2.cpu5.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster2.cpu5.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu5.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu5.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu5.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster2.cpu6.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu6.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu6.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu6.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu6.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu6.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

subcluster2.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

subcluster2.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster2.cpu8.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu8.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu8.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu8.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu8.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu8.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu8.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster2.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu9.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu9.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu9.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu9.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu9.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster2.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.ecv_support_level

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

subcluster2.ete.CLAIMTAGS

Number of claim tags.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 4

subcluster2.ete.MAX_INST_PER_Q
Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.NumberOfRSPairs
Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster2.ete.PIDR_CMOD
TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.Q_CADENCE
Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.RES0_STATEFUL
Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster2.ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster2.ete.SIM_OVERFLOW_GRANULARITY
Number of instruction blocks in each granule, for simulated overflow.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x64`

`subcluster2.ete.SIM_OVERFLOW_PERCENTAGE`

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

`subcluster2.ete.SOURCE_ADDRESS`

Allow generation of source address elements.

Type: `bool`

Default value: false

`subcluster2.ete.TRACE_OUTPUT`

File to which to write trace byte stream.

Type: `string`

Default value: N/A

`subcluster2.ete.TRCRSRTA_FORCED_EXCEP`

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

`subcluster2.ext_abort_so_write_ras_type`

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

`subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks`

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster2.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster2.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster2.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster2.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

subcluster2.has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

subcluster2.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster2.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster2.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster2.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster2.mpam_has_altsp

MPAM Whether MPAMIDR_EL1.HAS_ALTSP bit is set or clear.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.mpamidr_has_force_ns

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster2.mpamidr_has_sdeflt

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

subcluster2.mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

subcluster2.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

subcluster2.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80`

`subcluster2.tcr_txsz_undersize_should_fault`

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

`subcluster2.tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`subcluster2.treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`subcluster2.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.52 ARMCortexA520CT_CortexA725CT

Defined in `LISA/ARMCortexA520CT_CortexA725CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

About ARMCortexA520CT_CortexA725CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`
: Possible values are 1-13 (ARMCortexA520CT).

`subcluster1.NUM_CORES`
: Possible values are 1-13 (ARMCortexA725CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>`[0-12] for cores in `subcluster0`.
- `<port_name>`[13-25] for cores in `subcluster1`.

Note

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA520CT.
- ARMCortexA725CT.

Iris and MTI instances for ARMCortexA520CT_CortexA725CT

This model has the following Iris instances:

Ports for ARMCortexA520CT_CortexA725CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
`ppu_core_irq`	master	Signal	PPU core interrupt.
`ppu_core_isolate`	master	Signal	PPU Core Domain isolation control.
`ppu_core_wakerequest`	slave	Signal	PPU core wake request signal.
`presetdbg`	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
`pvbus_m0`	master	PVBus	The core will generate bus requests on this port.
`pvbus_periph_m`	master	PVBus	The core can generate peripheral bus request on this port.
`rei`	slave	Signal	Per core RAM Error Interrupt.
`reset`	slave	Signal	Reset signal to cluster.
`rvbaraddr`	slave	Value_64	Reset vector base address.
`sci_m`	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
`sei`	slave	Signal	Per core System Error physical pins.
`spiden`	slave	Signal	External debug interface.
`ticks`	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
`trbirq`	master	Signal	Interrupt signal from the trace buffer unit.
`utility_bus_s`	slave	PVBus	Utility bus slave
`vcpumntirq`	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
`vfiq`	slave	Signal	Virtualised FIQ.
`virq`	slave	Signal	Virtualised IRQ.
`virtio_s`	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
`vsei`	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520CT_CortexA725CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

`AEND1_DEFAULT`

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

DBGROMADDR

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: false

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

core_complex_mapping

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [0, 1], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: “{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1": { "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4, 5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"}} }”

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: true

`l3cache-hit_latency`

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-maintenance_latency`

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-miss_latency`

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_access_latency`

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`l3cache-read_bus_width_in_bytes`

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

l3cache-write_bus_width_in_bytes

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

mpmm_accumulator_multiplier

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

num_nodes

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

subcluster0.CPUCFR

Value of CPU Configuration Register.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster0.core_cache_protection

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu0.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu0.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu1.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu1.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu1.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu1.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu10.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu10.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu10.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu10.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu10.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu10.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu10.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu11.l2cache-read_bus_width_in_bytes`

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`subcluster0.cpu11.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu11.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu11.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu12.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu12.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.

Default value: `0x0`

subcluster0.cpu12.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu12.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu12.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu12.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu12.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu12.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu12.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu12.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu12.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu12.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu12.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu12.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu12.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu12.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu12.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu12.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu12.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu12.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu12.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu2.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu2.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster0.cpu2.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster0.cpu2.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu2.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu2.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu2.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.semihosting-stack_base
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu3.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu3.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu4.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu4.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu5.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu5.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu5.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu5.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu7.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu7.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu7.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu7.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu7.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu8.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu8.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu8.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu8.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster0.cpu9.l2cache-read_bus_width_in_bytes`

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

`subcluster0.cpu9.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster0.cpu9.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu9.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu9.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu9.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu9.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu9.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

subcluster0.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster0.has_actlr2

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster0.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster0.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster0.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ras_extra_configurations

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: “[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]”

`subcluster0.ras_pfg_clock_mhz`

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

`subcluster0.revision_number`

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

`subcluster0.tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`subcluster0.treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

`subcluster1.cpu0.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu0.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu0.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu0.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu0.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster1.cpu1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu1.force-fpsid`

Override the FPSID value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu10.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu10.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

subcluster1.cpu10.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu10.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu11.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu12.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu12.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu12.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu12.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu12.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu12.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu12.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu12.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu12.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu12.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu12.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu12.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu12.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu12.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu12.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu12.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu12.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu12.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu12.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu12.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu12.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu12.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu12.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu12.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu12.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu3.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu4.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu4.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu4.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu4.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Non-Confidential

`subcluster1.cpu4.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu4.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu4.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu4.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu4.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster1.cpu5.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

subcluster1.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu5.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu5.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu5.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu5.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu5.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster1.cpu5.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster1.cpu5.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

`subcluster1.cpu6.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu6.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu6.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu6.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu6.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu6.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu9.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

subcluster1.ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 1

subcluster1.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Default value: true

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 2

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster1.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster1.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster1.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.53 ARMCortexA520CT_CortexA725CT_CortexX925CT

Defined in `LISA/ARMCortexA520CT_CortexA725CT_CortexX925CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA520 r0p1	Full support
CortexA725 r0p0	Full support
CortexX925 r0p0	Full support

For an explanation of the quality levels, see Quality level definitions.

