1. Introduction

1.1 Conventions

The following subsections describe conventions used in Arm documents.

Glossary

The Arm Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm® Glossary for more information: developer.arm.com/glossary.

Typographic conventions

Arm documentation uses typographical conventions to convey specific meaning.

Convention	Use
<i>italic</i>	Citations.
bold	Interface elements, such as menu names. Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments. For example: <pre>MRC p15, 0, <Rd>, <CRn>, <CRm>, <Opcode_2></pre>
SMALL CAPITALS	Terms that have specific technical meanings as defined in the <i>Arm® Glossary</i> . For example, IMPLEMENTATION DEFINED , IMPLEMENTATION SPECIFIC , UNKNOWN , and UNPREDICTABLE .
 Caution	Recommendations. Not following these recommendations might lead to system failure or damage.
 Warning	Requirements for the system. Not following these requirements might result in system failure or damage.
 Danger	Requirements for the system. Not following these requirements will result in system failure or damage.
 Note	An important piece of information that needs your attention.

Convention	Use
 Tip	A useful tip that might make it easier, better or faster to perform a task.
 Remember	A reminder of something important that relates to the information you are reading.

1.2 Useful resources

This document contains information that is specific to this product. See the following resources for other useful information.

Access to Arm documents depends on their confidentiality:

- Non-Confidential documents are available at developer.arm.com/documentation. Each document link in the following tables goes to the online version of the document.
- Confidential documents are available to licensees only through the product package.

Arm tests its PDFs only in Adobe Acrobat and Acrobat Reader. Arm cannot guarantee the quality of its documents when used with any other PDF reader.

Adobe PDF reader products can be downloaded at <http://www.adobe.com>

1.3 Other information

See the Arm website for other relevant information.

2. Abstract

Arm offers software developers working with STMicroelectronics devices a free-to-use tool suite. It only works with STMicroelectronics devices based on the Arm Cortex-M0/M0+ cores.

This specific Keil MDK edition is available for these device families:

- STM32C0
- STM32F0
- STM32G0
- STM32L0
- BlueNRG-1
- BlueNRG-2
- BlueNRG-LP
- BlueNRG-LPS

Figure 2-1: Keil MDK is made for STM32

This edition includes the Arm C/C++ Compiler, the μ Vision IDE and debugger, as well as the Keil RTX5 real-time operating system. Keil MDK uses STM32CubeMX to configure peripherals and other device settings.