Changes in 11.30.27

Model quality level changes:

From	To
CortexA520 r0p1=Full support CortexA725 r0p0=Preliminary support CortexX925 r0p0=Preliminary support	CortexA520 r0p1=Full support CortexA725 r0p0=Full support CortexX925 r0p0=Full support

About ARMCortexA520CT_CortexA725CT_CortexX925CT

The number of cores in each subcluster is configurable using the following parameters:

`subcluster0.NUM_CORES`

Possible values are 1-12 (ARMCortexA520CT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.NUM_CORES

Possible values are 1-12 (ARMCortexA725CT).

subcluster2.NUM_CORES

Possible values are 1-12 (ARMCortexX925CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port_name>[0-11] for cores in `subcluster0`.
- <port_name>[12-23] for cores in `subcluster1`.
- <port_name>[24-35] for cores in `subcluster2`.

Note

All instances in the Master cross trigger matrix port array, `cti[36]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu11` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu11` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu11` identify cores in `subcluster2`.

For information about the cores in this model, see:

- ARMCortexA520CT.
- ARMCortexA725CT.
- ARMCortexX925CT.

Iris and MTI instances for ARMCortexA520CT_CortexA725CT_CortexX925CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA520CT_CortexA725CT_CortexX925CT	Cluster_ARM_Cortex-A520_CortexA725_CortexX925_Heterogeneous
ARMCortexA520CT_CortexA725CT_CortexX925CT.AMU	PVBusLogger

Name	Component type
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster2.cpu0	ARM_Cortex-X925

Ports for ARMCortexA520CT_CortexA725CT_CortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsm_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.

Non-Confidential

Port	Direction	Protocol	Description
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsm_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	slave	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA520CT_CortexA725CT_CortexX925CT

`AEND0_DEFAULT`

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND1_DEFAULT

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND2_DEFAULT

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

AEND3_DEFAULT

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART0_DEFAULT

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART1_DEFAULT

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

ASTART2_DEFAULT

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

ASTART3_DEFAULT

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: false

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x0`

`CMO_broadcast_when_cache_state_modelling_disabled`

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

`GICDISABLE`

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

`bus_type`

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

`core_power_on_by_default`

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: false

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_peripheral_port`

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: false

`icache-state_modelled`

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

`l3cache-has_mpam`

L3 Cache has MPAM support.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-ways

L3 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 16

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`mpmm_accumulator_multiplier`

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n * accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

`subcluster0.CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

`subcluster0.core_cache_protection`

core_cache_protection can change ERR0FR, ERR0PFGF and ERR0PFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: `int8_t`

Default value: 1

`subcluster0.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster0.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu0.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu0.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu0.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu0.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu0.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu0.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu1.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Non-Confidential

subcluster0.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu1.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu1.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu1.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu1.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu1.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu1.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu10.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu10.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu10.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu10.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu10.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu10.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu10.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu10.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster0.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu2.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu2.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu2.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu2.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu2.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu2.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu3.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu4.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu4.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu4.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu4.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu4.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster0.cpu4.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu4.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu4.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu4.semihosting-heap_limit
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.semihosting-stack_base
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu4.semihosting-stack_limit
Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu4.trace_special_hlt_imm16
For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu5.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu5.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu5.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu5.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu5.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu5.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu5.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu5.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu5.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu5.semihosting-stack_base`
Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu6.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu6.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu6.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu6.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster0.cpu6.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

`subcluster0.cpu7.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster0.cpu7.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu7.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu7.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu7.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu7.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

`subcluster0.cpu7.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu7.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu7.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu7.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu7.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu7.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster0.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

`subcluster0.cpu8.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu8.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu8.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster0.cpu8.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu8.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu8.semihosting-stack_base`

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

`subcluster0.cpu8.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster0.cpu8.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu8.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster0.cpu8.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster0.cpu9.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster0.cpu9.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster0.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster0.cpu9.l2cache-read_bus_width_in_bytes

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x10`

subcluster0.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster0.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.l2cache-write_bus_width_in_bytes

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: `uint32_t`

Default value: `0x20`

subcluster0.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster0.cpu9.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster0.cpu9.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster0.cpu9.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster0.cpu9.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster0.cpu9.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster0.cpu9.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster0.cpu9.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster0.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

subcluster0.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 4

subcluster0.ete.MAX_INST_PER_Q
Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.PIDR_CMOD
TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVAND
TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.PIDR_REVISION
TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.Q_CADENCE
Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster0.ete.RES0_STATEFUL
Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster0.ete.RETSTACK
Return stack depth.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 3

subcluster0.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster0.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster0.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster0.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster0.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster0.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster0.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster0.has_actlr2

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR_EL1[63:32].

Type: `bool`

Default value: true

subcluster0.has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster0.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster0.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`subcluster0.invalidate_code_cache_on_icache_cmo`

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

`subcluster0.memory_tagging_support_level`

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

`subcluster0.pmu-num_counters`

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

`subcluster0.ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.ras_extra_configurations`

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn_EL1. E.g. [{"Index": 0, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXMISC1_mask": `0x0`, "ERXMISC1_reset": `0x0`, "ERXMISC2_mask": `0x0`, "ERXMISC2_reset": `0x0`, "ERXMISC3_mask": `0x0`, "ERXMISC3_reset": `0x0`, "ERXCTLR_EL1_mask": `0x0`, "ERXCTLR_EL1_reset": `0x0`}, {"Index": 1, "ERXMISC0_mask": `0x0`, "ERXMISC0_reset": `0x0`, "ERXSTATUS_IERR_mask": `0x300`}].

Type: `string`

Default value: “[{ "Index": 1, "ERXMISC0_mask": `0xFFFFc0003fc3`, "ERXMISC1_mask": `0x03F870003FF30f07`, "ERXPFGCTL_reset": `0x1000` }, { "Index": 2, "ERXMISC0_mask": `0xFFFFe007ffc0`, "ERXMISC0_reset": `0x2`, "ERXSTATUS_IERR_mask": `0x300` , "ERXMISC1_mask": `0x0FF8700fFFF31f0f`, "ERXPFGCTL_reset": `0x1000` }]”

subcluster0.ras_pfg_clock_mhz

RAS Pseudo-Fault generation clock rate in MHz.

Type: `uint8_t`

Default value: 12

subcluster0.revision_number

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

subcluster0.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster0.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster0.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

subcluster0.walk_cache_latency

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.CPUCFR

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.NUM_CORES

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

subcluster1.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster1.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu0.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster1.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu0.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

`subcluster1.cpu1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster1.cpu1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster1.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster1.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu1.force-fpsid`

Override the FPSID value.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu1.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu1.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu1.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu1.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu1.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu1.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu1.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu1.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu1.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu1.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000`

subcluster1.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu10.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Non-Confidential

Default value: `0x0`

subcluster1.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu10.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu10.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu10.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu10.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

`subcluster1.cpu10.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu10.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu10.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu10.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu10.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu10.semihosting-stack_base`
Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu10.semihosting-stack_limit`
Virtual address of stack limit.

Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster1.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu11.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu11.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu11.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu11.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu11.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu11.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu11.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu2.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-maintenance_latency

Default value: `0x0`

subcluster1.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu2.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu2.max_code_cache_mb`

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

`subcluster1.cpu2.min_sync_level`

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

`subcluster1.cpu2.semihosting-A32_HLT`

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu3.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Non-Confidential

`subcluster1.cpu3.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-read_latency`

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu3.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster1.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu3.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu3.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu3.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu3.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu3.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu3.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu4.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

`subcluster1.cpu4.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu4.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu4.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu4.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu4.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster1.cpu4.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster1.cpu4.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster1.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu5.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster1.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu6.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

subcluster1.cpu6.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu6.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu6.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu6.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu6.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster1.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster1.cpu7.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100000`

subcluster1.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster1.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu7.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu7.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu7.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster1.cpu7.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu7.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster1.cpu7.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu7.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu7.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu7.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu7.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu7.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu7.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster1.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster1.cpu8.force-fpsid

Override the FPSID value.

Type: `bool`

Default value: true

subcluster1.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.l2cache-read_access_latency

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

`subcluster1.cpu8.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu8.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

subcluster1.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster1.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster1.cpu8.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster1.cpu8.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster1.cpu8.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster1.cpu8.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster1.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster1.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster1.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster1.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster1.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu9.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster1.cpu9.force-fpsid`

Override the FPSID value.

Type: `bool`

Default value: true

`subcluster1.cpu9.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.l2cache-maintenance_latency`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster1.cpu9.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster1.cpu9.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster1.cpu9.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster1.cpu9.semihosting-enable`
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster1.cpu9.semihosting-heap_base`
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster1.cpu9.semihosting-heap_limit`
Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster1.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster1.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster1.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster1.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster1.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Default value: false

subcluster1.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x10000`

subcluster1.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster1.ete.ETE_REVISION

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

subcluster1.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x1`

subcluster1.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster1.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVAND

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.PIDR_REVISION

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

subcluster1.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster1.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 1

subcluster1.ete.REVISION

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster1.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster1.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster1.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster1.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: false

subcluster1.ete.TSMARK

Whether timestamp markers are supported.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster1.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster1.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster1.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

subcluster1.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.has_large_va

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT_LVA).values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster1.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: false

subcluster1.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster1.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster1.icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster1.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster1.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster1.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 3

subcluster1.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

subcluster1.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster1.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster1.tlbi_stall_enabled

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

subcluster1.treat_PAC_as_NOP

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

`subcluster1.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.CPUCFR`

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.NUM_CORES`

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

`subcluster2.cpi_div`

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster2.cpi_mul`

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

`subcluster2.cpu0.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu0.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster2.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu1.CFGEND`

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

`subcluster2.cpu1.CFGTE`

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

`subcluster2.cpu1.CRYPTODISABLE`

Disable cryptographic features.