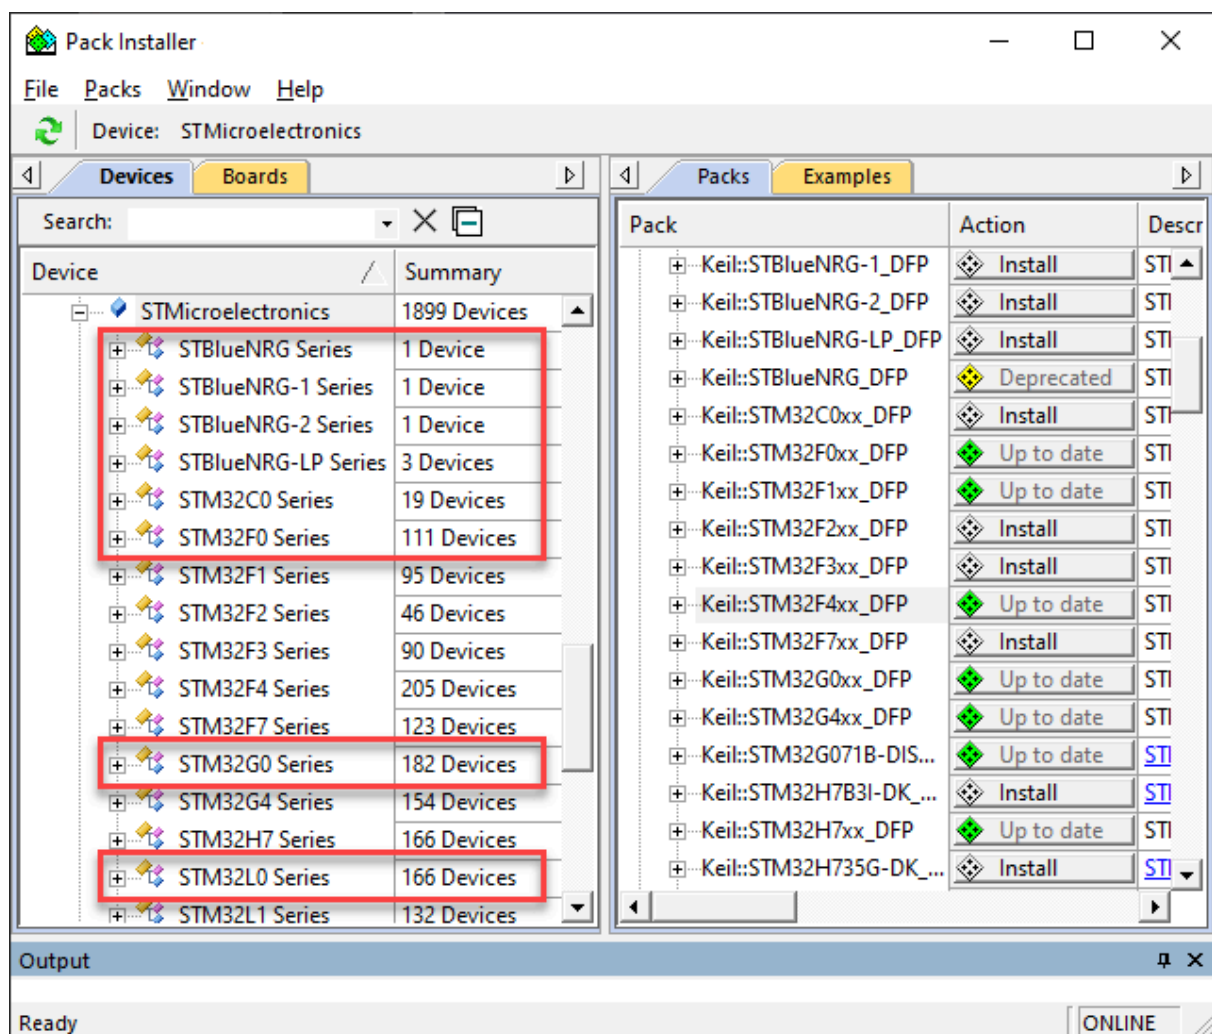

This application note explains how to download, install, and use MDK with STMicroelectronics devices based on the Cortex-M0/M0+ cores.

3. Installation

This chapter explains how to download and install Keil MDK on your local computer.

1. [Download](#) Keil MDK.
2. Run the downloaded MDK5xx.exe installer.
3. Select your installation location (default is c:\keil_v5). If you have existing MDK installations that you want to keep, select a new folder. Once the installation has finished, Pack Installer opens.
4. In Pack Installer, click “Install” to download and install the device family packs supplied by STMicroelectronics.

Figure 3-1: Install STMicroelectronics CMSIS-Packs

Next, you need to [get a valid license](#) for your product.

4. License

This chapter explains how to obtain a valid License ID Code (LIC).

To activate the Keil MDK for STM32C0/F0/G0/L0 and BlueNRG-1/2/LP/LPS edition, use the following Product Serial Number (PSN):

4RMW3-A8FIW-TUBLG

With this PSN you can cut a one-year term license.

Next, [activate](#) your product.

5. Activation

This chapter explains how to activate your product.

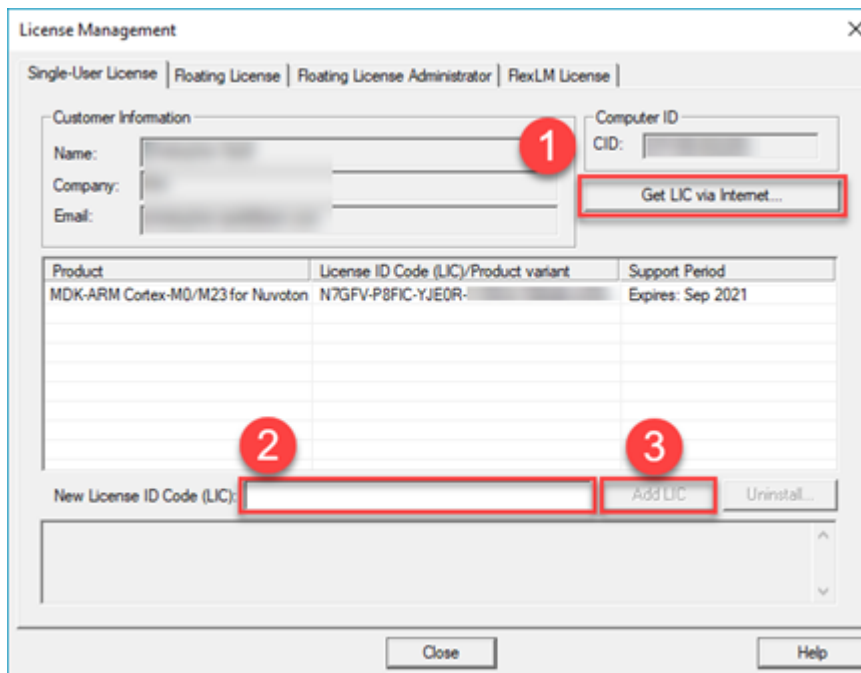

- On your PC, login with an account that has administration rights.
- Right-click the μ Vision icon  and select “Run as Administrator...” from the context menu.
- Go to “File – License Management...” and select the “Single-User License” tab.

Figure 5-1: License Management - Single User

Product	License ID Code (LIC)/Product variant	Support Period
MDK-ARM Cortex-M0/M23 for Nuvoton	N7GFV-P8FIC-YJE0R-	Expires: Sep 2021

1. Click the button “Get LIC via Internet...”, then click the button “OK” to register the product. This action opens the License Management page on the Keil web site. Enter the PSN from the [License](#) chapter. Add your contact information and press the “Submit” button. An e-mail is sent back with the License ID Code (LIC) within a few minutes.
2. To activate the product, enter the “LIC” in the field “New License ID Code (LIC)”.
3. Click “Add LIC”.

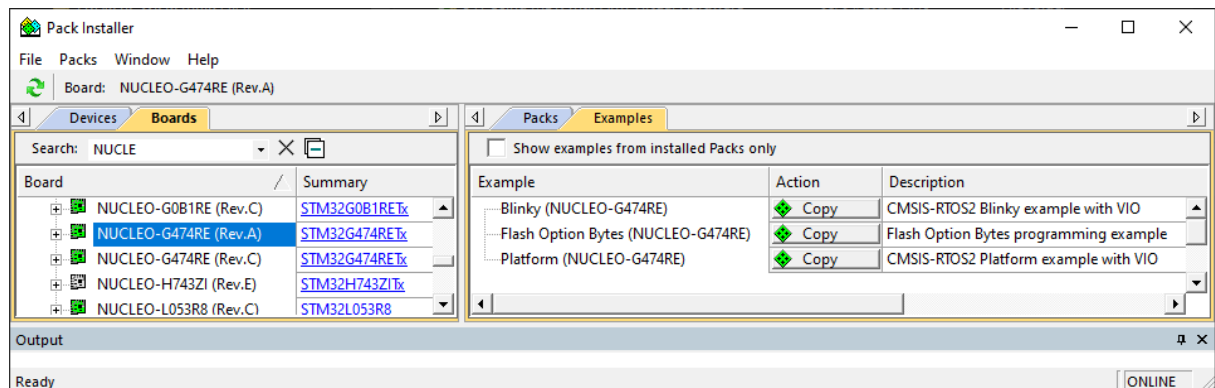

Next, test your set up using an [example project](#).

6. Example Projects

This chapter shows how to use example projects from the STMicroelectronics CMSIS-Packs to check the correct set up of the hardware and software.

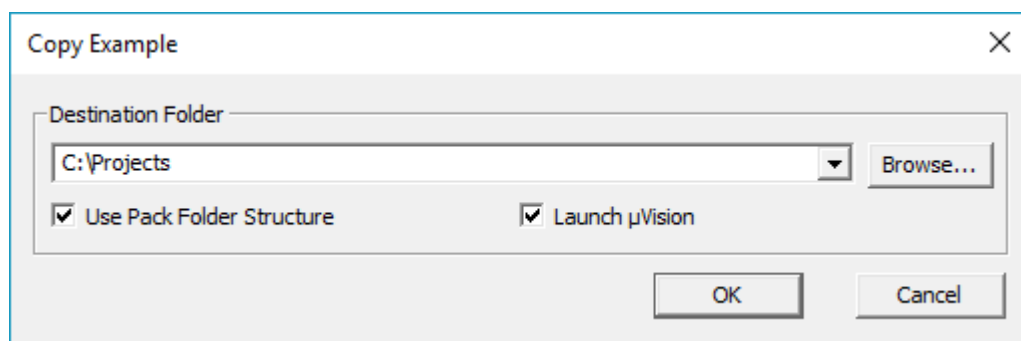

1. Open the Pack Installer from the μ Vision toolbar.
2. Switch to the “Examples” tab. From the list, select the example you want to install. The “Devices” tab allows to filter for specific devices or device series.

Figure 6-1: Find an example project

3. When pressing “Copy”, a dialog box will ask for the desired destination. The example will be directly installed into this folder. Folders that do not exist will be created automatically.

Figure 6-2: Copy an example project

4. Tick “Launch μ Vision” to open the project immediately.

Congratulations! You can now start working on embedded software development for STMicroelectronics devices!