Type: `bool`

Default value: false

`subcluster2.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster2.cpu1.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu1.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu1.semihosting-A32_HLT`
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu1.semihosting-A64_HLT`
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu1.semihosting-ARM_SVC`
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu1.semihosting-T32_HLT`
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu1.semihosting-Thumb_SVC`
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu1.semihosting-cmd_line`
Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu1.semihosting-cwd`
Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu1.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu1.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu1.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu1.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu1.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu1.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu1.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu1.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu10.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu10.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu10.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu10.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu10.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster2.cpu10.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu10.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu10.min_sync_level
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu10.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu10.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu10.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu10.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu10.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu10.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu10.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu10.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu10.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu10.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu10.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu10.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu10.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu10.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu10.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu11.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu11.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu11.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu11.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu11.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu11.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Non-Confidential

Default value: `0x0`

subcluster2.cpu11.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu11.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu11.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu11.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Non-Confidential

Default value: `0x0`

subcluster2.cpu11.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu11.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu11.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu11.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu11.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu11.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu11.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 171

`subcluster2.cpu11.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu11.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu11.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

`subcluster2.cpu11.semihosting-heap_base`

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu11.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu11.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu11.semihosting-stack_limit`

Virtual address of stack limit.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu11.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu11.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu11.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu2.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu2.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu2.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.cpu2.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu2.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Default value: `0x0`

subcluster2.cpu2.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu2.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu2.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu2.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu2.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu2.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu2.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu2.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu2.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu2.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu2.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu2.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu2.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu2.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu2.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu2.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu2.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu3.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu3.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu3.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu3.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu3.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu3.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu3.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu3.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu3.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu3.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu3.semihosting-A64_HLT`

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu3.semihosting-ARM_SVC`

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

`subcluster2.cpu3.semihosting-T32_HLT`

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

`subcluster2.cpu3.semihosting-Thumb_SVC`

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

`subcluster2.cpu3.semihosting-cmd_line`

Command line available to semihosting calls.

Type: `string`

Default value: N/A

`subcluster2.cpu3.semihosting-cwd`

Base directory for semihosting file access.

Type: `string`

Default value: N/A

`subcluster2.cpu3.semihosting-enable`

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu3.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu3.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu3.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu3.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu3.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu3.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu3.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: true

subcluster2.cpu4.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu4.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu4.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu4.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu4.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu4.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x0`

subcluster2.cpu4.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu4.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu4.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

subcluster2.cpu4.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu4.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu4.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu4.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu4.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu4.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu4.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu4.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu4.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu4.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu4.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu4.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu4.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu5.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu5.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu5.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu5.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu5.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu5.l2cache-size`

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`subcluster2.cpu5.l2cache-snoop_data_transfer_latency`

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.l2cache-snoop_issue_latency`

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.l2cache-ways`

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

`subcluster2.cpu5.l2cache-write_access_latency`

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster2.cpu5.l2cache-write_latency`

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu5.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu5.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu5.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu5.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu5.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 171

subcluster2.cpu5.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu5.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu5.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu5.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu5.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu5.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0xf000000`

subcluster2.cpu5.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu5.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu5.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu6.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu6.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu6.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu6.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu6.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu6.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu6.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu6.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 60

subcluster2.cpu6.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu6.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu6.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu6.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu6.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.semihosting-stack_base

Virtual address of base of descending stack.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu6.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu6.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu6.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu6.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu7.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu7.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.cpu7.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu7.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu7.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu7.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 8

subcluster2.cpu7.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu7.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu7.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu7.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu7.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu7.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu7.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu7.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu7.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu7.semihosting-enable
Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu7.semihosting-heap_base
Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.cpu7.semihosting-heap_limit`

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu7.semihosting-stack_base`

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

`subcluster2.cpu7.semihosting-stack_limit`

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

`subcluster2.cpu7.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`subcluster2.cpu7.vfp-enable_at_reset`

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

`subcluster2.cpu7.vfp-present`

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu8.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu8.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu8.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

subcluster2.cpu8.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

subcluster2.cpu8.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu8.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster2.cpu8.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.semihosting-A32_HLT
A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-A64_HLT
A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.semihosting-ARM_SVC
A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu8.semihosting-T32_HLT
T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu8.semihosting-Thumb_SVC
T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu8.semihosting-cmd_line
Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster2.cpu8.semihosting-cwd
Base directory for semihosting file access.

Type: `string`

Default value: N/A

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu8.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu8.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu8.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu8.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu8.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu8.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu8.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.cpu8.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.cpu9.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster2.cpu9.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster2.cpu9.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster2.cpu9.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.cpu9.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x80000`

subcluster2.cpu9.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-ways

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

subcluster2.cpu9.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: `0x100`

subcluster2.cpu9.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster2.cpu9.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster2.cpu9.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster2.cpu9.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster2.cpu9.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: N/A

subcluster2.cpu9.semihosting-cwd

Base directory for semihosting file access.

Type: `string`

Default value: N/A

subcluster2.cpu9.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster2.cpu9.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster2.cpu9.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster2.cpu9.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster2.cpu9.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0xf000`

subcluster2.cpu9.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster2.cpu9.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster2.dcache-hit_latency

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-miss_latency

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster2.dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed.dcache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

subcluster2.dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.ecv_support_level

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT_ECV).

Type: `uint8_t`

Default value: 2

subcluster2.ete.CLAIMTAGS

Number of claim tags.

Type: `uint8_t`

Default value: 4

subcluster2.ete.MAX_INST_PER_Q

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.NumberOfRSPairs

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

subcluster2.ete.PIDR_CMOD

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: 0

subcluster2.ete.Q_CADENCE

Number of instruction blocks traced between two Q elements.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint16_t`

Default value: `0x1`

subcluster2.ete.RES0_STATEFUL

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: false

subcluster2.ete.RETSTACK

Return stack depth.

Type: `uint8_t`

Default value: 3

subcluster2.ete.SIM_OVERFLOW_GRANULARITY

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

subcluster2.ete.SIM_OVERFLOW_PERCENTAGE

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

subcluster2.ete.SOURCE_ADDRESS

Allow generation of source address elements.

Type: `bool`

Default value: false

subcluster2.ete.TRACE_OUTPUT

File to which to write trace byte stream.

Type: `string`

Default value: N/A

subcluster2.ete.TRCRSRTA_FORCED_EXCEP

TRCRSR.TA value for a forcibly traced exception.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

subcluster2.ext_abort_so_write_ras_type

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: false

subcluster2.force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

subcluster2.force_zero_mpam_partid_and_pmg

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0_EL1, MPAM1_EL1, MPAM2_EL2, MPAM3_EL3, MPAMHCR_EL2.

Type: `uint8_t`

Default value: 0

subcluster2.has_enhanced_pan

Implements Armv8.7 Enhanced PAN feature (FEAT_PAN3)values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.has_ete

If true, implements the Embedded Trace Extension (FEAT_ETE). This option is discarded if ete plugin is explicitly loaded (–plugin or -P).

Type: `bool`

Default value: false

subcluster2.has_mt_pmu_disable_feature

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT_MTPMU). 0: FEAT_MTPMU is disabled, 1: FEAT_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT_MTPMU is cherry-picked, `0xF`: The feature is disabled and is represented by value `0xF` in ID_AA64DFR0_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

subcluster2.has_statistical_profiling

Whether Statistical Based Profiling is implemented (FEAT_SPE).

Type: `bool`

Default value: true

subcluster2.has_v8_7_spe_inverted_filtering

Where FEAT_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: false

subcluster2.has_v8_7_spe_previous_branch_target

Where FEAT_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT_SPE_PBT).

Type: `bool`

Default value: false

subcluster2.icache-hit_latency

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster2.icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-miss_latency

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

subcluster2.icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed.icache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster2.icache-size

L1 I-Cache size in bytes.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint32_t`

Default value: `0x10000`

subcluster2.instruction_tlb_size

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

subcluster2.invalidate_code_cache_on_icache_cmo

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

subcluster2.memory_tagging_support_level

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT_MTE).2, implemented (FEAT_MTE2).3, implemented with asymmetric handling of exceptions (FEAT_MTE3).

Type: `uint8_t`

Default value: 3

subcluster2.mpam_has_altsp

MPAM Whether MPAMIDR_EL1.HAS_ALTSP bit is set or clear.

Type: `bool`

Default value: false

subcluster2.mpamidr_has_force_ns

Whether MPAMIDR_EL1.HAS_FORCE_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

subcluster2.mpamidr_has_sdeflt

Whether MPAMIDR_EL1.HAS_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 1

subcluster2.mpamidr_has_tidr

Whether MPAMIDR_EL1.HAS_TIDR bit is set or clearvalues of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

subcluster2.pmu-num_counters

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

subcluster2.ptw_latency

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

subcluster2.stage12_tlb_size

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

subcluster2.tcr_txsz_undersize_should_fault

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: false

subcluster2.tlb_latency

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`subcluster2.tlbi_stall_enabled`

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: false

`subcluster2.treat_PAC_as_NOP`

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behavour of FEAT_PAuth instructions changes as following PAC* and AUT* and XPAC* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT_PAuth traps.

Type: `bool`

Default value: false

`subcluster2.walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.54 ARMCortexA53CT

Defined in `LISA/ARMCortexA53CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA53CT

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a PVBusDecoder to direct traffic to the correct port, `dev_debug_s` or `memorymapped_debug_s`.

Non-Confidential

Differences between the CT model and RTL implementations

This component has the following differences from the corresponding revision of the RTL implementation:

- The value of the AArch64 `PMCEID0_EL0` register, and the AArch32 alias of this register, differs in the model from the TRM value. The model value reflects the model counters.
- The mechanisms for setting the affinity fields of the `MPIDR`. The RTL has two ports:
  - `CLUSTERIDAFF1[7:0]`.
  - `CLUSTERIDAFF2[7:0]`. AFF1 sets the value of `MPIDR` bits[15:8] and AFF2 sets the value of `MPIDR` bits[23:16]. In contrast, the model has a single `CLUSTER_ID` port. This difference allows the setting of bits[23:8] of the `MPIDR` using bits[15:0] of the `CLUSTER_ID` value.
- The memory mapped debug registers have a view for cores and a view for external debug agents. In the model, these views require two PVBus ports. In hardware, the system designer decides how the implementation differentiates the views.
- In the model, a single peer event port combines the functionality of the `eventi` and `evento` signals in the RTL.
- The Generic Timers are Programmer's View (PV) level abstractions: a model-specific protocol connects the `cntvalueb` port to the MemoryMappedCounterModule.
- The GIC CPU Interface is a PV level abstraction: a model-specific protocol connects the GIC CPU Interface to the GIC Distributor.
- The CoreSight Cross Trigger Interface (CTI) is a PV level abstraction: the interface is a model specific one.
- The model has no mechanism to read the internal memory that the Cache and TLB structures use, through the implementation defined region of the system coprocessor interface. This memory includes the RAM Index Register, `IL1DATA` Registers, `DL1DATA` Registers, and associated functionality.
- The model does not implement:
  - ETM registers.
  - The `PMUEVENT` bus.
  - The `WARMRESETREQ` signal. However, the warm reset code sequence (see the section Code sequence to request a Warm reset as a result of `RMR_ELx.RR` in the Arm Architecture Reference Manual for A-profile architecture) makes the model simulate a warm reset of the core.
  - The `PMUSNAPSHOTREQ` and `PMUSNAPSHOTACK` signals.
  - The `EXTERRIRQ` and `INTERRIRQ` signals.
  - Processor dynamic-retention signals.
  - The `SYSBARDISABLE` signal.
  - This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
  - The `DBGPWRDUP`, `DBGPWRUPREQ`, `DBGNOPWRDWN`, and `DBGRSTREQ` debug power management signals.
  - The RTL synthesis option to remove FP and ASE.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

- The RTL synthesis option for a Cortex-A15 style debug memory map.
- Although Neon support is optional for the Cortex-A53 processor, this model does not implement the `ase-present` parameter. This means it is not possible to configure the model to not support Neon.
- ECC and parity schemes are hardware-specific so are not supported.

Iris and MTI instances for ARMCortexA53CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA53CT	Cluster_ARM_Cortex-A53
ARMCortexA53CT.AMU	PVBusLogger
ARMCortexA53CT.AMU.mapper	PVBusMapper
ARMCortexA53CT.DAP	PVBusLogger
ARMCortexA53CT.DAP.mapper	PVBusMapper
ARMCortexA53CT.DSU	DSU
ARMCortexA53CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA53CT.MMAP	PVBusLogger
ARMCortexA53CT.MMAP.mapper	PVBusMapper
ARMCortexA53CT.RAS	PVBusLogger
ARMCortexA53CT.RAS.mapper	PVBusMapper
ARMCortexA53CT.acp_mapper	PVBusMapper
ARMCortexA53CT.cpu0	ARM_Cortex-A53
ARMCortexA53CT.cpu0.UTLB	TLB
ARMCortexA53CT.cpu0.dtlb	TLB
ARMCortexA53CT.cpu0.l1dcache	PVCache
ARMCortexA53CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA53CT.cpu0.l1icache	PVCache
ARMCortexA53CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA53CT.ext_bus	PVBusLogger
ARMCortexA53CT.ext_bus.mapper	PVBusMapper
ARMCortexA53CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA53CT.global_debug_rom	debug_rom
ARMCortexA53CT.l2_cache	PVCache
ARMCortexA53CT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexA53CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA53CT.AMU	PVBusLogger
ARMCortexA53CT.AMU.mapper	PVBusMapper

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Component type
ARMCortexA53CT.DAP	PVBusLogger
ARMCortexA53CT.DAP.mapper	PVBusMapper
ARMCortexA53CT.DSU	DSU
ARMCortexA53CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA53CT.MMAP	PVBusLogger
ARMCortexA53CT.MMAP.mapper	PVBusMapper
ARMCortexA53CT.RAS	PVBusLogger
ARMCortexA53CT.RAS.mapper	PVBusMapper
ARMCortexA53CT.acp_mapper	PVBusMapper
ARMCortexA53CT.cpu0	ARM_Cortex-A53
ARMCortexA53CT.cpu0.UTLB	TLB
ARMCortexA53CT.cpu0.l1dcache	PVCache
ARMCortexA53CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA53CT.cpu0.l1icache	PVCache
ARMCortexA53CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA53CT.ext_bus	PVBusLogger
ARMCortexA53CT.ext_bus.mapper	PVBusMapper
ARMCortexA53CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA53CT.l2_cache	PVCache
ARMCortexA53CT.l2_cache.upstream[Z] (where *Z* = 0–16)	PVBusSlave
ARMCortexA53CT.l2_flusher	AsyncCacheFlushUnit

Ports for ARMCortexA53CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastinner	slave	Signal	Enable broadcasting of Inner Shareable transactions.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	Timer signals to SoC.
CNTPNSIRQ	master	Signal	Timer signals to SoC.
CNTPSIRQ	master	Signal	Timer signals to SoC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SoC.
commirq	master	Signal	Interrupt signal from debug communications channel.
commrx	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgl1rstdisable	slave	Signal	Control ram clear on reset
dbgnopwrdwn	master	Signal	This signals relate to core power down.
dbgpwrupreq	master	Signal	This signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete.
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
l2rstdisable	slave	Signal	-
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
standbywfil2	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Processor Virtual System Error Interrupt request.

Parameters for ARMCortexA53CT

cpuX.AA64nAA32

Type: `bool`

Default value: true

cpuX.CFGEND

Type: `bool`

Default value: false

cpuX.CFGTE

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.CP15SDISABLE

Type: `bool`

Default value: false

cpuX.CRYPTODISABLE

Type: `bool`

Default value: false

cpuX.RVBARADDR

Type: `uint64_t`

Default value: 0

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: 256

cpuX.min_sync_level

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

cpuX.semihosting-A32_HLT

Type: `uint32_t`

Default value: `0xF000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.semihosting-A64_HLT

Type: `uint32_t`

Default value: `0xF000`

cpuX.semihosting-ARM_SVC

Type: `uint32_t`

Default value: `0x123456`

cpuX.semihosting-T32_HLT

Type: `uint32_t`

Default value: `0x3C`

cpuX.semihosting-Thumb_SVC

Type: `uint32_t`

Default value: `0xAB`

cpuX.semihosting-cmd_line

Type: `string`

Default value: “”

cpuX.semihosting-cwd

Type: `string`

Default value: “”

cpuX.semihosting-enable

Type: `bool`

Default value: true

cpuX.semihosting-heap_base

Type: `uint32_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`cpuX.semihosting-stack_base`

Type: `uint32_t`

Default value: `0x10000000`

`cpuX.semihosting-stack_limit`

Type: `uint32_t`

Default value: `0x0F000000`

`cpuX.trace_special_hlt_imm16`

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

`cpuX.vfp-enable_at_reset`

Type: `bool`

Default value: false

`cpuX.vfp-present`

Set whether the model has VFP support.

Type: `bool`

Default value: true

`BROADCASTCACHEMAINT`

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

`BROADCASTINNER`

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

Type: `uint32_t`

Default value: 0

DBGROMADDR

Type: `uint64_t`

Default value: `0x0`

DBGROMADDRV

Type: `bool`

Default value: true

GICDISABLE

Type: `bool`

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

PERIPHBASE

Type: `uint64_t`

Default value: `0x13080000`

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-hit_latency

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-miss_latency

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-dcache_state_modelled=true.

Type: `bool`

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-state_modelled

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: 0

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: 0

`icache-size`

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

`icache-state_modelled`

Type: `bool`

Default value: false

`l2cache-hit_latency`

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

`l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

`l2cache-miss_latency`

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

`l2cache-read_access_latency`

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`patch_level`
Cosmetic change to Revision field in MIDR/MIDR_EL1. Corresponds to the patch number Y in rXpY.

Type: `uint32_t`

Default value: `0x1`

`ptw_latency`
Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

`revision_number`
Cosmetic change to Variant field in MIDR/MIDR_EL1. Corresponds to the revision number X in rXpY.

Type: `uint32_t`

Default value: `0x0`

`tlb_latency`
TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

`walk_cache_latency`
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

3.55 ARMCortexA55CT

Defined in `LISA/ARMCortexA55CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA55CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
    - Automatic CPU retention mode.
    - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Dual ACE masters.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpuN.`, where N identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA55CT

This model has the following Iris instances:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Name	Instance type
ARMCortexA55CT	Cluster_ARM_Cortex-A55
ARMCortexA55CT.AMU	PVBusLogger
ARMCortexA55CT.AMU.mapper	PVBusMapper
ARMCortexA55CT.DAP	PVBusLogger
ARMCortexA55CT.DAP.mapper	PVBusMapper
ARMCortexA55CT.DSU	DSU
ARMCortexA55CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT.DSU.shared_cache	PVCache
ARMCortexA55CT.DSU.shared_cache.upstream[Y] (where *Y* = 0–3)	PVBusSlave
ARMCortexA55CT.MMAP	PVBusLogger
ARMCortexA55CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT.RAS	PVBusLogger
ARMCortexA55CT.RAS.mapper	PVBusMapper
ARMCortexA55CT.cpu0	ARM_Cortex-A55
ARMCortexA55CT.cpu0.UTLB	TLB
ARMCortexA55CT.cpu0.dtlb	TLB
ARMCortexA55CT.cpu0.l1dcache	PVCache
ARMCortexA55CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l1icache	PVCache
ARMCortexA55CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l2cache	PVCache
ARMCortexA55CT.cpu0.l2cache.upstream[U] (where *U* = 0–1)	PVBusSlave
ARMCortexA55CT.ext_bus	PVBusLogger
ARMCortexA55CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA55CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Ports for ARMCortexA55CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_ redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA55CT

`cpuX.AA64nAA32`

Type: `bool`

Default value: true

`cpuX.CFGEND`

Type: `bool`

Default value: false

`cpuX.CFGTE`

Type: `bool`

Default value: false

`cpuX.CP15SDISABLE`

Type: `bool`

Default value: false

`cpuX.CRYPTODISABLE`

Type: `bool`

Default value: false

`cpuX.RVBARADDR`

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.VINITHI

Type: `bool`

Default value: false

cpuX.l2cache-hit_latency

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

cpuX.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-miss_latency

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

cpuX.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

cpuX.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

cpuX.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

cpuX.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 256

`cpuX.min_sync_level`
force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

`cpuX.semihosting-A32_HLT`
Type: `uint32_t`

Default value: `0xF000`

`cpuX.semihosting-A64_HLT`
Type: `uint32_t`

Default value: `0xF000`

`cpuX.semihosting-ARM_SVC`
Type: `uint32_t`

Default value: `0x123456`

`cpuX.semihosting-T32_HLT`
Type: `uint32_t`

Default value: `0x3C`

`cpuX.semihosting-Thumb_SVC`
Type: `uint32_t`

Default value: `0xAB`

`cpuX.semihosting-cmd_line`
Type: `string`

Default value: “”

`cpuX.semihosting-cwd`
Type: `string`

Default value: “”

`cpuX.semihosting-enable`
Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

cpuX.semihosting-heap_base

Type: `uint32_t`

Default value: `0x0`

cpuX.semihosting-heap_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.semihosting-stack_base

Type: `uint32_t`

Default value: `0x10000000`

cpuX.semihosting-stack_limit

Type: `uint32_t`

Default value: `0x0F000000`

cpuX.vfp-enable_at_reset

Type: `bool`

Default value: false

cpuX.vfp-present

Set whether the model has VFP support.

Type: `bool`

Default value: true

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistance operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

Type: `uint32_t`

Default value: 0

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Type: `bool`

Default value: true

NUM_CORES

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

cpi_div

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

cpi_mul

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

dcache-hit_latency

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

dcache-maintenance_latency

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-miss_latency

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

dcache-prefetch_enabled

Enable simulation of data cache prefetching. This is only used when dcache-state_modelled=true.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

dcache-read_access_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-read_latency

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-size

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

dcache-snoop_data_transfer_latency

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

dcache-state_modelled

Type: `bool`

Default value: false

dcache-write_access_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write_bus_width_in_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: 0

dcache-write_latency

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: 0

enable_simulation_performance_optimizations

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

force_zero_PSTATE_PAN

Non-architecture parameter to force PSTATE.PAN to be 0. 0: No effect, 1: PSTATE.PAN is always treated as 0.The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: false

has_acp

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

has_dot_product

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

has_peripheral_port

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-hit_latency

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

icache-maintenance_latency

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-miss_latency

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

icache-prefetch_enabled

Enable simulation of instruction cache prefetching. This is only used when icache-state_modelled=true.

Type: `bool`

Default value: false

icache-read_access_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read_latency is set. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

icache-read_latency

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state_modelled=true.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-size

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

icache-state_modelled

Type: `bool`

Default value: false

l3cache-hit_latency

L3 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks.

Type: `uint64_t`

Default value: 0

l3cache-miss_latency

L3 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set.

Type: `uint64_t`

Default value: 0

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`l3cache-size`

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

`l3cache-snoop_data_transfer_latency`

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

`l3cache-snoop_issue_latency`

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks.

Type: `uint64_t`

Default value: 0

`l3cache-write_access_latency`

L3 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if 32cache-write_latency is set.

Type: `uint64_t`

Default value: 0

`l3cache-write_latency`

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

`pchannel_treat_simreset_as_poreset`

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: false

`periph_address_end`

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

`periph_address_start`

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

`ptw_latency`

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

`tlb_latency`

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

`walk_cache_latency`

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.56 ARMCortexA55CT_CortexA75CT

Defined in `LISA/ARMCortexA55CT_CortexA75CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA75 r3p0	Full support

For an explanation of the quality levels, see Quality level definitions.

About ARMCortexA55CT_CortexA75CT

The number of cores in each subcluster is configurable using the following parameters:

subcluster0.NUM_CORES

Possible values are 1-7 (ARMCortexA55CT).

subcluster1.NUM_CORES

Possible values are 1-4 (ARMCortexA75CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port_name[0-6] for cores in subcluster0.
- port_name[7-10] for cores in subcluster1.

Note

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu6` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- ARMCortexA55CT
- ARMCortexA75CT

See also Arm DynamIQ Shared Unit Technical Reference Manual.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the Arm Developer website.

Iris and MTI instances for ARMCortexA55CT_CortexA75CT

This model has the following Iris instances:

Name	Instance type
`ARMCortexA55CT_CortexA75CT`	Cluster_ARM_Cortex-A55_Cortex-A75
`ARMCortexA55CT_CortexA75CT.AMU`	PVBusLogger
`ARMCortexA55CT_CortexA75CT.AMU.mapper`	PVBusMapper
`ARMCortexA55CT_CortexA75CT.DAP`	PVBusLogger
`ARMCortexA55CT_CortexA75CT.DAP.mapper`	PVBusMapper
`ARMCortexA55CT_CortexA75CT.DSU`	DSU
`ARMCortexA55CT_CortexA75CT.DSU.l3_flusher`	AsyncCacheFlushUnit

ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l2cache.upstream[W] (where *Z* = 0–1; *W* = 0–1)	PVBusSlave
ARMCortexA55CT_CortexA75CT.subcluster1.cpu0	ARM_Cortex-A75

Ports for ARMCortexA55CT_CortexA75CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamIQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamIQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
clusterpmuirq	master	Signal	DynamIQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdwn	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Port	Direction	Protocol	Description
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

Parameters for ARMCortexA55CT_CortexA75CT

BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: true

BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: true

CLUSTER_ID

The Cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

CMO_broadcast_when_cache_state_modelling_disabled

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation.this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certaineven when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

GICDISABLE

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: true

bus_type

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

`dcache-state_modelled`

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: false

`default_opmode`

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

`diagnostics`

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: false

`enable_simulation_performance_optimizations`

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12_tlb_size parameter to 1024).

Type: `bool`

Default value: true

`has_acp`

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: false

`has_peripheral_port`

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: false

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

icache-state_modelled

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: false

l3cache-hit_latency

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-maintenance_latency

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-miss_latency

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_access_latency

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-read_latency

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.l3cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint64_t`

Default value: `0x0`

l3cache-size

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

l3cache-snoop_data_transfer_latency

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-snoop_issue_latency

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_access_latency

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write_bus_width_in_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

l3cache-write_latency

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

pchannel_treat_simreset_as_poreset

Register core as ON state to cluster with simulation reset.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `bool`

Default value: false

periph_address_end

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

periph_address_start

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

subcluster0.NUM_CORES

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

subcluster0.cpi_div

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpi_mul

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

subcluster0.cpu0.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu0.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu0.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu0.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: false

subcluster0.cpu0.RVBARADDR

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.VINITHI

Reset value of SCTLR.V.

Type: `bool`

Default value: false

subcluster0.cpu0.enable_trace_special_hlt_imm16

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Default value: false

subcluster0.cpu0.l2cache-hit_latency

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-maintenance_latency

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-miss_latency

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu0.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu0.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `uint8_t`

Default value: 0

subcluster0.cpu0.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu0.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

subcluster0.cpu0.semihosting-T32_HLT

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

subcluster0.cpu0.semihosting-Thumb_SVC

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

subcluster0.cpu0.semihosting-cmd_line

Command line available to semihosting calls.

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-cwd

Base directory for semihosting file access.

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

Type: `string`

Default value: N/A

subcluster0.cpu0.semihosting-enable

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: true

subcluster0.cpu0.semihosting-heap_base

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu0.semihosting-heap_limit

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.semihosting-stack_base

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

subcluster0.cpu0.semihosting-stack_limit

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

subcluster0.cpu0.trace_special_hlt_imm16

For this HLT number, IF enable_trace_special_hlt_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.
Non-Confidential

subcluster0.cpu0.vfp-enable_at_reset

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: false

subcluster0.cpu0.vfp-present

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: true

subcluster0.cpu1.AA64nAA32

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: true

subcluster0.cpu1.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: false

subcluster0.cpu1.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: false

subcluster0.cpu1.CP15SDISABLE

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: false

subcluster0.cpu1.CRYPTODISABLE

Disable cryptographic features.

Non-Confidential

Type: `bool`

Default value: false

`subcluster0.cpu1.RVBARADDR`

Value of RVBAR_ELx register.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.VINITHI`

Reset value of SCTLR.V.

Type: `bool`

Default value: false

`subcluster0.cpu1.enable_trace_special_hlt_imm16`

Enable usage of parameter trace_special_hlt_imm16.

Type: `bool`

Default value: false

`subcluster0.cpu1.l2cache-hit_latency`

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.l2cache-maintenance_latency`

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

`subcluster0.cpu1.l2cache-miss_latency`

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

Non-Confidential

subcluster0.cpu1.l2cache-read_access_latency

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-read_latency

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed.l2cache-read_access_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-size

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

subcluster0.cpu1.l2cache-snoop_data_transfer_latency

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-snoop_issue_latency

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_access_latency

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write_latency is set. This is only used when dcache-state_modelled=true.

Non-Confidential

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.l2cache-write_latency

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write_access_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state_modelled=true.

Type: `uint64_t`

Default value: `0x0`

subcluster0.cpu1.max_code_cache_mb

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

subcluster0.cpu1.min_sync_level

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

subcluster0.cpu1.semihosting-A32_HLT

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-A64_HLT

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

subcluster0.cpu1.semihosting-ARM_SVC

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`
